We must understand that, just as the canal is a symbol for us, it is a symbol to the Panamanian people as well—indeed, one that is far stronger to them than it is to us. For them, it is a constant reminder that their nation is divided. Early this year, when the new treaties were just coming under discussion, my high school son asked, how would we feel if another country had a canal through Florida? That is a simple metaphor, but it helps me understand the hostility that the Panamanians feel.

These treaties—in a way that is fully consistent with our own interests—will eliminate the major causes of that hostility. For the Panamanian people, they mean that their country will no longer be divided in two by an American enclave. They mean that a Panamanian visiting a relative on the other side of his country will not have to pass through American jurisdiction. They mean that the people of Panama will begin to receive a fair share of the revenue from the canal, which is, after all, a major national resource. In short, they give the Panamanian people a legitimate stake in the canal which makes them our partners rather than adversaries in the canal enterprise. And in so doing, they make us real partners in assuring that the canal remains open to all ships and is defended against all threats.

Unlike the existing arrangement, the new treaties have the support of the Panamanian people. In their recent national referendum, two-thirds of the Panamanian voters approved the new treaties. The national debate which preceded the referendum was lively, free and fair. Much of the opposition to the treaty in Panama was, in many ways, a mirror image of the opposition here—many Panamanians thought that their government had conceded too much to the Americans. But the overwhelming majority of Panamanians accepted the new treaty terms, assuring us that under the new treaties the canal will be operated with the energetic support of the people of Panama.

From a military standpoint, then, these treaties protect our right to defend the canal, if necessary, and they make it less likely that an American life will ever be lost defending it.

What about our commercial interests? What effect will the treaties have on American trade and American business? The first concern of those who use the canal in their trade is to assure that it remains open and efficiently operated, that tolls remain reasonable, and that ships passing through the canal are secure. In addition, companies that use the canal also want certainty about the future; they want a stable situation for the canal so that they can plan effectively. The new treaties address these concerns and promote our interests.

As I have noted, we will continue to be responsible for operating the canal through the end of this century. During this period, we will be training Panamanians in the management of the canal so that they will be able to operate it effectively after the year 2000. Both before and after the year 2000, we will be able to defend the canal if it is threatened.

The practical facts of life are just as important as the legal rights we have under these treaties. By resolving the cause of bitterness and resentment, and enhancing the stake of the Panamanian people in the canal enterprise, we are taking the most effective action possible to assure the smooth operation of the canal in the future.

In his regard, it is important to recognize that Panama derives 12 percent of its gross domestic product and 18 percent of its foreign exchange earnings from canal-related activities. Moreover, unlike the present arrangement, what Panama will earn from the canal enterprise under the new treaties will be directly related to the level of traffic that moves through the canal. If traffic were suddenly shut off by the closing of the canal, or diverted because of inefficient operation, the biggest loser would be Panama.

As a result of our insistence that payments to Panama for its contribution to the canal enterprise be drawn entirely from canal revenues, there will be toll increases in the future. Although our current study of the subject is not yet completed, it appears that such an increase will be on the order of 30 percent.

Is such an increase justified and what will it mean for American consumers and exporters? Over the last 40 years, tolls have only increased from 90¢ per canal ton to $1.29 today. Can you think of any other product or service which has increased so little in 40 years?

Panama's toll levels are far below those for the Suez Canal. An increase of 30 percent would mean that for a Japanese car enroute to an Atlantic or Gulf port, for example, the increased transportation cost will be $3.00, less than one-tenth of one percent of the total purchase price.

If I may, I would like to add one other word about the commercial aspect of the canal and these treaties. We consider our commercial interest in the canal to be important. The port of Tampa, for example, shipped over two million tons of phosphates to Asian markets through the canal in 1976. And, Florida's citrus exports through the canal to Asia were worth approximately $20 million in 1976.

Thus, while the canal is less important to our overall commerce than it once was—only 7 percent of all our waterborne foreign trade passed through the canal in fiscal year 1976—it remains important to the economy of this state and the nation. That is one important reason why ratification of these treaties is essential. They substantially increase the likelihood of a stable, long-term partnership with Panama, which will ensure an open and efficient canal in the future.

What about the cost of these treaties to the American taxpayer? Are we paying Panama to take it away, as some have claimed? The answer is no.

We insisted during the negotiations that payments to Panama for its contribution to the canal enterprise be drawn entirely from the canal's earnings. Panama initially sought much larger payments which far exceeded what could be financed from the canal's earnings. Our view prevailed. Under the treaties, Panama will receive payments that more nearly reflect the fact that it is making available its major national resource—its territory. But the treaties will not require any appropriations from the American taxpayer.

In addition, we have agreed, outside the treaty, to seek certain arrangements which will assist the general economic development of Panama and enhance its stability. These are loans, guarantees and credits. And, they will be used largely to help Panama finance U.S. trade and U.S. investment.

Finally, what about our image as a world leader? Are these treaties a sign of retreat? Will they create a power vacuum in the Caribbean that can be exploited by Cuba or the Soviet Union? The fact is that these treaties will have just the opposite effect. They will increase our influence in this hemisphere. It is the status quo which can be exploited by others. The treaties lessen this danger by removing a major source of anti-American feeling throughout Latin America.

It is the widely shared conviction of the Latin American nations that the original treaty needs to be changed. Some of our closest friends in this hemisphere—including Venezuela, Costa Rica, Mexico, and Colombia—issued a joint communique in August urging the United States and Panama to conclude the new treaties. Indeed, through all the years of these negotiations, the people of Latin America have looked forward to the peaceful resolution of this troublesome issue.

The treaties do not settle the other important issues on the agenda of the United States and the nations of Latin America—issues involving trade and development, regional peace and human rights. Nevertheless, they will enable us to approach these issues with a fresh spirit of cooperation, unencumbered by the suspicion and resentment that accompany the existing canal arrangement.

To all nations in the world, the treaties demonstrate that we will use our power in a manner that not only takes full account of our own security interests, but also our firm belief in reducing global tensions and in dealing with other nations on the basis of mutual respect.

Thus, the very same resourcefulness and ingenuity that enabled us to build a canal where others had failed now leads us to build a new relationship with the people of Panama that reflects present-day realities and that provides for the future.

We are a nation that has always been able to change with changing times.

We have never rested on our laurels; we have always seized the opportunity to make things better.

And we are a nation that wants to use our great strength and power, not to prove that we are powerful, but to lessen the dangers of violence and conflict around the world.

These new treaties serve America's interests. I hope that, after you listen to the treaty arguments, and consider them carefully, you will conclude that they should be approved by the United States Senate.

SEA POWER OF THE STATE

Mr. GARN. Mr. President, Adm. Sergei Gorshkov, the father and architect of today's Soviet Navy, has framed a powerful and theoretical work that permits us an inside perception of contemporary strategy for sea power. Fortunately, an astute analysis has been offered of "Sea Power of the State" by David Joseph Kenney, as printed in the spring 1977 Naval War College Review. Commander Kenney's review is closely studied for several reasons. First, it becomes clear that the Soviet Navy's primary mission will remain the protection and viability of its first and second strike capability from its SSBN's. Second, a corollary mission will continue to be destruction of U.S. SSBN's by a concerted attack on our protective systems—the antisubmarine warfare (ASW) P3 and S3 aircraft, and shipborne ASW platforms. Such is Gorshkov's reliance on the SSN that his navy has become the first to devote major resources to destruction of opposing ASW resources.

Operationally speaking, Gorshkov clarifies his navy's ubiquity in stating that the Soviets will steam everywhere, in a readiness to fire the first shot on the naval side of a political event. Further measures will dedicate assets to intervene in local wars as its amphibious and logistics mature. New tanker classes will offer the backbone for an expanded worldwide capability without fixed bases.

Sea power has placed the Soviet Navy in Marxist political theory as an equal of the army, air force, and strategic rocket force. The Soviet Navy now has major claims on defense budgets and missions and, accordingly, they must enter our defense thinking in a very serious way.

I recommend Commander Kenney's article to my colleagues for a clear reflection on the rising Soviet naval threat and the forms and methods of naval warfare aimed directly at our own sea forces. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEA POWER OF THE STATE

(By David Joseph Kenney)

Few institutions and fewer men change their country's destiny singlehandedly. By deploying a submarine fleet, first the Whiskey-class boat in the 1950's and later the SSBN, away from the Russian coast into the shipping lanes of the world, Sergei Georgiyevich Gorshkov has rushed his navy into history.

The admiral's disposition of this fleet transformed a country, whose history is a chronicle of struggle with ancient enemies on the Eurasian landmass, into the second maritime nation of the world. Russia was, after 1,000 years, finally free of its own soil.

This deployment was the seminal act of Russian naval history. Russia no longer depends solely on her armies or rocket forces to bring victory by tortuous campaigns so destructive to Russia and her enemies alike. As a consequence, other possibilities of defense and of expansion exist beyond those provided by the ground arms and the nuclear weapons of air and rocket forces.

These possibilities and their potential effect on us are the subject of Gorshkov's most recent and arquably most striking work, *Sea Power of the State*. The book is dense, rich, logical and almost overpowering in breadth. The admiral calls upon the wisdom and experience of a life, dramatically spent, to give us a summa of naval power. This Soviet officer earned his flag during the darkest days of September 1941 and has held it through wars, purges and bloody ideological strife. Whatever else happened to Russia, Gorshkov determined that he should survive as a principal naval leader and that his country should have a navy second to none. He has succeeded in the tasks of building and operating the Soviet navy. The admiral is that *rara avis*, a maker of history who is kind enough to give us glimpses of the future.

It would be useful to describe what *Sea Power* is not about and why Gorshkov writes and builds his arguments the way he does:

(1) The admiral's purpose is not to recast history in a Soviet mold. In this book the revisionist asides are muted and of short duration. True, he must do the usual courtesy to official Soviet history. He even attempts to make Admiral Ushakov, the victor of an engagement with the Turks, into a Russian Mahan. This predictably comes off badly. To his credit, the admiral focuses princapally upon the present and future rather than on descriptions and analyses of past events.

(2) Nor does the admiral propagandize in this work. He writes factually and, compared to the usual Soviet polemicist, dispassionately. From the summit of a brilliant career he can survey the world ocean as few men can. His ships steam everywhere. He no longer needs to be defensive or tentative.

(3) The admiral's hostility to the United States does not influence the book's form or content in a meaningful way—if in fact it

ever existed beyond the pages of his earlier, less refined work.[1] What does show is his great sense of being a Russian. There can be no doubt that in his old age (he is approaching 70) sheer patriotism is one of his great motives.

(4) Gorshkov, finally, is not interested in ship types, missions and weapons systems per se. He is greatly concerned with historical forces and levels of technology, and only as a consequence of these, with the equipment a navy has and the use to which it is put.

STYLE AND METHOD

Not many people will find Gorshkov's prose style as felicitous as his observations are stimulating. Though his writing in translation is cumbersome to us, his goals in this book are achieved by a subtly constructed and artfully executed stylistic method which cannot be separated from his intent. The admiral was born before the Revolution and heard his first words from a family whose members most remembered literary experience was the liturgy of the Russian Orthodox Church.

Despite governmental attempts to excise Tsarist remnants from life under Marxism, Soviet political literature still observes in its form prescribed usages of the ancient rite: repetition, deference to its own "Sacred Scripture" and a complex sentence structure designed for its poetic effect. Why? To clear the way for a total acceptance or explication of Marxist-Leninist doctrine. The results are not always benign, for the admiral's prose, especially in translation, is often unavoidably wordy and awkward rather than solemn and beautiful. The admiral might be suspected, too, of knowing that the loftier the tone of his discourse, the purer his readers will consider his intent.

Gorshkov's practice of this near-liturgical form does not mask his intent to the Slavic reader but highlights it, because the admiral is concerned with final ends, with destiny. He speculates at a very high philosophical level on the final victory of Marxism according to the scientific laws of history and on the part the navy must play. He dwells on the earthly purpose of a man who is a Russian, a sailor, and a believer in the Hegelian-Marxist dialectic of history.

Purpose. The lines of argument and the weight of evidence show clearly Gorshkov's purpose in writing *Sea Power*. The admiral's overriding goal is none other than to show that a Marxist, dialectical interpretation of the scientific laws of history demands the existence of a strong Russian Navy. Gorshkov contends that because a new thesis, or set of historical circumstances, has arrived, in which a strong Soviet Navy is dialectically necessary for advancement into the next stage of history, the navy must be given a vote in the political-military decisionmaking process, a just allocation of military funds, and an enlarged strategic mission. His statements fly in the face of classic postwar Soviet strategy as espoused by such leaders as Marshall Sokolovsky, who relegated the navy to a role far beneath the army's, and who thought the high purpose of a contemporary battle fleet was engagement of surface ships.

Why should the most successful Russian Admiral ever, feel compelled to use the vehicle of a book to advance this proposition, a task at once philosophic and budgetary?

Russian methods of forming a consensus differ drastically from those of the West. We publicly debate strategic options and military policy in our journals and in other public media, whereas formulators of Soviet policy must first search Marxist-Leninist literature for doctrinal bases with which to support their definitions, their analyses and their solutions. It is highly unlikely, for example, that a Russian counterpart of "Mr. X" (later revealed to be George Kennan) could write a speculative and pseudoanonymous article in the Russian equivalent of *Foreign Affairs*, arguing a whole new policy toward the West on nonideological grounds.

On the contrary, any Soviet strategist who proposes novel solutions to difficult questions, must support his logic with wealth of classic Marxist underpinnings. The more daring the argument, the surer the author's grasp of dialectical logic must be shown to be. In this last will and testament, Gorshkov could not risk an ideological mistake. He wants to leave with the decks clean.

The most important reason for Gorshkov's prolixity falls into the central purpose of *Sea Power*. The admiral's great theoretical contribution and the basis for all the purely naval discussion in the book stems from his description of the course on which history now leads us.

Gorshkov believes radical changes have occurred in world politics, in the wealth and power of leading countries, in the way countries use power, in the economic bases of a nation's strength and, most importantly, in the way navies interact with all the elements of state power. Seapower is not merely the capacity to destroy one's maritime enemy but it is also the ability of the state to use for national purposes any part of the maritime world, from its oil to its fish to its shipping lanes. Gorshkov concludes that a principal power's navy may soon be the glue which holds a state together.

The end of World War II, according to the admiral, signalled the close of an epoch and the arrival, in Marxist terms, of a new synthesis. At that time a new set of social, political, military and economic forces, a new set of historical circumstances arrived. This synthesis then became the new thesis. In practice, this meant that Russia was free to rival America's economic power and to advance international Marxism because Russian armies dominated the Eurasian landmass as never before. Although large standing armies are necessary to confirm the victory over fascism and to maintain status quo, the ethnic enemies that taunted Mother Russia for a millenium are firmly in hand. The Soviet Navy has secured the army's flank well into the Mediterranean basin and guards the commercial and fishing fleets on the seven seas.

What, then, does Russia have to fear in the face of security undreamt of 25 years earlier? Gorshkov's answer has two parts: First, the new thesis produced a high technology that permits, even encourages, the destruction of Moscow not by armies or by airplanes, but by ICBM's launched from beneath the sea's surface thousands of miles from target. Formerly, Russia's sheer size and poor weather allowed the worst generals and the most ill-prepared ground troops an opportunity for the mud of winter to repulse even a Napoleon. Now, sure defeat can occur 20 minutes after missile launch.

The second part of the reply is that Russia's traditional land enemies have been replaced by a coalition of imperialist maritime nations. Gone forever is the smug certainty that Russia had always and would always finally defeat the Poles, Magyars, Teutons and Balts as well as enemies from the East. These new and unfamiliar enemies and their technology are not susceptible to attack, let alone defeat by the traditional arms of the U.S.S.R.

Gorshkov warns that warmaking potential of this new coalition must never become military reality on Russian soil. In case of war or threat of war, the imperialist enemies' military and industrial power must be destroyed quickly in their own countries. The overall mission of the Soviet Navy is still defense of the homeland, but henceforth by use of the fleet against its opponents' shore facilities. This is a forward defense carried to the ultimate by modern technology. Its aim is to achieve victory without a land war and if possible without damage to Russia herself. No one wants a replay of the murderous land battles fought in Russia during World War II.

This argument fulfills a trend begun most noticeably in Sokolovsky's *Military Strategy*, which had led Soviet military thinkers away from a preoccupation with theater warfare whose inherent parochialism makes it less cost-effective and bloodier than global war, which if waged by a Soviet Navy at sea is cheap and sterile. Gorshkov implies that favorable major changes in the world's balance of power can be obtained by loss of few ships and their crews.

Hence the ancient concept of a fleet's purpose, combat against another fleet, carries secondary importance. The Red Army, Gorshkov reiterates, may sit powerfully astride the Elbe; it is powerless against the Trident. The Soviet Navy is now the motherland's first line of defense.

Why does Gorshkov advance this argument? Accepted Soviet or Marxist revolutionary doctrine (by omission not by design) had never held a navy necessary for victory in the class struggle. Gorshkov had to breach this obstacle before the Soviet Navy could hold a valid position in the military pantheon and before the navy's institutional memory within the Soviet government could be secured. Furthermore, he had to fight history tooth and nail to show that the course of action he advocates has precedent in victories during the class struggle. He had to show philosophy in action.

He gets little help from the Red Navy's history, because by and large it is a minefield of disasters. Even the most patient researcher cannot find the Russian equivalents of Trafalgar and Coral Sea, of Nimitz and Jacky Fisher, or de Grasse and von Hipper. Ironically, only the modern Russian naval era begotten by Gorshkov would please the historian in Gorshkov.

On the other hand, Marx, Engels, and Lenin had uniquely acute insights into the role of a Red Army during the revolutionary struggle. They and their successors believe that the army is the conduit by which civil strife, economic complaint and political discord are brought to bear in the class struggle. Theory became blood through the Red Army around the Winter Palace, on the Long March and in the Sierra Maestre.

Not only were Marx and Engels elegant theorists but they were also practical managers of violence who knew that successful revolutions occupied buildings, road crossings and power stations by force. They knew that the best way to accomplish these necessarily dirty tasks was the conversion and use of peasants and workers who fire the rifles and drive the tanks. Ships cannot seize and hold ground, armies can. Marx, Engels and Lenin sided with the armies. Lenin could not afford to build ships; Stalin wanted a big-ship navy because the British had one; and Khrushchev thought *Sverdlov* cruisers best suited for transporting senior Soviet statesmen abroad in high style. No theoretical role in the class struggle was ever assigned to the navy.

Gorshkov has overcome this historical and theoretical burden by a simple but clear piece of Marxist logic. He proposes that since Russia and international Marxism find themselves at a new stage of history and contend against new opponents, the state must maintain a mix of armed forces quite different from that needed to assure past victories in order to triumph in the present phase of the class struggle. Moreover, because of the vastly increased importance of the sea, which yields wealth of its own as well as carries the riches of the land, no nation can remain a principal actor on the world stage without a strong navy.

---

[1] *Red Star Rising at Sea* (Annapolis: U.S. Naval Institute Press, 1974).

It is as though Gorshkov turns to his army colleagues and says, "Comrades, your land armies were dialectically necessary in a former movement of history and are still needed to consolidate victory. Military roles have changed, however, according to the scientific laws of history. That history has removed the main class struggle from the Eurasian landmass to distinct countries and has made the sea a hiding place for weapons that could do to Russia what Napoleon and Hitler could not. The navy has to become a paramount arm, because only naval force applies to these new circumstances."

Nothing Gorshkov has done in the way of ship construction, weapons systems, operations and tactics contradicts *Sea Power's* interpretation of classic Marxist-Leninist military doctrine. All his acts accord with it. In fact, so powerful is the logic and so acute the sense of history in *Sea Power* that Gorshkov's work is now part of the hierarchy of doctrine his book venerates.

While the Soviet Navy's goal, defense of the homeland, remains the same, the fleet's missions have changed drastically. Traditionally, naval defense began and ended with strategic protection of waters near the Russian shore. To assuage army fears. Gorshkov stresses the continuing need for a strong coastal defense of the Russian littoral, principally by small rocket-equipped ships and by airplanes.

During this phase of history, however, modern technology demands that the most significant defense of the homeland begins on the high seas where both the Soviet and the imperialist shore-destroying ballistic missiles are concealed and launched. Here, the mission bifurcates: to destroy from the ocean bed the enemy's land-based military and industrial strength, while at the same time to neutralize the enemy's SSBN's which presently constitute about 70 percent of the U.S. strategic missile force.

Gorshkov thus demonstrates that the army, air and rocket forces have no role in foiling the vast preponderance of U.S. ballistic missiles. His navy is the only weapon that has a chance under foreseeable technological circumstances of killing the SSBN. Again, Gorshkov devotes lengthy argumentation to anchor this major conclusion to a classically Marxist interpretation of history's dialectical movement.

Once the idea that the fleet should operate principally against the shore is comprehended, the logic of the Soviet Navy's ship construction program and its fleet operations becomes clear. The analyst must then concentrate on what Gorshkov considers the touchiest problem to solve before the missions of the fleet against shore can be successfully prosecuted.

The most important operational point in the book is Gorshkov's statement that since the SSN is the most lethal ASW weapon, it must be neutralized or destroyed along with air and surface ASW forces to protect Russian SSBN's targeted against the imperialist's military potential and to leave the hostile missile submarines open to successful attack.

Gorshkov draws on the lessons of World War II to show how the Soviet Navy must operate its fleet successfully against its enemies' shores. By way of example, Gorshkov claims that 70 percent of all German U-boats sunk in World War II were destroyed in transit, not during prosecution of an attack. He heaps mortal blame on the German Naval High Command for not devoting sufficient resources to neutralize Allied ASW efforts. Surface ships, Gorshkov claims, should have protected and coordinated submarine transits to and from operating areas.

This statement has enormous evidential value. It confirms our speculative reasoning to account for the substantial force of large ASW ships built and building, e.g., the *Krestas* and *Krivaks*. It predicts the deployment of squadrons built around the *Kiev* ASW carrier to perform high seas ASW and to protect Soviet submarines en route to operational areas.

To sum up, Gorshkov's principal operational reason for writing this book lies in his need to demonstrate that the Soviet Navy must kill hostile ASW forces as well as destroy their enemies' shore-based warmaking potential by attack from SSBN's. The implications of this statement, which approach a dramatic or theatrical tone as nearly as is possible in Soviet political literature, are profound. NATO navies must consider anew the rationale for ship construction, weapons systems and tactics.

Sea Control. The need to neutralize hostile ASW forces absorbs the admiral's concept of sea control. Gorshkov's notion is not Mahan's. The Soviet admiral envisages sea control as the establishment of dominance in a maritime area, perhaps measured in minutes, perhaps in only one medium of a small sector of the world's ocean. He sees a Soviet Navy composed of forces which either by threat or by actual victory in combat can prevent any other navy from working its will against the Soviet naval effort during this transitory period of control. Safe passage to their operating areas of the Soviet SSBN is sea control's first purpose, and neutralization of the imperialists is its second. Clearly, *Kiev's* embarked VSTOL aircraft are directed to this task.

Other cases are made for sea control, such as blockades against critical marine traffic, and assistance to friendly forces in the Third World. Gorshkov offers one proviso, however, in his remarks on sea control. So lethal are modern weapons, he warns, and so fast in their injection into combat, that sustained dominance by any navy over any body of water or maritime airspace is problematic.

Gorshkov is confident, nevertheless, that his navy can now establish what he calls a "favorable operating regime" virtually anywhere in the world ocean over a period long enough for Marxist political, military and social elements to produce a victory in the class struggle under proper dialectical circumstances. Strategic mobility renders the Soviet Navy alone of all the U.S.S.R.'s armed forces capable of decisive intervention abroad.

To Gorshkov, this belief may well mean the superiority of a naval force designed by himself as the principal military agent of his country's political leadership. Modern technology, the admiral warns, will smile only on a swift attacker who fires overpowering first shots, destroys his adversary and flees back into concealment. Running through *Sea Power* is the notion, vigorously expressed, that modern combat no longer favors the standing army, the massed artillery barrages, the frontal attacks of thousands of soldiers, and the existence of a huge logistics enterprise.

Despite its mobility, Gorshkov considers the attack carrier, up to now the foremost 20th-century example of naval surface and airpower, a useless system when used against the Eurasian landmass. No surface force, he claims flatly, can withstand nuclear air-to-surface missiles fired from the planes of the Soviet Naval Force. Despite this bold assertion, the admiral concedes that the carrier, somewhat modified for sea control missions, is useful for that role and for general use in the Third World. Doubtless, the operations of *Kiev* and her sisters will show which roles the Soviet Navy does envisage for its own large air-capable ships.

Gorshkov's theoretical base for that part of his navy not pertaining to the SSBN/SSN/ASW mission has to do with what Marxists call "contradictions in history." These events occur when the forces of working class or peasantry collide with those of the capitalist imperialists. No one can predict the time, place or characteristics of these struggles, but the scientific laws of history dictate that they will happen. Gorshkov claims that when navies have been involved in these episodes, the imperialists have nearly always won, e.g., the Cuban missile crisis and the conquest of the Philippines by the United States. He warns that since the Eurasian landmass is largely policed by the Red Army, contradictions will occur most frequently in other, distant areas where the only mode of military intervention to assure a victory will be the Soviet Navy.

Gorshkov's world, boisterous and dynamic, is subject always to violent upheavals and quick to cause and to accept death. To further the class struggle in the next movement of history, the admiral posits an increasing need for strategic and tactical mobility. This means amphibious forces, a chain of foreign bases and a fleet train. Not only ships, but navies and countries must move swiftly.

To meet the demands of mobility in a world where contradictions of history occur unpredictably, a fleet must be able to fight in three media. While the admiral reluctantly admits to his own inability to predict accurately the kinds of engagements his fleet will fight, he does assert that he will build variegated and mutually supportive units and systems to prepare for all kinds of combat. The Soviet Navy, he insists, will install a plenitude of the best weapons systems on the cheapest, most austere hulls available. At the expense of desirable characteristics such as larger crew accommodations and spare parts, the Soviet Navy will maximize the cost-effectiveness of its weapons suites.

Some Short Points. Scattered through Sea Power are tersely expressed insights which outline Gorshkov's views on many issues common to all navies. Offered by way of example, but not of limitation, are the following short expressions paraphrased from the book.

(1) Building Program.

Each navy is a unique product of its own leaders and is set in a particular economic and technological milieu. Therefore, the Soviet Navy will never be a mirror image of any other navy.

Weapons, not hulls, kill.

The tendency of naval warfare is to produce more heterogeneous ships, weapons and tactics.

Single-purpose hulls are too expensive. Henceforth, all combat ships should fight in the three media.

Technology is so expensive no navy can have everything. Each navy must select its own range of military problems to solve.

The era's technological base will determine the final form of victory.

Gorshkov boasts that his navy rides the crest of a technological wave which fortuitously satisfies its huge wants in an era of revolutionary transition. He is obviously quite happy with his ship designers and naval engineers. The admiral believes he has the key not only to the navy's strategic needs but also to the kinds of weapons necessitated by his strategy. Here, he breaks with European naval tradition which weighed the thickness of one's own armor against the penetrating power of a potential enemy's projectile. A new technological and strategic day has arrived; so too has the need for innovative ships and weapons that bear little resemblance to their counterparts of the 1940's and 1950's.

(2) Operations.

The next war will be fought with forces on hand and on station. No opportunity will exist to move, let alone to build ships.

Contemporary weaponry is so lethal that he who fires first probably will win.

The appointment of ship captains and of

tactical commanders is all-important. They must be able to act independently and decisively, because communications will almost certainly fail during a nuclear engagement.

General fleet engagements serve little purpose and are vestigial. Fleet versus shore is the principal strategic preoccupation.

The strike by a competent, prepared unit is the greatest naval act.

Gorshkov predicts short, savage naval engagements fought by forces already on station or at least nearby a combat area. The tide of battle, he warns, will swing back and forth, as missiles fired from airplanes and submarines, as well as from ships, destroy an enemy with a single shot and leave a battle's outcome in doubt until its end. In the next war a defensive posture is sure to bring defeat; all forces must be strategically and tactically ready to attack. Consequently, captains must imbue their ships' companies with an offensive mentality.

(3) Strategy.

A world navy must construct a favorable operating environment in areas critical to that navy's success. Sometimes the task demands years, but history rewards him who stays the course.

To go from favorable operating conditions to tactical control to theatre superiority to strategic dominance and vice versa can take but a few hours. Speed in every act is essential.

Each epoch has its own naval problem. To understand it one must study history and logic with its dialectics.

The present era demands that the Soviet Navy sail the world ocean not only for traditional naval purposes but to decide which maritime areas are critical to success and to learn how to operate there. Within those areas, the navy must build tactical ascendancy, so that when battle comes, knowledgeable captains can gain theatre control quickly. If done astutely in consonance with the actions of other armed forces, strategic dominance may also be obtained quickly.

(4) Missions.

Future naval wars may be surrogates for land combat. Naval wars are clean and occur away from Russia. Land wars are dirty and have historically involved serious destruction of the Russian people and property.

The navy is the Soviet Union's only medium of strategic intercontinental mobility. Without it the Soviet Union would act contrary to the dialectic and would have to fight costly, damaging land wars.

The sea and all it yields up will grow in importance. A principal nation must use the sea to assure its living standard.

The Soviet Navy is only the maritime tail of the foreign policy dog.

Victory on the naval side of a political event, not defeat of the enemy at sea per se, is the navy's job.

It is well to remember when analyzing *Sea Power* and all its complexity that Gorshkov is not burdened by the baggage of victory. No cabal of victorious but retired admirals utter critical stage whispers to the civilian leadership about the "odd" task young Gorshkov assigns the Soviet Navy. The terror of the 1930's and the disasters of the "Great Patriotic War" permitted the few survivors, of whom Gorshkov is the prime exemplar, virtually free rein to devise a whole new set of assignments for the navy. No hoary wardroom traditions frustrate the experimentation which new looks at a radically changing world must necessarily produce.

Some Things Left Unsaid. Although Sea Power has enormous scope, some lacunae remain in the admiral's discussion. For example, the surface ship is inherently vulnerable. It cannot unilaterally terminate an engagement (it cannot run fast enough nor hide to avoid its adversaries); it must either kill or be killed. Although the Soviet Navy continues to build very costly and large surface ships, Gorshkov has not constructed a new theoretical framework that assimilates and discusses this new calculus of lethality.

Further, all navies of more than 100' boat size either have or will shortly acquire surface-to-surface missiles capable of killing a 5,000-ton ship. Are Soviet ships, like ours, too expensive to risk against an obviously offensive Third World PGF? What are the risks attendant upon the dispatch of expensive ships to fight very minor engagements?

How will the Soviet Navy, traditionally a highly centralized organization, exercise command and control during a nuclear engagement when communications are broken? It is well but not satisfactory to say "Have good ship captains."

Is not a war of position self-producing in the sense that during the construction of favorable operating conditions thought by Gorshkov to be a prelude necessary for victory, the presence of warships in a troubled area will destabilize the situation sufficiently to force or permit naval combat?

What will the admiral do to counteract the cheap precision guided missiles (PGM) that will appear by 1980 at the latest? These missiles will have a 500+ mile range, carry a ship-killing warhead and be operable by irregular troops from, say, the hills of Sicily. History shows us that owners of weapons tend to use them. The problem of operating surface ships close aboard a hostile shore or in an enclosed body of water such as the Mediterranean might become unmanageable.

Is the strategic mobility that Gorshkov claims for his navy a cover for a new wave of adventurism involving limited nonnuclear naval wars? Was the Soviet combat naval presence hull down off Angola a harbinger? Why does the admiral make so much of his gift to the Soviet leadership of strategic mobility?

While Gorshkov is careful not to offend the army, his whole argument cannot fail to produce a question about the structure and purpose of massive Soviet ground forces. Does Gorshkov represent or head a group of thinkers who wish to deemphasize the huge army establishment of the Warsaw Pact in order to free resources for other tasks such as increasing domestic living standards? If this proposition has even small validity, who are the admiral's colleagues and his opponents in this venture?

Gorshkov does not discuss these and other vexing questions. He must know of their existence. His innate brilliance and his knowledge of Thales, Heraclitus, Hegel, Lucretius and Jomini, all of whose influence is quite apparent in *Sea Power*, as well as that of the classic Marxist writers, put him in a position to handle these speculative topics as well as anyone. Has technology and the wild race of events about us, overpowered even Gorshkov's ability to synthesize all he perceives into one construct according to the scientific laws of history?

All Is Not Vodka and Caviar After All. Certainly, Gorshkov does express well-modulated trepidation about the future. The admiral realizes that the importance of seapower and of a navy is not a constant either in Russian history or in the dialectical march of events. He fears that one day history may have no use for his splendid machine.

Oddly enough, in view of his present position, Gorshkov fears the ocean will become the main, perhaps the only, arena for the next war. He envisages savage naval engagements as surrogates for the blood-filled wars on Russian soil he wishes to avoid. Ruefully, he believes all countries will carry their wars to sea. He contemplates it as a vast launching pad for all nations' missiles, finally becoming a desolate no-man's land where victory, as heretofore understood, may have no significance.

Gorshkov worries about the methods and techniques of the battle itself. Do air-to-surface missiles fired undetectably hundreds of miles from target prevent the attainment of any kind of sea control? What is sea control? He wonders at the end of the book in the face of new technology, and how does one meld it to the proven ways of the sea?

The world, laments the admiral, is dotted by the imperialists' bases. How can the Soviet Navy achieve the superiority of position it needs to win a naval war? How will he get the money to build and maintain the fleets he believes necessary to defend fisheries, offshore oil and mineral deposits and the marine economic zones so necessary for a growth in Russian living standards?

Balefully, Gorshkov perceives a strategic shift of imperialist power from land to sea and wonders if the Soviet Navy can withstand new expansionist policies of the West. The admiral somewhat puzzlingly affirms the existence of a continuing power held and ready to be used by the West against the Soviet Union; a power not explicable by the scientific laws of history, a power he neither can fully perceive nor accurately describe.

CONCLUSION

Because Gorshkov's main points are chillingly important, we must understand why he writes as he does and what his primary concerns are. Even though Gorshkov's place in Russian military thought has not been argued through to its conclusion, *Sea Power* offers profound insights into naval problems America and her allies must solve for the sake of their countries' survival.

No Soviet newspaper publishes the hearings that must certainly be held in the Soviet Defense Ministry on strategic option-building programs and force levels. *Sea Power* is the closest firsthand look a lay reader will get inside the Soviet decisionmaking process. The distribution of 60,000 copies of this book inside the U.S.S.R., and the sale overseas of hundreds of bound editions at cheap prices indicate the Soviet Government wants the book read and understood.

Probably no author other than Gorshkov is better suited to outline the strategic, theoretical and operational framework of Soviet military policy for the balance of this century. Now a member of the Defense Ministry, Gorshkov has spent 20 years as CNO. This extraordinarily long tour has yielded the Soviet Navy unique stability in the design and operation of its ships, weapons and planes. Western admirals are fortunate if the ships designed on their watch are operational under their immediate succesors. Some ships launched and operated by Gorshkov have, by contrast, served a full 20-year term and now move into obsolescence.

The admiral is a man of high pragmatic accomplishment. No modern naval leader but Gorshkov has survived Moscow's internecine warfare to bring his navy from the backwaters of Eastern and Central Europe to a periscope view of the Statue of Liberty.

Who among us could fuse a discredited Slavic navy to the bankrupt philosophy of Marxism and produce a weapon that can help destroy Western civilization? Sergei Georgiyevich Gorshkov, Admiral of the Fleet of the Soviet Union and strategist, has written a book that will influence navies and governments for the rest of this century.

TRIBUTE TO SENATOR HUMPHREY

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial tribute to our distinguished colleague HUBERT H. HUMPHREY. The editorial captures the essence of many of the contributions made by Mr. HUMPHREY.

There being no objection, the editorial

was ordered to be printed in the Record, as follows:

[From the Watertown (N.Y.) Daily Times, Nov. 25, 1977]

Humphrey's Monument: His Service

(By Alan Emory)

You could tell when they named a government department building after him. And then when the House of Representatives shattered all the precedents and asked him to address one of its sessions—an invitation no United States Senator had ever before received.

It was official Washington's way of doing something special for Hubert Humphrey while he could still enjoy it, and his reaction was much the same as it had been on the day he returned to the Senate and each colleague tried to outdo the other in praising the man from Minnesota.

Finally, Sen. Dale Bumpers of Arkansas leaned over to ask Mr. Humphrey whether he didn't think the Senators were laying it on a little thick, and Mr. Humphrey, who has been battling inoperable cancer, grinned broadly and allowed as how he didn't mind a bit.

But it is not buildings or speeches that will stand as monuments to Hubert Horatio Humphrey when the time does come for monuments. More than anything else his legacy to the American political scene will be the importance, value and deep satisfaction of public service superbly and unstintingly performed.

Government and politics have never been dirty words to Hubert Humphrey, and his example has been to encourage others to become involved in the decision-making process, to find out how rewarding it can become.

Those who have come to know Senator Humphrey over the years, both as lawmaker and political candidate, understand that a mass of concrete, steel and glass will never evoke the excitement and, to use his own word, joy, of the battle over issues and elections.

The remarkable record of ideas and proposals and programs that originated with him as mayor, as Senator, as Vice President and, even, as professor in the brief hiatus wedged into his public life by the results of the 1968 presidential election, will stand unmatched.

Senator Humphrey has been the champion of the blacks, the farmers, the workers and those out of work, the poor, the educationally disadvantaged, those striving for balanced and peaceful foreign relations and those who want the super-powers to reduce their superarms to the point where the world can stop worrying about being blown up tomorrow.

In this corner there is no memory of anyone in public life who thoroughly enjoys people the way Hubert Humphrey does, and if public service means anything it means service to people. He cannot pass the most casual greeter without stopping to exchange a few words and a vigorous handshake.

Washington is a brighter and happier place with Hubert Humphrey back in the Senate, albeit on a more restricted work schedule. That restriction does not curb the active mind and articulate expression that have characterized his work in government and relationships outside government.

So they can name all the buildings they want to for Hubert Humphrey, but they won't mean a thing. What will mean something is when someone enters public service on the local, state or federal level or runs for office because he wants to do something for people the way Hubert Humphrey has done things for people, because the satisfaction of that service is a reward that surpasses other rewards.

Hubert Humphrey went back into the hospital this past week for treatment of cancer. Washington cannot wait until he is released and gets back on the job, for good government and Minnesota's senior senator are one and the same.

CURRENT U.S. POPULATION

Mr. PACKWOOD. Mr. President, I wish to report that, according to U.S. Census Bureau approximations, the total population of the United States as of December 1, 1977, is 218,102,055. In spite of widely publicized reductions in our fertility levels, this represents an increase of 1,797,729 since December 1 of last year. It also represents an increase of 136,411 since November 1, 1977, that is, in just the last month.

Over the year, therefore, we have added more than enough people to fill the cities of Baltimore, Md., and Seattle, Wash. And in just 1 short month, our population has grown enough to more than fill the city of Topeka, Kans.

VERDICT ON STEVE BIKO'S DEATH

Mr. KENNEDY. Mr. President, I join in expressing shock and outrage at the recent Pretoria court verdict clearing South African police of blame in the death of Steve Biko, the moderate leader of the Black People's Convention.

It is incontrovertible that Mr. Biko had suffered head injuries in the hands of the South African security police. Instead of receiving medical treatment, he was driven 700 miles in a landrover while naked and in a semiconscious state. I strongly agree with the State Department statement that:

> It seems inconceivable on the evidence presented that the inquest could render a judgment that no one was responsible.

It is not only a twisted legal system but a callous society that produces such gross mistreatment with such gross impunity. Mr. Biko is preceded by at least 20 persons known to have died in South African prisons this year, and by at least 23 who died under similarly suspicious circumstances last year. In no case have the racist authorities been brought to account by their vaunted system of justice, which must now be counted a farce in the international community.

The tragedy is that South Africa has lost in Steve Biko a moderate black figure of competence and intelligence. Instead of helping overcome the deep racial chasm in that tortured society—as he would have wished—he has become a symbol of hostility between the black majority and white minority. And yet it was Steve Biko who wrote that he looked forward to a "nonracial, just and egalitarian society in which color, creed and race shall form no point of reference."

Mr. President, on October 31, I had the privilege to cosponsor Senate Concurrent Resolution 60 on the death of Steve Biko, introduced by my good friend, the Senator from Iowa (Mr. Clark). I ask unanimous consent that the text of this resolution be printed in the Record.

There being no objection, the resolution was ordered to be printed in the Record, as follows:

S. Con. Res. 60

Whereas the circumstances surrounding the death of Steve Biko on September 12, 1977, while he was being detained by the Government of the Republic of South Africa, have aroused deep concern among Americans and within the world community; and

Whereas the Government of the Republic of South Africa on October 19, 1977, took a series of repressive measures against black and white opponents of its apartheid policy, including the closing of newspapers, the outlawing of peaceful religious and social groups, and the detention and "banning" of South African citizens; and

Whereas these repressive measures represent a serious violation of the rights of the persons and organizations affected and will further isolate the Government of the Republic of South Africa as a member of the international community; and

Whereas the United States hold such actions to be unacceptable: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress strongly denounces the above acts committed by the Government of the Republic of South Africa which suppress the expression of political thought and violate the rights of the individual, and urges the President to take effective measures against the Republic of South Africa in order to register the deep concern of the American people about the continued violation of human rights in that country.

CETA

Mr. HAYAKAWA. Mr. President, I believe one of this year's most objectionable congressional actions was the increase of CETA funds by $1.5 billion. The resulting budget jump from zero in 1976 to $2.5 billion in 1978 was passed by the Senate without much debate. I am, of course, deeply concerned about unemployment among youth—indeed it is a major concern of mine. I know that job training programs work for some young workers and not for others. I know that restrictions placed (often by trade unions) on what young workers are permitted to do make many of these programs a sham—so that young people come to despise themselves, the programs, and the society that gives them nothing better to do. I was willing, nevertheless, to go along with spending $1 billion to see what can be done for the idle young, although I had serious reservations.

A recent editorial in the Pittsburgh Press and two articles by the respected black journalist, William Raspberry, in the Washington Post unfortunately confirm that my misgivings were justified. Accordingly, I ask unanimous consent that these articles be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

[From the Pittsburgh Press, Oct. 19, 1977]

The Job Flop

In the past three years the U.S. Labor Department's Employment and Training Administration has dumped more than $1.6 billion in taxpayers' money into a nationwide program that was supposed to provide summer jobs and skills training for young people.

But the program has been an utter flop.

That is the word from the General Accounting Office (GAO) of Congress.

Indeed, almost everyone concerned with the program—the Labor Department, local governments throughout the nation, and non-profit organizations running it—knew it was a flop.

This past summer GAO sent investigators to check on job sites throughout New York City, where 70,000 youngsters were hired at a cost of $35 million.

They found that at half of the job sites large numbers of youngsters had nothing to do. Many were simply playing games—or were absent. Teenagers were being paid even though they didn't show up for work. Others were late but were not docked any pay.

In addition, neither federal or municipal authorities were monitoring the program adequately. Many so-called non-profit groups were running the program in the same slovenly way they had operated it in previous years.

These groups should have shaped up or should have been cut off from federal funds, but neither occurred, according to the GAO.

The GAO has been checking on this program since 1969. It has submitted almost a dozen reports. In every case the findings were similar to the New York City situation this past summer.

If this is how the Labor Department runs a fairly simple, short-range jobs and training program for a half-million youngsters, how would it run the proposed jobs and training program for 1.4 million welfare recipients?

Considering the department's track record, the President might serve the country by shoveling $1,000 bills out of airplanes.

[From the Washington Post, Dec. 2, 1977]

Kids Who Don't Know How to Work

(By William Raspberry)

It sounds like something your grandfather might say, but it is almost literally true that we are raising a generation of kids who don't know what work is.

And without discounting the problems of a sluggish economy, discrimination, wage rates and the rest, that is one of the reasons why so many people find it tough to get jobs.

An example: Several months ago, a local firm had a need for some part-time, temporary laborers. After consulting with local community-action groups, the firm decided to hire young men aged 17 to 21.

Listen to their boss, a young black man who had urged that they be hired in the first place:

"Twelve of the youngsters didn't have Social Security cards and didn't know what Social Security cards were. Several had no Selective Service card, driver's license or anything else that they could use for identification, and most of them were not cognizant of the fact that they needed basic ID.

"They could not fill out application forms and seemed totally unfamiliar with routine procedures.

"And their decorum was awful. The work wasn't hard—in fact it was easily possible to complete the work in five hours and go home, although we still paid them for eight hours. Yet, they could hardly get the work done in a full shift. They didn't know how to organize the simplest tasks.

"I'd wind up saying, 'Look, you're right-handed—right?—so why don't you take the thing this way, see, and move it over here so you don't have to keep going back and—but, first, take your coat off, okay?'

"At one point, we hired some white girls from a local college, and they would be finished in 6, 6½ hours, no sweat. The boys would be working two hours longer doing the same work."

The problem wasn't indolence, he stressed. The youngsters wanted the jobs, often desperately. "When we first advertised for the openings—three days a week, $3 an hour—kids were lined up outside at 5:30 in the morning, waiting for us to open up," the supervisor said. "And after they were hired, several would come up to me and ask if there was any chance they could get on full-time. I'd tell them, "Sure, if you show me you can work."

"Then they'd work an hour or so and go to the bathroom and stay 30 minutes, or go over in the corner and take a nap. Hey, it was a trip!"

Most of the youngsters, the supervisor said, had never held jobs where they were expected to accomplish specific tasks, to get something finished. As a result, they had no sense of mission, no awareness that the employer existed for any reason except to sign their paychecks.

For many of them, their total work experience had been either of the Neighborhood Youth Corps type or in make-work summer jobs, where they spent their days filing cards, stapling papers or, frequently, doing nothing at all. At any rate, doing nothing that needed doing. The jobs existed because the kids needed them, not because the employers needed the kids.

"I'm not saying we shouldn't have these programs," the supervisor said. "But some provision has to be made for kids to learn the things that we used to learn by hustling our own jobs. We learned how to dress, so The Man would think we really wanted to work. We quickly learned that if you didn't have your working papers, you were out of luck. We learned how to impress the right people—by doing the job more quickly than someone else, or by making suggestions or by volunteering to do something that obviously needed doing, although no one had been told to do it. These kids today don't even know how to b.s.

"These kids today don't even know what to wear to work. I mean, they'll show up in long coats and stacked-heel shoes. We used to rap a lot, and I'd try to help them understand how to get a toehold on a job and how to progress. The only thing some of them wanted to know was, how did I get my job?

"I don't know where the problem originates. I suppose it's because their counselors don't tell them, or because they don't have to sharpen their wits hustling their own jobs, or because there are no fathers, brothers or uncles to clue them in to how it's done."

All those things, no doubt, and this additional one: So many of the "good" jobs—particularly in a city like Washington—are inside office buildings and out of view, or they involve functions that, to the uninitiated, don't look like work at all.

And as a result, thousands of youngsters—many of them bright, ambitious and unafraid of work—are reaching adulthood without learning just what work is.

[From the Washington Post, Dec. 5, 1977]

Kids Who Don't Know How Little They Know

(By William Raspberry)

The dozen young black men on the other side of the one-way glass were eager and ambitious, though less than dead certain about their career plans.

According to the New York management consultant who told me about it, all were high school graduates, and at least half of them students in open-enrollment junior colleges.

"'What do you want to do?" a counselor asked them. The answers came back: "Get a job." "Play ball (professionally)," "Make me some money."

Few were even remotely realistic about their prospects.

One young man had gone to Brooklyn College to study accounting but soon had switched to Manhattan Community College and a record-keeping course. After graduation, he said, he expected to make "you know, maybe $25,000." Another, whose skills were hardly more sophisticated or any more in demand, thought he'd be knocking down "about 40 grand."

The one who wanted a "real job" defined it as a "white-collar job, you know, where I can tell a few people what to do. Like, I see them coming in and out of this building all the time."

Suppose things didn't go exactly as he planned; would he settle for something else, say driving a cab?

"No, man. I got to make 25 to 30 K, minimum." Six of the 12 expressed serious interest in mass communications, though none could define it, the consultant said. Two of them thought it had something to do with data processing.

"The one phrase that was repeated over and over, like it had been drilled into their consciousness, was their need for 'meaningful and relevant' jobs," he said.

He feared that most of them would be disappointed, because no one had bothered to tell them about the real world. For instance: "The graduation rate from junior colleges in New York City is 40 percent, and of that 40 percent the majority are women who've gone back to school to become nurses, technicians and so forth."

"I feel sorry for some of these kids," the New York consultant said. "They don't know how little they know. Their guidance counselors are scared to tell them they aren't really equipped to go to college, and once they are in college, they automatically reject certain kinds of work as beneath their education.

"But it starts even earlier than that. When I went to public school in New York, there were two diplomas: regents or vocational. Now they have these two, plus academic, general and attendance. The attendance diploma says only that you 'completed' 12 years of school—which you can basically do just by showing up."

It's a familiar phenomenon, sometimes the result of those in authority not really caring about the kids, but perhaps more frequently the result of misguided attempts to make their lives better.

Someone observed the income differential between high school graduates and dropouts, noted also the higher dropout rate for black youths, and concluded that it would be a good thing if more young blacks completed their high school education.

Fine. But we've been accomplishing that worthy goal, not by helping the young people understand the value of education and of perseverance, not by inspiring them to work harder and keep their grades up. We're doing it by making high school substantially easier—in effect, by promising them a diploma if they only stick around long enough.

Someone discovered that high school completion was no longer adequate to ensure a decent job. A college diploma was the ticket for the job lottery, it seemed. Not a college education, a college diploma.

And rather than risk having admissions officers keep large numbers of ambitious youngsters out of line for the job lottery ticket, we pushed the notion of open-enrollment colleges to which any illiterate possessor of a meaningless high school diploma could gain automatic admission. Maybe next we'll make the awarding of the college degree automatic as well.

But, there ends our ability to smooth the way. We can't demand that prospective employers treat these counterfeit lottery tickets as genuine. So what finally happens, after all our years of care and concern, is that the youngsters discover that they are unemployable, that they have been had—not by "society" but by us.

And not just the ones who took the easy ride. We are in danger of creating a situation in which certificates from certain high schools and colleges will be an actual detriment to their possessors—even those who earned them."

LORNE GREENE'S TRIBUTE TO SENATOR HUMPHREY

Mr. ANDERSON. Mr. President, since Senator Humphrey's return to the Senate on October 25, many well-deserved tributes have been paid to our colleague by Members of Congress. Prior to returning to Washington, D.C., on October 20, the Minnesota Society sponsored a dinner in honor of Hubert H. Humphrey, in part to raise funds for the Humphrey Institute of Public Affairs at the University of Minnesota.

One of the speakers at the Minnesota Society dinner was Lorne Greene, the respected actor and a long-time close friend and supporter of Senator Humphrey. Mr. Greene's remarks particularly impressed me for they expressed eloquently the deep personal respect and affection that so many feel for Hubert H. Humphrey.

Mr. President, my colleagues will all be impressed with Lorne Green's tribute to Senator Humphrey and I ask unanimous consent that Mr. Greene's remarks be printed in the Record.

There being no objection, the remarks were ordered to be printed in the Record. as follows:

Tribute to Senator Hubert H. Humphrey

(By Lorne Greene)

I am very happy to be here tonight. I flew in from Vancouver, Canada, this afternoon. It was a long trip, but I would do it again and again for our dear friend Senator Hubert Horatio Humphrey.

And I am pleased as punch to see so many friends here tonight to honor the great Senator. What a man we are honoring. What a shining example of faith and courage. He is unique. A rare breed. He would have fitted well with the Founding Fathers had he been born in that time and there's no doubt that he would have been one of them.

But we are fortunate that he is of our time. He is a modern Founding Father.

Imagine the enormous energy and initiative of the man who imprinted the most indelible changes for human progress in America in this century. I am so proud to be the friend of the man who brought the sunshine into the Democratic Party in 1948 in the struggle for civil rights which culminated in his Civil Rights bill . . . then there was the great fight for Medicare, and the Peace Corps, and the Jobs Corps, and his leadership in the fight for proper nutrition for all people and his belief in their right to live in the Nuclear Non-Proliferation Treaty, and so much, so much more.

Whatever cause Hubert espouses, is always a just cause. He has such a great sense of decency and fairness. More than that, no one in his presence ever feels depressed. He makes them feel light and happy and full of hope. Sunlight is his ambience, not darkness. He has never lived for personal gain or profit, only to make things better in this world for all of us. Speaking for Nancy and myself, Hubert Humphrey renewed our faith in politics and politicians. He never allowed politics to make a cynic of him, never allowed reality to make him lose sight of his goals and ideals and his faith in human nature, and he never allowed his ideals to cloud his sense of reality.

He is not here tonight and he is sorely missed. We need him perhaps more than ever. We need his strength, his quick and accurate perception, his marvelous sense of humor, his down to earth practicality, and we need him to keep talking to us and telling us things we might otherwise be too likely to forget. And we need to pray for the miracle of his recovery.

We need his extraordinary vision and humanity for some time to come. Leaders may come and leaders may go, but I suspect that when history records the great social advancements of our time, the impact of the man who never became President may just outweigh them all.

DAVID BRUCE

Mr. PERCY. Mr. President, the death of David K. E. Bruce is a great loss for our country as well as for his family and friends. He was an ambassador par excellence who served the United States in major posts abroad, in Paris, Bonn, London, Peking, and NATO. He was highly respected as an Undersecretary of State and an Assistant Secretary of Commerce. He was a special representative to the European communities.

For those of us who were privileged to know him personally, he was a man of character, intelligence, judgment, and discretion. He was a wonderful and thoughtful friend. Our deepest sympathy goes to his beloved wife and close companion, Evangeline.

I ask unanimous consent that the David Bruce obituary published in the Chicago Sun-Times of December 6, 1977, and that of the New York Times be printed in the Record.

There being no objection, the obituaries were ordered to be printed in the Record, as follows:

China Liaison David Bruce, 79, Dies

Washington.—David K. E. Bruce, the first U.S. liaison to China after the 1972 thaw in relations and a major diplomatic figure for more than a quarter century, died Monday in Georgetown University Medical Center after suffering a heart attack. He was 79.

Mr. Bruce was ambassador to France in 1948–49, West Germany in 1957–59 and Great Britain in 1961–69.

Although he was only briefly a member of the Foreign Service in 1924, he became one of the United States' diplomatic giants.

He was undersecretary of state in 1952–53, an assistant secretary of commerce in 1947–48 and a special representative to the European communities.

During World War II, he was chief of European operations of the Office of Strategic Services, forerunner of the Central Intelligence Agency.

A registered Democrat, Mr. Bruce was lured from retirement in 1971 by President Richard M. Nixon to lead the U.S. delegation to the Vietnam peace talks in Paris. Frustrated by the slow progress of the talks, he retired once more a year later, only to be called again by Nixon in 1973 as the first head of the U.S. liaison office in China.

Mr. Bruce retired for good in 1976 after serving under President Gerald R. Ford as ambassador to the North Atlantic Treaty Organization. Ford presented him with the Medal of Freedom.

Three Democratic and three Republican Presidents relied on Mr. Bruce for advice in sensitive diplomatic roles, and he once was asked how he was able to retain the confidence of a succession of administrations.

"The cardinal rule for an ambassador in a foreign country is to cherish no antipathies or attachments for particular domestic political parties or programs," he replied.

He was the author of a history of the early days of the American Presidency called "Revolution to Reconstruction."

Mr. Bruce—a patrician who looked the part—was silver-haired, slim and always impeccably tailored. He was one of the members of a wealthy landed family, the Bruces of Maryland and Virginia.

He was divorced from Alisa Mellon in 1945. After that, he married Evangeline Bell, who has a deep interest in the arts. They had three children, Alexandra, David and Nicholas.

David K. E. Bruce, Diplomat, Dies

(By Albin Krebs)

David K. E. Bruce, one of the nation's most gifted and seasoned diplomats, died early yesterday at Georgetown Medical Center in Washington.

Mr. Bruce, who was 79 years old, suffered a heart attack Sunday at his home and was admitted to the hospital at 10 P.M. He had been retired since early 1976 after having served 16 months as chief United States delegate to the North Atlantic Treaty Organization.

Upon his retirement, he was awarded the Medal of Freedom.

Secretary of State Cyrus R. Vance said in a statement yesterday that Mr. Bruce had "served the United States with great distinction" and "was among the most eminent diplomats of his generation."

Mr. Bruce was a man of great charm, wit and sympathy, whose easy skills at cooling sometimes heated situations led him to a distinguished career that included heading three of his country's premier embassies, those in London, Paris and Bonn.

He was highly regarded in all those capitals, particularly in London, where he was Ambassador for eight years, the longest that anyone ever held that post. He also served in less glamorous and more vexing diplomatic assignments, such as the job he took on in 1970—head of the American delegation at the stalemated Paris peace talks to end the war in Vietnam. In addition, he was the first head of the U.S. liaison office set up in Peking in 1973.

After serving as Ambassador to France from 1949 to 1952, Mr. Bruce returned to Washington to become Under Secretary of State, and in 1953, he was made the special United States observer at the European Defense Commission and later was appointed representative to the European High Authority for Coal and Steel.

In the two latter posts, Mr. Bruce strove to achieve a united Europe, an undertaking that was only a partial success. He later regarded the breakdown of attempts to completely unify Europe as "a great failure for the United States as well as a great personal failure."

SERVED SIX MONTHS

Mr. Bruce was a Democrat, but in his diplomatic roles he was strictly nonpartisan. He took on assignments from Presidents Harry S. Truman, Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson, Richard M. Nixon, and Gerald R. Ford.

Upon his first "retirement" from the State Department, in 1969, when he left his post in London because of health problems, Mr. Bruce said, "The cardinal rule for an ambassador in a foreign country is to cherish no antipathies or attachments for particular domestic political parties or programs. This, fortunately, does not forbid him to contract friendships regardless of parties, or love the country of his residence dispassionately."

Mr. Bruce was called out of retirement a year later for the Paris Vietnam talks, then the Peking post, and in 1974 he became the American representative to the North Atlantic Treaty Organization in Brussels. He was then 76 years old.

Mr. Bruce was a descendant of old and distinguished Maryland families. His father, William Cabell Bruce, was a United States Senator from Maryland and was noted as a lawyer and an author (his biography, "Benjamin Franklin, Self-Revealed," won the Pulitzer Prize in 1918). Mr. Bruce's mother was the former Louise Este Fisher, a member of one of Baltimore's first families. His older brother, James, was to become Ambassador to Argentina in the 1940's. Born in Baltimore on Feb. 12, 1898 David Kirkpatrick Este Bruce had a comfortable upbringing, attending private schools and moving in the best circles. He entered Princeton in 1915, but left in 1917, in his sophomore year, to enlist in the Army. While serving in the artillery in France, he received a battlefield commission and was discharged as a first lieutenant.

DELIVERING A PIANO

After the war Mr. Bruce served briefly as a diplomatic courier in Europe, quitting in disgust after being assigned to deliver a baby grand piano to a Y.M.C.A. in Istanbul. He attended the law schools of the University of Virginia and the University of Maryland, and after being admitted to the Maryland bar in 1921 set up practice in Baltimore. In 1924 he was elected to the Maryland House of Delegates.

He joined the Foreign Service the following year and was assigned to Rome as a vice consul, with the primary duty of screening would-be emigrants to the United States. While in that job Mr. Bruce met Benito Mussolini and told him, undiplomatically: "I've been here for six months and my luggage is still being held by your Customs." Hours later the luggage was delivered to his apartment.

During the 1930's Mr. Bruce, who had established residence in Virginia, bought a 500-acre tobacco plantation and worked it as a gentleman farmer. He also invested in a plant that manufactured parachutes in Virginia. In 1939 he was elected to that state's House of Delegates.

His tenure was short-lived, however. By the following year war had erupted in Europe, and Mr. Bruce, he recalled years later, "knew instinctively that within months we would be deeply involved." He sought and won appointment as the chief representative of the American Red Cross in London. Even before the official entry of United States into the war late in 1941, Mr. Bruce had been recruited by Maj. Gen. William J. Donovan to be the general's right-hand man in the formation of the Office of Strategic Services, the intelligence-gathering organization that was to evolve into the postwar Central Intelligence Agency. From 1943 until 1945 at the height of World War II, Mr. Bruce commanded the O.S.S. in the European Theater of Operations.

WED MELLON'S DAUGHTER

Mr. Bruce came from a moderately well-to-do family, and never had to do without. He did not become a rich man, however, until after he married his first wife. She was Ailsa Mellon, the only daughter of Andrew W. Mellon, the multimillionaire industrialist who was Secretary of the Treasury at the time of his daughter's marriage to Mr. Bruce in 1926.

The following year, Mr. Bruce left the Foreign Service and moved with his wife to New York, where, for the next several years, he was active in the management of the Mellon business interests and in the firm of W. A. Harriman & Co. (At one point he was a director of some two dozen corporations.) While acquiring the base for a fortune, Mr. Bruce became the close friend of W. Averell Harriman, who was later to have a hand in getting him back into diplomatic channels.

David and Ailsa Mellon Bruce were divorced in 1945. Their only child was lost with her husband, Stephen R. Currier, in a 1967 airplane crash in the Caribbean.

Later in 1945 Mr. Bruce married Evangeline Bell, daughter of a career Foreign Service officer, and they had three children, Alexandra, David and Nicholas. Their daughter died in 1975.

Evangeline Bruce, a woman noted for her taste and beauty, loved her husband's assignments abroad, but managed at the same time to preside over the couple's three permanent households, a red brick house in the Georgetown area of Washington, a Gothic-type mansion on the old tobacco plantation in Virginia and an apartment in London.

In 1947, at Mr. Harriman's urging, Mr. Bruce served as Assistant Secretary of Commerce and the following year became chief of the European Cooperation Administration Mission to France, a job in which he channeled Marshall Plan aid into France's postwar recovery. In 1949 he became Ambassador to Paris and remained there until 1952 and his return to Washington to be Under Secretary of State.

In 1957 President Eisenhower ignored the protests of his fellow Republicans over Mr. Bruce's $1,000 campaign contribution to the 1956 Democratic campaign and appointed him Ambassador to West Germany. President Kennedy sent him to London in 1961.

The Bruces were admired and loved by the British, who appreciated their knack for seeming down-to-earth, taking their children to a pub for traditional steak and kidney pie washed down with a pint of bitter. (Mr. Bruce was also a gourmet of great sophistication and kept impressively stocked wine cellars in his homes.) The embassy in London entertained all sorts of people—writers and artists, long-haired dropouts, the socially prominent and the politically powerful.

As Prime Minister Harold Wilson told Mr. Bruce, "Your ambassadorial epitaph will never contain the phrase 'United States Ambassador to the Establishment.' "

Mr. Bruce was a man of singular grace who seemed able to perform any task, whether diplomatic, social or financial, with a refreshing admixture of charm, toughness, amiability, slyness, wit and an aura of offhanded expertise. He had a reputation as a man of reason, capable of being polite and quietly analytical on the most agitated of subjects. When a diplomatic bargaining discussion turned uncomfortably overheated, he was apt to cool matters with generous pourings of Dom Perignon.

He moved in a richly embossed world, one in which he could keenly discuss the most esoteric of books and speak learnedly on such subjects as fine silver and furniture. An avid and knowledgeable art collector, he at one time served as president of the National Gallery of Art in Washington. Mr. Bruce's knowledge of the arts stood him in good stead in discoursing on diplomatic problems. "In political affairs," he once told a news conference in Bonn, "the inability of nations to compose their differences constitutes a disharmony that would be insufferable to any art-loving audience."

A raconteur of considerable repute, Mr. Bruce liked to regale his friends and audiences with anecdotes about an assortment of relatives, his favorite being a 102-year-old grandmother. He once told a delighted audience about "the old lady, who had long abandoned any effort to communicate with her relatives, addressing them only in French, a language none of them understood. "She loathed Baltimore," he said, "although she acknowledged the excellence of its shellfish." When fire swept the city, he said, his centenarian progenitor perched on her roof "There goes the national bank!" She had and made joyous exclamations such as, her bonds in that bank, Mr. Bruce said, but she later explained she had always detested its architecture.

Despite his smoothness and calm demeanor, however, Mr. Bruce could on occasion be blunt. At one point, during the frustrating Vietnam negotiations in Paris, he became incensed after Xuan Thuy, the North Vietnamese representative, began an intemperate, personal attack on President Nixon.

Mr. Bruce told him coldly: "Your choice of words and your attitude . . . with regard to President Nixon [are] shameful and completely inadmissible. At least one should be courteous if one cannot be quiet." He added testily that "there have never been any true negotiations."

Mr. Bruce's role in the Paris talks ended in frustration and deadlock on July 29, 1971, but later it was revealed that with his help, Secretary of State Kissinger had had secret talks with the Communist side that eventually helped break the deadlock.

A GRACEFUL SPEAKER

Mr. Bruce, who walked with a slight limp because of a wartime injury or gout (none of his friends was able to determine the exact cause), was well over 6 feet tall. He spoke fluent French, but found it rough going in Bonn because he knew little German. He was a graceful extemporaneous speaker with a trace of a Tidewater accent. He dressed excellently and unflashily.

A man of exceptional warmth and generosity, he never hesitated to spend his own money in carrying out his diplomatic assignments. For example, when he was Ambassador to France, he used nearly the entire annual entertainment expense allowance furnished by the State Department just for the traditional Fourth of July party for the American colony in Paris. He thus assumed responsibility for the payment of all other debts in connection with embassy receptions and entertainments for the rest of the year.

Discussing the role of an ambassador, Mr. Bruce once said: "The dictionary definition of diplomacy is the simplest and most accurate of all—diplomacy is the management of international relations by negotiation. It is not a system of moral philosphy. It is rather the application of intelligence and tact to the conduct of official relations between the governments of independent states."

THE 60TH ANNIVERSARY OF THE NATIONAL FEDERATION OF FEDERAL EMPLOYEES

Mr. BURDICK. Mr. President, I take this opportunity to pay tribute today to the National Federation of Federal Employees, the oldest of all general Government employee organizations and the largest independent union of Federal employees in the Nation.

The National Federation of Federal Employees, this year celebrating its 60th anniversary, was founded at a time when Government workers had seen no general pay increase for 50 years and World War I had increased the cost of living to the point of causing financial problems for many. Among the goals adopted at the Charter Convention of NFFE in 1917 were: A retirement program for Federal employees, a modern system of duties classification, elimination of the spoils system, and establishment of a sound personnel system, and broader scope for the Civil Service Commission. The National Federation of Federal Employees has made and continues to make a key contribution toward achieving these and other very worthwhile goals.

I ask Senators to join me in saluting the National Federation of Federal Employees and in recognizing the accomplishments of an organization whose purpose, as stated in its constitution, includes "to aid in the perfection of systems that will make for greater efficiency in the various services of the United States."

THE CASE FOR INCREASED TRUCKING SAFETY

Mr. PERCY. Mr. President, in recent months, I have made several statements in the Senate concerning the lack of adequate truck safety on this Nation's highways. As the Nation's truck population continues to grow, and as Americans gradually turn to smaller cars, the lack of truck safety will become a greater, even more serious problem.

Secretary of Transportation Brock Adams has pledged to do his best to use the resources of the Department of Transportation to combat safety violations. I intend to enhance the Department's statutory power in the safety area by introducing a comprehensive truck safety bill early next year. Specifically, this legislation will be aimed at increasing the use and amount of civil fines for violation of safety regulations, extending protection to truckers from employer discrimination for refusing to drive unsafe equipment or break Federal safety regulations, and providing incentives to States to adopt adequate safety programs.

A recent article by Robert Sherrill in the New York Times magazine excellently outlines the problem of truck safety. He writes that—

> Truckers are operating all too often outside the law, greatly endangering other motorists and causing extensive damage to the interstate highway system.

Mr. President, it is important to point out that many truckers are conscientious about safety. Others would be, were it not for trucking company demands and schedules. But there are so many big trucks on the roads today that this problem cannot be ignored; it has reached proportions that demand congressional action.

Mr. Sherrill has discussed this timely issue with precision and facts. I ask unanimous consent that "Raising Hell on the Highways" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAISING HELL ON THE HIGHWAYS

(By Robert Sherrill)

I got 10 forward gears and a Georgia overdrive
I'm takin' little white pills and my eyes are open wide
I just passed a Jimmy and a White
I been passin' everything in sight
Six days on the road, and I'm gonna make it home tonight.

—"Six Days on the Road," by Earl Green and Carl Montgomery.

Americans are strangely sentimental about the heavy, long-distance truck—the tractor-trailer outfit with a dozen or so gears and a dozen or so tires that washes the highways with waves of terrible noise and vibrations and towering arrogance. Trucks now carry about one-third of the nation's intercity merchandise, and we probably could not do without them, but they are nonetheless one of the great abominations of the Asphalt Age.

Yet they and the men who drive them do, like Beelzebub, have a unique attraction for many people. Jane Stern, who hitchhiked with truckers for three years to gather material for her book "Trucker," subtitled it "A Portrait of the Last American Cowboy." She has a point, for truck drivers have inspired as much inflated myth as cowboys of another era, and when you consider the long hours, the bad food, the boringly macho aura and the casual attitude toward the law that was and is characteristic of both careers, it is not hard to see why truckers and cowboys are lumped together.

Even a writer for the staid Smithsonian magazine becomes a bit giddy over what he calls "the new folk hero." Citizens-band radio, once used only by truckers to circumvent the highway patrol, is embraced with gabbling bravado by the middle-class motorist. Country-western musicians crank out endless variations on the theme of the trucker's lonely road. Movies—at least since Bogart and Raft performed in "They Drive by Night"—keep going back to muscular truck drivers for basic schmaltz. Politicians, always eager to find some way to seem close to the commonest folks, apparently enjoy being intimidated by truckers who brandish their rigs like weapons. Hundreds of heavy trucks descended on Washington to roar around the Capitol in support of strip mining; when a Congressional subcommittee met on the West Coast to discuss legislation to protect the redwoods, scores of angry truckers drove their vehicles, laden with heavy tree-cutting equipment, into San Francisco to tie up traffic. The use of trucks in this way, trying to win economic debating points by paralyzing traffic, has become increasingly commonplace. But politicians and the general public, if they are offended by the ignominy of being bullied, certainly do not raise much protest. When motorists traveling at moderate speeds look into rear-view mirrors and see the back windows filled by the grilles of tailgating trucks, they may curse in terror, but they seldom try to get their curses translated into stiffer law enforcement. The drivers of small cars seem to accept as a routine part of life that they must fight the steering wheel for stability in the 70 mile-per-hour wake of passing trucks. The new folk hero is tolerated when not idolized.

Whatever pleasure Americans get from indulging themselves in the Romance of Trucking comes at a very high price—in lives lost, dollars wasted and driving comfort surrendered. Moreover, it is an indulgence in veneer, not in the reality, of trucking. The reality of this $108 billion industry is not to be found at the counter of a neon-lit truckstop but in the executive suite of American Trucking Associations Inc., the principal Washington voice of the industry, a voice that harmonizes with other rich lobbies representing oil, rubber and highway-construction interests.

In one of the few recent challenges to the association's influence over Congress, Representative Edward I. Koch, now Mayor-elect of New York, tried to to get a rollback of allowable truck weights. Just before the vote was taken, Koch told his Congressional colleagues, "We have been lobbied to death in this Congress by the truck lobby. In the judgment of some, it is at least as big as, and perhaps bigger than, the military-industrial lobby. . . . The largest lobby in the country today is the trucking lobby, and they have got to be stopped and stopped on this floor." He may have been exaggerating, but the ease with which it defeated him indicated he wasn't exaggerating much.

The reality of trucking it that if it is dominated not by the individual trucker, not by the owner-operator, but by corporations owning thousands of rigs each—outfits like McLean and Yellow Freight and TIME-DC. Theirs is not the jargon of CB radio but of the ledger, and the life they have created for their drivers is often not so much an adventure as an ordeal. But the Romance of Trucking serves the motor-carrier corporations very well. In lieu of comfortable and safe working conditions, they serve up another verse of folk heroism for their drivers. Some are simple enough to be satisfied with that, but many others resent being portrayed as happy, defiant, whistling highwaymen. "I'd give anything, I'd get down on my knees and pray, if it would do any good," says Lincoln Merrill of Winston-Salem, N.C., for 17 years a line driver for Roadway Express, "if I could convince the public that truck drivers are forced to be the unwilling participants in all sorts of unsafe practices because our union and the Government are in collusion with the trucking companies."

The truck population, swelling everywhere, has reached plague proportions in some parts of the country. The federally regulated ton-miles of truck traffic has more than doubled since 1960, and the Highway Users Federation—500 businesses and industries that feed off the highways—predicts that during the next 15 to 20 years, while auto travel increases 30 to 50 percent, truck traffic will double again.

As trucks have increased their domination of the highways, they have also increased their slaughter. The truck lobby boasts that trucks are the safest vehicles on the highways, if the judgment is based on how many people they kill per million miles. Quite true. But unfortunately there are getting to be so many big trucks on the highways, and each truck driver travels so many more millions of miles than the typical motorist, that they must be considered just as dangerous as they look and sound.

Of the four million trucks rolling today, about one million are the biggies, weighing up to 80,000 pounds (and, by special permit, even up to 130,000). These behemoths have an especially wicked kill rate. Of fatal highway accidents in 1975, Government figures show that 7.8 percent involved heavy trucks. In 1976 their share of the carnage moved up to 8.9 percent—a rather impressive score, considering that these heavies constitute less than one percent of vehicles on the road. Considering also that while all fatal highway accidents increased only 1.2 percent between 1975 and 1976, those involving heavy trucks soared 16.8 percent.

When the collision is between a heavy truck and auto, it's goodbye motorist. The University of North Carolina's Highway Safety Research Center analyzed 2,776 crashes between heavy trucks (all weighing more than 24,000 pounds) and autos; 2.8 percent resulted in a death—a mortality rate 14 times higher than the rate for auto-auto accidents. They found that seven out of eight times it was the car occupant, not the truck driver who was killed. And the heavier the truck, the deadlier. The National Highway Traffic Safety Administration found that deaths among the car occupants increased by 1.1 for each 10,000 pounds in added truck cargo.

To a large extent, the increased involvement of heavy trucks in highway slaughter can be blamed on a Congress and a Federal transportation bureaucracy that, for nearly two generations, has had a policy of doing as little as possible to guarantee the public's safety.

Most state governments have a permissive attitude toward the trucking industry, but the pattern and spirit of this permissiveness is set in Washington. Motor-carrier companies are rarely forced to adhere to safety laws, and the laws that they are supposed to adhere to are antiquated. If they operate safe equipment and give their employees safe working conditions—and some do—it is out of corporate benevolence, not out of fear of Federal or state sanctions. Nor do they fear pressures from the International Brotherhood of Teamsters, which did not get around to establishing a safety department until 1973; it has been one of the less aggressive union offices.

Jurisdiction over safety in the interstate truck industry is largely in the hands of the Bureau of Motor Carrier Safety. As a policing agency, the B.M.C.S. could be fairly described as a minifarce—intentionally set up and perpetuated by Congress in such a way as to give no more than the appearance of concern. The B.M.C.S. is debilitated by lack of funds, buried under a slag heap of superior bureaucracy, and its personnel, absurdly few for the task, are trained to a high degree of inefficiency.

The B.M.C.S. started life as an adjunct to the Interstate Commerce Commission, probably the most unabashedly proindustry regulatory agency in Washington. Most of the B.M.C.S.'s enforcement personnel learned their bureauratic survival skills in the I.C.C. days. When the Department of Transportation was established in 1966, the B.M.C.S. came over as a part of the Federal Highway Administration. The FHWA is now headed by William M. Cox, who until his appointment by President Carter, was vice president of a Kentucky trucking company operating 700 tractor-trailer units. The FHWA has always been much more interested in serving commerce with bigger and wider highways than with the safety of the motoring public, and under Cox it has shown no sign of changing.

But for all their faults, B.M.C.S. officials don't compound their failure with hypocrisy. They know they don't amount to beans. Howard L. Anderson, associate administrator for safety at the Federal Highway Administration, is policy boss of the B.M.C.S. He gives this honest appraisal of the bureau's work:

"There's around three million heavy trucks we have jurisdiction of. And around four million drivers. That's interstate trucks, heavy trucks, not the cement trucks and delivery trucks around town. We have to set regulations for drivers' physical qualifications, and enforce them. Then we have to take the vehicle and determine whether it is a safe commodity, and we have to decide if the carrier is complying with the safety requirements, and then whether the driver is operating the vehicle properly after he gets in it.

"We have 128 investigators in the United States. That's right—128. They handle all enforcement activities. You know, three million trucks and four million drivers is a lot of trucks and drivers for 128 people to regulate. You take any small suburb of New York City and you will find 600 or 700 police enforcing the laws of that suburb. To do the safety job right, says Anderson, would take between 1,000 and 2,000 investigators."

"So what you're talking about," says William Russel Fiste Jr., head of the bureau's Regulations Division, "essentially, is a voluntary program. We take action against only the most flagrant violators." In fact, the bureau rarely takes any action against even flagrant violators, and it does not normally discover these flagrant violators except by accident. Its record gets progressively worse. According to the Government Accounting Office, 10 years ago the ratio of commerical vehicles to Federal safety investigators was about 22,000 to 1, and about 3 percent of these trucks were inspected. Today the ratio is about 32,000 to 1, and the bureau is inspecting less than 1 percent of all interstate commercial vehicles.

The bureau's investigators hang out at state weigh stations and watch the trucks roll by. Once in a while, if they don't like the look or sound of a truck as it approaches the scales (if, for example, they notice something obvious like the hiss of a leaking air brake), they will flag it to the side for an inspection. Pierson says his investigators give the visual-audible once-over to about 80,000 trucks a year—a trifing fraction of the total in service. Out of these, they usually give about 25,000 to 30,000 trucks a full half-hour inspection. And between one-third to 40 percent of the trucks receiving the fuller inspection turn out to have "imminently hazardous" defects. They are impounded until fixed. Twelve thousand trucks were impounded last year.

How many unsafe trucks slip across the scales without a glance from Federal investigators? Nobody knows. "It's a sampling at best," acknowledges Pierson. "If one were going with the probabilities, the probability of being stopped, inspected and impounded isn't that great."

Nor is the risk of being punished for violating safety regulations. There are about 160,000 motor-carrier companies in this country, about 17,000 of which are licensed by the I.C.C. for interstate operations. In a typical year, the B.M.C.S. will take no more than 500 to court for lawless behavior, and the total fines resulting from these court encounters usually amount to considerably less than $1 million—hardly enough to frighten an industry whose regulated part alone takes in well over $20 billion a year. It is more profitable, some companies feel, to keep rolling and pay the petty fines than it is to take trucks out of operation for safety repairs. Interstate companies can have their licenses revoked by the I.C.C. but only twice in the last 10 years has it taken such action against firms that operate dangerous clunkers.

Although Federal law says that no driver can be forced to take out unsafe equipment, drivers have been fired for refusing a clunker, and the Teamsters Union, which has a cozy relationship with management, does not always fight for their re-employment. Nor have Federal officials always responded to drivers' safety complaints with much sympathy. Some drivers claim that when they specifically requested bureau investigators to inspect a dangerous defect they were told to move along and stop holding up traffic.

Some of the regulations are stunningly outdated. Federal law permits 60 hours of driving in seven days, 70 hours in eight days. It stipulates that a driver can be on duty for 15 hours but that he can actually drive for only 10 before getting eight hours off. That law is nearly 40 years old. It was put on the books when trucks were half the size and capable of half the speed they are today, and when traffic was half as thick. But until recently Federal highway-safety officials did not seriously consider imposing more humane working conditions on the industry even though they admit that driver fatigue is the No. 1 safety problem in trucking.

They could hardly say otherwise. Their own statistics covering major truck accidents from 1973 to 1976 show that physical exhaustion played a role in 32 percent of the cases. A study done for the Department of Transportation in 1972 found that after four hours behind the wheel, truck drivers begin making a "significant" number of errors and suffering a significant decline in alertness. It found that, after about seven hours of driving, "the frequency of accidents increased disproportionately." Worse, the study showed that after nine hours on the road a driver is too drained to recover from an ordinary rest break—indeed, that "there was not only no recovery but a further decline in psychophysiological arousal following that break." And it found that all of these physical problems were greatly intensified after fours days on the road.

Since profits take precedence over safety, Federal officials generally ignore the hours-on-duty regulations and let the highways fill up with exhausted truckers. Bob Green, a former produce trucker and now a reporter for Overdrive, a publication that caters to independent truckers, says, "Most produce is handled from Texas to New York City—2,200 to 2,500 miles—in 72 hours, and it doesn't pay enough to warrant using two drivers per truck. Some shipments are made from California to New York City in 72 hours. [Some by two drivers per truck; some by one.] The only way you can do that is to average 50 miles an hour for three 20-hour days. And the drivers know they've got to make it. If they're a few hours late, the people on the other end may refuse to take the shipment."

When Green was driving, he often did the produce trip from Florida to California, 3,200 miles of steady driving except for a six-hour fall-over in El Paso. He says others are still pulling similar marathons all over the country. "How do you think produce is picked in Florida one day and on the shelves in New York City the next day?" asks Bill Scheffer, national vice president of the Independent Truckers Association.

Many independent drivers are willing to undergo great fatigue because, for the luxury of being their own boss, they are often strapped with a $50,000 tractor-trailer outfit that they must pay off in three years. They can't afford a weekend at home, can't afford the kind of layovers on the road that permit digestion and enough sleep, and they feel that the 55-mile speed limit violates some primitive compact by which a person should be free to gamble his life (and others' lives) for his livelihood. An I.T.A. press release argues: "If Gary Gilmore can be allowed to kill himself, or be sentenced to death, then the nation's speeding motorists should have the same right."

But if the independent truckers are willing to risk lives in pursuit of the buck, they are no more responsible in this regard than many regulated trucking companies that subject their drivers not only to long but also erratic schedules. Bill Berryhill, a former Teamster official and 14-year driver out of Hagerstown, Md., says, "It's very common for a driver to be awake 24 hours. What happens is, you'll be eligible for a call, say, at 10 o'clock in the morning to run at noon. O.K., they do not call you. You sit by the telephone and wait for this call eight to 10 hours, maybe 12 hours, before the company calls you. By the time you get away from the terminal, you should be going to bed but instead you're heading out on a 10-hour run. You are out there on the road driving a vehicle after you have been awake 20 hours. And that is very, very commonplace."

Officials of Professional Drivers Council (PROD) say their files are loaded with letters from drivers making the Berryhill complaint. PROD is a lobby of about 6,000 dissident Teamsters who don't feel that their union is scrapping hard enough for safe working regulations. Arthur L. Fox 2d, former executive director and still attorney for PROD, claims that the B.M.C.S. has interpreted the hours-of-service regulation so loosely that companies "frequently" force drivers to work "close to 100 hours by conventional notions of what constitutes work" while stringing together 70 hours of driving in an eight-day period.

Aside from the long hours that bring it on, fatigue will also finally envelop drivers as the result of physical punishment inside the cab: fumes from defective exhaust stacks, noise levels that damage hearing (110 decibels in some cabs—greater than the noise level of the Concorde at takeoff) extremely cramped seating, and so much jolting and bouncing that drivers commonly suffer back and kidney disorders.

Government transportation officials have known of these sources of fatigue for years. You can go back to, say, 1971 and find a group of medical researchers from Michigan trooping to Washington to lay out all of these before a Senate labor subcommittee. They told how drivers finally become virtually hypnotized from staring at the roadway, how vibrations from high-powered truck engines causes fluid shifts within a driver's body and, from that, chronic and permanent lung damage. At about the same time, Ralph Nader came out with his poll of 1,300 truck drivers, 61 percent of whom said that taking pep pills to stay awake was "widespread" in their ranks. Eighty percent of the drivers admitted to having dozed at the wheel despite taking the pills.

But what has happened as a result of these disclosures? Virtually nothing at all. Drivers are still hallucinating from exhaustion. Pep pills, as FHWA's Anderson admits, are still being used, though nobody knows to what extent. One of the drivers who was a witness at the 1971 hearings says today, "the only difference our testimony made was it raised the price of goofballs."

If anything, new truck designs have made working conditions even worse and fatigue more certain.

Faced with an overall vehicle length maximum of 55 feet in most Eastern states and greedy to exploit the last cubic inch available under the regulation, carriers have begun using shorter cabs and longer trailers. Some cabs are so cramped that the drivers bump their knees on the dashboards. Ralph V. Durham, the Teamsters' safety director, says some tractors offer only 12 inches between the steering wheel and the back of the seat, forcing husky truckers to drive with their bellies rubbing against the wheel. The latest design for exploiting load space is the "cab under" tractor. Designed by Strick Corporation to give the trailer 600 cubic feet more payload space, the truck looks like a small crab scuttling along with a whale on its back.

Sixty percent of truck industry costs is labor. Profits depend largely on how adept managements are at manipulating that part of their budget. Since it is rather difficult to figure out a way to operate a truck with less than one driver, the objective over the years has been not to cut manpower but to increase the loads pulled per man. In 1975 the industry made a breakthrough on weights—a breakthrough that will put billions of additional dollars into its treasury but will further lessen highway safety and will add enormously to maintenance costs. The manner in which this came about is instructive.

When Congress passed the Federal Highway Act of 1956 (the year the Interstate was opened), it outlawed truck weights on the Interstate System greater than 18,000 pounds for a single axle or 32,000 pounds for tandem axles; additionally, it outlawed a gross weight of more than 73,280 pounds for both tractor and trailer.

Almost immediately the trucking industry began hammering at Congress to raise these limits. As the railroad industry slipped and the truck industry boomed in the late 1960's and early 1970's, the latter became increasingly ambitious and was determined to force Congress to permit a greater payload per truck. Largely through the counterlobbying of highway engineers, the American Automobile Association and the Association of American Railroads, however, these efforts failed.

Then came the energy hysteria of 1973, when OPEC nations quadrupled the price of oil. This was the opportunity the truck lobby was waiting for. Now it argued that patriotism demanded that the weight limits be lifted to get greater efficiency per gallon of gas. It claimed that if the load limit was raised to 80,000 pounds (about 10 percent higher), seven trucks could haul what eight trucks had hauled before. Claude S. Brinegar, then Secretary of Transportation and a former top executive with Union Oil Company, agreed wholeheartedly.

But Congress wasn't so sure. It had, after all, turned down the truck lobby's weight legislation in the two previous sessions, and now such august advisers as the National Society of Professional Engineers put it on the spot by urging that "the current fuel situation" should not be used "as a pretext for disregarding the wisdom previously demonstrated by Congress. . . ." Furthermore, as on earlier occasions, highway engineers came to Washington to warn that if the truck lobby got the axle loads it asked for, the remaining life of pavements could be cut 25 to 40 percent and that even some Interstate bridges (which are far sturdier than most bridges away from the Interstate) would suffer overstresses of up to 36 percent. Congress was also reminded there was little reliable data to show that raising the load limits could be done without seriously reducing highway safety.

The arguments against the weight increase were too potent for Congress to ignore unless the truck lobby could come up with a gimmick. It did.

Congress wanted to pass a 55-mile national speed limit. This would impose no great hardship on the trucking industry; after all, 55 m.p.h. was already the limit in several states where trucking was heaviest. Truckers weren't obeying the state speed limits and they had no intention of obeying the Federal, but with impressive theatrics the truck lobby claimed that a Federal 55 m.p.h. limit would ruin the drivers who were paid—as most are—by the mile; they claimed it would critically interfere with the pace of commerce; they claimed that truck motors were not built to operate at that speed. They said they simply could not accept 55 m.p.h. Then, with a great and generous show of compromise, the truck lobby offered to accept the unacceptable speed limit *if* Congress raised the weight limit. That was the swap that allowed Congress to bow without total embarrassment. And thus it came to pass; the weight change was quietly slipped into an omnibus bill in conference committee and shoveled through Congress during the pre-Christmas rush before adjournment in 1974.

The efforts by Congressman Koch in 1975 to have the weights rolled back got nowhere. So most of the nation is stuck with 80,000-pound trucks, or larger, and with little or no diminution of truck speeds. (You can test that premise to break the monotony of highway driving. Recently, I drove at a steady 63-65 miles an hour for 50 minutes. I was passed by 14 trucks; I passed one. Anyone who has been on the highway lately knows that heavy trucks and buses rarely get below the speed limit except on a grade.)

However, the new weight burden is not yet officially nationwide. The Federal increase of 1974 was permissive. States that did not already permit the 80,000-pound behemoths on their highways had the choice of taking the new limits or not. Maryland is one of the last barriers to the unobstructed movement of 80,000-pound trucks between Florida and the Northeast. The Maryland Legislature was deluged last session in what one reporter called "bourbon, beef and backslap" by the truck lobby, but so far the offerings have not been high enough to buy legislative approval of the new weights. A north-south line of barrier states also exists in the Middle West, frustrating the big trucks' unhampered east-west travel. But the pressures are getting so intense that the situation will likely change in the near future.

Meanwhile, the heaviest simply move through these barrier states illegally—traveling by back roads where necessary to dodge the weight stations. As the National Society of Professional Engineers warned Congress, no state can "realistically maintain limits presently set by law when neighboring states adopt the permissible maximums . . . no state could be expected to stop larger vehicles arriving at their borders from adjacent states."

They were so right. Illinois has not yet raised its maximum to 80,000 pounds, but Chicago is the nation's busiest truck terminal and many of the big trucks arrive there with outlaw load limits. A team of Chicago Tribune reporters staked out a weigh station southwest of the city and found that on a busy day an average of one truck every two minutes was leaving the highway to bypass the scale. The dodging maneuver took only five minutes of the truckers' time. Officials manning the scale could easily observe what the trucks were up to, but no effort was made to stop them. The policing of truck weights is left almost entirely to the states, but few try to enforce truck weights enthusiastically. In one recent year, Oregon issued 40,000 citations for overweight trucks, but according to the AAA, using data supplied by the FHWA, Pennsylvania issued only 610 (a tolerance for lawlessness that may help explain why Pennsylvania has 7,000 miles of roads that need resurfacing and 1,500 bridges that need replacing). Most states are more like Pennsylvania, and some—Massachusetts, Georgia and New York, for example—do not even have permanent weigh stations.

Never content with their payloads many companies take the 10 percent legal increase and add an illegal dollop on top. Susan Ginsberg, safety and health director of PROD, says that "thousands of complaints" convinced her that "overloading is a routine practice." She offers in evidence a Xeroxed memo from a manager in Consolidated Freightways, the third largest common carrier, reminding his drivers that "there are ways to run overloads." She pulls out a memo from a manager of McLean Trucking, sixth largest carrier, instructing drivers on how to avoid weigh scales. She says she has been told by drivers for Yellow Freight, the nation's eighth carrier, that the company has paid bonuses to drivers who take an overload and dodge the scales. And she cites a study by the State of Illinois that found illegal overloads on 41 percent of the trucks traveling one expressway.

The result of increased loads could mean plenty of trouble ahead.

Congress, in its usual fashion, set a load limit on the rear axles but set no load limit for the crucial front (steering) axle. So to exploit the new 80,000 pounds allowable for the truck as a whole, companies are throwing 12,000 pounds onto the front axle to go with the permissible 34,000 pounds on the middle and rear axles. Yet most drivers agree that anything over 10,000 pounds on the front axle can make steering extremely difficult—under certain conditions, impossible.

Tire failure and brake failure are the top killers in truck accidents caused by mechanical failure, and two-thirds of the tire failures are blowouts on the front. Even with new tires, the heavier front load presents an extra risk of blowouts. With retreads, the risk becomes much greater; but the Federal transportation bureaucracy, despite repeated pleas from drivers to come up with a ruling, has not outlawed retreads on the steering axle. The B.M.C.S.'s Pierson doesn't seem much concerned; he says that most companies "as a matter of practice" put their best tires on the front.

But drivers are so upset about it that even the Teamsters talk tough on this point. "It's plumb ridiculous," says Durham, the Teamsters director of safety and health. "They won't let interstate buses use retreads because they are carrying people, but they let a truck use retreads even though the truck, if it has a blowout on a front tire, can go out of control and wipe out the bus. A front tire blowout is always catastrophic. There's no way to hold the road with it. On the side of a mountain, the driver will just go over. On an undivided highway, he's likely to wind up in the opposite lane."

Congress' 10 percent load gift to the industry will also increase the number of cars plowing into the rear ends of big trucks—one of the commonest car-truck accidents—because, as the National Highway Transportation Safety Administration's own studies have shown, a 10 percent increase in weight can reduce the speed of even the best-performing truck by 20 percent on a three-percent grade, which autos can take without breaking speed. For years drivers have asked transportation officials to set a minimum horsepower requirement for gross weights, but the bureaucracy has not been moved. The Government admits that this kind of accident is on the increase and that right now perhaps as many as 40,000 cars run into the back of trucks each year, resulting in 100 to 300 fatalities and more than 8,000 injuries.

In many of the rear-end collisions, the car slips under the trailer. When this happens the occupants of the cars' front seat often wind up with their faces pushed back to their ears or with severed heads. Of course, the threat becomes greater as cars get smaller, but the Federal Highway Administration continues to use rear-end protection standards 25 years ago. Interstate trucks are within the law if their rear-end guards are 30 inches off the ground—but the top of the cylinder head of a Chevette, for example, is only 25 inches off the ground. Federal transportation officials, with what for them amounts to great insight, have indicated they think that, considering auto-design trends, a maximum clearance of no more than 18 to 24 inches would be much safer than the clearance allowed by present regulations.

But they have done nothing about it. (Tests sponsored by the Insurance Institute for Highway Safety showed that stronger, lower and much more effective rear-end guards could be built for no more than $20 to $28 extra per truck.)

Even if America's motorists are willing to put up with additional gore, it's highly unlikely that they will appreciate the extra cost of highway construction and repairs that will accompany the heavier weights. Already state and local governments are beginning to wail about ruptured highway budgets.

Not even the Interstate System, the premier quality highway, has been built to take the axle loads or total loads of the heaviest trucks, which is one reason the 42,000-mile, $100 billion Interstate, still unfinished and unpaid for, is already suffering serious decay. The Highway Users Federation complains that "some 28,000 miles of existing interstate highways are already obsolete by modern road standards." The Department of Transportation's figures are not that bad but bad enough; they indicate that 8,000 miles of completed Interstate needs $2.6 billion worth of repairs.

Ten years ago the Federal Highway Administration estimated that 88,900 bridges were structurally deficient or functionally obsolete. Today it estimates more than 100,000 bridges fit those categories. It also claims that our total highway system is falling apart 50 percent faster than it is being built.

One must allow for some exaggeration in such statements, of course, for they come from business groups and corners of the bureaucracy that want to keep Federal transportation money going into asphalt and concrete and away from mass transit. But there is also much truth in the picture of deterioration—especially in the local roads and bridges apart from the Interstate System. Art Haddad, treasurer of the Ohio County Engineers, says, "We are living with bridges on the local road system which were designed, for the most part, around the turn of the century and were really designed to carry herds of cattle or sheep. Local governments haven't had the money to replace them. Since January 1968, Ohio has had 355 bridges collapse. . . . a good many went under from heavy trucks. We have this happening all the time."

It's the sort of thing highway engineers are saying throughout the country, and they are worrying about new roads as well. Howard Schwark of Kankakee County in Illinois, road adviser for Region 5 of the Federal Highway Administration, says, "When you ride up and down the Interstates, you are beginning to see what 80,000-pound loads are doing to what was supposed to be a perfectly designed pavement. There isn't any of it that they aren't doing some work on. What are we going to do if the trucks get bigger and start using structures and highways designed for a maximum of 73,280? We'll have to go back and rebuild, and we keep telling Congress all the time, 'Hey, we just don't have the money to do that. Send us more money.' This is ridiculous. We'd better get these loads back on the rails again. That's the cheapest energy transportation. We need to get these truckers and lobbyists out of the hair of our Congressmen and sit down and face the energy crisis the way it should be faced."

The states' cry for money will grow louder in the years ahead, for the bulk of the repair costs is the states' responsibility, and their highway revenues have been far short of what they had forecast. Between 1964 and and 1974 the number of registered vehicles increased 51 percent, vehicles miles traveled increased 52 percent, and the number of highway miles increased by about 170,000—but the states could afford to buy only 4 percent more maintenance work at the end of the decade than at the start. There has been no official summary since 1974, but all signs point to a worsening of the states' ability to keep up with maintenance. For the first time some are doing serious engineering studies to find out exactly what kind of devastation can result from big truck traffic; their discoveries are chilling. An Illinois Department of Transportation study found that a tractor-trailer only 5 percent over the maximum permissible weight did damage to the highway equal to what 10,000 passenger cars could do.

Other studies, including one by the FHWA, show that the big trucks that do the greatest damage have got by with paying much less than their share of the cost of highway construction and upkeep. The FHWA's estimate as of 1969 was that the big trucks were shortchanging the highway fund by more than $200 million a year, considering taxes their owners paid as compared with the extra highway costs they caused.

It may be that eventually the general public will rebel at having their highways dominated by trucks that operate all too often outside the law, that present special safety problems and that raise their industrial hell at the general taxpayer's expense. After all, romance built on discomfort and bullying does have a way of petering out. As the West matured, its residents got sick of drunk cowboys shooting out the street lights and cattle barons intruding on farmlands. The "last cowboys" of today may finally inspire a similar response.

But if not, the industry will undoubtedly push on to even heavier, noisier and more dangerous dominance of the highways. Not long ago a Federal interagency task force produced the "Commercial Vehicle Post-1980 Goals Study." It predicted, and recommended the acceptance of supertrucks by 1990 that will weigh 120,000 pounds—50 percent heavier than today's maximum. That would be the routine weight; special weight loads could go much higher. A 120,000-pound truck: That's the equivalent of 30 Fords piled up and welded together. Those metallic mountains should make some fascinating traffic situations, as long as the roadway holds out. The interagency force thought of that, too. It suggested that all motorists chip in to pay for the strengthening of the highways so that the romance of trucking could continue unabated. They didn't put a price tag on their suggestion, but when you start rebuilding a $100 billion Interstate plus all of the other Federal and non-Federal roads, you are facing the costliest romance on record.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Robert M. Thompson, of Wisconsin, to be U.S. marshal for the western district of Wisconsin for the term of 4 years vice Leonard E. Alderson, resigned.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Tuesday, December 13, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

RECESS UNTIL 4 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess until the hour of 4 p.m. today.

There being no objection, the Senate, at 1:14 p.m., recessed until 4 p.m.; whereupon the Senate reassembled when called to order by the Presiding Officer (Mr. INOUYE).

ORDER FOR REPORTING S. 1566

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Select Committee on Intelligence have 30 days after the convening of the 2d session of the 95th Congress to report S. 1566.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 5 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess until the hour of 5 o'clock p.m. today.

There being no objection, the Senate, at 4:01 p.m., recessed until 5 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. HARRY F. BYRD, JR.).

Mr. ROBERT C. BYRD. Mr. President I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THIRTY-MINUTE RECESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess for 30 minutes.

There being no objection, the Senate, at 5:12 p.m., recessed until 5:42 p.m.; whereupon the Senate reassembled when called to order by the Presiding Officer (Mr. METZENBAUM).

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION TO PRINT ADDITIONAL COPIES OF REPORT ON S. 1437

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate authorize to be printed the usual number plus 3,000 additional copies of Senate Report 95-605 on S. 1437, the Criminal Code Reform Act of 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR JOINT REFERRAL OF H.R. 7819, S. 1256, AND S. 1257

Mr. ROBERT C. BYRD. Mr. President—this has been cleared all around—I ask unanimous consent that S. 1256, S. 1257, and H.R. 7819, three bills relative to diplomatic immunity that are presently pending before the Committee on Foreign Relations, be referred, if and when reported by the Committee on Foreign Relations, to the Committee on the Judiciary for a period not to exceed 60 days.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRIVILEGE OF THE FLOOR

Mr. PROXMIRE. Mr. President, I ask unanimous consent that Howard Menell, Ken McLean, and Lindy Marinaccio, of the staff of the Committee on Banking, Housing, and Urban Affairs, be granted the privilege of the floor during the consideration of the conference report on the antibribery bill (S. 305).

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONTINUING APPROPRIATIONS FOR FISCAL YEAR 1978

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Chair lay before the Senate a message from the House of Representatives on House Joint Resolution 662, that it be considered as having been read the first and second times, and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. The clerk will state the joint resolution by title.

The legislative clerk read as follows:

A joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes.

The PRESIDING OFFICER. Without objection, the joint resolution will be considered as having been read the second time at length, and the Senate will proceed to its consideration.

UP AMENDMENT 1080

(Purpose: To further restrict the Federal funding of abortion to certain limited situations including incidences of rape and incest that have been promptly reported.)

Mr. MAGNUSON. Mr. President, I send an amendment to the desk on behalf of myself and the Senator from Massachusetts (Mr. BROOKE).

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Washington (Mr. MAGNUSON) proposes unprinted amendment numbered 1080.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 2, beginning on line 15, strike the following: "as modified by the House of Representatives on August 2, 1977".

On page 2, after line 17, insert the following:

Provided, however That none of the funds provided for in this paragraph shall be used to perform abortions: except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.

Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced.

Mr. MAGNUSON. Mr. President, the House has just sent over a continuing resolution which contains an amendment on this matter of abortion that we have struggled so long with, the House and the Senate, for the past many weeks. The House voted, 200 to 170, again, to change the Senate amendment, almost entirely reversed the whole procedure that we thought the House would accept as a part of the abortion portion of the continuing resolution.

We are sending back to the House what we think is more than reasonable. We have given in here and there, we have changed words, and they have changed them around. What comes over here from the House is hardly recognizable, when we compare it with our original language, the paragraphs of the language that we went through over the many conferences we had on this matter. So we sending it back to the House, hoping that they will accept what we have done here this evening.

We think it is wholly within the context of what we talked about in a score of conferences with the House, what they sent back and we have been talking about. We have had informal conferences, we have had formal conferences, we have discussed with individuals back and forth, and we think this is reasonable. It is not exactly what the Senate would like. The Senate has voted now, Mr. President, 18 times—I thought it was 13, but I have just been advised that we have voted on this language now 18 times. It has been modified. I think it is language that the House should accept, because on Thursday, the time runs out on some other matters that are quite important, involving HEW appropriations.

I do not know what to do, Mr. President, about this legislation on appropriations bills. I wish it had not been on HEW. HEW appropriations is becoming a repository of all the amendments that people can think of that belong in legislative committees, matters of intense controversy that belong in legislative committees which should be considered and made, one way or another, a part of national policy and not be in an appropriations bill.

A year ago, Mr. President, when we had this matter before us and had the long argument about it, both in the Senate and the House again, back and forth, we had the assurance of the legislative committees that they would take up this particular matter. We have had five or six other important matters. OSHA is one. We have had civil rights, and about six other important policy matters that should have been taken up in the legislative committees, all in appropriations bills, particularly HEW.

I am hopeful that this issue can be resolved tonight. We are going to wait patiently to see. It does what we have understood the Members of the House—who have objected to parts of the original Senate language, that we have passed on many, many times—what we think some of them would like to see done, and language which would make it more acceptable to them. It includes only what we did last year by way of report, a report which specified the problems involved with the victims of rape or incest. This time, we wanted to put it in the legislation, because we have been told by the Department and other people, including some obiter dictum in the courts, that the language in the report did not mean anything and that, therefore, it need not be carried out. So we are putting it in the language of the joint resolution.

The House conferees agreed with that. They agreed on many occasions. And some of them have agreed to this language themselves; the conference committee of the House once agreed to this language. Now, they have changed it back and forth, but the Senate has stuck with its original provisions, and the Senate, on many, many occasions, has voted about 2 to 1 to sustain that viewpoint.

The House is still in session. The Senate will be in session. I hope that they will accept this language.

In a moment I shall yield to the Senator from Massachusetts, who has been so active in this matter, along with myself. I do not like to give in on some of this language. If I had my way, I would appear before the legislative committee, the proper committee, and insist on stronger language on this whole problem of abortion. But we do have an approximately $60 billion-plus bill that involves everybody in the whole of the United States, in one way or another, in the HEW appropriations. Of course, that has to be considered, too.

I hope the House realizes that this is only one facet of the real problem we have with respect to the responsibility of the Congress of the United States to pass an HEW bill—for all the programs to be carried out and the salaries to be paid. I believe that approximately 300,000 people are involved with respect to salaries alone. They will not receive their checks unless we can resolve this problem.

I yield to the Senator from Massachusetts.

Mr. BROOKE. I thank the distinguished chairman for yielding.

Mr. President, I commend the Senator from Washington on his very strong and forceful statement on this issue.

I will not here review the sequence of events, the many votes that have taken place by the Senate and by the House in this matter, the many conferences, the many hours, days, weeks, and months in which we have discussed this issue.

Mr. President, the legislative stalemate on the abortion issue today took a new turn for the worse. The House this afternoon rejected an effort to reach any accommodation with the Senate. It has once again sent us a continuing resolution containing the restrictive Hyde language to which the Senate is clearly opposed. The House action makes more difficult our efforts to reach a workable resolution to this impasse which has held up the Labor-HEW bill for many months.

The language in the continuing resolution takes us back to the restrictions in the original Hyde language which the House passed last June. The Senate has rejected this language several times by overwhelming votes.

If we do insist upon denying poor women the funds for abortions, we shall not prevent abortions among poor women. We shall only be denying them safe abortions. We shall only be forcing them once again into dangerous self-induced or back-alley abortions. We shall only be forcing them again into abortions through coat hangers, lye, a quart of alcohol, an "accidental" fall. And, incredibly, after we have done this, we shall then allow the 25,000 poor women each year who the Department of HEW estimates will suffer serious complications from such dangerous abortions, medicaid funds to correct the botched abortions we forced them into.

For all these reasons and more, we cannot accept the language the House has sent us.

Instead, we simply will return to the House essentially the language the Senate passed on November 29. That includes language the House requested providing for a reporting requirement for rape and incest, but excluding reporting to "equivalent" organizations, language the House would not accept.

In addition, we also include the word "promptly," to provide that any reporting must be prompt. By this we do not mean hours; we mean a much longer period of time that is reasonable yet humane.

Frankly, we do not like the word "promptly." In fact, the Senate recently rejected "promptly" by a vote of 23 to 42.

However, it is clear we must find a solution to the impasse over the abortion language. The word "promptly" may be a way out of this morass.

Mr. President, earlier today Chairman GEORGE MAHON, of Texas, the distinguished chairman of the full Appropriations Committee in the House, presented a proposal to the House which only differed in three respects from what we already had agreed upon. One change was "forced" rape, one was "promptly," and the other was the deletion of the words "or its equivalent."

Again, the Senate is making a compromise, a very serious compromise, and I think we should know what we are doing. That compromise would now put in the word "promptly," which will require reporting promptly in cases of rape or incest. That is what we voted upon. That was the Helms amendment, which lost in the Senate by a vote of 23 to 42 the last time we voted. So this is a further concession by the Senate to the House; it is on the word "promptly."

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. BROOKE. I yield.

Mr. MAGNUSON. As a matter of fact, the word "promptly" was constantly suggested by the House members of the conference over a period of 8 or 10 conferences. There was some difficulty or argument as to whether the reporting should be done to the law enforcement agency or the health agency, but they finally agreed to that.

This is exactly the wording they suggested to us in the beginning, and it was the basis of all the discussions we had in the last five or six conferences with the House.

Mr. BROOKE. The chairman is correct. As a matter of fact, the Senate bill originally did not contain any reporting language. So what we have done is to concede on reporting, and now on reporting "promptly."

Mr. METZENBAUM. Mr. President, will the Senator yield for a question?

Mr. BROOKE. I yield.

Mr. METZENBAUM. In yielding to the House with respect to putting in the word "promptly," it seems to me that it opens the door to a wide variety of interpretations. We are talking about reporting promptly after a woman has been raped. Does it also apply in the event of incest?

Mr. BROOKE. It does.

Mr. METZENBAUM. Does the Senator from Massachusetts, therefore, interpret the word "promptly" to mean a number of weeks and possibly months after the traumatic experience has occurred, rather than a requirement to get on the telephone immediately after that kind of occurrence? I believe it does have relevance, and I would appreciate some elaboration on the subject from the Senator from Massachusetts.

Mr. BROOKE. Mr. President, I agree with the Senator from Ohio that the word "promptly" is subject to interpretation.

As I view it, "promptly" would mean a reasonable and humane period of time in which the rape or incest would be reported to a law enforcement agency or to a public health service; it might be reported by a parent or someone in behalf of that victim of rape or incest, or it could be reported by the victim.

We may be talking about children. As the distinguished Senator from Ohio well knows, it is a matter that concerns me deeply and concerns him and others deeply. We may talking about young children, so we may be talking about the reporting of the parent, where the child cannot be in a position to make that report promptly. It is not a question of hours, as I see it, but maybe days, weeks—a reasonable and humane period of time, whatever that may be considered.

Mr. METZENBAUM. Possibly weeks and months.

Mr. BROOKE. It could be, yes.

Mr. MAGNUSON. I would not suggest that they wait months. As with any piece of legislation, you cannot spell out the time. We probably could say within 90 days or within 60 days or within the first part of the pregnancy. But we have to leave it up to the Department to make what we hope will be reasonable regulations to carry out what the word "promptly" means.

In reverse, I think it means that you cannot wait and wait and wait and all of a sudden show up some place and say, "I was raped," or, "Incest took place." You would have to do it within a reasonable time, with respect to the Department.

In this amendment, we go even further. We say:

> The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced.

I think that would mean that they would interpret the word "promptly" not to apply to any length of time, but that it should be done, say, in 90 days, or say that was the middle figure, that it be before that time, not "promptly" after a long period of time.

I am sure that is the way the regulations would read.

Mr. BROOKE. I think a reasonable and humane period of time would be a fair period of time. I think there might be extenuating circumstances in certain cases which should be taken into consideration.

Mr. MAGNUSON. Each case has to be taken into consideration.

Mr. BROOKE. I can conceive of a case where there is an extenuating circumstance such as reqiuring a longer period of time, say, than the normal case. So I think that would be the intent of the language.

Mr. METZENBAUM. I appreciate the assurances of the distinguished Senator from Massachusetts and the distinguished Senator from Washington that "promptly" in this sense in this legislation does not mean "promptly" as we normally think of it such as when we expect the Secretary of HEW to act promptly in issuing regulations. That is a different kind of promptness than that which we expect under these circumstances.

Mr. BROOKE. I agree.

Mr. MAGNUSON. I hope this will set an example for other regulations they have to issue down there.

Mr. METZENBAUM. I appreciate it.

Mr. BROOKE. In the case of incest involving a young female child, I say to the distinguished Senator from Ohio, it may not be found out for a period of time.

The mother of that child might not find out until several months afterwards that there has been incest. There could be those extenuating circumstances.

Mr. METZENBAUM. I understand the Senator from Massachusetts. I appreciate the clarification, and I thank the Senator.

Mr. BROOKE. So, Mr. President, as I said, we have had all of these conferences and many, many times sat down with the conferees of the House of Representatives where we have considered language which time after time has proved to be a concession to the House's position.

I hope that in this last attempt, where we are giving them two out of three of the issues that they consider to be so important in order to get this matter passed through the House, they would accept the proposal which we are presenting to them through this amendment to the continuing resolution.

I also point out to my colleagues that this continuing resolution that has been sent to us has the funding level of the 1978 Labor-HEW appropriations bill, so it is, as the chairman has said, $60 billion plus.

If the House of Representatives will accept the amendment that we have now or will hopefully include and send back to them tonight, there will be no necessity then for a Labor-HEW bill. This, in essence, would be the Labor-HEW bill at the funding level of 1978 and with the new programs, so there would be no need for either house to act upon this matter again.

So we would be making some real progress if the House of Representatives would, at long last, recognize that this is a matter of compromise. This is certainly something that I do not want to accept. This is not anywhere near what I believe is right. I believe "medically necessary" was the right path for us to have taken in the first instance, after it became clear there would be some restrictions on Federal funding of abortions. So, therefore, we have come a long way from "medically necessary," as was well pointed out, and I am hopeful that the House of Representatives will accept this latent version.

Mr. President, I call for the vote.

The PRESIDING OFFICER (Mr. METZENBAUM). The question is on agreeing to the amendment of the Senator from Washington.

The amendment was agreed to.

Mr. MAGNUSON. Mr. President, for the record, I think it should be clear that if the House of Representatives would agree to this language, then, of course, we would not have to go to conference and there would be no need for another rollcall vote on it.

Mr. BROOKE. The Senator, of course, is correct.

Mr. MAGNUSON. As the Senator from Massachusetts pointed out it is the 1978 amount of over $60 billion, and it is for a period of time that will take care of all of these other very important matters involved in the HEW appropriation.

Mr. BROOKE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BROOKE. Will the continuing resolution now voted upon with the amendment be sent immediately to the House of Representatives?

The PRESIDING OFFICER. The Senator is correct.

Mr. BROOKE. I thank the Chair.

Mr. MAGNUSON. Mr. President, I know that we have a very efficient staff up here, and all the clerks, but I urge that the Chair promptly get this over to the House of Representatives. Will he do that?

I thank the Chair.

The PRESIDING OFFICER. The joint resolution is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendment and third reading of the joint resolution.

The amendment was ordered to be engrossed and the joint resolution to be read the third time.

The joint resolution (H.J. Res. 622) was read the third time and passed.

The PRESIDING OFFICER. What is the will of the Senate?

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FOREIGN CORRUPT PRACTICES ACT OF 1977—CONFERENCE REPORT

Mr. PROXMIRE. Mr. President, I submit a report of the committee of conference on S. 305 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

> The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 305) to amend the Securities Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such Act to maintain accurate records, to prohibit certain bribes, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the proceedings of the House of Representatives.)

Mr. PROXMIRE. Mr. President, this is the antibribery bill which passed the Senate 87 to 0 earlier in the year. We had a very satisfactory conference with the House of Representatives.

I think we strengthened the bill. They have some provisions that were, I think, stronger and wiser than ours, and they also made some concessions to us.

Mr. President, the purpose of this legislation is to stop foreign corporate bribery.

Disclosures during the past several years have shown that the bribery of foreign government officials by corporations for the purpose of obtaining business is a significant problem in need of clear legislative attention.

Investigations by the Securities and Exchange Commission revealed that over 300 companies made corrupt payments to foreign government officials in the hundreds of millions of dollars. Foreign democratic governments friendly to the United States in Japan, Italy and the Netherlands came under intense pressure from their own people complicating our foreign policy. The image of American democracy abroad was tarnished. Confidence in the financial integrity of our corporations was impaired and the efficient functioning of our capital markets hampered.

Corporate bribery undermines the free market system. In the free market it is basic that the sale of products should take place on the basis of price, quality and service. Corporate bribery is destructive of these basic tenets. Corporate bribery takes place primarily to assist corporations in gaining business. Thus, foreign corporate bribery affects the very stability of overseas business. Foreign corporate bribery also adversely affects our domestic competitive climate because domestic firms engage in such practices as a substitute for healthy competition for foreign business.

Mr. President, foreign corporate bribery has largely been accomplished by the maintenance of off-the-books slush funds. This legislation requires corporate issuers subject to the jurisdiction of the SEC to make and keep books, records, and accounts which, in reasonable detail, accurately and fairly reflect corporate transactions and dispositions of assets. The in reasonable detail qualification will insure that the accurate and fair standard will require a degree of precision which is realistic, reflecting transactions in conformity with accepted methods of recording economic events and effectively preventing off-the-books slush funds and payments of bribes.

Under the legislation such corporations are required to devise and maintain systems of internal accounting controls sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to maintain accountability for assets. This provision places the responsibility where it belongs to prohibit off-the-books slush funds—namely in corporate management.

Two supportive accounting provisions contained in the Senate bill which were not in the House bill were deleted by the conferees. These were provisions prohibiting any person from "knowingly" falsifying a corporate book or record or "knowingly" lying to an accountant in connection with an audit of the firm. Unfortunately, these provisions became involved in an issue never intended to be raised or resolved by the Senate bill—namely, whether or not the inclusion or deletion of the word "knowingly" would or would not affirm, expand or overrule the decision of the Supreme Court in the Hochfelder case. As stated clearly in the Senate committee report on S. 305, their provisions were to be severable from the rest of the securities laws. This legislation is not the forum to debate the Hochfelder issues. This is legislation to proscribe foreign corporate bribery.

The legislation also makes it a crime for corporations to use the mails or any means or instrumentality of interstate commerce corruptly in furtherance of making a bribe to a foreign official for the purpose of obtaining business. Any corporation violating these provisions of the legislation may be penalized up to $1 million per violation. Individuals such as officers or directors of such corporations participating in violations may be fined up to $10,000 or imprisoned for up to 5 years, or both.

Mr. President, this legislation recognizes the inherent jurisdictional, enforcement, and diplomatic problems in the passage of legislation which prohibits conduct some part of which takes place overseas. Accordingly, the conferees determined not to cover foreign subsidiaries of American corporations operating overseas. Nevertheless, where the parent corporation participates directly or indirectly the prohibited conduct it would itself be liable. Enactment of this legislation will enable the State Department to go forward with the negotiation of a treaty which, for example, will require all of the European nations in the Common Market and Japan to adopt similar legislation proscribing foreign corrupt practices by their corporations. This will insure that no nation's corporations are disadvantaged in the marketplace because another nation permits such practices to take place.

President Carter firmly supports this legislation and has taken the lead among the industrialized Western nations on the issue of proscribing foreign corporate bribery. President Carter is to be commended on his firm stand. Mr. President, I wish to state my personal gratitude to Senator HARRISON WILLIAMS who cosponsored this legislation and provided guidance on intricate issues of SEC law, and to Senator BROOKE, the ranking Republican member of our committee, for his valuable assistance in seeing S. 305 become law. I wish further to state my personal gratitude to the members of the House Interstate and Foreign Commerce Committee, particularly Chairman HARLEY STAGGERS and Congressman BOB ECKHARDT, for their leadership on these important issues.

Mr. President, I move the adoption of the conference report.

Mr. BROOKE. Mr. President, I am pleased to join in submitting this conference report to accompany S. 305, a bill that would prohibit U. S. companies from paying bribes to foreign officials in order to obtain or retain business.

The bill includes stiff criminal penalties for violations of its antibribery provisions and also requires every publicly owned company to establish an internal accounting system designed to insure that all company financial transactions are properly reported. This latter requirement places an affirmative statutory duty on publicly owned companies and should effectively discourage them from establishing off-record "slush funds" or other devices used in the past to make improper payments.

During the past few years, principally through congressional hearings and actions of the Securities and Exchange Commission, it became apparent that hundreds of U.S. corporations were misusing corporate funds to make improper payments to foreign officials. These questionable or illegal payments involved hundreds of millions of dollars and significantly harmed our Nation's image in foreign countries. In the process of making such payments, companies were engaging in elaborate schemes designed to give stockholders and others no hint that such payments were in fact being made. In my opinion, the dubious schemes used to hide such payments were themselves an indication of the questionable nature of the payments.

In light of such improper activities, several bills were introduced in the Senate during the past year that were designed to deal with the payments problem. After considering the various alternatives, this past May the Senate passed S. 305, a bill that includes accounting and antibribery provisions. Since the House passed an antibribery bill that did not include accounting provisions, a joint conference became necessary. While the conference committee agreed to revise or delete certain provisions contained in S. 305. the bill is substantially the same as when the Senate originally passed it. In my opinion, the bill agreed to by the conferees provides reasonable standards of conduct that will help to strengthen and reaffirm our country's democratic ideals.

In recognition of the importance of this bill, I should note that the Banking Committee has made a conscious effort to act expediously on the various antibribery bills that have come before it during the past year. In this regard, I also wish to commend the chairman of the Banking Committee, Senate PROXMIRE for his strong leadership in helping to insure that S. 305, a strong antibribery bill, has been approved by the conferees and sent to the floor.

Mr. President, there is widespread recognition in the Senate of the need for this bill, and it is my hope that the Senate will approve it without delay.

Mr. WILLIAMS. Mr. President, as chairman of the Subcommittee on Securities and a cosponsor of this landmark legislation, I rise in its support and strongly urge its enactment without further delay.

S. 305, the Foreign Corrupt Practices and Foreign and Investment Disclosure Acts of 1977, deals responsibly and effectively with two separate and complex issues—corrupt payments overseas by and disclosure of corporate ownership of American business. As it is before us today, the bill is the result of several years of study and effort by the Congress, the Securities and Exchange Commission, the American business community, the administration, the international community and organizations, and the accounting profession. It is universally supported.

By prohibiting bribes to foreign officials by American companies, the bill reaffirms the commitment of the United States to a system of free enterprise undistorted by improper and questionable practices which intefere with the free flow of commerce and trade.

There is a manifest need for title I of the bill which would prohibit U.S. companies from bribing foreign officials. More than 350 U.S. companies have already admitted to committing acts of bribery overseas. As a result, the reputation of American business is tarnished and both our foreign policy and our economy have been substantially and adversely affected.

Bribery is simply incompatible with traditional business practices at home; there should not be a double standard overseas.

S. 305 is necessary legislation. Neither the SEC's disclosure program nor self-regulation by the business community are adequate. Disclosure alone will never put a stop to the practice. I believe the kind of bribery this legislation addresses cannot and should not be regulated or controlled through disclosure; it must be prohibited by law. Thus, this bill would make it a crime for U.S. companies to bribe a foreign government official for the specified corrupt purposes. Companies violating the criminal prohibitions face maximum fines of $1 million. Individuals acting on behalf of such companies face a maximum fine of $10,000 and 5 years in jail.

In addition to the direct prohibition of foreign corrupt payments, the bill also imposes an affirmative requirement on publicly owned American corporations to strengthen the accuracy of corporate books and records and the reliability of the audit process. These are the bedrock elements of our system of corporate disclosure and accountability. With the enactment of this bill, it will no longer be possible for corporations to conceal questionable or illegal payments on the company's books and records. Secret bank accounts, off-the-book slush funds, fictitious subsidiaries, and other devices used in the past to cover up or paper over such illegitimate payments will no longer be possible. These provisions should operate in tandem with the outright prohibition of bribery and further deter corporate bribery.

The accounting sections of the bill, of course, reach beyond the problem of bribery and other questionable payments. In its "Report on Questionable and Illegal Corporate Payments and Practices" (May 12, 1976) to the committee, the SEC stated that:

> . . . the almost universal characteristic of the cases reviewed to date by the Commission has been the apparent frustration of our system of corporate accountability which has been designed to assure that there is a proper accounting of the use of corporate funds in the documents filed with the Commission and circulated to shareholders . . .

New section 13(b)(2) of the Securities Exchange Act of 1934 will prevent definance or circumvention of the system of corporate accountability, assure reliable and accurate books and records, protect the integrity of the audit process and make clear the responsibilities of corporate management and accountants, and safeguard fundmental precepts of corporate democracy.

Title II of the bill is designed to strengthen the disclosure and ownership reporting requirements of the Securities Exchange Act of 1934 applicable to domestic and foreign investors having a significant ownership interest in the securities of American corporations.

Title II of the bill would:

First. Amend section 13(d) of the act to require those persons who already file reports with the SEC when they own more then 5 percent of the shares in a U.S. company to identify their residence, citizenship, and the nature of their beneficial ownership.

Second. Enact a new section 13(g) to provide for the development of a comprehensive system for gathering and disseminating information about ownership interests in publicly held companies.

Third. Require the Commission to consolidate the various beneficial ownership reporting requirements of the Securities Exchange Act into a centralized nonduplicative system for the collection of such information, and to tabulate such information and make it available to regulators and the public.

Fourth. Enact a new section 13(h) to require the Commission, within 30 months of the date of enactment of the legislation, to report to Congress with respect to the effectiveness of the ownership reporting requirements under the act and the desirability and feasibility of reducing or otherwise modifying the 5-percent disclosure threshold giving appropriate consideration to specified regulatory and public policy considerations.

Fifth. Provide the Commission with authority to assure that the jurisdictional effectiveness of section 15(d) of the Securities Exchange Act is not inappropriately limited because of the use of nominee and street name registration of securities.

In 1975, the Congress directed the Commission—in section 12(m) of the Securities Exchange Act of 1934—to conduct a study and investigation of the practice of recording the ownership of securities in other than the name of the beneficial owner-"street" and "nominee" names.

To more fully achieve the purposes originally intended by Congress in 1968 when ownership reporting at the 5 percent was added to the act by the committee, the Commission recommended the establishment of a comprehensive system for disclosure of ownership interests and called for legislation "to require ownership reports from those persons owning more than 5 percent of an issuer's securities who are not currently required to report under the Act."

These recommendations of the Commission would be implemented under title II of S. 305. In these respects, title II will close inappropriate and anomalous gaps in the legislative scheme of disclosure under the Exchange Act and result in across-the-board disclosure essential to a cohesive and comprehensive reporting system.

At the same time, title II of the legislation is designed to unify present reporting requirements of the Securities Exchange Act into a comprehensive system for gathering and disseminating information about ownership interests.

Public policy in support of enhanced disclosure in securities transactions follows a pattern which began with the securities acts of 1933 and 1934. This legislation will complement continuing efforts within the executive branch, the regulatory agencies, and the committee to increase the availability of information which is vital to the development of sound policy where important national and international issues are at stake.

Mr. President, this bill permits American companies to conduct business anywhere in the world on a legitimate basis and establishes the United States as a world leader in the creation of an international code of business standards. It sets the ground rules for unilateral and multilateral agreements. And by regulating only American business, and citizens, it respects the jurisdiction of our law enforcement agencies and the sovereignty of other nations.

This bill is only the first step, but an essential one. Affirmative action by our Government will facilitate an international solution. Once this bill is law, the U.S. Government will be in a position to argue forcefully, with integrity and credibility, for bilateral and multilateral agreements.

Mr. President, numerous individuals and organizaitons have influenced and helped to shape the final provisions of the bill. Senator PROXMIRE, the distinguished chairman of the Banking Committee, has steered this bill through the Congress, overcoming considerable difficulties. I wish to congratulate him on his firm leadership. On the House side, Congressmen STAGGERS and ECKHARDT, the chairmen of the House Committee and its Finance Subcommittee, respectively, have cooperated throughout to make certain this legislation would become law. They, too, deserve the congratulations they have earned for their efforts.

The Securities and Exchange Commission has vigorously pursued and prosecuted questionable payments—both domestic and foreign—for violations of the securities laws. At last count, some 400 companies have admitted to such improper practices. With the administration, Secretary of the Treasury Blumenthal, in forcefully presenting the administration's response to this problem, has been supportive of tough antibribery legislation. And President Carter's support for S. 305 is already on record.

Mr. President, both titles of S. 305 have been fully considered by the committee and passed by the Senate on several occasions. I am hopeful that these important amendments to our Federal securities laws will receive final congressional passage today so that they may be signed by President Carter.

Mr. TOWER. Mr. President, the Foreign Corrupt Practices Act of 1977 constitutes a needed and rational response to the practice of some U.S. companies paying bribes to officials of foreign governments to secure or retain business. Since discussion of the bill began, I have felt that the real solution lay in the negotiation of treaties with foreign governments to secure a concerted effort to deal with essentially an international problem. I still believe that this will be required in the long run. My concern with this bill from the beginning therefore was that it would inhibit our negotiating efforts by attempting to stretch the reach of U.S. jurisdiction too far.

While the bill we report today should be an effective deterent, it contains two limitations that I believe are necessary for the long range solution as I have outlined it, and that will make the new law workable in practice.

First, the bill excludes "grease" or "facilitating" payments. These are bribes to relatively low level officials, usually made to secure the prompt and proper performance of his duties. Under the bill, payments must meet two tests to be actionable: First, they must be made to secure or retain business, and second, they must be made to an official whose duties are not "essentially ministerial or clerical." We discussed the possibility of excluding payments to secure the performance of "essentially ministerical or clerical" duties, but rejected it in favor of a test that would look to the type of officer involved—not to the particular duty he was being asked to perform.

Second, the bill excludes foreign subsidiaries of U.S. companies. The Senate felt that given jurisdictional, diplomatic, and enforcement difficulties, it would be unrealistic to attempt to extend the law's prohibitions to foreign subsidiaries. Moreover, their actions would be substantially curtailed by section 102 of the bill, which would require the U.S. parent to closely oversee its accounting practices. H.R. 3815 did not contain a comparable section, and evidently the House believed coverage was necessary. The House receded to the Senate on this point, however.

Perhaps the most controversial section in the bill was section 102 of S. 305. The Senate bill provided that:

First. Companies keep books which "accurately and fairly" reflect company transactions.

Second. Companies establish internal controls "adequate" to insure that transactions occur only in accordance with management's authorization, and that accountability for assets is maintained.

Third. It is unlawful for any person to "knowingly" falsify corporate books.

Fourth. It is unlawful for any person to "knowingly" make a false or misleading statement to an auditor.

The conference inserted "in reasonable detail" before "accurately and fairly" to make it clear that no absolute standard of precision is required or attainable. I would not expect this provision to establish a new accounting standard. Its purpose is to require that books and records are kept so that financial statements prepared in accordance with generally accepted accounting principles can be derived from them. It should be kept in mind that the section was intended to merely stop the use of off-book accounts by insuring the maintenance of accountability for company assets.

Subsections (3) and (4) of section 102 which were dropped in conference made unlawful the knowing falsification of corporate accounts, and knowing misstatements to auditors.

I felt the "knowingly" standard was appropriate because: First, the off-book accounts uncovered during the SEC investigation were by and large intentional falsifications—no need was shown to establish liability for mere negligence; second, only inadvertent acts were to be excluded—the report makes it clear that "knowingly" encompasses reckless or grossly negligent acts, and that inadvertent acts were to be excluded; and third, inasmuch as the section for the first time amends the securities laws to deal directly with corporate conduct—not disclosure—it was believed appropriate to require that only gross negligence or intentional misconduct be actionable. The reason is that, unlike elsewhere in the securities laws, a sale of securities is not here involved—nor is direct information to the public involved. The higher degree of protection needed when a securities transaction is involved, which demands a public policy of liability for negligent misinformation, is not here required.

The SEC and the House majority strongly opposed the inclusion of "knowingly." It would affect the Commission primarily in a civil injunctive action, and they said it would unduly burden their enforcement efforts to have to prove this added element. They also fear that the courts would interpret the inclusion of "knowingly" as a policy statement affecting other sections of the securities laws as well. See Hochfelder (424 U.S. 185) 1976.

As the Senate report (No. 95–114) states, however:

> The inclusion of this standard is intended to be limited to matters arising under these new subsections and not to any other provisions of the securities laws. (p. 9.)

Nevertheless, it was not the intent of the Senate to raise the issue, and, rather than embroil the legislation in this dispute, the conferees determined to delete subsections (3) and (4) altogether.

The House report states it is expected that the courts will recognize implied private right of action under the criminalization sections of the bill. This question was not considered in the Senate or during the conference, and thus cannot be said that any intent is expressed at all on this issue. In view of the existing case law, it is difficult to conceive that the courts would imply a cause of action in any event. Nevertheless, because of the gratuitous statement in the House report, I feel I should state my understanding that neither the Senate nor the conferees expressed any opinion on this issue.

Regarding title II, I have previously stated my views in the Senate Report (No. 95–114), page 22. They have not previously appeared in the RECORD, and I ask unanimous consent that they be printed in the RECORD at this point.

There being no objection, the excerpt from the report was ordered to be printed in the RECORD, as follows:

ADDITIONAL VIEWS OF SENATORS TOWER, GARN, AND LUGAR

We concur with the committee's conclusions regarding the need for title I of S. 305. Further, although the merits of the various proposals to deal with the problem of foreign payments may be debated, we believe that the method adopted by the committee will be an effective deterrent to such conduct in the future.

Regarding title II, however, even though it has been substantially altered since its introduction and its effects will now be minimal, we believe that there remains much doubt as to the need for such legislation.

The stated justification for title II has been difficult to fix due to the many changes it has undergone. Its forerunners were S. 425 and S. 3084 in the 94th Congress, and title II, S. 305, as introduced in the 95th Congress. Those who advocate the legislation in its present form point to the practice of registration in nominee name as providing the principal justification. This results in: (1) difficult shareholder communication and (2) difficulty for investors in determining who controls the policies of a corporation. In support of their argument, they cite the reports of the Senate Committee on Government Operations in 1973 and 1975, chaired by Senator Metcalf, and the "Street Name Study" of the Securities and Exchange Commission authorized by the "Securities Acts Amendments of 1975."

Regarding registration in nominee name as it affects shareholder communication, the "Street Name Study" concluded that—

"While problems exist, they are not evidence of systemic weaknesses but result from failures by individual brokers and issuers. In general, legislative or regulatory action does not appear to be necessary to correct these problems. Rather, improved compliance with self-regulatory rules and industry-wide implementation of generally accepted standard procedures for the distribution of annual reports and the solicitation of proxies would resolve most of them."

Not only was increased ownership disclosure not recommended by the EC's study, but it is difficult to perceive that the present bill would enhance issuer-shareholder communications in any event. The bill only requires disclosure by 5 percent owners. Although the number of investors owning a greater than 5 percent interest may not be insignificant, the number of ultimate shareholders it would reach is not such that it would significantly affect shareholder communications.

Next, it is said that disclosure by 5 percent beneficial owners is required so that investors may know who is in a position to control the policies of the corporation. While in some cases it is undoubtedly true that a 5-percent owner could control corporate policy, it must be conceded that it is not universally true and varies from company to company. Treasury Secretary Blumenthal, testifying before the committee on this issue stated:

"I think it depends on the circumstances of individual corporations. I would think that in many situations when you get to about 15 percent or more, it depends on the kind of corporation it is. And if the rest of it widely held, it depends how the rest of it is held, you are getting to the point where you can exercise where you can get on board and begin to control. But not less than that."

The "Street Name Study" did recommend that Congress "close the gaps" in the 5 percent reporting requirements of the Williams Act. Currently exempt are those who acquire less than 2 percent annually, and those who acquired their interest before enactment in 1970. These would be effectively deleted by the present legisltion. The study, however, bases its recommendation on its perception of congressional intent in enacting the Williams Act. The study states:

"The Commission believes that the act and the rules thereunder currently may not achieve fully the scope of disclosure or range of dissemination contemplated by Congress."

The Williams Act, however, clearly was aimed at tender offers and those situations where it appears that an investor is attempting to acquire control or exert influence over company policy. In that light, the exemptions are entirely appropriate, and remain so. The present section 13(d) reporting already catches those situations where control is a real possibility.

The study, however, fails to recognize this and merely states that national policy, as expressed by the Williams Act, is disclosure at the 5-percent level. This is not consistent with the express provisions and purpose of the Williams Act, nor is it based on any independent finding by the Securities and Exchange Commission.

The assertion is also made that Government policymakers need centralized and comprehensive reporting of foreign ownership information. Again, we submit that the case simply has not been made. The Treasury Department and the Commerce Department in their foreign investment studies—Foreign Investment Study Act of 1974—did not recommend new legislative initiatives. Moreover our vital industries such as communications, energy, and transportation are already adequately protected from control by foreign interests—either by direct prohibition or close regulation. See hearings, "Foreign Investment and Arab Boycott Legislation," July 22, 23, 1975.

We are not unmindful of the fact that the author of the Williams Act is also the author of the instant legislation. Nevertheless, we submit that the stated justification and need for title II is logically inconsistent, and unsupported by the record. If there is a new policy to be here developed, then sound reasons for it should be advanced and examined. In our opinion, this has not been done to date.

The bill is not major legislation, and few people will be affected by it. Even so, it does not follow that it should be enacted without well-reasoned policy arguments supporting it. Those that have been advanced are marginal at best and seem to reflect the well-known irrepressible desire by Government regulators to close perceived gaps, and to acquire information for its own sake.

For these reasons, we believe title II to be unnecessary would recommend that it be deleted from S. 305.

John Tower.
Jake Garn.
Richard G. Lugar.

Mr. TOWER. The conferees have made a further improvement by deleting the requirement that historical data be provided. Inasmuch as the disclosure requirement does not necessarily deal with the takeover situation, I feel this is appropriate. More extensive disclosure would still be required for those situations under section 13(d).

I would hope too that the Commission will take to heart the direction that it study, not only the possibility of "reducing" the threshold disclosure level of 5 percent, but also the possibility of "otherwise modifying" it upward. Perhaps we will then gain a clearer idea of the purpose and need for this legislation.

Mr. President, I make these criticisms of the legislation to make my colleagues aware of the issues that were discussed and resolved. I do not mean to leave the impression that I am wholly dissatisfied with the bill. I am not. Many people have worked long and hard on this legislation, and I believe their efforts, conducted in the spirit of compromise, have produced a workable bill. I hope my colleagues will join with me in support of the bill, and would urge its favorable, and speedy, consideration.

Mr. PROXMIRE. Mr. President, I move that the conference report be adopted.

The PRESIDING OFFICER (Mr. Leahy). The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. PROXMIRE. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BROOKE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

SECURITIES AND EXCHANGE COMMISSION AUTHORIZATIONS, 1978—CONFERENCE REPORT

Mr. PROXMIRE. Mr. President, there is one other conference report in connection with the same issue. This is the conference report that provides for funds for the continuation of the Securities and Exchange Commission.

I submit a report of the committee of conference on H.R. 3722 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

> The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the proceedings of the House of Representatives.)

Mr. PROXMIRE. Mr. President, this bill passed the Senate unanimously. It simply authorizes the administrative expenditures of the Securities and Exchange Commission for fiscal year 1978. The House bill authorized a total of $67 million for the salaries and expenses of the Commission. The Senate bill authorized $58.290 million. After meeting in conference, the conferees agreed upon $63.750 million. This sum will enable the Commission to carry on its activities, and it contains enough flexibility to allow for the anticipated cost of a supplemental pay raise appropriation to accomodate the raises authorized for Federal employees last October 1.

I think this is a reasonable compromise. It falls in between the figures set by the House and the Senate.

I move the adoption of this conference report.

Mr. BROOKE. Mr. President, I agree with the distinguished chairman, and I join with him in his motion.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. PROXMIRE. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BROOKE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in adjournment until the hour of 12 noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR NO RESOLUTIONS TO COME OVER UNDER THE RULE TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow no resolutions come over under the rule at the conclusion of routine morning business.

THE PRESIDING OFFICER. Without objection, it is so ordered.

ORDER DESIGNATING A PERIOD FOR ROUTINE MORNING BUSINESS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that after the two leaders or their designees have been recognized on tomorrow under the standang order——

The PRESIDING OFFICER. May we have order so that the majority leader can be heard?

The majority leader will continue.

Mr. ROBERT C. BYRD. Mr. President, I thank the Chair.

I ask unanimous consent that after the two leaders or their designees have been recognized under the standing order on tomorrow there be a brief period for the transaction of routine morning business, not to extend beyond 10 minutes, with statements limited to 2 minutes each therein.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER THAT THE FULL EMPLOYMENT AND BALANCED GROWTH ACT OF 1977 (S. 2345) BE HELD AT THE DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a bill (S. 2345) introduced by Mr. Humphrey and other Senators, which is titled the Full Employment and Balanced Growth Act of 1977, be held at the desk until tomorrow pending further disposition.

Mr. BAKER. Mr. President, will the majority leader yield?

Mr. ROBERT C. BYRD. Yes, I yield.

Mr. BAKER. Will the majority leader withhold his request for a moment? Do I understand the request is that it be held at the desk until tomorrow? Could it be held at the desk pending further disposition?

Mr. ROBERT C. BYRD. Yes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the majority leader.

ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate I move, in accordance with the order previously entered, that the Senate stand in adjournment until the hour of 12 noon tomorrow.

The motion was agreed to; and at 6:39 p.m. the Senate adjourned until tomorrow, Wednesday, December 7, 1977 at 12 noon.

NOMINATIONS

Executive nominations received by the Senate December 2, 1977, pursuant to the order of the Senate of November 29, 1977:

INSTITUTE OF MUSEUM SERVICES

Leila I. Kimche, of Maryland, to be Director of the Institute of Museum Services (new position).

IN THE AIR FORCE

The following-named officer under the provisions of title 10, United States Code, section 8066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 8066, in grade as follows:

To be general

Lt. Gen. James Erskine Hill [redacted], U.S. Air Force.

Executive nominations received by the Senate on December 5, 1977, pursuant to the order of the Senate of November 29, 1977:

COMMISSIONER ON AGING

Robert Clyde Benedict, of Pennsylvania, to be Commissioner on Aging, vice Arthur S. Flemming.

RAILROAD RETIREMENT BOARD

William P. Adams, of Virginia, to be a member of the Railroad Retirement Board for the term of 5 years from August 9, 1977, vice James L. Cowen, resigned.

IN THE COAST GUARD

The following-named commanders of the Coast Guard Reserve to be permanent commissioned officers in the Coast Guard Reserve in the grade of captain:

Lennard K. Rambusch
William R. Babineau
Ernest J. Bader
Aristedes (n) Manthous
Henry G. Satterwhite
William A. Stone, Jr.
Thomas M. Bader
Hugh J. Costello
Bolivar T. Recio
Bennett S. Sparks
John D. McLean
Morton M. Levine
William J. Tangalos
David L. Pearl
Harmon G. Eakles
George L. Sutton
William N. Taylor
Joseph F. Lavelle

IN THE AIR FORCE

The following-named officers for promotion in the U.S. Air Force, under the appropriate provisions of chapter 839, title 10, United States Code, as amended.

DENTAL CORPS

Major to Lieutenant colonel

Barkmeier, Wayne W., [redacted].
Bergman, Dennis W., [redacted].
Blaser, Paul K., [redacted].
Brennan, Mark E., [redacted].
Buchanan, William E., Jr., [redacted].
Eyman, Russell G., [redacted].
Goupil, Michael T., [redacted].
Hallmon, William W., [redacted].
Hebda, Thomas W., [redacted].
Hickory, John E., Jr., [redacted].
Hill, Robert L., [redacted].
Jackson, Anson B., [redacted].
Killian, William F., [redacted].
Kreig, Louis T., Jr., [redacted].
Landers, Sam R., [redacted].
Lauder, Keith F., [redacted].
Lubow, Richard M., [redacted].
Maki, Karl A., [redacted].
Munford, Arthur G., [redacted].
Nielsen, Adrian M., [redacted].
Samuelson, John A., [redacted].
Steegstra, David A., [redacted].
Stevens, Fredric D., [redacted].
Stoffers, Kenneth W., [redacted].
Thompson, Larry D., [redacted].
Voss, James E., [redacted].
Westbrook, Steve D., [redacted].
Williams, Howard J., [redacted].
Zeitz, Stanley E., Jr., [redacted].

MEDICAL CORPS

Abraham, David A., [redacted].
Arnold, Hendrick J., III, [redacted].
Baldwin, John L., [redacted].
Barnes, Robert P., [redacted].
Biehl, Albert G., III, [redacted].
Bostrom, Stuart G., [redacted].
Brady, Charles E., III, [redacted].
Carbonneau, John R., [redacted].
Carson, James H., Jr., [redacted].
Celdran, Harriet H., [redacted].
Chasen, Marvin H., [redacted].
Christian, Charles B., Jr., [redacted].
Coburn, Bry H., [redacted].
Cofoid, Paul B., [redacted].
Cogburn, Bobby E., [redacted].
Collins, Cleve B., [redacted].
Conklin, James J., [redacted].
Corwin, James A., [redacted].
Crawford, Raymond S., III, [redacted].
Dail, Eric M., [redacted].
Davey, Joseph J., [redacted].
Davis, David L., [redacted].
Delermecolon, Melida E., [redacted].
Delp, Glenn R., [redacted].
Douglas, Glen A., [redacted].
Elms, John B., Jr., [redacted].
England, Douglas M., [redacted].
Evans, William M., [redacted].
Fan, Warner J., [redacted].
Fedosky, Allan L., [redacted].
Figueroadesigas, Ibis D., [redacted].
Fishburn, Frederick B., [redacted].
Fisk, David E., [redacted].
Floyd, John L., Jr., [redacted].
Frenger, Fred P., Jr., [redacted].
Fuller, Philip S. B., [redacted].
Gilmore, Robert W., [redacted].
Gilstrap, Larry C., III, [redacted].
Hall, Ronald R., [redacted].
Harasimowicz, Joseph A., [redacted].
Harris, Melvin E., [redacted].
Hastings, John R., [redacted].
Heffron, Charles H., Jr., [redacted].
Henderson, Richard A., III, [redacted].
Hidayat, Ahmed A., [redacted].
Hoenes, Douglas R., [redacted].
Holeyfield, Roy W., [redacted].
Howard, Wilbur F., Jr., [redacted].
Johnson, Sherman B., [redacted].
Jordan, Henry S., Jr., [redacted].
Josselson, Arnold R., [redacted].
Kee, Jimmy W., [redacted].
Keller, Harrison B., [redacted].
Learned, David K., [redacted].
Lee, Dennis R., [redacted].
Legaspi, Lester M., [redacted].
Lewis, Ramon L., [redacted].
Mabry, Earl W., II, [redacted].
Marquart, Chris D., [redacted].
Marsh, Royden W., [redacted].
Mataban, Antonio A. B., [redacted].
McClean, Charles K., [redacted].
McDonald, Robert E., [redacted].
Medina, Oswaldo F., [redacted].
Meier, Walter L., [redacted].
Mendlick, Richard M., [redacted].
Miller, Charles J., [redacted].
Mills, William C., III, [redacted].
Mimay, Antonio S., [redacted].
Mittuch, Joseph E., [redacted].
Moncrief, Hugh, [redacted].
Montgomery, Michael A., [redacted].
Muller, Stephen P., [redacted].
Murray, Harry M., Jr., [redacted].
Naguwa, Stanley M., [redacted].
Osterholzer, Heinz O., [redacted].
Paullus, Wayne S., Jr., [redacted].
Paxston, Donald K., [redacted].
Perschau, Richard A., [redacted].
Phillips, Daniel G., [redacted].
Player, David M., [redacted].
Poitrast, Bruce J., [redacted].
Racek, Edward L., [redacted].
Rasmussen, Reed C., [redacted].
Rettig, Kenneth R., [redacted].
Richardson, Howard M., [redacted].
Rigopoulou, Helen, [redacted].
Riley, Robert J., [redacted].
Risser, Christian F., [redacted].
Roadman, Charles H., II, [redacted].
Rogers, James H., Jr., [redacted].
Roper, Daniel L., [redacted].
Rose, Donald D., [redacted].
Ruehle, Charles J., [redacted].
Ruggles, Charles W., [redacted].
Ryan, Michael E., [redacted].
Schwartz, Gary P., [redacted].
Schwender, George E., [redacted].
Seith, William F., Jr., [redacted].
Sexson, William R., [redacted].
Shane, Jeffrey A., [redacted].
Shelley, James M., Jr., [redacted].
Shirley, Douglas P., [redacted].
Sigler, Robert W., [redacted].
Sipperley, Jack O., [redacted].
Smith, James M., [redacted].
Spielvogel, Richard L., [redacted].
Stelling, Henry G., Jr., [redacted].
Stevens, Edwin A., [redacted].
Stith, John A., [redacted].
Stonefeld, Donald F., [redacted].
Stutts, Baldwin S., III, [redacted].
Szpak, Michael W., [redacted].
Tolan, Gil D., [redacted].
Toon, Lee, [redacted].
Tremblay, Normand F., [redacted].
Trent, William G., [redacted].
Tuggle, Allen Q., [redacted].
Turlington, James T., [redacted].
Waring, William M., [redacted].
Warren, Fredric H., [redacted].
Whelan, Gerald P., [redacted].
Wilcox, Harry E., [redacted].
Wilson, Robert O., [redacted].
Wolfe, William H., [redacted].
Yu, Percy P. C., [redacted].
Yunes, Earl L., [redacted].

The following officers for appointment in the Regular Air Force, in the grades indicated, under the provisions of section 8284, title 10, United States Code, with a view to designation under the provisions of section 8067, title 10, United States Code, to perform the duties indicated, and with dates of rank to be determined by the Secretary of the Air Force:

MEDICAL CORPS

To be captain

David E. Fisk, [redacted].
Ronald R. Hall, [redacted].
Earl W. Mabry II, [redacted].

IN THE NAVY

The following-named (Naval Reserve Officers Training Corps candidates) to be permanent ensigns in the line or staff corps of the Navy, subject to the qualifications therefor as provided by law:

Dale K. Atkinson
Elizabeth V. Bres
Richard Chelune

The following-named (Naval Reserve officer) to be appointed a permanent captain in the Medical Corps of the U.S. Navy, subject to the qualifications therefor as provided by law:

Capt. Harold R. Schumacher, MC, USNR.

The following-named (Naval Reserve officers) to be appointed permanent commanders in the Medical Corps of the U.S. Navy, subject to the qualifications therefor as provided by law:

Comdr. Frank R. Arko, MC, USNR.
Comdr. John C. Fulmer, MC, USNR.
Comdr. Godofredo L. Navarro, MC, USNR.
Comdr. Richard H. Rahe, MC, USNR.

The following-named (Naval Reserve officers) to be appointed permanent lieutenant commanders in the Medical Corps of the U.S. Navy, subject to the qualifications therefor as provided by law:

Lt. Comdr. John A. Bigbee, MC, USNR.
Lt. Comdr. Djalma A. Braga, MC, USNR.
Lt. Comdr. David S. Frost, MC, USNR.
Lt. Comdr. George W. Gregory, III, MC, USNR.
Lt. Comdr. Kenneth G. Gross, MC, USNR.
Lt. Comdr. Justiniano C. Leyva, MC, USNR.
Lt. Comdr. Robert L. Magnuson, MC, USNR.

Lt. Comdr. Gerald W. Ross, MC, USNR.
Lt. Comdr. Judy E. Schwartz, MC, USNR.
Lt. Comdr. Charles S. Settle, MC, USNR.
Lt. Comdr. James C. Syverud, MC, USNR.
Lt. Comdr. Felix R. Tormes, MC, USNR.

The following-named (Naval Reserve officer) to be appointed a permanent Lieutenant Commander in the Dental Corps of the U.S. Navy, subject to the qualifications therefor as provided by law:

Lt. Comdr. Ronald B. Schatz, DC, USNR.

The following named Chief Warrant Officer to be appointed a permanent Chief Warrant Officer, W-2, in the U.S. Navy, subject to the qualifications therefor as provided by law:

CWO-2 Robert L. Kennedy, USNR.

The following-named (Naval Reserve officers) to be appointed temporary captains in the Medical Corps of the U.S. Navy subject to the qualifications therefor as provided by law:

Capt. Frank R. Arko, MC, USNR.
Capt. John C. Fulmer, MC, USNR.
Capt. Richard H. Rahe, MC, USNR.

The following-named (Naval Reserve officers) to be appointed temporary commanders in the Medical Corps of the U.S. Navy, subject to the qualifications therefor as provided by law:

Cdr George W. Gregory, III, MC, USNR.

Cdr Kenneth G. Gross, MC, USNR.

Executive nominations received by the Senate before the convening of the Senate on December 6, 1977, pursuant to the order of the Senate of November 29, 1977:

DEPARTMENT OF JUSTICE

Carlon M. O'Malley, Jr., of Pennsylvania, to be U.S. attorney for the middle district of Pennsylvania for the term of 4 years, vice S. John Cottone.

Mack Burton, of Arkansas, to be U.S. marshal for the western district of Arkansas for the term of 4 years, vice Lee R. Owen.

Coy W. Rogers, of Oklahoma, to be U.S. marshal for the western district of Oklahoma for the term of 4 years, vice Floyd E. Carrier, term expired.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 6, 1977:

NATIONAL MUSEUM SERVICES BOARD

The following-named persons to be members of the National Museum Services Board for the terms indicated:

For a term of 1 year:
Douglas Dillon, of New York.
Neil Harris, of Illinois.
Joan Mondale, of Minnesota.
For a term of 2 years:
Mamie P. Clark, of New York.
Benjamin W. Hazard, of California.
Nancy Negley, of Texas.
For a term of 3 years:
Gary K. Clarke, of Kansas.
George Horse Capture, of Montana.
Charlotte Ferst, of Georgia.
For a term of 4 years:
Lewis Davis, of New York.
Raul A. Lopez, of California.
E. Leland Webber, of Illinois.
For a term of 5 years:
Lloyd Hezekiah, of New York.
Peter H. Raven, of Missouri.
George C. Seybolt, of Massachusetts.

NATIONAL SCIENCE FOUNDATION

James Arthur Krumhansl, of New York, to be an Assistant Director of the National Science Foundation.

DEPARTMENT OF ENERGY

John M. Deutch, of Massachusetts, to be Director of the Office of Energy Research.

DEPARTMENT OF THE INTERIOR

Walter N. Heine, of Pennsylvania, to be Director of the Office of Surface Mining Reclamation and Enforcement.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

VOLUNTEER DEVELOPMENT CORPS

HON. THOMAS F. EAGLETON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, December 6, 1977

Mr. EAGLETON. Mr. President, I call your attention to the work of one of my constituents who has three times volunteered his skills and experience to advance self-help economic development overseas. I ask that the article, "Bud Barker: International Volunteer," by Nancy C. Kaprelian, which appeared in the September 1977 issue of the Missouri Courier, the monthly publication of Missouri Credit Union League, be printed in the RECORD immediately following my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. EAGLETON. Bernard C. Barker of Washington, Mo., former assistant managing director of the league, has completed three Volunteer Development Corps assignments. The first was in Peru, where he developed an information gathering system for credit co-ops. The second was in El Salvador, where Mr. Barker helped establish lending and repayment procedures for a group of small agricultural credit co-ops. His third assignment was in Thailand, where he organized a training program for credit co-op fieldmen throughout the country.

Mr. Barker is only one of several Missourians who have reported to me on their work as they have returned from VDC assignments overseas. I recall others including—

Dr. Harry A. Herman, former executive director of American Association of Animal Breeders, Columbia, Mo., who advised the superintendent of cooperatives of the Brazilian States of Minas Gerais, a State as large as France, on establishing artificial insemination cooperatives for both milk and beef producers:

Earl W. Grigg of Sunrise Beach, Mo., a former Farmland Industries construction supervisor, who helped members of a honey marketing co-op in Belize erect a steel building to house their processing equipment; and

A. H. Stephenson of Tuscumbia, Mo., former executive vice president of Farmland Industries, who advised Indonesia's director general of cooperatives on fertilizer distribution.

The contributions of these Missourians and other VDC volunteers to economic development overseas is impressive. As Ms. Kaprelian says in her article, the co-ops that sponsor VDC "want to make certain that the cooperative technique of economic organization is used and used effectively."

U.S. co-ops provide some of VDC's funds. Most of its money comes from the Agency for International Development as grants. Its most important resource, however, is not money but the volunteered skills and experience of highly qualified men and women. Ms. Kaprelian's article has caught not only the spirit of VDC and its volunteers but the spirit that lies at the heart of America's foreign aid program.

EXHIBIT 1

BUD BARKER: INTERNATIONAL VOLUNTEER

(By Nancy C. Kaprelian)

As the car came to the river's edge in Thailand, the driver informed Bud Barker that the credit union meeting was on the island in the middle of the river and that the only means of getting to that island was by boat. Barker took the situation in stride and calmly stepped into the boat, to be steered to the island. This was just another episode in a long line of international adventures and experiences in Barker's life since his retirement from the Missouri Credit Union League in December 1971.

Retirement—it is a word that conjures up such gentle images as the creak of a rocking chair on a front porch swept with a summer breeze, or at least nothing more strenuous than the idea of puttering in a garden. Retirement is a time of peace and quiet, the reward after a lifetime of bustle and pressure.

Barker eschews that quiet image because he prefers the bustle of life. His present lifestyle would be full for a man half his age, but the seventy-year-old finds it satisfying and rewarding. His most gratifying experiences these past six years have been his missions for the Volunteer Development Corps (VDC).

In the months before his retirement from the Missouri League after four years as assistant managing director and virtually after a lifetime of credit union work, he contemplated what he was going to do with his retirement. He noticed a small article in a credit union publication about the VDC. He felt that he would have the time now to devote to such volunteer work, so he wrote the organization for some descriptive literature. In its answer, the VDC suggested that he write Credit Union National Association (CUNA), which happened to be one of the sponsoring organizations of VDC. Barker didn't write CUNA and let the matter drop, or so he thought.

But in November 1971, right before the League's annual meeting, he received a call from the VDC to see if he could go to Peru on a volunteer mission. They wanted Barker to leave immediately, the next day if possible.

With special permission from the League board of directors and after quick orientations at the state department, CUNA's Washington office, and the Confederation of Latin American Credit Unions (COLAC) offices in Panama, Barker and his wife Eloise found themselves in Lima, Peru. They arrived in December and stayed for approximately three months. His job was to develop a statistical department for the Federacion Nacional de Cooperativas de Credito del Peru, Peru's equivalent of a credit union league, and to train someone to manage that department.

It was a typical job for the VDC, a private, non-profit organization which had been established seven years ago by a group of six U.S. cooperatives to provide short-term technical assistance to other cooperatives in developing countries. According to David Angevine, VDC president, these sponsoring cooperatives wanted to make certain that the cooperative technique of economic organization is used and used effectively.

VDC is financed jointly by the Agency for International Development (AID), a U.S. government agency, and the now-five cooperatives, one of which is the World Council of Credit Unions (WOCCU). (CUNA had been one of the six charter cooperatives, but in April of this year, transferred its authority to WOCCU. A. A. (Paddy) Bailey, president of WOCCU, presently is a member of the VDC board of directors.) In order not to conflict with the international work of these cooperatives, the VDC does not accept any assignments overseas which cannot be handled within 90 days. The VDC also depends on volunteers.

These volunteers are highly qualified, experienced men and women who are chosen carefully for each specific task. The volunteer may have retired recently from a U.S. cooperative or may be a mid-career professional whose co-op has granted him or her leave-with-pay to handle the overseas assignment.

Into this situation, Barker had strode with 33 years of credit union affiliation. Angevine was impressed with Barker's experience and jumped at the chance to tap this goldmine. He sent Barker off to Peru, to develop that statistical department. The credit union league there did not have any idea what credit unions were in its membership. The task was a formidable one for Barker. In classic understatement, he shook his head, smiled and said, "You can't imagine how loosely-run some credit unions are in other countries."

Because of the short-term nature of VDC work, the volunteers do not learn the language of the country to which they have been assigned. They need interpreters, and Barker's interpreter was a young man from Wisconsin who was in the Peace Corps.

Despite the free-wheeling attitude there, Barker believes that U.S. credit unions, with all their technical knowledge, can learn a thing or two from Peru and other countries. There is a national police credit union in Lima that has a ten-story building. One floor is devoted to education, one to dormitory space, another is a health clinic, and still another a cooperative with goods for purchase for all the credit union's members, who are scattered throughout the country. Barker says, "I don't know of any credit union in the States that gives the services that credit union in Lima does."

The VDC volunteer usually is not called up for a second assignment, but in April 1972, Barker left for six weeks in El Salvador. The Foundacion de Promotora de Cooperativas, a Catholic Church organization in that country, had asked the VDC for assistance. The organization sponsors a group of credit unions, which are not members of the credit union league there. This group wanted a volunteer to present an educational program for their officers.

A young Catholic priest served as Barker's interpreter as he visited these credit unions formed from farmers cooperatives. Beyond the specific assignment of a credit union educational program, Barker also worked with these people to teach them the wise use of credit to buy farm equipment to bring about better farm yield. "You're given the specifics of an assignment by the VDC," he states, "but you respond also to other needs as they come up in the countries."

The VDC must have been terribly pleased with Barker's initiative, for in 1974, they assigned him to a job in New Guinea to conduct seminars for credit union leaders from all parts of that country, but primarily from the back country. However, the assignment did not pan out because Australia did not pick up the tab as had been expected, and New Guinea did not have the finances.

Two years later, Barker embarked on his most recent VDC assignment. His trip to Thailand has left the greatest impression on his memory. Bud and Eloise left the U.S. in July 1976 to stay for two months in Bangkok. The request had been made to the VDC by the Credit Union League of Thailand to send a volunteer to review the operations of the league. Barker also was to devise a training program for the league's field representatives or extension workers, who then would organize new credit unions, especially in the rural areas. And he was to advise the league's officers of the directions to proceed to make the league self-supporting.

One of the field representatives who was fluent in English was assigned to the Barkers as their interpreter, Nikom Subongkot was driver, interpreter, and all-around "Man Friday" to them. "I don't know what we would have done without him," Barker smiles. "Whatever we wanted or requested, Nikom could find." The Barkers also were assisted by Somchit Varangkanangyubol, the acting manager director of the league. Happily for the Barkers, the Thai tradition of addressing people is to call them by their first names.

Barker found no trouble being an American in that troubled Asian country. He thought the people friendly and cooperative. "I was impressed by the people in Thailand," he remembers. "They were eager to work and progress." It pleased him to help these people. He found that the Thai people need financial guidance and credit at a reasonable rate of interest. "They can't go into a bank from the street like we can for easy credit," Barker states. He believes that if the government remains stable, the credit union movement in Thailand will grow because it answers a real need, much like the beginnings of the movement in this country.

The credit unions in Thailand are village credit unions. Some are located in remote provinces, like the credit union on the island in the river in Ubon province. Barker traveled the country and visited credit unions and chapters to "get the feel" of the land and the people.

Just as he had for Peru and El Salvador, Barker researched information and background data on Thailand in the library before leaving this country. The short briefings at the state department were not enough as far as he was concerned. For his trips to Peru and El Salvador, Barker even subscribed to *Americas* magazine, which is published in Washington, D.C., and which contains stories on the countries of South and Central America. Then, when he arrived at his destination, he traveled the length of the land to obtain firsthand knowledge of the country and its people. "You have to start from the grassroots," he believes.

In Thailand, Barker found that the majority of the people were Buddhists but that the majority of the league's employees were Catholics. One of his recommendations was to hire more Buddhists to dispel the people's notion that credit unions were elitist organizations. He wanted to rid the credit unions of the stigma of distrust. He also observed that the Thai people considered credit unions as organizations for "the poorest of the poor only" and that the middle classes did not need to show an interest in the movement.

The entire credit union movement in Thailand is worth seven million bahts, the Thai currency. Barker says that compares with the assets of Kirkwood Municipal credit union, in Kirkwood, Missouri, which is about $350,000. The currency exchange is 20 bahts to one dollar.

In his report, Barker felt that the future development of Thai credit unions presented possibilities. He believed that credit unions could offer unlimited assistance to the majority of Thai people, and that the growth and expansion of the credit union movement there was greatly needed for the benefit of the people.

One of the impressions in Thailand that sticks vividly in Barker's mind is his visit to a refugee camp in the northern province which borders on Laos. It was an abandoned American base that has been converted by the Thai government into housing for refugees from the fighting in Laos. The Thai government had done all it could to make the refugees comfortable, but it still was disturbing to see these displaced citizens of Laos who could never go back to their homeland. Barker and his interpreter walked among the refugees, and Barker was able to talk to them extensively.

Barker is not certain he will be called again for volunteer service. "Normally, the VDC just calls a person for service for one time only," he stated, "but they've asked me to serve three times so far. I'd like to go to Africa; that's a continent I've never been to. My wife says she won't go."

Eloise Barker has accompanied her husband on all of his trips. She learned to cope with domestic needs in the three countries and keep Bud's home life stable while he battled with the problems that had brought them there in the first place. She was born Eloise Goodale in Indian territory before Oklahoma became a state. Her father was a justice of the peace there, in land that was much like the old west. She inherited her father's spirit and proved it when she followed Bud on his jaunts overseas. Are there any takers on a bet that she won't accompany him to Africa if they are called?

While they are waiting to see if they receive another VDC assignment, the Barkers keep busy with their many other activities and jobs. Both are members of the Greater St. Louis Airstream Unit, which is part of the national Wally Byam Caravan Club International. They recently returned from the 20th international rally of the club at Bozeman, Montana, a gathering of the tribes, so to speak, of Airstream travel trailer owners. On that one trip alone, the Barkers traveled through 14 states in the west.

Bud Barker also is manager of the Kirkwood Municipal credit union and has had that position for the past three years. He has been the accountant for the past two and one half years for the Consumer Credit Counseling Services of Metropolitan St. Louis, and recently added the duty of lecturer in schools and at civic group meetings on the subject of consumer finance.

And Barker's hobby in woodworking is well-known. His decorative trays are works of art, and one was presented to Leonor K. Sullivan, former Congresswoman from Missouri, for her untiring efforts on behalf of consumers and credit union members in this state.

Born Bernard C. Barker on September 2, 1906 in LaGrange, Missouri, he attended elementary and high school in Keokuk, Iowa. He attended Iowa University and Hills Business College in Oklahoma City, then graduated from International Accountants Society in Chicago, Illinois.

It is plain to see that traveling was in his blood from the start. At that time, it was natural for Barker to join the navy and continue his traveling ways, but this was the one time fate thwarted him. "I thought you joined the navy to see the world," he joked, "but I was in the finance office on the naval repair base in San Diego and I stayed there." He served nearly three years as first class petty officer and was released with an honorable discharge.

He spent years in banking, in the insurance business, and in the treasury department of a large oil company before going back to Oklahoma and employment as chief auditor of the consumers tax division of that state's tax commission. In 1938, he moved to the Oklahoma employment security commission. And in that same year, he began his affiliation with the credit union movement.

After 15 years with the commission, Barker moved to Michigan in 1953 to begin work with the Michigan Credit Union League. He worked there in various capacities until 1961, when he assumed the position of treasurer-manager of Detroit Federal Employees credit union. He left Detroit in 1965 for Arizona and the position of assistant managing director of the Arizona Credit Union League. He stayed there until 1967, when he came to the Missouri League. Barker is a member of the Founders Club and a charter member of the Credit Union Executives Society.

He married Eloise in June 1932 and aften teases her with the remark that "45 years is an awfully long time to stay with one woman." They have two sons: Dan, who is 30, and lives with his wife Terri in Tempe, Arizona; and Lane, who is 25, and lives in Webster Groves with his wife Linda.

As an elder in the Christian Church (Disciples of Christ) for nearly 30 years, Barker has been instrumental in organizing two churches, one in Oklahoma and the other in Michigan. He is a Sunday School teacher and presently serves as chairman of the board at the Villa Ridge Christian Church.

His values and his love of travel merge in Barker's work as an international volunteer. He believes that "the cooperative effort in financing and other areas in these emerging nations is the way they are going to progress the fastest. These people need information so that they can help themselves. With the cooperative effort, people learn to do for themselves." He recognizes that the U.S. cooperative movement has helped a great many people in this country and feels that these same methods can help others in developing nations. Barker smiles and states, "I'm not a philosopher, but that's how I feel. That's my philosophy."

It's this philosophy that will draw Bud Barker from his tranquil home near Washington, Missouri, to roam the world spreading the cooperative creed as a volunteer with the VDC. He may be retired, but he hasn't been sent to pasture, for the people of the world need Bud Barker and his experience and values.

PHILADELPHIA ACTS TO REDUCE NUMBER OF VACANT HOMES IN CITY

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. EILBERG. Mr. Speaker, the city of Philadelphia has been engaged in a determined effort to reduce the number of vacant homes in the city, and I am happy to be able to report that this campaign has resulted in a substantial improvement in this critical area of housing.

A new survey, completed earlier this year, shows a 38.1 percent decrease in vacant residential and residential-commercial properties in the past 3 years.

Mayor Frank L. Rizzo has issued the following statement on the progress that has been made:

> This significant improvement in a critical area of our housing problem is most welcome. It demonstrates that we are on the right track. In the months ahead we will exert every effort to bring about even greater improvements in the all-important area of housing.

The vacant housing report, issued by Licenses and Inspections Commissioner Dominic Sabatini, has been transmitted to Allen R. Vose, General Manager of the U.S. General Accounting Office, by John A. Gallery, director of the city's Office of Housing and Community Development.

Comparing a recent survey of vacant residential properties conducted by the city during the period June 1 to July 15, 1977, with a similar survey done in 1974, Gallery noted that there were some 34,303 vacant properties in the city 3 years ago. Some 7,000 to 8,000 of these were owned by the Department of Housing and Urban Development as a result of FHA mortgage defaults.

The current vacancy figure for these residential categories is 21,214—a drop of 13,089 vacancies. This reduction, Gallery noted, can be attributed to a number of factors:

> First, there has been a substantial reduction of HUD vacant units during this period as a result of HUD's own efforts and the City's efforts to take HUD properties through the City's Gift Property Program, the LPA Rehab Program, and Urban Homesteading. HUD's inventory has been reduced from the 7000 to 8000 figure to slightly less than 1000 properties . . .
>
> There has also been a reduction resulting from L & I's demolition of public nuisance properties. Approximately 5600 such properties have been demolished, usually as a result of requests from individuals or community organizations.

In his letter, Gallery also noted that there has been a reduction based upon the city's rehabilitation efforts directed toward privately-owned vacant properties, which have reclaimed 1,257 vacant properties through the gift property program and the urban homesteading program, as well as through efforts of the Philadelphia Housing Development Corporation and the Redevelopment Authority LPA Rehab Program.

In his 1977 report on the vacant property survey, Commissioner Sabatini gave further details of the city's efforts to reduce the residential vacancy rates.

He noted that neighborhoods and community groups are recognizing the negative influence of vacant dilapidated houses and that the Department of Licenses and Inspections requested by communities to remove these sources of blight, has demolished 5,632 structures through its public nuisance and dangerous building programs.

He added that the number of vacant lots has not increased even with greater demolition activity—there has actually been a decrease of 3.18 percent from 15,562 to 15,067 in the past 3 years. A number of programs have made such lots a benefit to the neighborhood by paving them for parking or making them available as community gardens or play areas. Further, where whole blocks of structures have been torn down, the resultant large vacant lots are more marketable for development.

Private market activity has also played a role in the vacancy rate reduction, the commissioner states, as such areas as Queen Village, Fairmount, Spring Garden, and Olde Kensington have benefitted from a back-to-urban-living concept and have been improved and reoccupied on an individual basis.

The city's urban homestead program makes vacant properties available to families who agree to rehabilitate a house and occupy it for 5 years. Technical rehabilitation services and financial counseling, plus help in obtaining mortgages, are provided to homestead families.

The gift property program of the Office of Housing and Community Development provides an opportunity for owners of tax-delinquent vacant properties to give them to the city for forgiveness of back taxes and city liens. Properties accepted by the program are made available to individual families, channeled into existing public programs, or held aside for future development.

The Redevelopment Authority's LPA (Local Public Agency) rehabilitation program purchases vacant, vandalized and abandoned houses in 12 urban renewal areas, rehabilitates them, and sells them to eligible home-buyers who plan to live in them.

The vacant property survey was compiled by department inspectors who reported on over 51,000 addresses in a concentrated, highly controlled program using computer-produced records and detailed maps to assure complete coverage of the city.

COMMUNIST CHINA: ENEMY OF A FREE PRESS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. ASHBROOK. Mr. Speaker, recently I placed one of a series of articles that Ross Munro of the Toronto Globe and Mail wrote on the lack of human rights in mainland China. To the Washington Post's credit it ran the whole series of articles.

The Chinese Communists have informed the Toronto Globe and Mail that Munro's visa will not be renewed "due to obvious reasons". Toid of this in Peking, Munro commented,

> Communist countries never expel correspondents for telling lies.

The West would be much better served by this type of honest reporting rather than that which usually is the case.

The refusal to renew Ross Munro's visa shows the true nature of the Chinese Communists. Reporters who have the courage to report the truth will not be allowed to continue reporting from the mainland of China. Communist China is an enemy of a free press. It not only prohibits its own subjects from learning the truth but also wants to restrict information to the citizens of the United States. But then we should not be too surprised. The Chinese Communists have tried other tricks in regard to the press including threats of no Peking bureaus for newspapers that carried advertising of Free China.

OIL COMPANIES—"THEY ARE ME"

HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. KETCHUM. Mr. Speaker, the accusations, misrepresentations, and half-truths being leveled by the White House on the oil industry in recent weeks are not only unjustifiable, but in my opinion represent a last-ditch "anything goes" effort by the administration to salvage the Carter energy bill. From a President whose earlier campaign promises emphasized honesty and integrity, these tactics are that much more difficult for the American public to swallow.

I represent a district in which oil is a vital part of the area economy. Consequently, I am able to see firsthand the effects of the industry on employment, tax revenue, and area development, and I assure you that these effects are positive ones. My district, however, is but a small example of the positive impact of this industry on the American economy. In his attacks the President has painted the oil industry as a monolithic structure commandeered by a few individuals whose influence is so vast that they are able to strong-arm the U.S. Congress into turning down some of the major proposals incorporated in the Carter energy "panacea." I consider this an insult to myself and to the Congress. Instead of portraying himself as the "knight in shining armour" out to protect the Nation from the "dragon" oil industry, I suggest that the President more closely examine the faults inherent in his energy proposals.

Mr. Speaker, I would like to conclude by requesting that a copy of an editorial printed in the October 19 edition of the Washington Post be included in today's RECORD for the benefit of my colleagues. I think that this letter better represents the role of the oil industry in the American economy.

THE OIL COMPANIES—"THEY ARE ME"

President Carter's senseless attack on "the oil companies" should be noted as political rhetoric only, as any brief analysis would show. Who are "the oil companies"? Well, they are me—I own 800 shares of Continental Oil Company (Conoco) stock, which I bought with money I saved while working, and the $93.33 that Conoco pays me every month helps a great deal now that I'm retired. Although lagging for a while, dividend increases lately have a bit more than matched the increase in cost of living.

Over the past 10 years, including those when Sen. Henry Jackson was calling "the oil companies" thieves, Conoco has sold $44.3 billion worth of products, has paid federal income taxes of $600 million and other taxes of $8.9 billions, and "other costs" have amounted to $32.6 billion. Net profits were $2.2 billion (5 per cent of sales), dividends were $800 million, and $1.4 billion were reinvested in the business. Those receiving dividends (the owners) were perhaps, on the average, in a 38 per cent tax bracket, so $300 million of the $800 million in dividends went to Uncle Sam, increasing his take from the business to $900 million and decreasing the owners' take to $500 million.

So Uncle got, in income taxes alone, almost twice as much as the owners got in net income; total taxes paid by Conoco over the period were almost 20 times as much as the owners got from the business. During the 10 years, long-term debt increased by $600 million, so the owners borrowed more money than they got back in net income.

"Other costs" of $32.6 billion, the $1.4 billion reinvested, and the $600 million increase in long-term debt mostly went into jobs for people—you can't drill a hole in the ground or buy transportation or equipment without putting people to work. Certainly these figures represent hundreds of thousands of jobs.

So this is "the oil companies," fostered by private capital and existing in a competitive environment, paying 20 times as much in taxes as the owners get, and selling gasoline much more cheaply than it can be bought in most other major countries of the world. This is a rip-off?

What do the politicians offer us in return if we accede to their demands that they be allowed to run the oil companies? Promises, intentionally vague promises, because they know little of the system they would destroy. But I know this, that when they destroy the oil companies they destroy me and hundreds of thousands of people like me. I am writing this letter because I object strenuously to being destroyed.

WILLIAM T. ST. CLAIR.

BERRYVILLE, VA.

LIBERTY LITTLE LEOPARDS—LIBERTY, OHIO—ARE NATIONAL CHAMPIONS IN POP WARNER FOOTBALL

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. CARNEY. Mr. Speaker, the members of the Liberty Little Leopards football team were honored at the fouth annual football banquet on December 4, 1977, at the Mahoning Country Club in Youngstown, Ohio. This year's banquet was an especially important event. The Liberty Little Leopards, composed of boys from the Youngstown area, have been named the "Number One Junior Midget Team in the Nation" following their victory over Orlando, Fla., in the Pop Warner Youth Football Playoffs. The Little Leopards were undefeated in 10 games.

I had the privilege of addressing the Little Leopards football banquet. In my remarks, I urged the boys to be champions off the football field, as well as on it. I also encouraged them to excel scholastically, and to set an example for their peers. The Liberty Little Leopards and their coaches have met their community's highest expectations for sportsmanship, teamwork, and discipline. Their hard work and determination have led them to develop the strength and skill necessary to achieve this national championship. Their families, friends, and supporters are justly proud of them, as I am.

Pop Warner, who once coached at such major universities as Cornell, Temple, Stanford, Georgia, and Pittsburgh, founded a football organization in 1929 to coordinate boys' football teams. Today, over 6,000 teams nationwide, made up of players between the ages of 8 and 15, are affiliated with Pop Warner Football. These teams are able to take advantage of the national organization's publications, insurance, safety, and scheduling programs.

Mr. Speaker, I wish to extend my congratulations to the Liberty Little Leopards and their coaches on their outstanding football season. Our community is proud of their accomplishment, and wishes them future success. At this time, I would like to insert the names of the coaches and the members of the championship team in the RECORD:

John Batcho, head coach; Dan Gustafson, coach; Bill Long, coach; Ed McCann, coach; Ed Rohm, coach; Robert Palumbo, coach; Tom Thomas, coach; and Ron Coman, equipment manager.

Members of the team: Mark Aliff, Brian Blasko, Marty Blasko, Doug Brown, Randy Burns, Bob Burton, Terry Chalker, Greg Cizmar, David Cordy, Danny D'Andrea, Bill Daniels, Ted Daroski, Antoine Davis, Keith Davis, Jack Day, John D'Egidio, Mark Demidovich, Tony DeNunzio, Joe Merolillo, Tom Matey, Sean McFarland, Dave Moamis, George Moamis, Joe Novello, Brian Palumbo, Lenny Portolese, Dean Pierce, Ed Quaranta, Tommy Ragland, Joe Sarko, John Sallustio, Greg Scharrer, Allen Smail, Mike Weddell, and Mark Welsh.

Kevin Holmes, manager; John Ague, manager; and Kevin Blasko, manager.

SHOPLIFTING: CONSUMERS ARE ITS INDIRECT VICTIMS

HON. MORGAN F. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. MURPHY of Illinois. Mr. Speaker, for the fifth straight year, the Illinois Retail Merchants Association sponsored an educational campaign to raise public awareness of one of America's fastest growing crimes—shoplifting. In recognition of the seriousness of retail theft, Gov. James Thompson and Chicago's Mayor Michael Bilandic declared November 13–19 Everything Has a Price Week.

The point of Everything Has a Price Week is this: People who steal do not get "something for nothing." Theft hurts all of us—in the form of higher prices (caused by higher insurance costs and money spent on theft prevention), fewer job openings because of lower business profits, and higher taxes for increased law enforcement services.

Everything Has a Price Week activities were aimed at discouraging this "something for nothing" attitude. Retail merchants want the public to be aware that everyone—not just store owners—suffer a financial loss when people shoplift. As Hugh E. Muncy, president of the Retail Merchants Association, said:

Few people realize that by turning the

other way when they see a thief in action, it costs them plenty.

Mr. Speaker, I commend the Illinois Retail Merchants Association for its continuing effort to reduce the crime of shoplifting. Consumers everywhere must realize that they have a vested interest in seeing that retail theft is curbed.

NUTRITION EDUCATION IN NEW YORK CITY

HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. RICHMOND. Mr. Speaker, nutrition education should be a major concern of the Federal Government. Yet when we take a look at our current $70 million effort designed to teach people to eat right, we see an array of 30 programs administered by 11 different agencies. There is a clear lack of planning and coordination with the result that relatively limited Federal funds are being wasted on a patchwork of largely misdirected nutrition education projects.

In an effort to remedy this situation the Agriculture Subcommittee on Domestic Marketing, Consumer Relations, and Nutrition, which I chair, has begun an intensive investigation of the Federal Government's role in nutrition education. So far, we have found that the American public is not being reached by Government nutrition information where they want it nor in an easily comprehensible format.

The expanded food and nutrition education program (EFNEP) of the Extension Service, USDA, serves citizens who live outside of the mainstream of opportunity and affluence, consumers who can least afford to be nutritionally ill informed. Mothers who live and raise their families in the community are trained to carry the messages of good nutrition to neighbors and friends, offering shopping and cooking advice in the language of the people whom they assist. EFNEP is a unique example of a Federal program contributing to the public health while strengthening the stability of the family.

Mr. Speaker, I would like to share with my colleagues the following article by New York Times writer Patricia Wells. The article emphasizes the need for clear Federal directives in establishing nutrition education programs that will have long-term impact on the eating habits of all Americans.

[From the New York Times, Nov. 2, 1977]

PUTTING NUTRITION INTO HISPANIC DIETS

(By Patricia Wells)

In Puerto Rico, they snacked on papayas, acerola berries and guava. Now, more often than not, it's Twinkies or doughnuts. Rice and beans is still a staple, but meat, once reserved for holidays, has become a daily habit.

For the many hundreds of thousands of Puerto Ricans now settled in New York, besides a new climate, new language and customs, there have been drastic changes in diet. And according to nutritionists working in the city's Spanish-speaking communities, the change has largely been negative.

Obesty. Hypertension. Iron deficiency. Deficiencies in Vitamins A and C. These are the health problems that Nilda Tirado, nutritionist working seven years in East Harlem, relates to the changing Puerto Rican diet.

"It's hard to tell a family who sees daily consumption of meat as a status symbol that this isn't good for them," said Miss Tirado, who believes that the old, simple diet, full of folk wisdom and cures, was nutritionally superior. "I have to say, look at what you ate back home, and look at what you eat now. Remember all the fruits? You didn't eat meat every day. You never ate cakes and candies."

It isn't that simple. According to Miss Tirado, head of one of the three offices in New York City of the Expanded Food and Nutrition Education Program, food habits are not formed overnight. Nor are they changed in a day.

Miss Tirado, her staff and those in community nutrition programs in the South Bronx and South Brooklyn have been working at improving the dietary habits of residents ever since Cornell University began administering the Federally financed program in 1970. And they're the first to admit that such change is slow.

The program, based on the belief that knowledge of foods and nutrition can improve the diet, health and life of low-income New Yorkers, now reaches about 15,000 adults and younger people, most of them Spanish-speaking.

The nutritionists and their aides go into the community with a one-to-one education program that includes everything from assistance on food selection in supermarkets to informal classes on cooking and baking.

The city's three offices employ about 60 aides full time, all young mothers recruited from the community in which they work. All receive an intensive three-week training course in foods and nutrition, and later attend weekly programs to update their knowledge.

After canvassing door to door and talking with homemakers about food and related subjects, each aide sets up a caseload of homemakers who voluntarily agree to participate in the program from six months to a year. Aides make weekly or semiweekly visits to 30 to 50 homemakers, beginning with discussions on the family's eating patterns and food-buying habits.

"The homemaker's needs vary widely," explained Miss Tirado. "Sometimes it's just a young mother who doesn't know how to cook and wants to learn. Or another who is confused by all the unfamiliar foods here and wants to know how to shop for and prepare such vegetables as spinach or broccoli. Infant nutrition is another big area."

In some housing projects, groups of homemakers enrolled in the program have gathered on their own to form discussion groups on weight control, food preparation or menu planning.

In many cases, homemakers graduate from the program and become so interested in nutrition and the community work that they go on to become aides themselves.

"It is a very costly, time-consuming program," Miss Tirado admitted, "but it's not just enough to give information. We're looking for behavioral changes, not just knowledge change."

Such behavioral change was much in evidence during a recent visit to a South Bronx homemaker. During a previous trip, Milagros Caraballo, the young nutrition aide, had found that the homemaker and her family of four used one gallon of vegetable oil each week, generally in frying pork chops or chicken or in preparing rice.

"I saw that their consumption of fats was awfully high, and suggested ways in which they could cut down," said Miss Caraballo.

During this visit the aide was greeted at the door with a smile and the words, "The pork chops were delicious. I baked them with a little spice, no oil, and everyone loved them."

A similarly positive behavioral change was noted in a group of South Bronx fourth graders who had received nutrition lessons from Cecilia Hallgren, a nutrition aide specializing in work with children.

Months after Mrs. Hallgren had visited, the class had a party. Instead of the usual snacks, students brought bananas rolled in wheat germ, fruit salad and carrot cake—all items rather foreign to their diet before Mrs. Hallgren's appearance.

On a larger scale, the program's influence was felt throughout the state in 1972, with the passage of a bill requiring that all rice sold in New York be enriched.

Maria Burgos, the nutritionist heading the South Bronx program, initiated the bill after she discovered that most of the rice sold in one-pound boxes was enriched, which was not the case with the 10- or 20-pound bags purchased by Spanish-speaking residents, who consume a half pound of rice per day per capita.

"In Puerto Rico, it was law that rice be enriched," said Mrs. Burgos. "I had to see that it was so here, too."

Some of the other changes the nutrition program has encouraged include a more varied diet, adding more vegetables high in vitamin A and fruits high in vitamin C; better shopping habits; healthful breakfasts, and better snacking habits.

For vitamin A, they often suggest adding carrots to stews or offer recipes for carrot cookies and carrot cake. They've also introduced the community to orange nog—a combination of orange juice and milk—now a popular snack drink that competes successfully with Kool-Aid and Hi-C.

As Miss Tirado pointed out, the program deals largely with a populace that sees a dentist only to have a tooth pulled and with women for whom prenatal care is almost nonexistent.

"Our largest and most captive audience is really the children," explained Judy Rodriguez, who works with young people in the East Harlem program.

Working with schools, community centers and after-school programs in the nutrition center, Mrs. Rodriguez stressed healthful snacks and the "breakfast habit."

"They love to cook—oatmeal cookies with raisins, special ice milks—it's the only thing that keeps them coming back," she said.

JOSEPH EGAN NAMED TO COMMERCE POST IN CITY OF PHILADELPHIA

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. EILBERG. Mr. Speaker, I am pleased to report that one of my constituents, Joseph M. Egan, Jr., has just been named first deputy director of commerce for the city of Philadelphia.

The appointment of Mr. Egan was announced by Mayor Frank L. Rizzo, who has described the new first deputy director as a man "well versed on the Philadelphia business and economic scene."

Mr. Egan, vice president of program development for the Philadelphia Industrial Development Corp., is a career economic development professional who worked with the redevelopment authority on the successful marketing of Independence Mall in the late 1960's, before joining PIDC.

Mr. Egan, who packaged the multimillion-dollar federally funded community economic development program at the PIDC, is a cofounder of the Philadelphia Garment Board, member of the board of directors of the Parkway-Stevens School, the Council of Revitalization of Employment, and the Dunmore Corp. He is also a member of the Irish Society.

He is married to the former Marian Patricia Saring. The couple has three boys, Joseph III, 14, a pupil at Holy Ghost Preparatory School, and Patrick Logan, 12, and David Matthew, 9, who attend Maternity B.V.M. School.

The family resides at 2121 Murray Street in the far northeast.

LETTER FROM A CONCERNED CONSTITUENT

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following excellent letter my constituent, Elaine K. Fulton, of Ventura County, Calif., the wife of a small businessman, has written to the members of the House Ways and Means Committee. Mrs. Fulton presents a practical, down-to-earth, approach to the problems we in the Congress will soon be facing.

The letter follows:

SANTA PAULA, CALIF.,
November 23, 1977.

To The Honorable Members of the House Ways and Means Committee

GENTLEMEN: My name is Elaine K. Fulton, and I live at 20090 South Mountain Road, Santa Paula, California. I am a registered Democrat. My husband is a small business man. He is the inventor of the first Avocado Harvesting Machine in the world. Development and exploitation of the system has been a long slow process and we are severely burdened by the tax system which has developed over the past several years.

I attended your open hearings in Los Angeles, on November 17. I believe that I have a unique point of view, at least with respect to the testimony I heard that day. I am not employed by the government. I am not on any kind of welfare program. I represent an endangered species, a tax paying citizen of the middle class who has no guarantee of income from the government.

I ask that my testimony be entered into the record of the hearings of that day, but to some of you, I am sending this in the hope that you will take the information offered into consideration as you think about welfare reform.

I believe that your hearings were focused on the wrong end of the line. Since my experience has been limited to running a household for thirty years, and studying and thinking independently for a lot of that time, I can see your welfare system in terms of a household, and in most well-run, successful homes, the parents do not ask the children what they want until there is some idea about how much money will be available. Children, (and other unemployed individuals,) have a lot of time to sit around and think of things that they want. To allow/encourage people on welfare and other dependent individuals to set forth demands before the money is in hand is to set the scene for frustration.

The economic system that is the United States, has achieved its power through the rather simple-minded belief that a working person has a right to earn money and a right to spend that money for good things that he wants for himself and for his family. Each person is allowed to define what is good in his own terms.

Since World War II, an ideology has developed that says that people who earn the money do not know best how to spend it. Wage earners can produce the goods but they are denied the money/profit which is earned by the increase in value which they add to the raw materials. A vast bureaucracy of civil servants and politicians has been imposed on the productive part of society. This bureaucracy says to the working man, "You do not know how to spend 39 percent of your money. We know better how to spend that money so that it buys more 'good'."

These people take the money from the worker. The first thing they do is to set themselves handsome salaries and provide for their own future retirement, and then they use what is left over for whatever 'good project' they had selected to do.

The working man pays the bills, and yet he is given no voice in what the bureaucrats spend his money for. He may be given a voice in which of them get to write the checks, but the priorities remain the same, first provide for the department employees—then do what needs the be done, if you can afford it. The bureaucracy provides a standard of living and a standard of retirement for its employees that a small business person cannot even hope to acquire for himself.

The good life, as we know it, does not come from the chambers of government, nor from the offices of the bureaucrats. The good life comes from the fields, the factories and the markets of America. It comes from the work of millions of men and women who go to their place of business each day and collect a pay check each month. They take their money and use it to buy the things they need and want for themselves and their families. Only those things that they buy from the private sector add to the economic growth and development of the nation. Those dollars which they spend to hire people to tell them how to run their lives and their business cannot be spent for anything else. The money is gone. The use of the money is denied to the person who earned it. It is lost forever. The money that is used for government is only consumed, it can neither be spent nor invested.

In their shrill and strident manner, the unemployed demand meaningful jobs with a future. Those wage earners who support the whole system do not have meaningful jobs, but they are too busy to appear before congressional committees. To expect a hash slinger at the local greasy spoon to pay for a meaningful job for someone else, (who chooses not to work at anything at all unless it is 'meaningful') is patently unfair. A person who spends his working day climbing up and down 12 foot ladders with a picking bag hung round his neck ought not to be taxed to support that person who does nothing but complain that his life is meaningless because he has nothing he wants to do. What means meaningful?

These people who are demanding meaningful jobs are also demanding jobs with a future. Presumably, a job could be rejected on either of those bases. (A meaningful job could be said to have no future. A job with a future could be said to be meaningless.) The pickets outside the hearing said that they did not want to be told that they had to work. The present welfare system depends on their not working since the welfare department is staffed on the basis of its case load. If the case load were to be reduced, then the staff would be reduced, unless of course, the head of the agency said that his job could be done with 20,000 fewer people, but that those people did not have to worry, they would not lose their jobs. Their wages and their pensions were locked in.

I believe that the only fair way to distribute the Gross National Product is on a percentage basis. Prosperity would return if the share which the private sector pays for government could be reduced. Prosperity would have a fighting chance if that share could be stabilized. Twenty-five percent of every dollar any body, or any corporation earns would seem an equitable share. Survival would also be possible if the charge for government were as much as 35 percent. However when we must pay between 39 and 41 percent of our income before we get to spend anything on ourselves, we are in danger of experiencing an economic collapse.

If the share of money now used to buy government were reduced, and more dollars were left in the hands of the people who earn it, this money could be used to buy the things the families need for their welfare and their comfort. This money would generate jobs in the private sector. It might be that the economy would grow to the point that the 25 percent or the 35 percent would be more dollars than the present 39 to 41 percent.

If you really want welfare reform, the easiest way to do it would be to decide what percentage of the national income should be spent for government. If this is 25 percent, then that is a quarter out of every dollar earned by any one. Let this twenty-five percent be one hundred percent of the money spent for government, and then decide what share of the total each of the layers should receive, Local, municipal, state and federal government would each receive a share of the total.

Each of the departments of each of the governing levels would also get a percentage. Finally priorities could be established on a national basis, Interior Commerce, etc? The Congress can take their share for administering the whole thing.

The only hard and fast rule would be that the share of the GNP that went for government could not be increased. This would serve as a reward system for both the public and the private sector. It would put them on a cooperative basis instead of a competitive one. Good management would be rewarded in the public sector as well as in the private, and I would expect that half the people could do twice the work, and the rest could be employed in 'meaningful' jobs. It would restore the right of the wage earner to decide how most of his money ought to be spent. It would enable public employees to know how much money would be coming in and allow them to do the most with it.

As long as you develop a marketing list before you look at the bank balance, you are doomed to insolvency.

Sincerely,

ELAINE K. FULTON.

RESOLUTION OF APPRECIATION

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LEDERER. Mr. Speaker, it is with the greatest sense of pride that I share with my colleagues in the House of Representatives the accomplishments of Scoutmaster William Kitchen and the Scouts of Troop 10, Boy Scouts of America.

The executive board of the Philadelphia Council, Boy Scouts of America, at its regular meeting on November 17, 1977, unanimously adopted a "Resolution of Appreciation," recognizing the outstanding accomplishments of the leaders and Scouts of Troop 10, particularly taking note of the massive rehabilitation project completed by the Scouts and leaders in the restoration of meeting rooms to be used on behalf of scouting.

I, and, I am sure, all my colleagues in the House join with the executive board of the Philadelphia Council of Boy Scouts of America in conveying our highest commendation to the leaders and Scouts of Troop 10, sponsored by Horn Ross Weiss Post VFW.

RHODESIA: A NATION THAT REFUSES TO DIE

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. ASHBROOK. Mr. Speaker, I want to call to the attention of my colleagues that on November 11 Rhodesia celebrated her 13th year of independence. This has been made possible by the gutsy leadership of Prime Minister Ian Smith and the strong resolve of that nation's citizens.

From the beginning liberal doomsayers have eagerly predicted the imminent death of Rhodesia. When she proclaimed independence from Great Britain in 1965, most said that the government would last only a few short months.

The New York Times proclaimed the Rhodesian economy would be quickly strangled. The London Economist urged the British Government to make the first moves in opening talks so that the Smith regime could gracefully surrender. The British Prime Minister stated the matter would be settled in weeks, not months.

As the months turned into years, dire prophecies as to the demise of Rhodesia have continued. To cite just one example, I have in my files a Dear Colleague letter from the gentleman from Minnesota, Don Fraser, head of the International Organizations Subcommittee, dated September 23, 1975. In that letter he stated:

> The Ian Smith government in Rhodesia is facing the end.

Needless to say Rhodesia has survived another 2 years and 2 months beyond "the end."

In short, Rhodesia has confounded the experts. Year after year she has beaten the odds and lived to celebrate another anniversary.

All of this has been accomplished without the help of the United States. For 13 long years we have refused to recognize Rhodesia's independence. We have spurned her friendship and refused to lend a helping hand. Instead we have joined the United Nations in imposing strict economic sanctions against Rhodesia on the ridiculous grounds that she constituted a threat to world peace.

Such a policy is hard for me to understand. It is détente with our enemies but a cold shoulder for those who would be our friends.

Nevertheless, Rhodesia has continued to survive. Despite outside pressures she is moving forward with her own policies and developing her own solutions to internal problems. That she is still alive to celebrate her 13th year of independence is an impressive achievement.

HANSEN VERSUS THE IMPERIAL JUSTICE DEPARTMENT

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. DORNAN. Mr. Speaker, on November 18, I had the privilege of chairing ad hoc hearings in Houston dealing with the alleged misuse of Federal funds and irregularities associated with the International Women's Year Conference.

The first and most distinguished witness was our colleague and my good friend, Representative George Hansen of Idaho. The Congressman spoke forcefully for the rights of the individual States to ratify—or not to ratify—the so-called equal rights amendment. His arguments were as lucid and as logical as those we have become accustomed to hear him deliver in this Chamber. I wish only that all of our colleagues could have been present to listen to his powerful arguments in favor of allowing States to rescind approval of the equal rights amendment.

So that all of our colleagues will have the benefit of his cogent reasoning, I insert his news release of November 18 to be reprinted in the Record.

Sovereign Rights of the States Assaulted by U.S. Attorney General

Houston.—"The Sovereign rights of the states are being unfairly and unconstitutionally assaulted by arbitrary and political decisions from the office of the U.S. Attorney General," Idaho Congressman George Hansen said in Houston today.

Hansen appeared before an Ad Hoc Congressional Hearing chaired by U.S. Representative Robert Dornan (R-Calif.) in connection with activities related to the National Conference of International Women's Year (IWY) to testify for his legislation to allow states to rescind their ratifications of the Equal Rights Amendment (ERA).

"Three states have already passed recissions of ERA ratifications including my own state of Idaho," Hansen said, "but the Carter Administration is so hell-bent to get ERA approved that the U.S. Attorney General's office is passing off political advice as determinations of law in a blatant display of legal arrogance."

The Idaho Lawmaker contended, "The Attorney General's office should be fair enough to admit they can't have it both ways. States not approving ERA on first consideration are not prevented from later ratifying, so why should ratifying states later be prohibited from rescinding?" Hansen questioned.

"My bill which I call the Hostage Relief Act will clarify and guarantee that legislatures are free to change their minds either way until such time as the proper number of states have qualified for certifying approval of the proposed amendment," he pointed out.

Hansen noted that his legislation is particularly important in light of the recent bill introduced by Rep. Elizabeth Holtzman (D-NY) which would extend the time for ERA ratifications for another seven years.

"Certainly states should not be held hostage to actions taken under a given set of rules and conditions when those circumstances are changed." He continued.

"ERA has already had the advantage of extensive lobbying at taxpayers' expense," stated Hansen who has filed a lawsuit against IWY for illegal diversion of funds as revealed in an audit by the General Accounting Office (GAO). "Why should they also be able to arbitrarily change the rules to their advantage without allowing the fairness of an escape clause for those who wish to reconsider?"

Hansen also noted that he has sent several strong protests to President Carter over what he termed "abusive, bigoted and divisive public statements made by IWY and Administration leaders like Bella Abzug and Midge Costanaza."

"They have no business using a tax supported position to publicly condemn in the most derisive fashion those who philosophically disagree with their program and goals—a wrath that has been heaped heavily upon such minority religious groups as Catholics and Mormons who have strong anti-abortion and family-oriented philosophies," Hansen concluded.

REPRESENTATIVE FISH DELIVERS PAPER IN GENEVA

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. GILMAN. Mr. Speaker, the distinguished gentleman from New York's 25th District, Mr. Fish, has recently returned from Europe where he had the dual honor of serving as an adviser to the American Delegation to the Belgrade Conference and addressing the 41st session of the Intergovernmental Committee on European Migration (ICEM) in Geneva.

At this point in the Record, Mr. Speaker, I request that Mr. Fish's remarks at the 41st session of the ICEM be inserted. In just a quarter of a century, the ICEM has been responsible for the safe movement of more than 2.3 million Europeans, including 1.3 million refugees. The ICEM's function has been to provide for the needs of those Europeans who wish to emigrate to other lands. It is an important body, with an important function, and Congressman Fish's remarks are indeed fitting:

Statement of Congressman Hamilton Fish, Jr.

Thank you Mr. Chairman.

At the outset, I wish to say how pleased I am to have this opportunity to attend another session of the ICEM Council. I well recall the 25th Anniversary of ICEM in 1976, when I had the great honor to participate in the Commemorative Ceremony.

Mr. Chairman, my colleagues and I in the United States Congress follow with close interest the programs of ICEM and we have been pleased to note the great achievements of the organization over the years. As we understand it, ICEM, since its inception in 1952, has moved almost 2,300,000 persons including about 1,300,000 refugees. We further understand that during the current year ICEM will move some 63,000 persons including 57,000 refugees. These are most impressive figures and I take this opportunity to commend the Director and his very able staff on a big job well done.

At the present time, ICEM is playing a most important role in the resettlement of Indochinese refugees including the tragic boat cases, as well as refugees from Eastern Europe mainly from the Soviet Union, and refugees and detainees from Latin America.

The record established by ICEM shows what a determined group of free nations working together in a common cause can do. Mr. Chairman, The International Community is very fortunate to have the ICEM mechanism. One of the forces for good in the world today is this body of organizations—ICEM, ICRC, UNHCR and the Voluntary Agencies—who set for themselves the task of relieving the distressed, the needy, the persecuted and the uprooted who are unable to help themselves and require resettlement assistance.

I am proud to observe that through this network of organizations my government has always responded generously. The American people have been especially sympathetic to the plight of refugees probably because all of us have been immigrants if not refugees.

My interest in these matters is intensified, Mr. Chairman, because I serve as the ranking minority member of the Judiciary Committee's Sub-Committee on Immigration, Citizenship and International Law in the House of Representatives. You are all acquainted with the previous Chairman of that Sub-Committee, the Honorable Peter Rodino, and with the present Chairman, the Honorable Joshua Eilberg. Both gentlemen have had the pleasure of attending previous sessions of ICEM here in Geneva.

The Sub-Committee on which I serve has jurisdiction over legislation involving the admission of refugees into the United States. In 1975, we wrote the Indochinese Migration and Refugee Assistance Act. That legislation authorized the appropriation of funds for some 150,000 Indochinese refugees to settle in my country. That legislation was recently extended and, I am pleased to state, now provides for the adjustment of their status as permanent resident aliens. Recently hearings have been held on paroling into the country an additional 15,000 Indochinese refugees, those in Thailand and a number of so-called boat cases. I would expect this flow to continue.

The Sub-Committee at the same time has been increasingly concerned over the flow of refugees from Eastern Europe, especially the Soviet Union. As you are aware, Mr. Chairman, the number of these refugees is building up in Italy. I would like to commend this acute humanitarian issue to the attention of all the member governments.

Now, Mr. Chairman, we would all be pleased, I know, if conditions in the world were to improve suddenly so that peace and stability would prevail. Then perhaps the refugee problems would diminish and finally disappear—and we could all devote our efforts to other important problems confronting us. However, I see no prospect of any such result. The disturbing state of the world today provides no hope that current refugee problems will soon be resolved, or that new refugee situations will not develop. So the number of persons in need continues as before.

It is of the utmost importance, therefore, that our international machinery—ICEM and the Voluntary Agencies—continues to operate in the future. Adequate funds and resettlement opportunities should be available to meet the continuing problems in an effective way so that the human needs can be met with a minimum of political repercussions. It is most desirable that financial resources be large enough and that resettlement opportunities be generous enough to permit ICEM and Voluntary Agencies to provide prompt and effective responses to the newly arriving refugees. The problem is an international one—and the need for the International Community to be responsive to it is clearly evident.

Having said this, Mr. Chairman, I am mindful of the current financial problems facing ICEM. The existing and projected deficits are cause for real concern. As an interested party, permit me to suggest, Mr. Chairman, that all of us—the Director and member governments alike—must renew our efforts to place and maintain ICEM on a sound basis. Member governments in particular should demonstrate a greater willingness to provide their fair share of financial support to ensure the fulfillment of ICEM's programs, both the Regular and Special Programs. I am confident that the United States will not be found wanting in this regard.

All of us who follow refugee and migration activities appreciate the human need and the tragedy of the refugees and needy migrants. Similarly, we appreciate the heart-warming hopes and joys of those given a new chance of life.

ICEM must continue its vital work and I am confident that our joint concerns and interests are great enough that we will not falter in this important endeavor. Those of us fortunate enough to be here today can do no less.

POVERTY A REALITY

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. BROWN of California. Mr. Speaker, Congress, through legislation, has attempted to maximize the effectiveness of human service programing at the local level. Quality management is required to optimize the impact of Federal dollars in the community.

It is for this reason that I commend the Community Services Department of San Bernardino County—the war on poverty agency in my congressional district. The community services department has implemented modern management techniques—management by objectives, zero-based budgeting, cost benefit analysis, and so forth—in their efforts to maximize services for poor people.

The following is an article, from a weekly newspaper in my district, that outlines the goals and objectives of this cost-effective organization:

[From the El Chicano, Aug. 25, 1977]

POVERTY A REALITY

Mr. Rodolfo H. Castro has been Executive Director of the Community Services Department (CSD) since December, 1976 for the County of San Bernardino. He comes to our area with both local and national experience in the management of Community Action Programs. Mr. Castro's CAP experience commenced with Summer Youth Programs in the Middle 1960s and since then, he has been involved in a broad range of program activities—Head Start, Opportunity Centers, Manpower, Senior Programs, Educational Projects, etc.

A graduate of California State Polytechnic College, he majored in Business Administration and graduated in the top 5 percent of his class. In 1973, Mr. Castro received his Masters of Business Administration from Harvard University.

The following interview was conducted recently by a volunteer Chicano staffer:

Q. What is the Community Services Department?

A. The Community Services Department is the Community Action Agency for the San Bernardino County. We are a Public CAP under the administrative framework of the San Bernardino County Board of Supervisors.

Q. What are the objectives of your Department?

A. Our programmatic objectives are: a. To develop and implement human service programs designed to alleviate poverty in San Bernardino County. b. To function as an advocate on behalf of San Bernardino County's poor people. c. To build community sefl-sufficiency and dignity.

Q. What kinds of Programs are you administering?

A. CSD is currently administering a diverse combination of human service programs designed to effectively deal with the problems of poverty—nutrition, transportation, weatherization, food stamps, outreach, neighborhood projects, Indian opportunities, etc.

Q. Does CSD operate San Bernardino County's Nutrition for Seniors Program?

A. Yes, that is correct. CSD operates twenty nutrition sites in San Bernardino County that provide approximately three-hundred thousand meals to Senior Citizens annually. I would like to point out that CSD's Nutrition for Seniors Program has earned a statewide reputation for cost effective-high quality meals.

In addition, the Nutrition Program provides other services—socialization, transportation, counseling, information and referral, and shopping assistance.

Q. What is Weatherization?

A. CSD administers a Weatherization Program designed to weatherize the homes of poverty level participants.

CSD's Weatherization Program work crews insulate and weatherstrip low-income participant's homes. The Weatherization process reduces utility bills, conserves energy, and reinforces homes against the elements.

The program includes an education component designed to inform poor people about energy conservation techniques. CSD's Weatherization Program is receiving national recognition for programmatic effectiveness and innovation. I have been informed that CSD's weatherization efforts will be highlighted in the Communicator—the CAP World's national publication.

Q. Has CSD funded local Neighborhood Projects?

A. CSD funded nine Neighborhood Projects this year. The objective of the Neighborhood Projects Program is to provide local community based organizations with the opportunity to meet specific local community needs. Some Program examples are Casa Ramona's Senior Day Care Program, the Urban League Sickle Cell Education Effort, East Valley Area Health Council's Project H.E.A.L., and the Ex-Contact Program administered by Inland Area Development Projects.

A. In addition. CSD funded Los Padrinos for a Chicano Needs Assessment Study this year and a Black Needs Assessment Study has been budgeted for next year.

Q. What about the American-Indian?

A. CSD will fund two American-Indian Projects next year. In addition, we are currently working with the San Bernardino and Barstow Indian Centers and providing nutrition services at Fort Mojave.

The CSD Social Planning Unit will assist Indian managed community based organizations with resource attraction and grant writing. We are currently building communication linkages with San Bernardino County's Indian Community.

In the resource allocation process, the American-Indian is once again the forgotten

American. We must see that he/she is remembered through Advocacy.

Q. Who are the poor in San Bernardino County?

A. CSD estimates that there are approximately one-hundred and sixty thousand poor people in San Bernardino County—21 percent of the aggregate population. The poor are comprised of the unemployed, elderly, ethnic minorities, migrants, the handicapped, and the disenfranchised.

One out of five people in San Bernardino County is poor. Poverty in San Bernardino County is a reality. A reality that must be confronted by a joint public-private sectors effort if there is to be a solution.

Q. Is there a future for the War on Poverty?

A. Yes, a very optimistic future. Ms. Graciela Olivarez, the New National Director of CSA, has the complete support of the President of the United States in her effort to re-vitalize the War on Poverty. The new theme is "Bring the Program back to the People." Everywhere I travel, there is enthusiasm and optimism on the part of CAP people. Its very exciting.

Q. What about at CSD?

A. I am in the process of developing a first date, results oriented Management Team.

A. Management, Fiscal Accountability, Community Involvement, and Advocacy are the long-term directions for CSD. I hope to build a sound managerial framework from which to achieve the CAP's programmatic and philosophical objectives.

The CSD Administering Commission has been very supportive. They have put in a lot of long hours to translate our dream into a reality—to build a viable, effective CAP Program in San Bernardino County.

GREEK CYPRIOTS PLIGHT

HON. PAUL S. TRIBLE, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. TRIBLE. Mr. Speaker, I want to remind this House of the continuing plight of the Greek Cypriots. Their tragic situation is being forced out of the headlines by other issues of international import. But we cannot forget the human and political tragedy of Cyprus. America has a special interest in Cyprus and her people.

Many Americans have friends and family who continue to suffer from the devastation of the Turkish invasion of July 1974, and oppression of the Turkish occupation forces. The continued division of this island threatens renewed hostilities between Greece and Turkey which would destroy the southern flank of NATO. Most importantly, the human suffering and injustice on Cyprus cries out for our attention.

The Turkish invasion in 1974 affected the lives of tens of thousands of innocent people who were caught in the path of the Turkish forces. Nearly 5,000 Cypriots died, some 2,000 are missing, and 200,000 were left homeless in the wake of the battle. The Greek Cypriots suffered one of the most blatant violations of human rights since the close of World War II at the hands of the Turkish army. The rape, looting, desecration of churches, and killing was compounded by the expropriation of homes, farms, and businesses that had belonged to Greek Cypriot families for generations. Forty percent of the island remains in the iron grip of a Turkish occupation army. The issue of missing persons remains unresolved, with many families not yet knowing the fate of fathers and sons since 1974. Freedom of movement about the island is restricted. The Cypriot people live in daily fear of the resumption of war. It is an unstable and intolerable situation in which the Cypriot people must try to live.

Turkey, which so quickly assumed the responsibility for supporting the Turkish Cypriots in 1974, must be made to assume the responsibility for resolving the desperate situation on Cyprus. The illegal use of American arms and ammunition in the 1974 invasion is compounded by the continued illegal Turkish presence on the island.

As a result of the invasion, the United States suspended military aid to Turkey for 8 months. Turkey responded by closing U.S. bases in Turkey. To prevent the dissolution of the southern flank of NATO, aid to Turkey has been resumed on a limited basis. This year $175 million will go to Turkey in the form of military aid. About $93 million of this aid will consist of F-4 jet fighters.

Congress should not divorce mutual defense agreements with Turkey from the Cypriot issue. While I recognize the importance of maintaining a strong NATO posture in the Middle East, I believe that the suffering, injustice, and threat of renewed hostilities on Cyprus are of equal importance.

We cannot afford to repeat our earlier mistakes. American weapons should not be used against the Greek Cypriots or to prop up the military occupation forces on Cyprus. Before these weapons and planes are shipped to Turkey, the Ankara regime should make substantial concessions on Cyprus. I oppose further aid to Turkey until that time.

The American people are committed to resist the violation of human rights worldwide. Congress cannot in good conscience deliver the tools of aggression into the hands of the Turks until the people of Cyprus are once again absolutely free to govern their own destiny.

A VALIANT RESCUE

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. O'NEILL. Mr. Speaker, I would like to call to the attention of my colleagues an incident which occurred off the coast of Cape Cod last summer.

The 36-foot fishing vessel, *Fairwind*, of Eastham, Mass., was sinking some 18 miles off the coast of Chatham, when the Chatham Coast Guard received a call for help. Responding immediately to the call the Coast Guard dispatched a helicopter with pumps, and a buoy tender, as well as a 44-footer, in an attempt to repair the stricken *Fairwind*. Meanwhile, another fishing vessel in that area heard the call and rescued the *Fairwind* crew, consisting of James Rainey, George Williams, and Bob Jennings, all of Eastham.

In conditions that were hardly conducive to a rescue attempt—visibility was seriously hampered by an early morning cape fog—the Coast Guard crew worked skillfully and quickly to lift the *Fairwind* out of the water and patch her up after she had, within 15 minutes of striking a log, sunk to her rails.

Through the resourceful efforts of the Coast Guard crew, the *Fairwind* was saved from complete destruction.

The Coast Guard plays a valuable and important role in patroling and maintaining the safety of the waters of the cape and in responding to the needs of fishermen when they experience difficulty. Too often, the efforts of the Coast Guard go unnoticed, and sometimes, unappreciated.

The crew of the *Fairwind* is deeply grateful to the Coast Guard for its efforts in their behalf, and I would like to take this opportunity to extend my compliments to the Coast Guard for a job well done on that occasion.

MARYLAND STATE INCOME TAXES

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. TEAGUE. Mr. Speaker, I am sure that there are other Members in this body who have experienced or will experience problems with the State of Maryland with respect to the payment of income taxes for the 5-year period immediately preceding this year.

I have already had the problem and remitted to the State of Maryland a tidy sum of money which I will be able to deduct from the payment of my Federal taxes this year. In view of our action in adopting Public Law 95-67 I wrote to the Attorney General of the United States to ascertain what action, if any, his office could take in behalf of Members of Congress who have been taken to task by the State of Maryland.

Under leave to extend my remarks in the RECORD, I wish to include my letter to the Attorney General and a copy of his reply to me dated November 23, 1977. You will note that their Tax Division is prepared to represent Members of Congress who have had problems with the State of Maryland and have asked that those interested Members get in contact with his office as soon as possible sending him copies of all correspondence and affiliated papers:

NOVEMBER 8, 1977.

HON. J. GRIFFIN BELL,
The Attorney General of the United States,
Department of Justice, Washington, D.C.

DEAR MR. BELL: In May of this year, the State of Maryland dunned a number of Members of Congress who reside in the State of Maryland for State Income tax for the years 1972 through 1976.

I paid to the State of Maryland a sum of $11,714.00 under protest, representing the tax for the years listed above; however, did not remit the penalties which they claimed against me.

As the result of PL 95-67, I claimed refund of the tax remitted. The refund was denied as set forth in the enclosed letter from the State of Maryland.

As a U.S. citizen, I also pay Federal income tax and the amount paid to the State of Maryland this year will represent a substantial reduction in my tax liability to the Federal government.

In view of the fact that the Federal government pays a rather substantial amount of money under various programs enacted by the Congress for aid to the States based on the fact that I am a Federal employee and residing in the State of Maryland, and the signing into Public Law the act which places an exemption on Members of Congress residing in the States adjacent to Washington because of circumstances beyond our control; I would appreciate very much learning from you whether your office can and will be of assistance to this group of Members of Congress in their claim with the State of Maryland.

Sincerely,

OLIN E. TEAGUE,
Congressman.

WASHINGTON, D.C.,
November 23, 1977.

Hon. OLIN E. TEAGUE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN TEAGUE: Your letter of November 8, 1977, addressed to the Attorney General, has been referred to the Tax Division for reply.

While the primary function of the Tax Division is to represent the Internal Revenue Service in matters involving the enforcement and administration of the revenue laws before the courts, we also have an additional function of litigating matters involving the resolution of conflicts between federal and state statutes in the field of taxes. Having read your letter and the material which you submitted, it appears to me that your claim against the State of Maryland is a matter appropriate for us to undertake in the exercise of the latter function. The passage of P.L. 95-67 does, I believe, evidence a Congressional purpose to avoid the imposition of additional burdens upon Members of Congress in the form of local income taxation by the states contiguous to the District of Columbia in which many of the Members may have temporary residences.

Accordingly, we are prepared to represent you and other Members of Congress similarly situated in establishing your exemption from taxation in the State of Maryland under P.L. 95-67 and in establishing the constitutionality of that statute. If any other Members of Congress wish to join you in this matter, it will be necessary for them to advise us and to furnish us with the necessary details as to the tax claims asserted and the amounts involved. We shall probably also require from each of you copies of the relevant tax returns and any other papers associated therewith. We request that you act promptly in this regard in order that our efforts not to be hampered by unnecessary procedural obstacles. Thus, for example, the letter from the State of Maryland denying your claim is dated October 7, 1977, and is stated to be a statutory notice of denial permitting appeal to the Maryland Tax Court within thirty days. Unfortunately, your letter to the Attorney General was not written until that thirty-day period had expired.

We shall be pleased to cooperate with you in every way possible and request the same consideration from you and the other Members of Congress. Your case will be handled under the supervision of Mr. John J. McCarthy, Chief, Civil Trial Section, Central Region, and I would suggest that you address further communications directly to Mr. McCarthy.

Sincerely yours,

M. CARR FERGUSON,
Assistant Attorney General, Tax Division.

NEW FACES AND NEW FOCUS IN BOB BERGLAND'S DEPARTMENT OF AGRICULTURE

HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. RICHMOND. Mr. Speaker, the U.S. Department of Agriculture was originally conceived to serve farmers. Over the years though, we have seen the USDA expand its role and take on new responsibilities. Technological advances, social and economic changes, and the movement of people from rural to urban areas have all been key determinants in the changing character of the American farm.

As these changes were incorporated into our national lifestyle, so were they integrated with USDA policy. Bob Bergland's USDA is no exception.

In bold moves to reorganize and refocus the efforts of USDA, Mr. Bergland has shed new light on the agency. He understands that consumer input is equal in importance to farmer advice in formulating U.S. food policy. He has displayed the responsible leadership which the USDA has so long needed.

Des Moines Register writer Lauren Soth recently commented on the new USDA. Mr. Speaker, I would like to share this article with my colleagues, as it provides an excellent overview of the growing importance of USDA in assuring an abundance of nutritious food for all Americans.

The article follows:

[From Des Moines Register, Oct. 3, 1977]

NEW FACES AND NEW FOCUS IN BOB BERGLAND'S USDA

(By Lauren Soth)

Bob Bergland is trying to reshape that ancient institution which he heads, the U.S. Department of Agriculture.

During most of its illustrious, century-old life, USDA has been considered by its clients and the public to be strictly a farmers' agency. Except for the Forest Service and a few other odds and ends, USDA worked for farm families, primarily to increase their productivity.

The promotion of better farming methods and the paying of subsidies on the basis of commodity-unit prices have been so successful that USDA doesn't have many clients left. The number of workers needed in farming has been slashed; the size of farms has increased; the farm population has fallen.

Income of the top half-million farm operators (who produce 80 per cent of the products for sale) has climbed steeply.

At the same time, the interest of the public in agriculture has changed. During the last few years sudden eruptions of food prices have alarmed consumers; the long period of chronic farm surplus and low food prices seemed ended. Also, the public has become concerned about environmental abuses in farming.

The appearance of nitrates in some water supplies, pesticide dangers, siltation of streams; the alarms about cancer-causing substances in foods, some coming from livestock feed additives and some from food processing—all these have turned public attention to USDA.

Bergland, the northern Minnesota farmer, former farm program official and former congressman, knows the new claims on USDA better than most. Recently, he called in a group of about 55 persons connected with food and agricultural affairs near Philadelphia to a weekend retreat conference with 34 policymaking officials of his department and himself. The subject of discussion was what the USDA should be doing to meet the public needs in food and agriculture.

Bergland already has shown that he is ready to break with tradition in USDA. His appointments to high positions include a number of people from outside the familiar agricultural establishment: big farmers, farm organizations, state agricultural colleges, farm product processors, farm supply companies.

The appointment of Carol Tucker Foreman as assistant secretary for food and consumer services caused a semi-panic in some quarters of the Establishment. Foreman was director of the Consumer Federation of America and of the Paul Douglas Consumer Research Center. She also has worked in the Department of Housing and Urban Development. Her criticism of agricultural policies in recent years and her championing of consumer interests have caused some farm organization leaders to regard her as a dangerous witch.

I found her to be a very bright and levelheaded leader. She understands farmers and their problems better than some of her lobbyist opponents of the past would have you believe. But, since USDA spends more public money on food programs than it does on all its other activities combined, it's about time that the department give this activity more emphasis. Carol Foreman will do that.

The conflict between food consumers and farmers has been stirred up in part by farmer lobbyists who have been sucked in by food processors and distributors to do their work. The cost of the raw material in food (what the farmer receives) is less than the cost of manufacturing, distributing and selling food products. In the case of cereal products, including bread, the cost of the grain is almost negligible.

It is the common interest of farmers and consumers to minimize costs between the farm gate and the retail counter. Farmers and consumers need not be so fiercely at odds over drugs in livestock feeds, environmental controls and food preservation, either. The tradeoffs in such cases, if they reduce farm production, will raise farmer income. So the issue is whether consumers want to pay higher food prices in order to eliminate or reduce certain drugs.

The new look at USDA, I believe, will give both farm people and food consumers (farm people buy practically all their food at the supermarket, too) better service than before.

In other aspects, USDA is departing from historic molds. The new man in charge of rural development, Assistant Secretary Alex P. Mercure, is a Mexican-American from New Mexico. He has been a farmer and rancher and vice-president for public service of the University of New Mexico. He doesn't have all the old ties and inhibitions of the Land Grant ag college system about working with poor people.

M. Rupert Cutler, the assistant secretary for conservation, research, and education, is not the usual type of Land Grant educator.

He is a conservation and wildlife specialist and has been something of a crusader. The Soil Conservation Service people think he'll be great, but some of the research and extension oldtimers view him with forboding.

My own view is that these new appointments are healthy and will move the USDA along in the new directions which it must go. Our conference in Pennsylvania was constructive. If it did not produce any charts for change, it certainly was imbued with an attitude of change and willingness to experiment. Bob Bergland deserves praise from the public and the special clients of USDA as well.

PHILADELPHIA GETS NEW DIRECTOR OF FINANCE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. EILBERG. Mr. Speaker, Mayor Frank L. Rizzo of Philadelphia has recently appointed Irvin R. Davis to the post of director of finance for the city.

Mr. Davis is a constituent of mine, in the 4th Congressional District of Pennsylvania, and I am naturally pleased at this appointment. He is a 22-year career city employee, who has been serving as acting director since the resignation in September of Lennox Moak.

Mayor Rizzo named Davis from a list of nominees presented to him by the finance panel, in accordance with the provisions of the home rule charter.

Davis, 43, was deputy director of finance from 1968 to 1976, when he was named first deputy. He also served as the city's legislative liaison with members of the general assembly in Harrisburg, where he helped obtain changes in various State laws resulting in increased grants and subsidies for Philadelphia in areas such as road maintenance, health and welfare services, and increased contributions from the State on other programs.

Davis joined the city of Philadelphia as an accountant in 1955, gradually rising through the ranks to accounting supervisor and fiscal analyst. He was named deputy finance director in 1968.

In his over 2 decades of service with the finance department, he has been responsible for development and implementation of various accounting procedures saving the Philadelphia taxpayers money.

In 1968, Davis was an adviser to the Philadelphia delegation attending the State Constitutional Convention on Local Government and Financial Changes held in Harrisburg.

He is a member of the Municipal Finance Officers Association, the Association of Governmental Accountants, a director of the Pennsylvania League of Cities and is serving on the Effective Government Steering Committee of the National League of Cities.

He attended the University of Pennsylvania's Wharton School Evening Division from 1952 to 1955 and received an associate degree in business administration from St. Joseph's College in 1958.

Davis is married and has two children. He is a graduate of West Catholic Boys High School and formerly worked for Atlantic Refining Co. (now Atlantic Richfield). He lives in the Northeast.

NATIONAL HEALTH INSURANCE—AT WHAT COST?

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. ASHBROOK. Mr. Speaker, one of the national health insurance proposals most talked about by liberals is the Kennedy plan, sponsored by Senator EDWARD KENNEDY of Massachusetts. It would establish a program covering the entire population to be financed through a combination of social security taxes and general revenues.

Before we take up any health insurance legislation, however, I think it is important to carefully consider the cost. In only the last 2 years our Nation has chalked up a budget deficit in the $100 billion range. Such unwarranted Federal spending must be brought under control. Congress should proceed with extreme caution before enacting any new spending programs.

The cost estimate of the Kennedy health insurance plan is simply staggering. According to a report prepared last year by an independent actuary, adoption of the proposal would add an additional $130.1 billion in Federal spending by 1980.

In this same regard nationally syndicated columnist James J. Kilpatrick recently wrote the following about the Kennedy plan:

> The total cost? No one has even a foggy notion of the cost. Two hundred billion, three hundred billion? . . . Present costs are vaguely estimated at $145 billion. Once all restraints were abandoned, the figure easily could double or treble.

In other words, the Kennedy plan would increase Federal spending by one-third or more over the current level of spending. Such a massive increase at a time when we are already suffering from huge budget deficits and steep social security taxes would be irresponsible.

President Carter, of course, has promised us a comprehensive national health insurance plan of the Kennedy variety. This is one campaign promise that would be better forgotten.

Following is an excellent article on this subject by James J. Kilpatrick which appeared in the November 12 Washington Star.

A CAMPAIGN PROMISE TO BE BROKEN

(By James J. Kilpatrick)

In his press conference of Oct. 27, President Carter said he couldn't think of any major innovative proposals he would offer in 1978 or 1979. Shortly thereafter, responding to some raised eyebrows, the press office said that wasn't exactly so. Mr. Carter had not abandoned his promise of national health insurance. Such a program would yet be presented.

Maybe so. Mr. Carter's commitment was absolute. Time after time on the campaign trail, he pledged his efforts to enact a "comprehensive, mandatory program of national health insurance."

This is the kind of sweeping, first-dollar, all-embracing program that Sen. Edward Kennedy, D-Mass., continues to push. The 100-member Committee for National Health Insurance still is beating the drums for this scheme. The American Public Health Association, which met in Washington last week, raised whoops and hollers for "socialized medicine" as such.

But unless I am wholly mistaken, most of the steam has leaked out of the movement toward national health insurance. Victor Hugo once said that no army can resist the strength of an idea whose time has come. By the same token, no army can impose an idea whose hour has passed. This idea is over the hill.

Several reasons support that cheerful prediction.

So radical a departure from existing patterns of medical care would have to command overwhelming popular support. Are the people clamoring for national health insurance? Unless my ears deceive me, the people are as quiet as so many clams.

Last year, NBC took a poll: "Do you favor or oppose a program of health insurance paid by the government through increased taxation?" Only 36 percent of the respondents said yes. Almost half opposed; 16 percent were not sure. It is not what you would call a ground swell.

The NBC figures reflect the growing disillusionment with federal programs generally. What is proposed, under Kennedy's grandiose plan, is to turn medical care over to the same wonderful folks who have given us Amtrak and the Postal Service.

If ever a majority of the people believed government could perform a function better than the private sector, that belief no longer commands much support. A people disenchanted with public education have no perceptible enthusiasm for comprehensive public health.

The opposition to the Carter-Kennedy program rests on more than intuitive antipathy. The people are perfectly capable of foreseeing fantastic costs, and they don't like what they see.

The senator's idea is to scrap all existing programs of private insurance; he would also abandon Medicare, and he would retain only parts of the health care now provided under Medicaid, the Veterans Administration and other agencies.

In their place he would erect an enormous new bureaucratic structure headed by a Health Security Board. This board would effectively fix hospital budgets, fix doctors' fees, fix prescription prices, collect billions of dollars in new taxes and disburse millions of checks annually to providers of health services.

The total cost? No one has even a foggy notion of the cost. Two hundred billion, three hundred billion? It is all the same to Messrs. Kennedy and Carter.

Present costs are vaguely estimated at $145 billion. Once all restraints were abandoned, the figure easily could double or treble.

Who would pay for all this? Who do you think would pay for all this? The Kennedy-Carter plan envisions new taxes on employer and employee (on top of the stunning Social Security increases now in prospect), plus matching billions from the general fund. There is no way under moon or sun that Mr. Carter could fold any such program into his budget for 1979 or 1980, and still hope to see the budget balanced.

An estimated 92 percent of our people now are covered by some sort of health or hospital insurance. Relatively speaking, only a

> small minority of families have no coverage of any sort.
>
> The poor are fully covered by Medicaid, the aged by Medicare, the veterans and their families by military benefits. In our largest industries, such as automobile manufacturing, collective bargaining has resulted in health benefits equaling what Kennedy proposes.
>
> If any federal program at all can be justified—and can be afforded—it is a program to insure the risk of catastrophic illness. If Mr. Carter will settle for that, few persons will belabor him for breaking a promise. And you can't depend on that.

PITTSBURGH'S BRIDGES ARE FALLING DOWN

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. WALGREN. Mr. Speaker, the issue which I would like to address today is the tremendous need that continues to exist for the repair, replacement, and rehabilitation of bridges across the Nation and the question of funding for these bridge repairs.

It is undeniable that if any progress is to be made in this area, funding for bridge repair has to be increased significantly. At current funding levels, if all of Pennsylvania's funds for bridge repair were allocated solely for my home county of Allegheny's 37 deficient bridges, it would take 10 years to complete all repairs. If the State of Pennsylvania's level of funding remains constant, it would be approximately 110 years before each of the State's 362 unsafe bridges would be repaired. This outrageous figure becomes even more so when we realize that this is assuming that no additional bridges become deficient in the interim.

It is generally accepted that a reasonable funding figure for bridge repair in the Nation is approximately $2 billion annually. This figure has been recommended repeatedly in testimony before the Public Works Subcommittee on Surface Transportation. This is also the figure contained in the Surface Transportation Act of 1977 of which I am a sponsor. This sum is not especially exorbitant since it is currently estimated that a total of $23 billion is required to adequately repair the approximately 105,000 unsafe bridges in the United States.

How are we to finance this large but necessary sum of money? I believe the only place to turn for the money needed for bridge repair is the highway trust fund, which receives the incredible sum of $7 billion each year from principally Federal gas taxes.

The Federal Highway Administration announced on March 10, 1977, that, as of December 31, 1976, 89.9 percent of the total designated mileage in the Interstate System of 42,500 miles was open to traffic. The remaining 10 percent of the interstate mileage is estimated to cost one-third of the total cost of the entire Interstate System, or about $30 billion. The remaining 4.250 miles are projected to cost, in current dollars, more than the original estimate of the entire Interstate Highway System ($26.6 billion).

No final location decisions have been made for 1.6 percent of the total interstate mileage (705 miles). Locations have been approved, but no construction has begun, on another 4.0 percent of the system (1,714 miles). This represents over 2,000 miles where the State governments involved have not gone beyond even the preliminary stages of constructing a highway. I believe it is time to ask whether it is better to build roads that are still on the drawing boards or repair bridges which are already known to be unsafe.

The people of my district who depend on bridges like the Sewickley or Thornburg of Jacks Run or any of the other 34 deficient bridges in Allegheny County answered that question long ago.

We endanger lives and property by continued neglect of our rapidly deteriorating bridges. This is an emergency problem; these are immediate and undeniable needs. We cannot continue to neglect our bridges by funding bridge repair at the current insufficient levels. We should not wait until the major disaster which will undoubtedly come if we hesitate to act. It is time for funds from the highway trust fund to be appropriated for the repair and replacement of our most deficient bridges.

THE ENDANGERED AMERICAN WILDERNESS ACT

HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. KETCHUM. Mr. Speaker, most of the Members of this House have had to face at one time or another legislation dealing almost exclusively with his or her district. Throughout this first session of the 95th Congress I have had to do just that on a matter of vital importance to my constituents in the 18th District of California. Specifically, I am referring to the Golden Trout Wilderness Area provision of the Endangered American Wilderness Act which this body is considering within the near future.

The members of the House Interior and Insular Affairs Committee know full well of my long struggle to limit the amount of acreage designation for the golden trout, an area entirely contained within my district. At first I opposed any wilderness, but then I compromised my position of 179,000 acres. After receding to the Senate language and obtaining a revised administration position on the morning of the conference, however, the leadership of the House conferees drastically raised this figure from 179,000 acres to over 300,000 acres.

To share with my colleagues the genuine concerns of my constituents I would like to cite one letter from Mr. Hank C. Abraham, chief forester of the American Forest Products Corp., who writes,

> I find it really astonishing that a Joint Conference compromise on H.R. 3454 and S. 1180 included a worthless adjustment of the Senate Committee Report acreage to be included in the Golden Trout Wilderness Area (proposed).
>
> The Compromise is not a compromise.
>
> It ignores the silvicultural needs of a very large area that adjoins the more suitable wilderness acreage as reported by the House Committee, 179,625 acres.
>
> It has provoked the dismay and wrath of many hardworking employees and residents of the 100 percent dependent community of Johnsondale, a group of people who lived there for 30 to 40 years. Their homes and jobs are scheduled for a very indefinite future as this "Endangered Wilderness Bill" moves towards enactment.
>
> The principal forces that are prevailing have used political maneuver and clout to in effect guarantee one man a lifetime job in further research on the Golden Trout, its associated subspecies, hybrids, strains, and mutations in an undisturbed state, while refusing to see that existing investment of capital and lives in the full and proper management of the forested areas. There will be 125 people losing homes and jobs while one man researches at random and at his own pace amongst a species of fish of relatively low value. Countless other people will be denied access to and use of these lands for multiple-utilization and enjoyment.
>
> Organized labor has spoken out for the reasonable compromise which would have permitted both the use of the land, providing jobs, and the research as provided for in the Forest Service Environmental Report.
>
> We now hear that the Sierra Club is further suggesting that the 27,000 acres relinquished in this "compromise" cannot be put to use, even in the area recently ravaged by a fire in the Bonita Flat area, because it lies within the RARE II inventory area. This is nonsense and arrogant—certainly not in the spirit of Senator Church's and others' intentions when working out a compromise.
>
> I feel bad about this because it is sickening to see, so close to home, such a waste! My hopes have always been that somewhere there are real meaningful reasons for preservation of wilderness. I believe there were good sound reasons in the past for a number of wilderness set-asides. Now, I am reluctantly convinced the real reasons stem not from reason and quality criteria for the wilderness, but rather from a simple continuation of attempts to win legislative battles just for the sake of winning legislative battles.
>
> At least we know we are right! Hopefully, a miracle can in some way regain the needed acreage in the southern portions of this proposal to continue our jobs and the appropriate silviculture and recreational management of the Little Kern, and even the compromise areas in Moses ski areas proposed by Mr. Krebs and in the areas near the Bonita Flat and Lookout Mountain.

I deeply share this same conviction with the majority of my constituents; the provision of the Golden Trout Wilderness is grossly ill-conceived and will have a dramatically negative impact on the economy and livelihood of the surrounding communities. For my part I will vote to see that this measure is defeated in its final passage, and I would urge my colleagues to boldly take the same stand.

PARTS PER MILLION—PPM?

HON. WILLIAM C. WAMPLER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. WAMPLER. Mr. Speaker, sometimes it pays to know what we are talking about or we see or hear. Most of us are not scientists or mathematicians, yet daily information comes across our desks or we hear in committee complicated scientific or technical testimony or supposed facts that bear little relation to good old plain English. One such situation came to mind recently during markup on the pesticides bill before the Agriculture Committee. Someone asked me what "ppm" stood for. Because I had been involved in my own mind with a similar question and had to find out for myself, I answered authoritatively, "Parts per million." Unfortunately neither he nor I sought the answer to the real question—what does parts per million really mean? What does it mean when put in proper perspective to the subject under discussion?

Mr. Joe Walker, Wisconsin agricultural agent, who writes a weekly column for the Waupaca County Post, put "ppm"—parts per million—in perspective in his November 30 column.

I insert Mr. Walker's column in the RECORD:

PARTS PER MILLION—PPM?

(By Joe Walker)

The pesticide bill was passed and signed by the Governor on October 11 and, for the most part, this puts a new dimension into pesticide use in the state.

As of last month, over 17,000 people in the state have received training for certification. As a matter of fact, just last week, 288 operators took part in the four pesticide certification programs held in Shawano and Waupaca counties.

This hits private and commercial applicators who plan to use restricted-use pesticides.

Now, the big question remains, just what will be on the restricted use list and, for the present, your guess is as good as mine. However, you can rest assured that those more potent or hotter materials are all prime candidates.

Another question often asked is, just what is included as a pesticide and here herbicides, insecticides, fungicides, rodenticides, avicides, piscicides and predacides all fall into this slot.

Thus, when we talk about pesticides, we are digging a little deeper than just insect or weed control materials but, rather, hit the entire gambit of chemical prescription pharmacy in agriculture.

Now the restricted use list hasn't been developed by E.P.A., as yet, and this list will never be engraved in granite but will, no doubt, be in a state of flux for some time to come. As with anything of this nature, it is always greeted with mixed emotions.

However, after one has been certified, he doesn't have to be recertified for five years. The program as such, points out the safety of operator, environment and the product, itself. After all, we only use these pesticides to provide better quality food for everyone.

Now, for those who haven't had an opportunity to attend a session, we are planning to hold another in Shawano County on March 7 and Waupaca County on March 8 and those interested are urged to contact their UW—Extension Office.

Speaking of pesticide use and certification brings to mind the fact that one of the terms often used when speaking of pesticides is tolerance in terms of parts per million. Most of us have difficulty with this term.

However, to put it in a practical light, we find one part per million to be as follows: In distance it is one inch in 16 miles, in time it is one minute in two years, in money it is one cent in ten thousand dollars, in weight it is one ounce in 31 tons, in volume it is equal to a drop of vermouth in 80 fifths of gin, in quality, yes, it's but one bad apple in 2000 barrels of same.

Thus we see parts per million are mighty small amounts. However, when dealing with pesticides, we are usually dealing with these terms, so it's a good idea to give them more good old, common term approach.

At any rate, when using any produce, we have to follow the label or directions. Seems the label to the pesticide is similar to the directions on the bottle of medicine, if not followed we can be in serious trouble.

A SUPREMELY COURAGEOUS ACT

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to take this opportunity to formally recognize the heroism and unselfishness of Mr. Samuel Jones, a young man from Santa Barbara who last month rescued a young woman from drowning.

Mr. Jones was driving along Highway 101 in the middle of the night when he saw a car crash and plunge into the Pacific Ocean. Without regard for his own safety, he jumped into the waves and rescued one of the victims.

I would like to publicly salute Mr. Jones, on behalf of the U.S. Congress, for his courage and concern for his fellow human beings. His heroic actions, in the face of personal danger, set an example for us all and stand as a heartwarming reminder of human values and concerns. I insert the editorial from the Santa Barbara News-Press, detailing Mr. Jones' heroism, in the CONGRESSIONAL RECORD:

A SUPREMELY COURAGEOUS ACT

The accident that claimed four lives when an auto plunged into the ocean near here Friday, tragic as it was, almost certainly would have been worse but for the heroism of a 20-year-old Santa Barbaran. Samuel Jones, 1151 Pepper Ln., dove into the dark waters of the Pacific at high risk to his own life to rescue Marian Thorpe, 21, the lone survivor of the harrowing tragedy. The California Highway Patrol reported that the Union City woman "surely would have died" had not Jones jumped into the foreboding ocean in the middle of the night to rescue her.

Observations of others bore out the CHP's conclusion. A News-Press staff member described the somber scene along The Rincon, where Freeway 101 almost touches the ocean, in these words: "The surf was pounding against the wet rock of the seawall in the dark, and there were no lights down there in the water when Jones jumped into the ocean. Some of the rescue workers, even after ropes were tied around them, seemed reluctant to clamber down the jagged rocks."

Jones, who witnessed the death car's plunge while driving in the opposite direction, appears to have acted instinctively and without regard for his own welfare in attempting this supremely difficult rescue. He also searched without success for some of the others who were trapped in the auto beneath the ocean's surface. It was a particularly courageous act, one that exemplified the concern of one human being for another. We salute young Samuel Jones, not only for his heroism, but for reminding us of that humanitarian concern.

STRATEGY BEHIND NONSTRATEGIC TRADE

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. CRANE. Mr. Speaker, it seems as if all trade that is not labeled "arms trade" is labeled "nonstrategic trade" today. Any commodity that does not look or act like a gun, missile, or weapon, is supposedly nonmilitary, and therefore nonstrategic. Automobile and tractor plants built, equipped, or designed by Americans for the Soviet Union, although they may seem harmless enough, produce as much as 95 percent of all Soviet military vehicles. Although the United States is not transferring nuclear warheads and missiles to the Soviet Union, we might as well be if one takes a close look at the so-called peaceful trade we have engaged in with the Soviet Union since 1930.

Following is an article by Mr. Allan Brownfeld on United States-Soviet trade and a strategic look at the nonstrategic trade we have engaged in:

"PEACEFUL TRADE" RUSSIAN-STYLE

(By Allan C. Brownfeld)

The Soviet Union is today, in the opinion of many experts, the most powerful military state in the world. In nuclear weapons, in armed forces, in its naval fleet—it either surpasses the West or will very shortly do so.

What many Americans do not know is that the Soviet Union could never have achieved this remarkable status without our help. In non-military areas, the Soviet Union remains a primitive society. Indoor plumbing, television, automobiles, telephones—these remain luxuries for the few. In nuclear warheads and missiles, however, Soviet technology is second to none. Unfortunately, it is we who helped to make it that way.

The transfer of sophisticated technology from the U.S. to the Soviet Union has been going on for many years. One major step forward, for example, was the agreement in February, 1930, between the U.S.S.R. and the Albert Kahn Co. of Detroit, builders of the Ford River Rouge, General Motors, Packard and other large plants in the U.S. The Kahn group designed and did the engineering work for all heavy and light industrial units projected by Gosplan. The units designed and started in 1929–32 were far larger than any the firm had constructed elsewhere in the world. The Urals Elmash plant in Stalin's "steel triangle" multiplied Soviet electrical-equipment manufacturing capacity by a factor of seven.

Later, as a result of the Lend-Lease Plan, which continued through 1947, the Soviet Union, in spite of war damage, ended World War II with a greater capacity than in 1940 and on a technical parity with the U.S. In 1930, the Ford Motor Co. designed the Gorki automobile plant. Individual parts and overall design of present-day Soviet military vehicles, including those used for weapons systems, can largely be traced to American automobile technology sent to the Soviet Union as "peaceful trade."

U.S. policy makers still make a distinction between "peaceful" trade in "non-strategic" goods and trade in directly strategic goods which Soviet policy-makers, for good reason, totally discount. In November, 1971, Krasnaya Zvedzda, "Red Star," the organ of the Red Army, clearly stated the Soviet perspective about what the U.S. refers to as "peaceful" trade: "In this era of complex weapons systems, all of heavy industry—from steel to electronics—and not only pure defense industries producing military end products, represents the foundation of military power."

While U.S. officials have referred repeatedly to automobile plants, computers, and other technological advances as "non-strategic" trade items, the Soviet Union has an entirely different view. The "Red Star" article states that, "The creation of modern armaments now requires the production of high-grade special metals and plastics, the most modern instruments, computers and communications systems . . . the interdependence of industries is now so great that almost all branches of heavy industry play a role in the manufacture of any complex mechanism or device."

The Soviet Union clearly believes that all trade and all technological exports are strategic. In the 1930s, U.S. firms were largely responsible for building tractor plants in Stalingrad, Kharkov, and Chelyabinsk, as well as the Kirov plant in Leningrad. From the very beginning, although U.S. officials said that the plants were "non-strategic," they were used to produce Soviet tanks, armored cars, and self-propelled guns. The Stalingrad Tractor Plant, the largest in Europe, was a packaged factory built in the U.S., dismantled, shipped to the U.S.S.R. and re-erected in Stalingrad under the supervision of American engineers. All its equipment was manufactured in the U.S. by some 80 firms.

The Soviet Union never pretended that automobile and tractor plants were anything but strategic. Pravda of July 20, 1927, declared that, "If we do not develop our automobile industry, we are threatened with the heaviest losses, if not defeats in a future war." As early as 1927, the Soviets officially stated their intention to use foreign technology for military vehicles. V. S. Ossinsky, a top planner, wrote a series of articles for Pravda in which he declared, "If in a future war we use Russian peasant cart against the American or European automobile, the result to say the least will be disproportionately heavy losses, the inevitable consequences of technical weakness." As much as 95 per cent of all Soviet military vehicles are produced in plants originally designed by Americans.

This is not simply historic—it is all going on at the present time, and involves computer technology as well as complete factories. In 1972, the U.S. Government issued $1 billion in licenses to export equipment and technical assistance to the Kama truck plant. Planned as the largest truck plant in the world, it covers 36 square miles and produces more heavy trucks than the output of all U.S. heavy manufacturers combined.

Thus, although it is not known by most Americans, we face an enemy which we have largely made into the powerful force it is today. In his important book, National Suicide: Military Aid to the Soviet Union, Antony Sutton declares that, "Soviet Russia is the most dependent large nation in modern history, for wheat as well as technology . . . an examination of the production history of individual Soviet tank models and related systems shows them to be of American origin. The U.S. has built for the Soviet Union a capability for military trucks and wheeled, armored, and weapons-carrying vehicles. This construction job has taken 40 years . . . All modern technology . . . depends on the use of computers. To make any progress in weapons systems the Soviets have to utilize modern high-speed computers. These . . . have come . . . almost exclusively from the U.S."

RULE XXII

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. HAGEDORN. Mr. Speaker, along with 15 other Members, I have introduced legislation which would amend rule XXII of the House of Representatives to require that every bill received or considered by the House contain within it a statement of constitutional authority. The statement would be required to cite, as precisely as possible, the article, section, and clause, or amendment of the Constitution which is the ostensible basis of authority for the bill.

In the short time that I have served in Congress, I have witnessed legislation being introduced which would regulate, promote, or prohibit virtually every area of private human endeavour. Among a few of the subjects which have been the focus of congressional legislation during that period have been spaying clinics, oyster producers, zoos, aquariums, home repairs, climate, scholastic sports, boxing, condominiums, seeds, military toys, the calendar, every disease and malady known to mankind, railroad depot art, local property taxes, cigarettes, poet laureates, Agriculture Halls of Fame, fertility, pate fois gras, blood donations, home garden tools, burglar prevention devices, summer camps, the arts and humanities, school field trips, travel agents, automobile repairmen, drivers' education, teachers' sabbaticals, temporary employment services, brainwashing cults, urban trees, and polygraphs.

The purpose of this legislation is not to suggest that each of these areas is necessarily an improper area for Federal involvement, but simply to occasionally remind ourselves that our Federal Government remains one of limited powers, and that such powers must be enumerated by the Constitution.

As the 10th amendment to the Constitution reads:

> The powers not delegated to the United States by the Constitution nor prohibited by it to the States, are reserved to the States respectively, or to the people.

It is this relationship between the National and State governments, and the people that this legislation is designed to highlight. The legislative initiatives that each of us in Congress have must be judged not simply on the basis of whether or not they are "good ideas," but also on the basis of whether or not they are legitimate areas for Federal involvement. Not all "good ideas" meet this latter test.

The constraints imposed upon legislation by a Federal structure are not the result of obeisance to an antique public document, but rather serve to promote the basic principles upon which this Nation was founded. They serve to insure against excessive concentration of power in the National Government; they serve to insure that the individual maintains maximum control over his own destiny; they serve to preserve and protect the diversity of the American experience; and they serve to limit the harmful effects of "bad ideas."

While I have absolutely no illusions that this bill will be a panacea for exercises of power by the legislative branch, I do believe that it will be instructive, and perhaps in the long run remedial, to learn the purported constitutional authority underlying many pieces of congressional legislation.

Of course, it is not Congress alone that is at fault. As Prof. Gottfried Dietze once noted:

> An uncurbed Congress will probably be less constitutionalist . . . than a Congress that must doubt whether its acts will be considered Constitutional.

The Federal judiciary, whose duty it is to do so, has not only failed to instill this sense of doubt in Congress' mind, but have in fact been in the vanguard of efforts to spur the legislative branch into taking actions of dubious constitutionality (earlier this year, incidentally, I introduced a resolution to establish a Commission on Legislative-Judicial Relations to examine this problem).

Each of us as elected Members of Congress must take an oath to uphold the Constitution. The only objective of the instant legislation is to insure that each of us give further thought to this vow during the 2-year period between swearing-in ceremonies. At this point in the RECORD, I would like to insert the language of this legislation:

> *Resolved*, That rule XXII of the Rules of the House of Representatives is amended by adding at the end thereof the following new clause:
>
> "7. The House shall not receive or consider any bill or resolution unless it contains a statement citing, as precisely as possible, the article, section, paragraph, and clause, or amendment, of the Constitution of the United States which is the basis of authority for the bill or resolution. Statements which cite language contained in the final paragraph of article I, section 8 of the Constitution of the United States shall further specify that language conferring the "powers" to which such paragraph refers.".

PRESIDENT SUPPORTS GI BILL IMPROVEMENTS ACT OF 1977

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. TEAGUE. Mr. Speaker, as H.R. 8701, the GI Bill Improvements Act of

1977, was being considered by the Congress, there was some criticism about the inadequacy of the GI bill program. Following my meeting of October 27, 1977, with Senator CRANSTON and Congressman ROBERTS, chairmen of their respective Veterans' Affairs Committees, a compromise was subsequently agreed to based on policy decisions established by Senator CRANSTON, myself, and Chairman ROBERTS. A copy of the compromise accepted by the principal parties based on the policy decision agreed to by representative of both the Senate and the House was presented to the administration for its comments and reactions. In a letter dated November 3 to the Speaker of the House, Max Cleland, Veterans' Administrator, speaking for the administration endorsed the agreed-to compromise. Following the acceptance of the compromise by the House and Senate, H.R. 8701 was signed into law on November 23 by the President.

So that all Members will be informed with regard to the strong support of the President of the GI Bill Improvements Act of 1977, which is now identified as Public Law 95-202, I am inserting a copy of the letter of November 3 by Veterans' Administrator Cleland to the Speaker and the President's statement of November 23 when he approved H.R. 8701 in the RECORD at this point:

WASHINGTON, D.C.,
November 3, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: It is my understanding that a compromise amendment to H.R. 8701, the GI Bill Improvement Act of 1977, will be offered today by Mr. Teague, the Chairman of the Subcommittee on Education and Training of the Committee on Veterans' Affairs.

You will recall that earlier this year, on September 12, the House passed H.R. 8701 by a vote of 397 to 0. Subsequently, on October 19, the Senate, by a vote of 91 to 0, returned the measure to the House with amendments. Since that time, both Veterans' Affairs Committees have been negotiating the respective versions of the bill. We believe that the resulting compromise version which will be offered today is worthy of support.

Under the compromise, almost one million Vietnam era veterans who are enrolled in the current fall school term will receive a 6.6 percent cost-of-living increase. Basic monthly support rate for a single veteran will be $311. A married veteran will receive $370, and the addition of a child will boost the monthly rate to $422. It is estimated that during Fiscal Year 1978 approximately 1,760,000 veterans will benefit from this rate increase.

Additional assistance for veterans attending high tuition institutions will be provided by a simplified veteran loan program which authorizes up to $2,500 a school year in direct VA low interest loans.

The compromise version also includes for the first time a provision allowing "acceleration" of a veteran's unused entitlement which can be used to cancel a portion of the veteran's loan repayment obligation. Under this provision, for example, a veteran who borrowed $2,500 could, if he successfully completed his program of education, have up to $1,200 cancelled through matching action by the federal government and the appropriate state or local governmental unit.

A third major provision of the compromise bill would provide a 2 year additional entitlement for direct veteran's loans to those veterans whose 10 year "delimiting period" for use of educational benefits has expired.

While the Administration continues to be concerned about the possible distortion of what is intended to be a readjustment benefit through extension of an already generous 10 year entitlement period to 12 years, we nevertheless can support the provision in the context of the overall compromise which would provide needed benefits to Vietnam veterans during this fall term.

A fourth major provision would provide a process by which service as a member of the Women's Airforce Service Pilots (WASP's), or any other similarly situated group whose members rendered service to the Armed Forces in a capacity considered, at the time, to be civilian employment or contractual service could be considered active duty for purposes of laws administered by the Veterans' Administration subject to certain specified conditions.

Finally, the compromise version contains a number of amendments, and studies designed to improve the operation of the program and to ease some of the administrative problems experienced by both schools and the Veterans' Administration with respect to the GI Bill program.

In conclusion, we believe the compromise amendment to be offered today is a reasonable one which takes into account the respective interests of both Houses and the Administration. Action today by the House would help ensure these increased benefits for Vietnam era veterans during the fall term, rather than postponement to February or later of next year. Thank you for your consideration of this matter.

Sincerely,

MAX CLELAND,
Administrator.

STATEMENT BY THE PRESIDENT

I am pleased to sign into law today, H.R. 8701, the "GI Bill Improvement Act of 1977," a measure providing expanded benefits for Vietnam-era veterans. This measure includes a 6.6 percent increase in monthly educational assistance benefits retroactive to October 1. It will mean larger checks for the approximately 1,700,000 individuals who will train during this fiscal year under the GI Bill and the Survivors' Educational Assistance Act. Monthly benefits for a single veteran will increase to $311; a married veteran will receive $370; a married veterar with a child will receive $422.

The VA work-study allowances are increased under this measure, as are special tutorial assistance provisions for veterans having academic difficulties.

This bill is also designed to help veterans attending high-tuition schools, by liberalizing the VA direct low interest educational loan program and increasing it from $1,500 to $2,500 per school year. Veterans will also be eligible to have a portion of their loan cancelled, through matching action by the Federal and State governments.

This means that a single veteran is now eligible for up to $4,745 in grants for a 9-month school year, plus an additional $2,500 in low interest loans. The current GI Bill now has a 65 percent participation rate, which far exceeds the final participation rate under both the Korean conflict program (43 percent) and the World War II GI Bill (50 percent). That rate will rise even farther when nearly 1,700,000 veterans benefit from the GI Bill Improvement Act.

The nearly $25 billion that we have spent under the current GI Bill has been an excellent investment in our Nation's future. The measure I sign today should further improve this program.

THE STEEL SHOT MISTAKE

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. BAUMAN. Mr. Speaker, 1 year ago I spoke to the House of Representatives about rules then being implemented by officials of the Interior Department which banned the use of lead shot pellets in 12-gage shotguns by hunters of waterfowl in Maryland. We are now in the midst of the first season of full scale steel shot waterfowling which was mandated by the Interior rules.

Just as everybody connected with the controversy over lead versus steel shot, except the isolated Government bureaucrats in Washington, D.C., then predicted, we are this season seeing record numbers of waterfowl being crippled, but not killed. The reason is that steel shot simply does not have the killing power of lead shot when used in a 12-gage shotgun. Waterfowl hit by steel shot more often than not are merely severely wounded or crippled. The hunters are unable to recover them, with the result that the fowl die miserable deaths in marshes, swamps, and grain fields in Maryland due to poorly thought-out legislation.

Gene Mueller, the fine outdoorsman who writes a regular column for the Washington Star, recently devoted his column to this topic and I commend Mr. Mueller's thoughts to my colleagues. As Mr. Mueller points out, it is time to go back to the drawing boards on the lead shot ban.

[From the Washington Star, Nov. 20, 1977]

STEEL SHOT: IT IS HAVING A CRIPPLING EFFECT ON FOWL HUNTING

It all started when Jim Bren of New Carrollton, Md., picked up his first box of steel shot shells to comply with a controversial new federal law that says you must stop using lead pellets in your 12-gauge when pursuing waterfowl within 150 yards of any water in a host of areas—especially Maryland's Eastern Shore.

"The law stinks," says Bren bluntly. "What in the world is the brass in Washington up to?"

A farmer in Kent County echoes Bren. "So they were concerned about lead-poisoned ducks. Big deal. Now, they passed a law that is so dumb only a government bureaucrat could have thought it up."

The corn and soya bean farmer is upset. Bren is upset. So are Alex Ross, Bob Moore, Dale Berkheimer, and at least 40 other waterfowlers—primarily goose hunters—we have talked to since the season on the majestic Canada geese opened up Oct. 21.

There are hundreds upon hundreds of geese dying a miserable death in the marshes, swamps, and grain fields of Maryland because of well-intended, but poorly thought-out, legislation. Steel shot—the very stuff hailed as the saving substance for thousands of ducks that supposedly ingested spent lead pellets and died from poisoning—is crippling birds in record numbers. No matter what the hunters do, the birds very rarely fall as they did in the day of the lead shot. No matter how long you wait for closely decoying geese, the steel pellets roughly equal the power of throwing small pebbles at them. It isn't working.

What's the answer? Stop hunting altogether? No way. Even if antihunting voice Cleveland Amory would be delighted at that prospect, it will not happen. Without hunters the geese would inundate the winter wheat fields of Maryland and devastate them even more than they do now. Disease would ravage its ever growing numbers. Hunting, believe it or not, is still the most useful wildelife management tool. Emotional rhetoric notwithstanding.

When asked what longtime waterfowler Alex Ross of Adelphi, Md., thought of using steel shot, his answer was brisk and short. "It's not worth a damn," he said. "Beyond 30-35 yards all you're doing is knocking out a few feathers, not a bird."

"I've gone back to using a 10-gauge gun," says Ross in reference to another strange part of the steel shot law. It appears the great ammunition manufacturers of our country could not come up with adequate amounts of steel shot to be used in all shell sizes. So 10-gauge, 16-gauge, and 20-gauge guns can still use lead, while the popular 12-gauges must use steel.

"I really don't believe all those lead-poisoning statistics," says Ross. "But if they are true, perhaps they ought to apply the law to duck hunters on rivers, bays and creeks, not us goose hunters who stay primarily in cornfields, even if they are a little close to water. Geese feed mostly on grains here. Our shot falls mostly on fields. It isn't hurting anything."

Bob Moore of New Carrollton says, "I don't have much use for it. It doesn't have the killing power lead has. Check out Eastern Bay (along Kent Island), and see how many cripples you can find. No one can dispute it. I won't stop hunting, but there are too many cripples. In the fields we can chase them down. But forget the water. You'll never get them."

Dale Berkheimer of Hyattsville is a retired Post Office employe who enjoys goose hunting as much as anything. "I don't know how they can improve the steel shot," he says, "but if it doesn't get better I'm switching over to a 10-gauge. I hunt about three times a week during the season and I've never seen so many cripples in the fields. Foxes are feeding on the carcasses. Yes, I'd like to see the law changed back."

The statements from other hunters are only more carbon copies of the ones you've read. All agree that steel shot is terrible and simply too expensive to be wasted, or to have birds wasted senselessly. It's a mess generated by many factions in the world of waterfowl. Most of these factions, hunter and nonhunter, alike, surely want the best for wildlife. But steel shot, at this time, is not the answer.

Back to the drawing board.

LASALA NAMED CITY REPRESENTATIVE, DIRECTOR OF COMMERCE IN PHILADELPHIA

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. EILBERG. Mr. Speaker, Philadelphia's Mayor Frank L. Rizzo has recently announced the appointment of Joseph A. LaSala to his cabinet as city representative and director of commerce.

Mr. LaSala, former regional head of the Federal Energy Administration in Philadelphia, has succeeded Albert V. Gaudiosi in the post.

Prior to joining FEA, LaSala was Deputy Regional Administrator for the U.S. Department of Housing and Urban Development in Region III and served as senior HUD officer in Pennsylvania during the Hurricane Agnes disaster.

A native of Aliquippa, Pa., LaSala served as director of the Pennsylvania Community Affairs Department Southwestern Region before joining the Federal Government in June of 1972.

He is married to the former Keith Hyde of Millvale, Pa. They have seven children and reside in Media, Pa.

HE DID NOT SIT THERE AND WATCH

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. WHITEHURST. Mr. Speaker, since most of the news we read in the press or see on televison or heard on the radio deals with the dark side of life, I must say that the following article, which appeared on the front page of the Norfolk Virginian-Pilot on November 29, served to brighten my day considerably. It was written by Steve Goldberg, a staff writer for the Pilot, and it gives me great pleasure to take this opportunity to share it with my colleagues.

Mr. Herbst is to be commended for his efforts. He is a symbol of what is still good about this great Nation of ours.

The article follows:

PURSE-SNATCHER SUSPECT CAUGHT: HE DID NOT SIT THERE AND WATCH

(By Steve Goldberg)

NORFOLK.—Stephen Herbst was sitting on his front stoop across from the Giant in Ghent when he saw two men knock over an elderly woman and grab her purse.

"I got mad. I've got a grandmother, and if something like that were to happen to her, I would want someone to do something," said the 18-year-old Navy enlisted man.

So, when the two men ran down Colonial Avenue, Herbst jumped in his car and gave chase.

While admitting to being a little afraid, Herbst said, "I figured if they had a gun, they would have held up a liquor store instead of having mugged an old lady.

"I thought maybe I could catch them."

The two men ran in different directions, but Herbst was able to get out of his car and collar one on Ghent Square. He held the suspect until a security guard arrived. Then, he retrieved the purse from under a car where it had been thrown during the chase.

Mrs. Lempi Edith Ritchey, 60, who lives in Haddon Hall apartments, said she was walking to the Giant on Colonial Avenue about 8 p.m. Friday when the men knocked her down. "I tried to hold onto my purse, but they grabbed it away from me."

She was left lying on the ground, her leg bleeding, holding the strap of her purse. "I thought the only thing I could do was start screaming."

Two passers-by heard her screams and called police. Police arrested Timothy Eugene McClain, 23, of the 300 block of East Olney Road on charges of assault and robbery. He is being held in City Jail. The other suspect has not been arrested.

"Those men who stopped to help me, and that young fellow that caught the man, they both deserve thanks," Mrs. Ritchey said.

"I had been going to the Giant at all hours since it opened, and I'd never had trouble before," she added.

Herbst lives in the 1200 block of Colonial Avenue and is stationed at the Naval Air Station. A New York native, he has lived here about two years.

THE ANTILABOR UNIONS

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. DORNAN. Mr. Speaker, the recent controversy over the granting of visas to Soviet "trade unionists" for the first time in our history has generated many misconceptions. In the summer issue of Policy Review, a publication of the Heritage Foundation, Dr. Stephen Haseler (former Labor Member of the Greater London County Council) offers a most perceptive analysis of the subject.

To begin with, he presents the proposition that an Eastern bloc "trade unionist" cannot exist since the concept is a contradiction in terms. As a trade union member himself, Dr. Haseler's argument carries all the more weight. He posits that free trade unionism cannot function in a totalitarian society where strikes are illegal and voluntary associations of workers for collective bargaining are outlawed. To grant a visa to the representatives of such an organization or to recognize them in other ways, is only to grant them respectability and to help perpetuate a dangerous myth. Far from being legitimate representatives of Soviet workers, the Soviet "trade unions" and their international labor organizations are fronts for the advancement of Soviet influence and control.

However, as Dr. Haseler illustrates, both policymakers and the American public still do not understand the true nature of the Soviet trade unions. As the most important cause of such a misconception, Dr. Haseler cites the policy of détente, which he states has positively disarmed any efforts to oppose contacts with these trade unions. He shows that:

> With political leaders in the West proclaiming the need for better relations between East and West, with the "cold war" increasingly derided by opinion formers, and with memories of the invasions of Hungary and Czechoslovakia receding, the whole balance of the argument has tilted against any trade union leader who wishes to oppose contacts.

Dr. Haseler continues by demonstrating how Western political leaders give further legitimacy to the Eastern bloc trade unions by claiming that their trips to the United States are justified by the Helsinki pact, involving the free movement of people and ideas. However, he reminds us that in reality, "contacts between trade unions of East and West are not part of the free flow of people and ideas, they are rather contacts between free trade unions on the one hand and agents of Communist governments and their intelligence agencies on the other."

Dr. Haseler has no objection to the persons involved coming to the United States in their true role as KGB agents (which many are) or as other Soviet Government and party officials.

With the Belgrade Conference recently in session, we would be well advised to consider seriously our commitment to trade union exchange between East and West.

I request that this timely article be inserted in the CONGRESSIONAL RECORD at this time:

Visas for Soviet "Trade Unionists"?

(By Stephen Haseler)

The recent controversy over the attempt to grant visas to Soviet "trade unionists" in order that they may be able to visit the United States raises wider questions about East-West "trade union" contacts. The attitude of the AFL–CIO in opposing such visas is but symbolic of their more general refusal to dignify Communist Party or Soviet government officials by accepting the deceit inherent in describing them as "trade unionists."

The simple proposition of the AFL–CIO is that an East-bloc "trade unionist" cannot exist since the concept represents a contradiction in terms. The argument, compelling as it is obvious, is simply that free trade unionism cannot exist in a totalitarian society—where strikes are illegal, voluntary associations of workers for collective bargaining out-lawed, and "trade unions," so-called, are simply an arm of the state and staffed by party or governmental personnel. To grant a visa to the representative of such an organization, or to recognize them in other ways, can only grant them respectability and help perpetuate a dangerous myth.

Consequently, for most of the post-war period, Western trade union organizations, conscious of the distinctions between organized labor in a free and an unfree society, have refused to have either formal or informal contacts with those East-bloc organizations which have appropriated their name. This policy of non-recognition was started in January, 1949 when the British TUC (Trade Union Congress), the American CIO and their Dutch counterpart led a withdrawal from The World Federation Of Trade Unions, which had fallen under communist control. They then, in the following November, set up the International Confederation Of Free Trade Unions which has since served as the international organization for organized labor in the free world.

The 1949 break was justified by similar reasons to those employed today by the AFL–CIO on the visa issue for communist "trade unionists." Not only is respectability conferred upon organizations which deserve none, but the communists actively use their "trade unions" and their international labor organizations as fronts for the advancement of influence and control.

The aim of the Soviet controlled WFTU, as with all East-bloc "trade unions," is to find points of agreement with Western unions over seemingly innocuous issues such as health and safety at work, and then to use these common aims, preferably augmented by an international conference, to spread their influence throughout the West. At the same time the ultimate political aims of these communist organizations remain quite clear. They remain unswervingly partisan in their support of Soviet actions. The WFTU supported the Soviet invasion of Hungary, and it remains silent about trials of writers and human rights campaigners in the East-bloc and about workers' revolts in Poland and East Germany. Although some initial criticism was voiced by the WFTU's secretariat in 1968 over the Soviet-led invasion of Czechoslovakia, Soviet control was soon reasserted. Some key WFTU officials were removed from office and the then Italian President was replaced by the Uruguayan communist, Enrique Pastorino.

The Russians make no secret of the role of their own "trade union" organization. Piotr Pimenov, Secretary of the Central Council of Soviet Trade Unions, has written that "the Soviet Trade Unions unreservedly support the Leninist foreign policy of the Communist Party."[1] The WFTU's general secretary, Pierre Gensous, the French Communist, has made it quite clear that "international exchanges between trade unions and countries of different political systems were an important contribution to the strengthening of the front of anti-imperialist struggle, as well as international trade union unity."[2]

Even so, and in the face of all this evidence, many Western trade unions (with the singular exception of the AFL-CIO) have opened up contacts and fraternal relations with some of their East-bloc so-called counterparts. The British Trades Union Congress has taken the lead in this peculiar adventure and for a labor movement ostensibly aligned with a Western social-democratic party it has thrown caution to the winds in this most sensitive of areas. At its 1975 Blackpool Congress the British TUC passed a motion calling for an initiative to bring the "two world trade union centers more closely together" (the ICFTU and the WFTU) and suggested that it (the TUC) was the best body to take such an initiative. Since then meetings have been going on in Geneva between WFTU officials and British trade union officials—notably Len Murray, the General-Secretary of the TUC, and Jack Jones, head of Britain's largest union, the Transport Workers.

Apparently not content with multilateral fraternization with East-bloc unions, the British TUC has entered upon a whole series of bilateral exchanges which would have been unthinkable for an earlier generation of British union leaders. In 1975 the TUC invited a Soviet delegation to Britain which included a former head of the KGB, Alexandr Shelepin, in his new guise a "trade union" boss of Soviet organized labor. Shelepin had to leave Britain prematurely on that occasion because of public protests: even so, the following year the TUC, evidently undaunted, gave a reception at their headquarters for Boris Ponomarev, the Soviet Communist Party's Central Committee man responsible for coordinating Communist Party activities in the West. So overtly political have the British TUC seem to have become that they now no longer even seek to hide behind some spurious "trade union" cover for their meetings with Soviet party officials. Alexandr Solzhenitsyn went so far as to single out for special condemnation the British trade union movement when he addressed the AFL-CIO in June of 1975. He said, "The leaders of the British trade unions are free to play the unworthy game of visiting the so-called trade unions (of the East-bloc) and receiving visits in return. But the AFL-CIO has never given in to these illusions."

The problem is not confined, though, to Britain. All over Western Europe bilateral trade union contacts between free unions and the puppet organizations of the East have been set in motion. For instance, the East German Trade Union Federation (FDGB), not particularly noted for its ability to engage in free collective bargaining, has established relations at the executive level with a number of Western trade unions, including those of Finland (not particularly surprising), Scotland (where the trade union congress is under communist control), Norway, Austria, Iceland, Belgium, and Denmark. The West German trade union movement (the DGB) has also been involved with contacts with the East, but seems of late to have cooled somewhat towards them.

In many respects, therefore, the continuing opposition to East-West trade union contacts by the AFL–CIO, and in particular their recent hostility towards the International Longshoremen's attempt to follow West European precedents by inviting Soviet "trade unionists" to their conference, is a welcome sign that American labor is not ready, as yet, to throw in their lot with what appears to be a developing trend.

The innocent observer might ask: why is it that decades of tradition have so easily been overthrown? What can free trade unions, operating within free societies and with full rights, possibly learn from agencies of totalitarian governments? How is it that Western trade union leaders can be so suspicious of their own governments and employers and yet so anxious to improve relations with bodies which repress workers abroad? The answer is probably three-fold.

First, there is simple, unadorned, guillibility—always a factor in human affairs. Many West European trade unionists, even those in relatively high and influential positions, are simply unaware of the consequences of their actions. They are often ignorant of the political intent of East-West exchanges and of the propaganda use to which they are put in communist countries. Trade union executives quite like traveling abroad and tend not to discriminate between good hotels in Sophia or the South of France, the hospitality is often quite lavish for visiting dignitaries behind the Iron Curtain and visitors, trade unionists, particularly, are not encouraged to visit real workers. Trade unionists from the West are not noted for their enquiries on this point, either.

Secondly, and more important, Western trade unions have since their inception been targets for internal Communist Party penetration. Lenin's famous dictum, proclaimed to the foundation meeting of the British Communist Party in 1920, that "we must be able to make any sacrifice, and even—if need be—to resort to various strategems, artifices and illegal methods, to evasions and subterfuges, as long as we can get in to the trade unions, remain in them, and carry on communist work within them at all costs"[3] has not gone unheeded. Communists and their fellow-travelers are present in enough numbers in many West European trade unions, which are not even affiliated to Communist Parties, to initiate East-West contacts and to carry along with them the gullible and the junket-seekers when any decision has to be taken. The decision-making processes in many trade unions are often so archaic, byzantine and closed that small, highly disciplined and unrepresentative groups can gain disproportionate power.

Even so, Western trade unions have always had a fair share of the gullible and the fellow-travelers amongst them, and it is only recently that East-West contacts have proliferated. In the fifties and early sixties not one single West European trade union organization, apart from the Communist trade unions of Southern Europe, would have even considered opening relations with the East. Of course, since then, European trade unions have moved to the left somewhat, although this process has been uneven. Only part of the answer can rest with the changing political complexion of unions, for even in Britain where the change has been most dramatic the majority of trade union executives are, if not exactly hostile to the East-bloc, at least non-communist.

---

[1] World Trade Union Movement (No. 3, March, 1973).

[2] Nachrichten zur Wirtschafts und Sozialpolitik (July–August, 1973).

[3] V.J. Lenin, *Selected Works*, Progress Publishers, Moscow, vol. 3, pp. 318–9, 1964.

The really important new factor is the effect which the policy of detente has had in the internal arguments between left and right within trade union executives. With political leaders in the West proclaiming the need for better relations between East and West, with the "cold war" increasingly derided by opinion formers, and with memories of the invasions of Hungary and Czechoslovakia receding, the whole balance of the argument has tilted against any trade union leader who wishes to oppose contacts.

To a not very politically committed member of a trade union executive the argument proffered by a fellow-traveler that "we can not turn down this invitation as we would want to further detente, comrades" appears compelling. Even though detente is supposed to involve an easing of tension between governments and the ideological struggle between the free and unfree systems is supposed to go on, involving as it must the whole issue of the rights of trades unions, this is a far too sophisticated and complicated reply to assertions that East and West should get together to increase understanding.

It is in this way, therefore, that the evolution of the detente policy by Western political leaders has positively disarmed many moderate trade unionists in their battles with their leftists over East-West contacts. It takes a particularly clear-sighted and ideologically committed trade union leader, with ample political support from within his union, to overcome the obstacles placed in his way by the Western politicians who have initiated and supported the detente policy.

In Western Europe, because of the changed ideological atmosphere and the new balance of political forces, it is rare nowadays for a political leader, even of a right of center party, to condemn these new trade union contacts with the East. Indeed, political leaders often encourage them. For instance, in a little-known political move of considerable significance Britain's present Prime Minister, while he was Foreign Secretary, actively supported the development of relations between the trade unions of Western Europe and those of the U.S.S.R.[4] Only a few years ago such support from such a quarter would not have been believed.

No doubt those Western political leaders who give legitimacy to these East-West trade union contracts will argue that it is all part of the Helsinki pact, involving the free movement of peoples and ideas. In reality, of course, it is no such thing. The fact remains that East-bloc "trade unions" do not exist in the sense that we understand them in the West.[5] Contacts between trade unions of East and West are not part of the free flow of people and ideas, they are rather contacts between free trade unions on the one hand and agents of communist governments and indeed communist intelligence agencies on the other.[6] To properly implement the Helsinki agreement it would involve Western trade unionists meeting regularly with real workers from behind the Iron Curtain and discussing with them how best to forward the process of free collective bargaining and other trade union rights. In fact, the East-West trade union issue highlights the inadequacy of detente as it is interpreted by many leaders of opinion in the West.

It would seem that from amongst all the trade union organizations in countries of the Atlantic pact only the AFL–CIO remains keenly aware of the pitfalls of East-West contracts, and how the detente policy has helped undermine the resilience of those who would still wish to oppose what amounts to a submission by major Western industrial organizations to Soviet international strategy.

UTICA HIGH SCHOOL CHIEFTAIN MARCHING BAND

HON. DAVID E. BONIOR

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. BONIOR. Mr. Speaker, the residents of Michigan's 12th District join with me in congratulating the Utica High School Chieftain Marching Band on being selected to participate in the Orange Bowl Parade of 1977.

The Chieftains Marching Band was selected from a field of over 400 highly competent and competitive high school bands. The auditioning was long and arduous, yet the highly enthusiastic members of this well-disciplined team had the stamina and determination to continue and remain a favorite in the competition.

Part of this congratulation should be directed to the taskmaster of this highly motivated musical force, the director, Mr. Nawrocki. A marching band with the high energy and unsinkable spirit of the Utica Chieftains requires the same energy and strength of its director. Mr. Nawrocki has provided that same energy and strength in his direction of the Chieftains Marching Band.

I will be watching the Orange Bowl Parade this year with a special sense of pride knowing that the district I represent in Congress has one of the best high school marching bands in the country.

ACP—A LOOK AT THE FUTURE

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. JONES of Tennessee. Mr. Speaker, a new soil and water conservation awareness is building in this country and the agricultural conservation program has been revised to reflect this awareness. Congress relied on advice from farmers, conservationists, environmentalists, program administrators and, yes, contractors before rewriting the act this fall.

You may ask why farm State Representatives in the Congress were persuaded to reform a program on which we have lavished praise for decades. First and foremost is that we, too, have developed a new awareness of conservation needs; and second, is the natural instinct for survival.

ACP was under fierce attack. Environmental interests complained ACP did not emphasize "long-term" conservation protection. An investigation by the congressional watchdog (the Government Accounting Office) charged that ACP concentrated too much on production-type practices. Taxpayers have frequently voiced the concern that farmers should be paying for the cost-shared practices because there were few off-farm benefits for society. Farmers, on the other hand, complained that not enough cost-sharing funds have been available to help meet the critical conservation needs on our agricultural land. Debate on local control versus tighter Federal guidelines has been continuous.

Believe it or not, Congress, in its own plodding and frustrating way, mirrors the feelings of the Nation at large and responds to the national mood. Farm-oriented Representatives are outnumbered about 10 to 1 in the Congress; this roughly reflects the breakdown of the U.S. population. Each year it was a harder fight to protect ACP from virtual elimination.

At hearings on reforming ACP, the president of the National Limestone Institute said:

> Over the next few years, the funds were cut from $500 million a year to $250 million—and recently they have been compromised out at $190 million. The $500 million was when our National budget was $8.9 billion. And, yet, in recent years, this Program has been operating at $190 million while our National budget has increased to more than $450 billion.

President Carter in August 1977 voiced his concerns very specifically. He had just asked Congress to consider additional funding for ACP but he stated he did so with reservations. He said:

> I'm concerned that our soil conservation programs, and this program in particular, are not as effective as they could or should be. I fear that we have about 3,000 separate conservation programs with little national guidance or problem solving orientation.

---

[4] In the 1976 General Council Report of the British TUC it was stated that a letter had been received from Foreign Secretary Callaghan to the effect that "The TUC was correct in adopting a pragmatic, step by step approach toward the development of relations between the trade unions of Western Europe and the U.S.S.R.," *Report of 108th Annual TUC*, 1976, p. 247.

[5] If any more evidence were needed, Vladimir Bukovsky (recently exchanged by the U.S.S.R. after being imprisoned for several years) laid out the facts with great eloquence before a meeting of the AFL–CIO Executive Council on February 25, 1977. *See AFL–CIO Free Trade Union News*, March 1977. He said that: "In the West, the decision to strike is usually taken by the labor union. In the Soviet Union, this is beyond imagination. Soviet trade unions do not protect the workers against hunger, persecution or exploitation. Labor unions in the U.S.S.R. are part of the party-government machine, which addresses itself not to the defense of the interests of working people, but only to the implementation of party-government projects. Even the Soviet Supreme Court, having looked into the practice of court cases involving illegal firings, was forced to point out that the labor union organizations are not observing labor legislation and do not defend the workers actively enough. Workers' complaints to labor union organizations are handed over by them to the KGB. In the verdict of the court in the political case of the truckdriver, Vladimir Pavlov (Maikoptown, 1971), his complaint to the district council of labor unions was taken to be material proof of his guilt. So, there is nothing surprising in the fact that for a ten-year period, the chairman of the Soviet labor unions was the former chairman of the KGB."

[6] See Dan C. Heldman, *Soviet Trade Unions*, Council on American Affairs, 1977.

> and, consequently, that the emphasis is on yield-enhancing practices rather than the more enduring conservation measures.

Congressmen are, indeed, politicians, and politicians can tell which way the winds are blowing. It was obvious ACP had to be reformed and reoriented if it was to be saved. Many of the critcisms were misdirected and can be rebutted. Any conservation practice is going to contribute in some degree to production; what is needed is enduring protection and sometimes short-term practices are required to accomplish long-term protection; both society and producers benefit from conservation practices even if only through protection of the resource base—our national heritage. But, in the end, the arguments for reform won on their merit—the problems with the program were growing too fast.

While many changes, major and minor were made, the thrust of the new program can be capsulized in this sentence from the new law:

> Eligibility for financial assistance shall be based upon the existence of a conservation or environmental problem which reduces the productive capacity of the nation's land and water resources or causes degradation of environmental quality.

An emphasis on real problem solving, I believe, is going to be the strength of the new ACP. County committees, in cooperation with development groups, are to identify and assign priorities to conservation and pollution problems in their areas. Focusing attention and money where it will do the most good and where it is most needed will not only enhance the image of the program, but will make it more efficient and effective. A great amount of discretion is left with the county committees in identifying and solving problems and we do not yet know how they will use it.

I envision that a county committee might recognize a severe erosion problem in one particular watershed or community which may result from the physical characteristics of a particular stream or soil type. The committee then might decide to place special emphasis on solving this localized problem by funneling a certain percentage of the county's ACP funds to it. This, obviously, would involve tradeoffs, because other farmers in the county deserve consideration for assistance as well. But one of the functions of the county committee is to make these tough decisions.

In any case, the local committee will be required to develop a priority system for the identification and solution of conservation and pollution problems. Using the same management principles used by any successful business, the committee will: First, identify the problems; second, set the priorities for action; third, develop solutions and carry out the practices; and fourth, make evaluations of the program.

A set of national practices has been developed to address conservation and pollution problems. State and county ACP programs will follow these national guidelines, but they have authority to develop additional practices to solve specific local problems.

Again the program will be trying to get landowners to agree to multiyear or long-term agreements of either 3 to 10 years or 3 to 5 years with an option to extend up to 10 years. A special emphasis will be placed on wind erosion control measures in the Great Plains area.

Coordination between ACP with the effort to rid waterways and lakes of point and nonpoint sources of pollution will be strengthened. Obviously, the goal of drinkable and swimmable water by 1985 established in the Federal Water Pollution Control Act cannot be met without the cooperation of farmers and assistance from ACP.

Delayed reimbursement for installation of conservation practices should no longer be a problem for farmers and contractors under the new funding mechanism which was adopted. The $2,500.00 cost-share limitation was dropped from the legislation but will continue in effect through 1978. Farmers and contractors alike have complained about both inordinate delays and the limitation.

Assessing the future of ACP, I must be optimistic. ACP has contributed too much in the past—it now has been reoriented—to solve present problems and to meet future goals.

HERE WE GO AGAIN

HON. WILLIAM C. WAMPLER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. WAMPLER. Mr. Speaker, with farm income down and food prices rising Mr. Donald Kennedy, Administrator of the Food and Drug Administration, is taking steps to make this situation even worse, by promising to issue new Federal regulations to severely restrict antibiotics utilized by farmers in feed that reduces disease and food consumption in livestock and dairy animals and poultry. The loss by the farmer of low-dosage antibiotics in feed to produce cheaper and healthier livestock and poultry, would cause a further rise in retail food prices and force farm incomes down. Conservative estimates indicate such an action by FDA would cause a retail price rise in beef products of 7 to 10 cents per pound and a much higher rise in pork and dairy products. Estimates also show we could lose 30 percent of our poultry if antibiotics are removed from their feed.

Mr. Speaker, if Mr. Kennedy were to be found correct and we had substantial scientific and medical proof that the use of antibiotics by farmers in animal and poultry feed caused a marked lowering of resistance to bacteria among humans, then I would have no quarrel with his proposal. But on the other hand, if Mr. Kennedy's proposal to take this drastic action is based on theoretical risks and hypothetical dangers existing only in the test tube, then much greater research and substantiated tests are needed before this drastic action is taken.

The facts of the matter are: We have not established reliable methods to measure the theoretical risks that a small element in science says exists; we do not have evidence that resistance to bacteria is occurring among farmers who are the closest to the theoretical exposure risks, that is those who daily dispense the antibiotic feeds to the livestock or poultry remain healthy; and we have few if any studies performed in a real-life field test basis to confirm these controversial test-tube theories expounded by some at FDA.

Dr. Kennedy's findings should, of course, be taken as a danger signal. But more important, strong and expanded research and field testing efforts should be conducted by the Department of Agriculture's animal disease research arm, at both the Federal and State levels, to establish firm and reliable guidelines for the utilization of low-dosage antibiotics in feed to control disease in livestock and poultry. Additionally, other medical research arms of Government should conduct valid tests among farmworkers, food processors and the public to determine the correlation between the feeding of antibiotics to animals and a lowering of resistance to bacteria among humans, on a real basis at different levels and methods of feeding.

Mr. Speaker, the Congress recently passed legislation under title XIV, Public Law 95-113, the National Agricultural Research Extension and Teaching Policy Act of 1977, which clearly foresaw the need and authorized funds for such research and field testing. In this instance the Food and Drug Administration would be well advised to withdraw its proposed action until adequate research is undertaken and FDA is on firmer ground. Too much is at stake here for Congress to permit American agriculture to be made a whipping boy or to force the American consumer to pay higher prices for food products as a result of a guessing game.

Mr. Speaker, in order that my colleagues are aware of Mr. Kennedy's proposals, I insert his recent letter to me on the subject in the RECORD:

ROCKVILLE, MD.,
November 30, 1977.

Hon. WILLIAM C. WAMPLER,
Ranking Minority Member, Committee on Agriculture, House of Representatives, Washington, D.C.

DEAR MR. WAMPLER: The Food and Drug Administration (FDA) is preparing to publish the third and final document of the series of proposals in the *Federal Register* intended to limit the use of penicillin and the tetracyclines (chlortetracycline, oxytetracycline) in livestock and poultry feeds.

Proposals published in the *Federal Registers* of August 30, 1977 (42 FR 43770) and October 21, 1977 (42 FR 56254) addressed the uses of penicillin and the tetracyclines. Our proposals to restrict the uses of these antibiotics are based upon extensively documented scientific evidence of a significant potential public health problem as documented in detail in the *Federal Register* notices.

The next document on antibiotics in animal feeds we plan to issue will propose to limit the distribution of penicillin and tetracycline-containing premixes to feed mills that hold approved medicated feed applications for the manufacture of medicated feeds containing these antibiotics. The notice also proposes to restrict further the distribution of such feeds to the order of a licensed veterinarian as a part of the record maintenance requirement of the Federal Food, Drug, and Cosmetic Act. We believe this proposal will enable us to obtain the widest possible spectrum of comments for evaluation in reaching a final decision. Thoughtful analyses of its contents will be welcomed from members of the public and from all quarters of the scientific and agricultural communities and State control officials. We expect to have this distribution controls proposal published in the *Federal Register* on or shortly after December 16, 1977.

This notice and explanation is submitted in accordance with the Conference Report (Rept. No. 95–520) concerning appropriations for the U.S. Department of Agriculture and other agencies for fiscal year 1978. We will send you a copy of the *Federal Register* document as it becomes available.

Sincerely yours,

DONALD KENNEDY,
Commissioner of Food and Drugs.

SENATE COMMITTEE ACTS TO END ELECTORAL COLLEGE

HON. MORGAN F. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. MURPHY of Illinois. Mr. Speaker, the Senate Judiciary Committee voted September 15 to approve a bill calling for the direct election of the President. The committee is to be commended for staving off a number of amendments that would have killed the direct election proposal. All of the alternatives to direct election—the so-called automatic, proportional, and district plans—are half-hearted reforms that only tinker with a system in need of an overhaul.

Mr. Speaker, I would like to draw my colleagues' attention to an article I have written on the recent action by the Senate Judiciary Committee. The article appeared in the Southtown Economist on November 2, 1977.

[From the Southern Economist, Nov. 2, 1977]

SENATE COMMITTEE ACTS TO END ELECTORAL COLLEGE

(By Representative MORGAN F. MURPHY)

Suppose there was a bill pending in Congress that had the support of 75 per cent of the American people. Suppose, also, that the bill had been endorsed by such diverse groups as the AFL–CIO, Common Cause, the American Bar Association, the United Auto Workers, the League of Women Voters, and the Chamber of Commerce.

What would you say are the chances for the bill's passage? Pretty good, right? Wrong.

Although the Senate Judiciary committee voted Sept. 15 to approve a bill calling for the direct election of the President, it appears to have only a slim chance of being ratified by the necessary two-thirds vote of the full Senate.

The bill, sponsored by Sen. Birch Bayh (D-Ind.), would amend the U.S. constitution to abolish the electoral college and award the Presidency to the candidate winning the most popular votes. If no candidate received at least 40 percent of the vote, a runoff would be held between the top two vote-getters'.

The Judiciary committee's approval was the first Senate action on the electoral college since 1969. That year, the House overwhelmingly supported a direct election bill by a vote of 339–70. But the measure was filibustered to death in the Senate, and the House is waiting for Senate ratification before considering the bill again.

Fortunately, the Judiciary committee staved off a number of amendments that would have killed Bayh's proposal. Among the amendments:

The "automatic" plan. This would eliminate the problem of the "faithless" elector—someone who fails to vote for the candidate winning the most popular votes in his state. The plan would require each state's electoral votes to be automatically cast for the popular vote winner. But this change in our electoral system would be so slight—and practically speaking, unimportant—that it would not be deserving of a constitutional amendment.

The "proportional" plan. This proposal would abolish the current "winner-take-all" system that awards all of a state's electoral votes to one candidate. According to this formula, electoral votes would be divided in proportion to the popular vote in each state.

The "district" plan. This complex proposal would allocate electoral votes to the popular-vote winner in each congressional district and throw in two extra electoral votes for the statewide winner. (Interestingly, Nixon would have beaten Kennedy under either the proportional or district plans.)

All of these alternatives to direct election were rightly rejected by the Judiciary committee. The plans are half-hearted "reforms" that only tinker with a system in need of an overhaul.

The direct election plan is the only proposal that would (1) count everyone's vote equally; (2) eliminate the possibility that the popular-vote winner could still lose the presidency; and (3) enable people to vote directly for the presidential candidate of their choice.

Despite the Judiciary committee's stamp of approval, the direct election bill faces an uphill struggle in the Senate. Sen. Bayh believes he has enough votes now to stop a filibuster, but not enough to win by the necessary 2–1 margin. A major reason: some senators from smaller states favor keeping the electoral college, as their states have slightly more influence under the present system than they would under direct election. Sen. Bayh recently told the National Journal: "The problem here is everyone is trying to figure out whose ox is being gored and who has the best advantage. The best thing under direct election is that no one has an advantage."

Because the direct election bill would amend the U.S. constitution, it must be approved by a two-thirds vote of both houses of Congress, and then be ratified by three-fourths of the state legislatures. Many believe that the smaller states would never pass a measure that would (slightly) diminish their electoral power.

But a poll taken by Sen. Robert Griffin (R-Mich.) in 1969, the year Congress last debated direct election, does not support that notion. Griffin's poll of legislators from the 27 smallest states showed that 64 percent of the respondents supported direct election. While sentiment may have changed somewhat over the last eight years, it appears that direct election has a fighting chance to win smaller states' approval.

The important thing is that the U.S. switch to direct election before the present system wreaks its full potential for damage. In the last presidential election, the shift of a few thousand votes in Hawaii and Ohio would have denied Jimmy Carter the presidency, even though he had won a majority of the popular vote.

At a time of mass communication and widespread skepticism about government, no popular-vote loser could hope to govern effectively following his assumption of the presidency. It is far better that we anticipate and avoid this crisis than be forced to change the system after the damage has been done.

CARTER'S SURRENDER TO MOSCOW

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. CRANE. Mr. Speaker, in theory, strategic arms limitation talks are to be reciprocal, mutually beneficial and mutually accommodating. In 1972, the United States and the Soviet Union decided to proceed from a common determination that in the age of nuclear weapons peaceful coexistence must be the basis for any bilateral agreement between the two superpowers. The ultimate objective, as outlined in the basic principles of relation and signed May 29, 1972, is to be complete disarmament on a bilateral as well as on a multilateral basis. With this in mind, it is vital that we look at the course we have followed to this point in time. Have we faithfully pursued our obligation to not obtain "unilateral advantage at the expense of the other, directly or indirectly" as stated in the basic principles? Yes, I believe our efforts have been consistent with the objectives set out in 1972, but, those principles were signed by two nations and it is to the Soviet Union that this question must be asked. The answer, I feel, may be in the following article entitled "Carter's Surrender to Moscow."

[From the Lima (Ill.) News, Nov. 13, 1977]

CARTER'S SURRENDER TO MOSCOW

(By Allan C. Brownfield)

"Surrender" is a word being heard more and more in Washington to describe the dramatic deterioration of the Carter administration's position concerning a SALT II agreement.

The agreement now being negotiated by the administration is far short of what the president demanded from the Russians last March. The figures which Carter appears prepared to accept are generally similar to those agreed to by President Gerald Ford at Vladivostok in 1974. The problem which caused a delay at that time—the difference over Russia's Backfire bomber and the U.S. cruise missile—seems to have been resolved by agreeing not to count the Russian bomber and a decision to severely limit the cruise missile.

Former U.S. arms control negotiator and former deputy secretary of defense, Paul Nitze argues that the agreement now being negotiated will leave the United States land-based nuclear missile force vulnerable to a Soviet "first-strike" by the mid-1980s. Nitze criticizes the Carter administration for leaving the Soviet Backfire bomber out of the agreement, for placing limits on the number of U.S. bombers armed with cruise missiles and for retreating from earlier proposals for heavy cuts in the number of Soviet land-based heavy modern ballistic missiles.

In the U.S. Senate, which must ratify any new SALT treaty, opposition has gradually been emerging in the form of criticism of elements of the agreement by Sen. Henry M. Jackson, D-Wash. Other members of Congress have spoken out strongly against the new and weaker position adopted by President Carter. Rep. Jack Kemp, R-N.Y., recently stated:

"The most chilling consequences of the unwise arms limitation policy being pursued by the Carter administration is that the lack of resolution Carter displayed to the Soviets between March and September invites them to try pushing him around throughout the world."

Kemp argues that there has been "a collapse of the president's negotiating position on virtually every point of significance in the SALT negotiations" and that this "underscores the danger the nation faces at the hand of America's arms control negotiators. As one who supported the administrations SALT posture in March, I am appalled at the unilateral retreat by our SALT negotiators."

Critics argue—quite properly—that the terms already agreed to would limit the administration's efforts to revitalize the NATO alliance. The U.S. agreed not to transfer cruise missile technology to its allies, despite the fact that Britain and West Germany have requested such assistance. In addition, the new agreement would guarantee the Soviets an advantage in missile throw-weight on the order of 10 to 1, posing a severe threat to the American Minuteman missile while precluding substitutes such as the proposed MX missile.

The deterioration of the American position is dramatic. In March, the U.S. asked for a limit of 150 Soviet heavy missiles, asking the Russians to tear down half the force. By May, the U.S. was willing to allow them to keep the whole force, provided only 190 heavy missiles carried multiple warheads (MIRV). Since this is approximately the number of current heavy missiles with MIRV, the U.S. in essence asked for a freeze on heavy missiles. When the Soviets rejected the 190 number, the U.S. tried for a heavy MIRV limit of 220. With that rejected, it tried 250. Finally, the U.S. dropped the idea entirely.

In March, the U.S. insisted on specific treaty provisions on how the Soviets could use their Backfire bomber. The Soviets argue that the Backfire bomber is not an intercontinental weapon—although it can fly from the Soviet Union over the U.S. to Cuba without refueling. By September, the U.S. agreed to keep Backfire out of the treaty if the Soviet Union would promise—separately—not to increase its production rate, even though the Kremlin refuses to say what the current production rate is. Critics charge—again quite properly—that such a promise is meaningless and totally unenforceable.

In March, the U.S. offered a cruise-missile concession limiting the range of air, land and ground-based cruise missiles to 2,500 kilometers. Bombers carrying cruise missiles would not have been counted. In September, the U.S. agreed that if it builds more than about 120 such bombers, it must tear down Minuteman or submarine MIRV missiles. And land-based and sea-based cruise missiles would be limited to a practically useless range of 600 kilometers. What we have seen is the Soviet Union being asked to concede almost nothing, while the U.S. makes concessions beyond what had been promised in the past.

Nitze, at an early November press conference, declared that under the most likely provisions of the new agreement, the U.S. runs a "high risks" of having no B-1 bomber and no cruise missiles adequate in either number or range to penetrate Soviet defenses, no "follow-up" weapons to replace the aging Minuteman missile force and a sea-based force of fewer than 25 submarines.

Our European allies are as worried about the Carter administration's strange performance as are many in Washington. The Economist of London, for example, declared:

"The greatest political—and in the end military—danger in all American-Russian strategic arms deals has been the wedge they tend to drive between America and its European allies, at a time when American technical superiority is the West's best defense against the sheer weight of Russia's nuclear weaponry. On previous occasions this has been avoided. Now, however, the threatened closure of the cruise missile option for Europe's own armies makes that danger suddenly real. If this treaty results in a Russian missile strength not very different from what it probably would have been without any treaty at all (which is what the figures suggest) at the price of starting to unravel the Atlantic alliance, then the treaty will be not bad, but disastrous."

PANAMA CANAL: THE MORAL ISSUES IN THE GIVEAWAY TREATIES

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. DORNAN. Mr. Speaker, the signing on September 7, 1977 of two proposed new Panama Canal Treaties that would give to Panama the U.S. Canal Zone, and their submission on September 16 to the U.S. Senate for its advice and consent to ratification, has aroused the people of the United States to a greater degree than any foreign policy in decades.

Unfortunately, the mass news media, including the major wire services, have not presented the issues involved in a forthright and objective manner but have reflected the views of the U.S. State Department in support of the giveaway, and thus views have contained monumental deceptions.

In spite of such attempts to propagandize, the people of our country, through the efforts of the large patriotic organizations and many ad hoc groups in various locations, have learned essential facts and are making their voices felt in the Halls of Congress with thousands of letters and other communications.

Among the recent clarifying articles on the canal question was one by Phyllis Schlafly, distinguished author, publicist, and commentator, now chairman of national defense, National Society of the DAR, who ably discusses the moral issues involved in the projected surrender and makes a strong appeal for the defeat of the proposed treaties.

In this article, she reports that the latest Federal Reserve Board figures show that American banks have loaned a total of $2.9 billion to Panama, a country whose credit is gone. Certainly, their debts should not be transferred to the overburdened American taxpayer.

As the indicated article by Mrs. Schlafly should be of interest to all Members of the Congress and the Nation at large, I quote it as part of my remarks:

THE MORAL ISSUES IN THE PANAMA TREATIES

(By Phyllis Schlafly)

The new treaties with Panama regarding the U.S. Canal involve moral, national security, constitutional and financial issues of great concern to all Americans. Let's examine some of these issues, beginning with the moral issues.

These treaties are highly immoral because they deprive us of the physical means of defending the Canal with the least cost in American lives. The first of the two Panama Canal treaties runs from the time of ratification to 1999. Under it we supposedly retain our right to defend the Canal. But this right is hamstrung with many handicaps.

First, under the terms of the treaty, we cede the Canal Zone to Panama. This buffer zone of five miles on each side of the Canal has always enabled us to keep five miles away from the Canal any saboteurs, rioters, or attacking troops. If we give it up, we will be allowing any of those people to come in close to the Canal. We will have lost the tremendous advantage of that buffer zone.

Second, under the terms of the Panama treaty, we are forbidden to increase the number of troops we have at the Canal over the level presently stationed there.

Third, the defense of the Canal is made subject to a combined military board on which will serve an equal number of Americans and Panamanians who must consult and cooperate together in the defense of the Canal.

Fourth, under the financial deal that accompanies the Panama treaty, the American taxpayers will loan to the Torrijos regime $50 million in military sales credits. This loan will be used to arm Torrijos' troops and to perpetuate the dictatorship he enjoys at the present time.

Assume that during the next 22 years, which is the life of the first treaty, there is a threat to the defense of the Canal. This threat could come from Torrijos who decides to nationalize the Canal. It could come from Communist agitators who run riot, or whom Torrijos allows to run riot. The threat could come from Cuban troops returning from Angola flushed with victory and looking for a new country to conquer.

Our existing troops would then be called upon to defend the Canal. They would have to carry out the defense without the advantage of the five-mile buffer zone on either side, without any reinforcements coming from the United States, and with the treaty-noose around their necks of being forced to consult and cooperate with the Panamanians. They might even have to defend the Canal against an attack by Torrijos' own troops who are armed by the American taxpayers' money.

This would be asking American servicemen to pay with their blood to overcome the handicaps that this treaty hangs around their necks.

Next comes the matter of defending the Canal after 1999 when the second treaty goes into effect. The second treaty provides that only the ~~Republic~~ of Panama shall operate the Canal and maintain military forces, defense sites, and military installations.

When I ask treaty proponents what is going to happen if Panama closes the Canal to our Navy, the answer is "Oh, if our national security is at stake, we will send the troops in if necessary and retake the Canal." This would be impossible if we abide by the terms of the treaty. They specifically deprive us of any right to have a single troop, a single base, or a single installation at the Canal after 1999. Of course we could violate the treaty, and we could retake the Canal. But at what cost! In the first place, world opinion would be against us, exactly as it was against the French and English when they tried to repossess the Suez Canal after Nasser took it over.

Secondly, and more important, are we willing to risk American blood for the paper promise of a pro-Communist dictator? He seized power in 1968, threw out his own constitution, and has demonstrated his disregard for human rights ever since. Should we surrender American territory and property, already paid for by the American taxpayers, which we may find necessary to reacquire at the expense of American lives? These are the moral issues that cry out for an answer before we sign any treaty.

What about the question, can we defend the U.S. Canal at Panama? Yes, we can defend the Canal if we reject the treaty. Our Canal Zone Commander-in-Chief, General McAuliffe, has testified that his troops are adequate to defend the Canal from any threat. Our Army, Navy, Air Force and Marines have always been equal to the duties imposed upon them.

But if we sign the Panama treaties, we will not be able to defend the Canal, because we will have no Canal Zone to keep our enemies five miles away, we will suffer the handicaps I have previously described, we won't be able to bring any reenforcements from the United States, and the Canal will be subject to saboteurs who can come in close to the Canal itself.

The second moral issue is the matter of American property at the Canal and in the Canal Zone. The American people have poured $7 billion of the taxpayers' money into the Canal and Zone. Does our Government have the right to simply give it away to some foreign country?

The third moral question involved in the Panama Canal treaties is the immorality of Panama's dictator. We are not talking about giving the Canal to some great Latin American hero like Simon Bolivar. We are talking about giving it to a dictator who is immoral, pro-Communist, who seized power in 1968, threw out his own constitution, and who has the worst record of human rights in all of Latin America. He was never elected to anything. An organization called Freedom House rates countries on their record of human, political and civil rights on a scale of 1-7, with 7 being the greatest violations of individual rights. Freedom House rates Panama 7 in political rights and 6 in civil rights; that's the worst record of all Latin America. Panama is specifically rated "NF", which stands for "Not a Free Country."

Torrijos' own brother is under an indictment in New York for smuggling narcotics into the United States. The Justice Department has confirmed that several members of Torrijos' family have been engaged in smuggling narcotics into the United States.

WERE WE FAIR TO PANAMA?

When we discuss moral issues, for some reason many people are given to understand that we should have some kind of guilt complex about the way we have treated Panama in the past. Let's discuss the question of justice to Panama.

Under the terms of the 1903 treaty, Panama granted us the Canal Zone. Panama did not lease us the Panama Canal Zone. The term "grant" is used 14 times in the treaty. The terms "rent" or "lease" do not appear even once. Panama granted us the exclusive use, occupation and control of the Canal Zone and all rights, power and authority as if we were sovereign "to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights power or authority." Some people have tried to make a case out of the word "if" we were sovereign. That agrument goes nowhere at all because, even if we don't have sovereignty, Panama still doesn't have it. The 1903 treaty specifically says that Panama has no sovereign rights whatsoever.

What was the length of the time of the 1903 treaty's grant of sovereignty and title? It was "in perpetuity". The words "in perpetuity" appear seven times in the 1903 treaty.

Our exclusive title and sovereignty over the Canal Zone were officially upheld by the U.S. Supreme Court in the case of *Wilson v. Shaw* in 1907, and again in a U.S. Court of Appeals case in 1971.

Even if we did not acquire title to the Canal Zone by means of the 1903 treaty, we acquired it anyway by virtue of our peaceful possession of the land and display of sovereignty for more than 50 years. International law sanctions the acquisition of sovereignty for a period of time without objections by other nations. We did exactly that for more than 50 years without any complaint from Panama.

Were we unfair to Panama by the 1903 treaty or when we bought the land? Was it a bad deal for Panama? No one in the history of the world ever got so much for such a worthless piece of real estate as Panama got out of the deal. All we received was a little piece of land 10 miles wide by 50 miles long. It was pest-ridden, mosquito-infested, and uninhabitable. But look what Panama got out of the deal.

First of all, the Panamanians got our guarantee of their independence. Panama had revolted 50 times against Columbia in the preceding 70 years. All those revolts were unsuccessful. By the 1903 treaty, the great United States of America pledged its honor to guarantee the independence of this little country. How lucky for the Panamanians!

Secondly, Panama got the promise that we would build our Canal at Panama instead of Nicaragua. The American Isthmian Commission had officially recommended that we build our Canal in Nicaragua, which was a better place, closer to our country, and has a more favorable climate and a deep lake which would have made construction more economical. But Panama won out over Nicaragua by the 1903 treaty.

Third, Panama got more cash than we paid for any land in all our history. Panama originally received $10 million in cash and has subsequently received a total of $70 million in cash. This is far more, for example, than what we paid for Alaska.

Fourth, we cleaned up Panama. Encyclopedias describe Panama in 1903 as one of the most disease-ridden areas in the entire world. We spent the first two years wiping out the malaria, the yellow fever, and the rats that carried the bubonic plague. We made it into a healthful place to live.

Finally, we poured in a tremendous investment which has given Panama the highest standard of living in Central America and fourth highest in all of Latin America. The economic benefits that have flowed into Panama, in addition to cash payments, have been tremendous. Last year the economic benefits totaled $243 million going into Panama.

Some people try to tell us that our control of the Canal Zone is a vestige of colonialism which we should eliminate in the 20th century. There is no parallel between our sovereignty over the Canal Zone and what is universally understood to be colonialism. The Canal Zone is not a colonial nation. We have not imposed our culture on the people of Panama. We have our Canal Zone and the Panamanians have their country, their dictator, their laws, their culture, and whatever they want. There is nothing exploitative about our relationship with Panama. We are not taking out their natural resources. We are constantly pooring money and investment in.

THE NATIONAL SECURITY ISSUES

There are vital national security issues involved in the new Panama Canal treaties. In wartime, the Canal is essential to American security. In World War II we were able to close the Canal to German submarines and Japanese warships but allow our Navy to go through. This was a tremendous military asset. During the Vietnam War, 70 percent of the cargo that we sent to Vietnam went through the Canal.

The Canal is also essential to us in peacetime. It enables us to have a much smaller Navy then we would otherwise be required to have. The Canal enables us to move our Navy back and forth quickly between the Atlantic and Pacific coasts. Of our 483 U.S. Navy ships, 470 can go through the Canal. Only 13 aircraft carriers cannot transit the Canal.

The Canal is almost as important to our national security in peacetime. Can we protect it and keep it open? Yes—*if* we reject the treaty. Our trump card would be that, if Panama closed the Canal to our ships, or allowed rioters or saboteurs to threaten it, we would be able to issue a peaceful threat to build another Canal somewhere else, such as Nicaragua. But if we ratify the Canal treaty, we bind ourselves not even to talk to a third nation about building another Canal without the express approval of the government of Panama. This is a humiliating provision, a restriction of our sovereignty, and a giveaway of our trump card that could eliminate all threats to the Canal from Panamanian agitation.

Third, we need the Canal for economic reasons. Thirty-five percent of the cargo that goes through the Canal is destined for or coming from the American ports. It is estimated that by 1980, 45 percent of the oil drilled in Alaska will be going through the Canal headed for the East Coast of the United States.

THE CARIBBEAN—A "RED LAKE?"

Fourth, the giveaway of the U.S. Canal will give another beachhead in the Western Hemisphere to a pro-Communist government. Congresswoman Leonor Sullivan, who was the chairman of the Merchant Marine Committee that had direct charge over the supervision of the Canal, said that turning the Canal over to Panama would turn the Caribbean into a "Red lake". She said that this would be "the most serious mistake of this century."

Torrijos went to Cuba for a state visit and took a retinue of 200 Panamanians. The Cuban embassy in Panama has an unusually large staff. Torrijos is also a good friend of the Communist dictator who runs Libya. In the summer of 1977, Torrijos invited the Soviet Union in to sign a trade agreement allowing the Soviets to open a bank, to carry on commercial dealings, and to occupy one of the bases formerly occupied by Americans. It begins to look as though, as fast as the United States moves out, the Soviets will move in.

We are told by the treaty proponents that the real issue is not who owns the Canal, but whether the Canal will be kept open. That is the best reason to reject the treaty. Our record is completely clear. We have kept the Canal open for 63 years. We have maintained it as a major international strait on fair and even generous terms to the whole world. We operate it at low rates open to all countries except our enemies in time of war. The U.S. Canal was really our gift to the world. We have never taken any return on our capital investment. We have charged only enough tolls to take care of current operational expenses.

Will Panama keep the Canal open? By the terms of the treaty, Panama doesn't even promise to keep the Canal open. Panama specifically refused to have a treaty provision requiring them to keep the Canal open. All they promise is that it will be "neutral." The Canal can just as well be neutral and closed, as neutral and open.

THE UNSTABLE PANAMA GOVERNMENT

Look at the unreliability of the Panamanian government. In the last 74 years Panama has had 59 chiefs of state. Since World War II, Panama has had 13 changes of government, five of them violent. This present dictator seized power and threw out his own constitution. And after 22 years, of course, total control will go to this Panamanian government. However, even before that, Panama would acquire de facto control.

The administration of the Canal during the next 22 years is set up on an unworkable arrangement. It is to be governed by a Panama Canal Commission with five Americans and four Panamanians. For the first 12 years, we appoint the top administrator and they appoint the deputy administrator. At the end of 12 years, Panama appoints the top administrator and we appoint the second in command.

In addition, there is a Consultative Commission to advise on all aspects of the Canal, on which there are to be an equal number of Panamanians and Americans. Under the treaty, Panama gets control of the Canal Zone, where Panama's civil and criminal laws will apply rather than American laws.

We are required to give preferential hiring to Panamanians in the operation of the Canal. We are required to accept Panama's professional licenses. Americans may remain in any jobs at the Canal a maximum of five years. Even George Kennan has conceded the impossibility of administering the Canal jointly by two countries who have different cultures, different political systems, different national goals, different technological abilities, and different temperaments. The arrangement will cause daily disagreements. Of course, George Kennan comes to the conclusion that we should give the Canal away right now. It is easy to see, that as we are beset by daily disagreements, Americans would get worn out and conclude, "Let's get rid of it, we can't stand it any longer."

Finally, we are told that we should support the Canal treaty because the Joint Chiefs of Staff are for it. The firing of General Singlaub in Korea shows clearly that the Joint Chiefs and every military officer on active duty will obey the policy of the Commander-in-Chief, or find himself another career.

THE CONSTITUTIONAL ISSUES

There are also constitutional issues involved in the Panama Canal treaties. Under our Constitution, the treaty power is shared by the President and the Senate which must give its advice and consent. The Senate gave no advice whatsoever about the Canal treaties. The Senators were prevented from even knowing the terms of the treaties until after they were signed on September 7, 1977.

Article 4, Section 3, of the Constitution says, "The Congress shall have power to dispose of and make all needful rules and regulations respecting territory or other property belonging to the United States." In other words, Congress, that is both Houses, has the sole and exclusive right to give away American territory and American property. Supreme Court cases have held that the President has even no right to negotiate about the transfer of American property or territory unless he has first been delegated that power by the Congress (consisting of both Houses). President Carter was given no such power by the Congress.

The third constitutional issue is the way the Canal treaty attempts to override the tax laws of the United States. Until this treaty came along, nobody ever would have thought that the President could sign a treaty with some foreign country and rewrite the tax law of this country. One provision of this treaty gives total income tax and other tax exemption to American citizens in the Canal Zone. It is not clear what is the purpose of this provision. It might be a little sweetener to get Canal Zone Americans to support the treaty or it might be to create a tax-free enclave for certain favored people. In any event, it is an attempt by treaty to amend the tax laws and give complete exemption to a privileged class of people.

There is also a First Amendment issue involved in the Canal treaty. The treaty says that Americans in the Canal Zone must abstain from any activity incompatible with the spirit of the treaty, and the United States will take all measures to ensure that this is carried out. That means that Americans living in the Canal Zone have no right to criticize the treaty. Certainly Torrijos would consider any criticism incompatible with the spirit of the treaty.

THE FINANCIAL ISSUES

Finally, there are major financial issues involved in the treaty. The Canal is a great national asset which we paid for four times. We paid Panama $70 million, we paid Colombia $25 million, we paid the French $40 million, and in addition to that we bought off the private land owners. We invested $7 billion of the American taxpayers' money in the Canal which the treaty will turn over to Panama, plus $82 million in buildings that we have erected in the Canal Zone.

But that is just the beginning. Look at the cash flow that will go along with it. By the terms of the treaty, Panama will get $10 million in guaranteed cash. Panama will get an additional $10 million for police and fire protection and street cleaning, without promising any satisfactory level of performance. Panama will get 30 cents for every ton going through the Panama Canal, estimated to total $50 million a year. Then Panama will get an additional $10 million a year if revenues permit; but that is cumulative and, if it is not paid one year, it must be paid the next. Then Panama will get another $5 million a year in revenues from certain business transactions. This makes a total of $85 million a year for 22 years.

That isn't all. Then come the loans from the American taxpayers. By the side agreements that go along with the treaties, the Administration has promised to loan the Torrijos regime $200 million from the Export-Import Bank, $75 million from the Agency for International Development, $20 million from the Overseas Private Investment Corporation, and $50 million in military sales credits, making a total of $345 million guaranteed out of the United States Treasury. Add it all up and it comes to $2.2 billion in cash over the next 22 years, in addition to the capital asset that we would turn over.

Why the great push to give Torrijos all this cash in addition to the Canal and the land? The polls show that about 80 percent of the American people are opposed to this giveaway. Where does the push come from? The answer is in a couple of ads run in the Wall Street Journal in 1972 and 1973. Those ads identified ten of our country's largest banks which had loaned millions of dollars to the Torrijos government in Panama. After 1972, the banks accelerated their loans. The latest Federal Reserve Board figures show that American banks have loaned a total of $2.9 billion to Panama.

The Panamanian government is now broke. Its credit is gone. The banks don't have a chance of collecting their bad loans. The Torrijos government is paying almost 40 percent of its national budget in debt service, that is, in interest on loans. By comparison, the United States, with our huge national debt, is paying only 7 percent of our national budget in debt service. Any individual or country that is paying almost 40 percent in interest is bankrupt.

How are those loans going to be paid back? How can they be paid back? There is no way unless Torrijos somehow gets access to the tolls or to money from the United States. This is the reason for the tremendous push from powerful and important people in our country to put over the Panama treaties in order to guarantee a cash flow to Panama over the next 22 years of a sum that approximates the amount that the ten largest U.S. banks have loaned to Panama.

In addition to the other costs, there will be a big increase in costs to shippers. We are told that the Latin American countries are very eager for us to give away our Canal and will be offended if we reject the treaty. When they realize how much they will have to pay in increased shipping costs, they will take an entirely different look at the treaties.

The Organization of American States passed a resolution in August 1977 saying that the tolls at the Panama Canal should reflect only current operating costs and should not be a monopoly source of revenue for the country that is operating it. Only the United States will ever operate the Canal that way. The Canal treaty violates this standard because it will require at least a 50 percent increase in the tolls in order to pay Panama the $85 million a year it expects.

WHAT MUST BE DONE

Our task is to speak up and inform the American people on this vital issue. Ask your Senators and Congressmen if they are going to force the American taxpayers to bail out the big bankers from their bad loans? Are they going to force us to give away this priceless asset paid for four times by the American taxpayers? Are they going to deal a mighty blow to our military security and our economic prosperity? Are they going to force the American taxpayers to finance another Communist base in the Caribbean? Are they going to force us to commit the immoral act of risking American lives for the paper promise of a corrupt pro-Communist dictator? It makes no difference what type of cosmetic surgery the Carter Administration or public relations personnel may apply to the treaties. The clear terms of the treaties represent a sellout, a surrender, and a shakedown of American interests from the first line to the last.

Make it your personal resolution to make sure that the Canal treaties are defeated, and that your Senators and Congressmen vote No.

SOVIET RUSSIA AFTER 60 YEARS

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LAGOMARSINO. Mr. Speaker, this November the Soviets celebrated the 60th anniversary of the Bolshevik revolution. Henry Huglin, a retired Air Force brigadier general and syndicated columnist on national security and international affairs, has made some very relevant observations about this occasion:

SOVIET RUSSIA AFTER 60 YEARS

(By Henry Huglin)

This month the Soviets are celebrating the 60th anniversary of the Bolshevik revolution which transformed Russia from an absolute monarchy into an absolute Marxist-Leninist state.

For half of the Soviet Union's existence our country has been deeply involved with her in a protracted geopolitical competition, conflict, and sometimes confrontation—for which there is no sure end in sight.

It is highly important that we Americans perceive Soviet Russia in a realistic perspective. Yet, for many of us, the Soviet state remains much as Winston Churchhill characterized it in 1939: "a riddle wrapped in a mystery inside an enigma."

Here are some views we ought to consider.

The Soviet regime has had considerable success in some ways—though at great human cost. Materially, most of the people are far better off than under the Czars. But they would likely have been even much better off than they are if a free enterprise democracy had emerged 60 years ago. And even the Czarist regime might have evolved and created better conditions by now than has the Soviet regime.

Because Soviet Russia is a superpower, two major aspects of that society most trouble our country and others.

The first is the hangup the Soviet leaders have that they must turn the rest of the world their way for them to be secure. Their seemingly ingrained ideological and geopolitical expansionism—now backed by great and growing military power—has been and remains the most pervasive unsettling force in the world.

The other most troubling aspect is the nature of the regime. It is repressive and devoid of many of the human rights we and many other peoples of the world hold dear. One of the reasons for this is that the regime has no true legitimacy; the people have no valid choice at the ballot boxes except to act as rubber stamps.

In addition, the Soviets are highly skilled in misleading propaganda and in subversion and political manipulation—through Communist parties and sympathizers throughout the world. And the effects of their foreign activities are more malevolent than benevolent.

Further, the Soviet regime has not created a system that is widely admired or emulated. No country has adopted communism by choice of its people. And many of those outside Russia who are attracted to communism are bewitched by the impractical idealism expounded by Marx or Mao and not by its Soviet application.

Fortunately, the Soviets make mistakes, suffer setbacks, and have great problems.

Their system is highly inefficient. Despite having over twice our land area and many more people farming, they cannot consistently produce enough food to be self-sufficient. In consumer products they are way behind the western world in quantity and quality. The regimentation, lack of incentive awards for initiative and hard work, and stultifying bureaucracy are millstones around the Russians' necks.

Of course, when the Kremlin leaders want to concentrate their resources and technical talent, they can get good results. This they particularly have done in their armaments and space programs.

Major problems of the Soviets abroad are the undependability of their satellites and the weakening of their control, except where their troops are present or nearby, as in eastern Europe. Tito's Yugoslavia defected in 1948 and Mao's China in 1959. And now the apparent growing independence of Communist parties, particularly in Italy, France, and Spain—the so-called Eurocommunism—is causing the Soviets deep concern. Further, some of their effort to gain influence and control through economic and military aid abroad, as in Egypt, have miserably failed.

Yet, their persistent drive to expand obviously remains strong and menacing.

How should we regard and deal with the Soviets? Well, warily, as we have been.

Above all, we must not allow them to achieve superiority in military strength, because that would give them the ability to checkmate us and free them to act with impunity in the world. Thus our long-term security would be jeopardized, as well as the security of many nations that depend on us.

Yet, we also need to continue patiently to seek areas of cooperation, conciliation, and agreement—to reduce areas of tension and to dampen down the arms race, the pace of which is being clearly set by the Soviets.

In effect, we need to follow the general policies that our country has followed for 30 years, profiting from our mistakes, but maintaining our military and economic strengths, diplomatic and technological dynamism, and our will to measure to the challenges we shall inevitably face. We've got "to hang in there."

Our long-term hope can primarily be that, if the Soviets continue to be thwarted in their imperialist expansion ambitions, the dynamics of their internal problems will result in a revolution or at least evolution of their society into one that is less repressive, more democratic, non-imperialistic, and hence more cooperative. But this may take another 60 years or more.

DROUGHT RELIEF AND WATER CONSERVATION ACT

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. MILLER of California. Mr. Speaker, the severe drought which has affected much of the Western United States for 2 years appears to be continuing, at least at the moment, into a third year. The economic, social, and environmental impacts of a third year of drought could be truly calamitous.

I have frequently said that lack of rainfall is not the sole cause of drought. Poor planning, improper management, and wasteful consumption have contributed to the severe shortage of water throughout not only the West, but in other areas of the Nation as well. Falling back on the traditional responses to short water supplies—the construction of new dams and other storage and transportation facilities—is no longer acceptable any more than simply producing more oil and natural gas will solve the energy crisis. We are fast reaching the limits of the resources, and we must look to workable alternatives.

The level of waste in our water usage has been clearly documented, as has the effectiveness of conservation programs. In northern California, residents are compelled to save 25 percent of their usual water consumption because of the drought. In fact, most counties registered far better records, and some even doubled the anticipated savings.

I am today reintroducing the Drought Relief and Water Conservation Act which would establish conservation as a mandatory feature of the Federal water program. The United States, through the Bureau of Reclamation and other agencies, delivers tens of billions of gallons of water per year to its customers. Yet, our management and pricing policies do nothing to encourage or mandate the most efficient use of that increasingly precious resource. A recent study by the General Accounting Office has estimated that a substantial portion of the federally developed water, perhaps half, is not used beneficially by the plants it is intended for.

Conservation can occur both residentially and agriculturally. Residential conservation can be very inexpensive and effective. A study by the California Department of Water Resources has estimated that retrofitting just one-third of the residences in the State would result in a savings of 40 million gallons of water at a financial savings of $4.38 million. The same reduction in water use would cut the consumption of oil, which is used to transport and heat the water, by 1.67 million barrels costing $25.1 million.

Nationally, the University of California at Davis has estimated that, over a 10-year period, residential water users could save $22.5 billion, and industries could save $52.3 billion. Yet the per home cost could be as low as $2 for the installation of aerators and flow-resting devices. Widespread use of such devices could help to stimulate new industries as it has in California, where over 26,000 jobs related to water conservation have been created in the past 2 years, and another 12,000 are anticipated.

Another recent study, by the prestigious Lawrence Berkeley Laboratory, has concluded that water conservation could save significant amounts of water. I would like to share these conclusions with my colleagues, and invite them to join me in sponsoring this legislation.

The article and bill follows:

STUDY BY LAWRENCE BERKELEY LABORATORY

(By Linda Stephenson)

Californians could reduce urban water consumption by 40 percent if standard water conservation measures were instituted in the residential and industrial sectors, a recent Lawrence Berkeley Laboratory (LBL) study shows. This savings in water consumption would also result in sizable energy savings, since energy is required to extract, convey, purify and heat water prior to use, and to treat wastewater.

"The significant water savings potential shown in this study indicates that conservation can be considered as an alternative to dam construction to protect against water scarcity," says LBL economist Peter Benenson, author of the 77-page report on the study. The report is entitled "A Water Conservation Scenario for the Residential and Industrial Sectors in California: Potential Savings of Water and Related Energy."

Water consumption data in the study was separated by various uses in residences, by the largest water-consuming industries and by 11 geographical subregions of the state. The energy use associated with this water use was also estimated for surface and groundwater delivery, distribution, heating and wastewater treatment.

"In the Bay Area," the report states, "the potential savings from water conservation are greater than the amount of water which would be delivered by the major planned water projects for urban supply in the next 10 years. In the Los Angeles and San Diego areas, the potential water savings from conservation measures exceed the short run groundwater overdraft in the Owens Valley."

The study, which was funded through the San Francisco Operations Office of the Department of Energy, concludes that water conservation potential should be included as a key factor in water supply planning. According to the report, projects still on the drawing boards should be reassessed in terms of water conservation potential in the area to be served.

In terms of energy, reducing California residential and industrial water use by 40 percent would result in approximately 40 percent reduction of energy consumption required to deliver, heat, and treat that water, according to Benenson. That represents a savings of two percent in overall statewide electricity consumption and three percent in statewide natural gas consumption, he adds. The electricity savings would result in decreased consumption in nonrenewable fuels and decreased pollution emissions.

"The estimated water savings potential outlined in this study is thought to be conservative," says Benenson, "because several water districts and industries have already reported far greater savings." Specifically, in 1977 California's Marin Municipal Water District and the East Bay Municipal Utility District have reported water savings for selected months of more than 50 percent of 1976 consumption. And at Lawrence Berkeley Laboratory the 1977 water consumption is 50 percent of what it was in 1976, according to Lab officials. "A comparison of estimated savings potential with savings actually reported shows that while the potential is attainable, and in some cases has been exceeded, statewide only one-third of the conservation potential derived in this study has been reached," the report concludes.

The study indicates that the 40 percent savings in residential water use could be brought about by simple and inexpensive measures such as placing two quart plastic bottles in a five-gallon toilet tank and reducing the average number of flushes a day from five to four; placing flow restrictors on spigots and reducing showering time from an average of five-and-a-half to four-and-a-half minutes; and using household grey water for landscape watering. The study concludes that exterior watering, toilet flushing, and bathing are the largest residential water uses, and therefore conservation efforts in these areas would result in the largest savings.

In industry, the study suggests that many of the projected savings could be effected quickly and relatively inexpensively by applying housekeeping measures such as plugging leaks, taking water which is heated in industrial processes and cooling it for reuse, and taking water which has had its quality reduced and using it in processes that tolerate lower quality water.

The study points out that one of the main difficulties in relying on water conservation is the possibility of sustained consumer resistance to behavioral change. This potential resistance applies mainly to conservation measures that require continuous attention to conserving a particular resource. However, large savings are possible from conservation measures that require only a one-time installation of a technological device, the study indicates.

The study concludes that although conservation cannot be relied upon with certainty as a water supply option equivalent to its full potential, it cannot be ignored as it often has been in past water supply planning.

Copies of the report, LBL No. 6817, are available from the Technical Information Department, Lawrence Berkeley Laboratory, 1 Cyclotron Road, Berkeley, Calif., 94720.

Lawrence Berkeley Laboratory is operated by the University of California under contract with the U.S. Department of Energy.

H.R. —

Mr. MILLER of California (for himself, Mr. EDGAR, Mr. MOSS, Mr. RICHMOND, Mr. RYAN, Mr. STARK, and Mr. VENTO) introduced the following bill; which was referred to the Committee on Interior and Insular Affairs.

A bill to establish a loan program to provide financial assistance to drought-impacted water districts, to provide Federal assistance to water districts for acquisition and installation of residential and agricultural water conservation devices and equipment, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the Drought Relief and Water Conservation Act of 1977".

DROUGHT IMPACT RELIEF LOANS

SEC. 2. (a) The Secretary of the Interior is authorized to make loans to any local water district, unit of local government, or other public agency which supplies agricultural or municipal water to consumers if such water district, unit of local government, or other public agency has sustained or is likely to sustain a substantial reduction in income due to a reduction in water consumption caused by drought. The Secretary shall by rule prescribe standards for determining which local water districts, units of local government, and other public agencies are eligible for loans under this section.

(b) Loans under this section shall be made at rates of interest not to exceed 5 per centum per annum and shall be made for periods not to exceed ten years. Repayment of loans under this section shall be made at such times, in such manner, and subject to such conditions as the Secretary may prescribe.

(c) A loan under this section shall be made upon approval of an application submitted by a local water district, unit of local government, or other public agency which supplies water to consumers. Such application shall be in such form and manner, and shall provide such information, as the Secretary may by rule require.

WATER CONSERVATION PLAN REQUIREMENT FOR FEDERAL WATER PURCHASERS

SEC. 3. (a) (1) The Secretary may not enter into a new contract, or (except as provided in paragraph (2)) extend or renew an existing contract, for the sale of water from any Federal reclamation project unless the purchaser of such water under such contract has adopted a water conservation program approved by the Secretary.

(2) The Secretary may extend or renew a contract in effect on the date of enactment of this Act for the sale of water from any Federal reclamation project if under such extension or renewal the Secretary will not provide more than 85 per centum of the amount of water provided under the terms of such contract as in effect on the date of enactment of this Act.

(b) The Secretary may not sell any surplus water to any contractor for water from any Federal reclamation project if such contractor has not adopted a water conservation program approved by the Secretary.

(c) Subsections (a) and (b) shall not apply in any State in which loans under section 4 are not available.

(d) (1) Subsections (a) and (b) shall take effect at the end of the one-year period beginning on the date of enactment of this Act.

(2) During such one-year period, any contract for the sale of water from any Federal reclamation project entered into by the Secretary, and any extension or renewal of any such contract, shall not be for a period of more than five years unless the purchaser of water under such contract has adopted a water conservation program approved by the Secretary.

WATER CONSERVATION LOAN PROGRAM

SEC. 4 (a) Upon the approval of an application of any general purpose unit of local government or of any local water district, the Secretary may make loans to such unit or water district for purposes of acquisition, distribution, and installation of certified residential water conservation devices and certified agricultural water conservation equipment to be installed in residences or for agricultural purposes within the jurisdiction of such unit or water district, and for related technical and educational information. An application for a loan under this section shall describe—

(1) the number of residential units or the agricultural area in which such devices or equipment, as the case may be, will be installed;

(2) the types and quantities of certified water conservation devices and equipment to be purchased, in whole or in part, with money received under this section;

(3) the amount of water which the entity submitting the application estimates will be conserved following installation of such devices and equipment; and

(4) such other information as the Secretary may by rule require in order to carry out the purposes of this Act.

(b) Loans under this section shall be made at rates of interest not to exceed 5 per centum per annum and shall be made for periods not to exceed ten years. Repayment of loans under this section shall be made at such times, in such manner, and subject to such conditions as the Secretary may prescribe.

(c) (1) No loan under this section shall be approved unless the Secretary has determined that the entity receiving the loan has established such procedures and requirements respecting a program for the distribution and installation of water conservation devices and equipment to be acquired with money received from the loan as the Secretary considers appropriate to carry out the purposes of this Act in an effective, fair, and equitable manner.

(2) Such procedures and requirements shall provide appropriate priorities for the distribution of such devices and equipment, considering the area in which such entity is located and the amount of water available in such area.

(d) No loan under this section shall be made to any general purpose unit of local government unless such unit has—

(1) adopted a regulation or ordinance requiring that all new construction begun after January 1, 1979, within the jurisdiction of such unit shall be required to include appropriate water conservation devices; and

(2) adopted a plan for the retrofitting of existing facilities owned or administered by such unit with appropriate water conservation devices.

(e) Nothing in this section shall be construed to require that distribution or installation of water conservation devices or equipment be carried out by officers or employees of a local government agency.

(f) The Secretary may initiate the loan program authorized by this section on a demonstration basis in not less than five States, such States to be selected on the basis of the acuteness of their water shortages in the previous two years and the likelihood of such a program having a significant effect on the residential consumption of water within such States.

MONITORING

SEC. 5. (a) The Secretary shall monitor the operation of entities receiving loans under sections 2 and 4 of this Act through on-site inspections and such other means as may be effective to assure that the requirements of this Act are met.

(b) (1) Each entity receiving a loan under this Act shall maintain such records as the Secretary may require.

(2) The Secretary and the Comptroller General of the United States shall have access, for purposes of examination and audit, to any book, document, paper, information, and record pertaining to any loan made under this Act.

CERTIFICATION OF DEVICES

SEC. 6. The Secretary shall, upon application of any manufacturer of a residential water conservation device (such as low flow showerheads and flow restriction and toilet tank displacement devices), or of any item of agricultural water conservation equipment (such as materials for lining or enclosing irrigation conveyances and drip irrigation equipment), certify such device or item for purposes of section 4 if the Secretary determines that such device or item—

(1) is effective in reducing the consumption of water in residential units or in agricultural use, as appropriate; and

(2) meets such other requirement (including requirements with respect to cost and quality) as may be prescribed by the Secretary.

REPORT

SEC. 7. The Secretary shall submit a report to the Congress on the operation of the loan programs authorized by this Act not later than July 1, 1979.

DEFINITIONS

SEC. 8. As used in this Act:

(1) The term "Secretary" means the Secretary of the Interior.

(2) The term "residences" means private homes, apartment buildings, hotels, motels, and iinstitutional, retirement, and hospital facilities.

(3) The term "State" means any of the fifty States and the District of Columbia.

OUR TIES WITH IRAN

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LAGOMARSINO. Mr. Speaker, the Shah of Iran's recent visit is a timely reminder of international realities, especially in regard to our energy demand. Retired Air Force Gen. Henry Huglin explores several significant questions pertaining to "Our Ties With Iran" in the following article:

OUR TIES WITH IRAN

(By Henry Huglin)

The violence in Washington between the Shah of Iran's supporters and opponents, during his recent state visit, focused attention more than usual on the ties between Iran and our country.

The nub of our relationship—which stretches over three decades—is that Iran is viewed as a geopolitical keystone linking the Mideast and southern Asia and bulwarking an area coveted by the Soviets to control the oil-rich Persian Gulf region. But another major factor now is access to the oil in Iran itself.

As the result of the great oil wealth now pouring in, the Iranian government, under the dynamic drive of the autocratic Shah, is engaged in a huge, across-the-board, highly-costly modernization program. Included is a major upgrading of Iranian armed forces, ostensibly for defense from neighboring Russia and Iraq, but also to become the dominant power in the Persian Gulf region. And the modernization program further includes nuclear power reactors, to take over energy production when Iranian oil runs out.

The Shah has made it clear that, if he cannot get from us the arms and nuclear plants he is determined to have, they will be gotten elsewhere.

A cause for concern is that, after the Iranians are strongly armed, their geopolitical goals may not remain so seemingly benign; and the nuclear reactors might be a step toward their making nuclear weapons some day.

Also, to finance his overly-ambitious plans, the Shah led the move four years ago that quadrupled the price of oil—to the great detriment of our economy and most of the others throughout the world. Now, though he has said that Iran will oppose an oil price rise in 1978.

Further, although much good has been accomplished for the Iranians with the modernization program, it has been done in an authoritarian way, with little respect for human rights and democratic forms.

So, our government has had to face a dilemma. If we don't deal with the Shah, as some critics are urging—because of his strict rule, or concerns over where the Iranians' growing strength will lead and over our possible involvement if they get into a war—we still don't prevent the Shah acquiring the arms and nuclear plants he wants, and we lose tens of billions in trade, a relatively-assured source of oil, and a great deal of potentially-important influence.

President Carter has obviously taken the prudent course to overlook or downplay the drawbacks and doubts and to recognize the key role the Shah can play in holding down further oil price increases and in promoting stability in the vital Mideast oil region.

But it was particularly ironical for Mr. Carter to be giving the Shah a warm reception while sniffing the tear gas being used to break up the violence between the pro and con demonstrators. The Shah hardly passes the litmus test on human rights that the President has made, in theory at least, a major basis of his foreign policy dealings. And Iran is currently getting more arms from us than any other country—and **now** more from the President who campaigned to scale down such arms sales abroad.

But we American consumers need to appreciate that, with our profligate use of oil, we are contributing to our government's bind over relations with such countries as Iran.

Instead of conserving energy we are making our country increasingly dependent on foreign oil sources. This is affecting our balance of payments problems, as well as forcing the government into action to insure reliable sources of oil abroad. And Iran—not being an Arab country, and hence not likely to embargo shipments of oil to us or Israel in case of another Mideast war, and becoming increasingly dependent on us for arms and other goods—is obviously being tied to us, in major part, for oil-source security reasons.

As the result of our ties, our government does exert influence on the Shah. He has recently moderated his regime's authoritarianism and he is helping keep stability in the Persian Gulf area. If he persuades the other oil exporting nations to forego price hikes, our government's realistic power politics will have achieved some specific payoffs.

So, the recent visit of the Shah is a clear reminder of international realities—and the impact of our voracious appetite for energy.

President Carter played the Shah's visit to the benefit of our overall national interests, though at the cost of some further disillusion over his circumvented pledges and policies, and to the dismay of the human rights crusaders, isolationist doves, and ivory-tower idealists.

REFINANCING SOCIAL SECURITY

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for December 7, 1977, into the CONGRESSIONAL RECORD:

REFINANCING SOCIAL SECURITY

One of the most vexing questions before the Congress is how to pay for the steadily rising cost of social security benefits for the aged, the disabled and their dependents. The basic problem is that because of high unemployment, improved benefits and the rising ratio of beneficiaries to workers, the system has been spending more than it takes in from payroll taxes.

As the Congress wrestles with solutions to this problem, it debates whether the social security system should be considered an insurance system or a form of welfare. In many ways social security is similar to an ordinary insurance program. Persons pay money into the system during their working lives so that they will be guaranteed a source of income when they retire or become disabled. The amount of benefits they get upon retirement is related to the amount of money they have paid in over their working years. At the same time, however, the social security system differs in major ways from an insurance system. It is a pay-as-you-go system with the taxes of each generation of workers financing the benefits of the previous generation. Furthermore, the amount of benefits that a retired or disabled person receives is related only loosely to the taxes he pays. Those who emphasize the insurance nature of the system do not favor using general federal revenues to shore up the social security system; benefits, they argue, should be paid from payroll taxes. Those who emphasize the welfare aspects of the social security system favor financing at least part of the benefits out of general revenues since the income tax rate is more progressive than the payroll tax rate.

The social security system faces two financing crises, one short-term and one long-term. The short-term crisis has been brought about by high rates of unemployment which curtail social security revenues, and equally high rates of inflation which cause increases in social security benefits. The House bill completely eliminates the deficit in the system brought on by these events through the remainder of this century through a combination of increases in employee and employer social security taxes. Had no action been taken by the Congress, two of the three trust funds within the system would have run out of funds by 1983.

The long-term financing crisis has primarily been caused by the sharp decline in the birth rate along with an increase in average life expectancy and a trend toward earlier retirement. These trends mean that the number of people working and paying social security contributions in the future will be smaller in relation to the number drawing benefits. Consequently, the cost of the program per worker will rise.

A number of proposals to restore the financing balance of the social security system are under consideration. President Carter has proposed to move some of the burden from the payroll tax to the income tax by using general revenues only when the national unemployment rate exceeds 6% and only until 1982. He would remove the ceiling on the wage base on which employers pay social security taxes while retaining the ceiling for employees. Both the House and the Senate have rejected anything but token funding from general revenues. The House has retained the parity feature of equal contributions by employer and employee. The Senate, by a narrow margin, has approved an end to the parity feature. Both House and Senate bills would raise the tax rate beyond the higher levels already scheduled in the law, although the Senate bill would raise it sooner and further. Both bills would raise the wage base ceiling, the House favoring an earlier boost and the Senate raising the ceiling much faster for employers than employees. Both bills would enable retirees to earn more money before they start losing social security benefits.

Both House and Senate bills are aimed at eliminating the short-run deficit in the social security funds which result from recent recession and a long-run deficit which will result from a lower birth rate, changed economic assumptions, and a faulty cost of living adjustment mechanism that threatens to run wild in future years.

No one likes to increase taxes but the Congress really has no choice. Virtually everyone concedes that a tax boost is necessary to put the social security trust fund back in order. Unless something is done quickly the system will go broke in the early 1980s.

Hard decisions simply must be made in order to maintain a soundly financed social security system. Thirty-three million Americans (one out of seven) currently receive benefits and another 104 million Americans contribute to the system. I know of no one who seriously advocates abandoning the system. To do so would be catastrophic for the entire nation.

In addition to the higher taxes, another unfortunate aspect of the social security bills now under consideration is that they raise taxes at the very time when the need for major tax reductions are needed to assure the continuance of the economic recovery. Thus, positive moves must be made quickly in 1978 to provide tax relief in order to offset the impact of the social security measure.

CITIZEN OF THE MONTH AWARD

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LEDERER. Mr. Speaker, it is with the greatest pleasure that I have the opportunity to present to my colleagues in the House of Representatives a newspaper account of the accomplishments of Mr. Grover C. Willis, recipient of the Philadelphia Tribune-Pepsi Cola Citizen of the Month Award.

The account follows:

[From the Philadelphia Tribune, Nov. 19, 1977]

CITIZEN OF MONTH IS MAN OF ACTION RATHER THAN WORDS

(By Linn Washington)

The old saying that actions speak louder than words befits the winner of the Tribune's October Citizen of the Month award.

Grover C. Willis was selected by a panel of judges to receive the Pepsi Cola-Philadelphia Tribune Citizen of the Month award and was presented with an engraved silver bowl during a luncheon given yesterday (Thursday) in his honor.

An employee of the General Electric Company and official of the National Technical Association, Mr. Willis replied with shy modesty when asked by luncheon guests to describe his community accomplishments and prompting Tribune President Alfred Morris to comment that he was a good example of actions speaking louder than words.

Willis is very active in his North Philadelphia community and at the luncheon complained to a reporter about efforts to get Conrail to cut the grass at a vacant station in his neighborhood.

Over the summer, Mr. Willis' efforts transformed a vacant trash-filled lot into a community garden. He personally took part in removing the debris from the lot which filled four city trash trucks. After the lot was cleared, various vegetables were planted. Willis said he had no problems with persons vandalizing the garden because the community was involved with its upkeep.

He also organized community co-op caravan trips to farms where persons could pick their own fruits and vegetables. Both the garden and the co-ops were unqualified successes. Next year, there will be more gardens in his community.

Mr. Willis is a board member of the Black Political Forum and worked for the local Carter campaign during last year's presidential race. Since then, he has been active in voter registration and registered 125 persons for the just-passed election.

Other of Willis' voluntary activities include vice president of Simon Gratz Home and School Association, minority business and job chairperson of the National Technical Association, Inc., Democratic Associated Committeeman for the 11th Ward, 12th Division.

Friends and neighbors describe Mr. Willis as "a very warm and pleasant person to know, and always concerned about the well-being of others and the progress that is being made by his fellow community citizens."

ENERGY "JUST A COMMODITY"

HON. ROBERT E. BADHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. BADHAM. Mr. Speaker, the November 30 Long Beach Independent Press Telegram contained a story which I would desire to have reprinted in the RECORD because it demonstrates the shocking lack of consistency and commonsense, both of which are becoming increasingly associated with the administration and the Department of Energy.

I said it is shocking because John F. O'Leary, Deputy Secretary of the new Department of Energy, is quoted as saying that it would neither be "sensible or realistic" for our Nation to achieve energy self-sufficiency. That and the balance of the article certainly do not demonstrate commonsense and further seem to be in direct conflict with the statements of President, or at least candidate Carter, who has told us for 2 years now we must strive to reduce imports.

Deputy Secretary O'Leary said that he expects almost a 60 percent increase in the already huge amount of imported oil. I hope my colleagues will read this article and develop a clear sense of where this country should be going. I insert the article at this point:

SELF-SUFFICIENCY DRIVE UNWISE, SAYS O'LEARY: ENERGY "JUST A COMMODITY"

SAN FRANCISCO.—It would be neither "sensible nor realistic" for the nation to achieve energy self-sufficiency, a top federal energy official said Monday.

"There's a great deal to be said for trade back and forth," John F. O'Leary, deputy secretary of the new Department of Energy, said.

Ending fuel imports would not only be "very difficult," for the U.S. economy, he said, but "from the standpoint of providing dollar flows to developing nations, it would be bad for their economies."

"I think within limits, energy is just another commodity," said O'Leary, former administrator of the Federal Energy Administration. "But when you talk about oil versus copper, for example you're talking about an elephant versus a squirrel.

"It is so dominant, the dollar flows are so huge, it so outweighs other things" that it has to be treated as an exception and regulated more strictly than other imports, he said.

But, he added, "I don't think that drives you to the conclusion that we ought to get out of the trade business and become totally self-sufficient," he said.

In a speech to the Atomic Industrial Forum, O'Leary said he expects the energy package Congress approves to boost oil imports to 9.5 million to 10 million barrels a day by 1985. That compares to six million barrels a day now—the ceiling at which the administration hoped to keep imports, he said.

Both coal and nuclear power could meet America's growing energy needs, but nuclear power holds the greatest potential, he said, particularly if a proposed licensing reform bill being drafted by the administration is approved.

INCREASE IN THE LUMP-SUM DEATH BENEFIT

HON. JOSEPH A. LE FANTE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LE FANTE. Mr. Speaker, today I am introducing a bill which would increase the amount of the lump-sum death payment made under the Social Security Act.

Under current law, the lump-sum death benefit is equal to three times an individual's primary insurance amount, or $255, whichever is smaller. My bill amends the law to increase the amount to $750 in all cases.

The lump-sum death benefit is payable to the surviving spouse of a fully or currently insured wage earner who was living with the deceased at the time of death. Where there is no surviving spouse, the lump-sum payment can be made to any person or persons who paid for the burial expenses. If the person responsible for payment of the burial expenses agrees or if no one assumes responsibility for the burial expenses within 90 days, the lump-sum death payment may be assigned directly to the funeral director.

The lump-sum death payment was designed to help pay expenses which are related to a wage earner's last illness and death and is often used to pay for funeral expenses.

The $255 ceiling on the amount payable for the lump-sum death benefit was set in 1954 and no increases in the benefit have been made since that time. Congress placed this $255 ceiling when across-the-board increases in social security benefits were made so that the lump-sum death benefit did not exceed reasonable funeral costs.

The $255 ceiling may have been reasonable in 1954 but inflation has eroded what this amount can cover over the past 23 years and the amount has not kept pace with the increasing costs of funerals. The lump-sum death benefit of $255 now covers only a fraction of the cost of a standard funeral. The National Funeral Directors Association in a 1977 study found that the national average expenditure for a funeral was $1,175. This figure does not include cemetary expenses, which would increase the average cost to $1,576 for all categories of services. Expenses for the average indigent funeral service amount to $438 not including cemetery expenses. When cemetery expenses are added on, the amount increases to $839 for a welfare adult funeral.

This large financial burden is placed on a surviving spouse at a time when he or she is least able to afford it or cope with it. Even though the surviving spouse may receive survivors' benefits, these benefits are not necessarily adequate or timely enough to cover the financial hardships related to immediate needs such as funeral expenses and medical bills resulting from the illness and death of a spouse.

Increasing the lump-sum death benefit at this time to $750 is certainly justifiable and is within the intent of keeping benefits at an amount which does not exceed reasonable funeral costs.

The text of the bill follows:

H.R. —

A bill to amend title II of the Social Security Act to increase to $750 in all cases the amount of the lump-sum death payment thereunder

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 202(i) of the Social Security Act is amended by striking out "an amount equal to three times such individual's primary insurance amount, or an amount equal to $255, whichever is the smaller, shall be paid" and inserting in lieu thereof "the sum of $750 shall be paid".

SEC. 2. The amendment made by the first section of this Act shall apply with respect to deaths occurring on and after the date of the enactment of this Act.

STROESSNER OF PARAGUAY

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. COLLINS of Texas. Mr. Speaker, I have recently had the opportunity to visit with Paraguay's distinguished Ambassador to the United States, Mr. Mario Lopez Escobar. Paraguay is a solid friend of the United States, and a country which maintains a balanced economy.

The Paraguayan guarani continues to maintain a stable relationship to the U.S. dollar, as it has done for the last 15 years. Current export figures are once again ahead of the previous year's, as Paraguay continues to maintain an excellent balance of trade with its exports of beef, soy, cotton, lumber, vegetable oil and coffee.

In addition to its stable domestic economy, Paraguay has operated with a consistently cooperative foreign policy, and has been a longstanding friend of the United States in foreign affairs. Paraguay was one of the first South American nations to support the United States in the 1962 Cuban missile crisis. Paraguay contributed a 200-man OAS peace force in the Dominican Republic. Paraguay offered to send troops to Bolivia when Guevara was on the loose. Paraguay consistently backed the U.S. position when the OAS sanctions were imposed against Cuba.

Paraguay continues the growth and development of its economic program with its hydroelectric projects. Over a period of 8 to 10 years, to be completed about 1980, Paraguay will have been transformed, without changing its essentially agricultural structure, into an important exporter of hydroelectric energy. The Yacyreta dam will produce 5 million kilowatts, Corpus 7 million kilowatts, and Itaipu 12 million kilowatts. Thus, Paraguay will be in a position of potential in a world with daily increasing needs for energy.

Leading Paraguay in this prosperity is a realistic, practical and energetic man, who through his foresight has transformed his nation into a land of peace, prosperity and progress. President Alfredo Stroessner has encouraged business in Paraguay and restored optimism and hope to its people. The country now has an excellent merchant fleet, airlines, schools, and modern hospitals.

Paraguay continues to be a peaceful country where people are safe to walk the streets day and night. They have also maintained a strong defense, and resisted all Communist inroads. Through the distinguished leadership of such fine men as President Alfredo Stroessner and Ambassador Mario Lopez Escobar, Paraguay continues to maintain its peaceful way of life, its progressive economic development, its Western Christian tradition, and its solid, dependable friendship with the United States.

LOSES A FRIEND

HON. IKE SKELTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. SKELTON. Mr. Speaker, throughout the ages, many writers have tried to express what it is about friendship that makes it such a rare and highly prized thing. The American philosopher, William James, said it well, I think, when he said:

> Wherever you are it is your own friends who make your world.

I am deeply saddened to report today that I have lost one of my friends—one of those special friends who do so much to enrich the lives of those around them.

My friendship with Raymond Vocate of Lexington, Mo., began when I was a child. As time went by, the friendship grew. Raymond was a trusted friend—a man I felt I could rely on through good times and bad times alike.

But, Mr. Speaker, Raymond Vocate was not just my friend. He was a friend to the entire community. Raymond was well known and well loved by all of us in Lexington. His warm personality and his generous, unselfish spirit seemed somehow to exert an attraction on those around him.

Any tribute to Raymond would not be complete without reference to his family life. He was a fine husband and a model father. He is survived by his lovely wife, Lucille, a daughter, Mrs. Janet Alley, and one granddaughter.

As James put it:

> It is your own friends who make your world.

Mr. Speaker, my world is a sadder place today without Raymond Vocate.

BRING BACK THE MELTING POT

HON. BALTASAR CORRADA

OF PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. CORRADA. Mr. Speaker, the December 5 issue of U.S. News & World Report carries an editorial titled "Bring Back the Melting Pot," extolling the virtues of the assimilated American stereotype, and incisively attacking the concept of bilingual education and the extent of our Federal commitment. As you know, the Education and Labor Committee will be actively considering the reauthorization of the Elementary and Secondary Education Act, including title VII (the Bilingual Education Act). As a member of the Subcommittee on Elementary, Secondary and Vocational Education, as the representative of the largest Hispanic constituency in Congress (3.2 million citizens), and as an individual deeply concerned with the special educational needs of those children whose language of the home is not English, I wanted to share with you my reply to the aforementioned editorial. During the coming weeks, I will be working on a bill to revise and extend title VII of ESEA. Lately it seems that bilingual education provokes an echo of overly reacting and hysterical individuals who by self-appointed right, deem what shall constitute acceptable American norms. I believe it is time that we look at the problem frontally. Bilingual education serves a legitimate purpose and need in our society. The Supreme Court in its Lau against Nichols decision acknowledged that need. Our society will not be threatened by the fact that a child will continue to speak the language of the home in addition to English. On the contrary, we will be richer, and more tolerant and understanding of the multiplicity of languages and cultures which dot the globe. It is unjust to look at the small and fragmented bilingual education programs which are federally sponsored and expect miracles. It will take a long time before we can develop effective and ideal models, with the necessary staffing, curriculum material, and local support. I look forward to working on the extension and refinement of the Bilingual Education Act, based on our experience, our need, and our ability to deliver services efficiently and effectively.

The letter to the editor follows:

To The Editor, U.S. News & World Report:

I wish to take strong exception to Marvin Stone's Editorial entitled "Bring Back the Melting Pot", which appeared in your December 5th issue.

In an era when shrinking distances are measured in the number of hours spent in an airplane, and when growing interdependence between nations is a reality as evidenced by the petroleum and coffee crisis, it seems that the editor is harking back to perpetualizing the stereotype of the assimilated immigrant who shed his or her native language and culture, and embraced English.

because in America to be different was to be less. Their children would be forced to disremember their language, and swim or sink in the educational system. These very children later on would be told that it was desirable to learn a foreign language, and a half hearted attempt would be made to teach them a second language which usually bore no relation whatsoever to the language of their ancestors.

Children in the United States have a responsibility to learn English. There is no question or doubt on this point. But equally, a child who speaks a language other than English does not force his or her language on the majority. They strive to retain the ability to communicate in their language, while acquiring English skills which will enable them to function in everyday American society.

The editor presupposes that the ability for all segments of American society to "assimilate" is the end goal for all of our diverse groups. The truth is that our nation is *not* a melting pot, but as my colleague Shirley Chisholm once pointed out, "a salad bowl".

Bilingual education was initiated in this nation precisely because an educational system, whose philosophy catered almost exclusively to the stereotype of the majority, failed abysmally to serve the needs of children who were limited in their English speaking ability, and who, because of the structure of the system, were faced with alternatives such as dropping out, being relegated to the realm of the slow learners, or being kept back in school.

The editor seems to imply that bilingual education programs are taught in languages other than English. This is not the case, bilingual education involves the teaching of two languages; namely, English and the child's language of the home.

The question is not whether we face divisiveness and a dismemberment of our "American" way. The basic question is what constitutes "American", both in terms of acknowledging the needs and aspirations of the majority and the minority, be it racial, ethnic, linguistic or otherwise.

THE CROWN OF ST. STEPHEN

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. STEERS. Mr. Speaker, I would like to take this opportunity to insert into the CONGRESSIONAL RECORD a letter written to President Carter by the Coordinating Committee of the Hungarian Organizations in North America. Since the decision to send the Crown back to Hungary was made with no consultation with the Hungarian-American community, I feel that it is important to have their viewpoint expressed in a public forum.

NOVEMBER 14, 1977.

DEAR MR. PRESIDENT: On behalf of the Coordinating Committee of Hungarian Organizations in North America, a consultative body of 14 Hungarian-American and Hungarian-Canadian nationwide organizations, we suggest the following conditions as to the surrender of the Crown of St. Stephen to the present imposed regime residing in Budapest:

1. The immediate withdrawal of foreign military forces from Hungary, and,

2. Free parliamentary elections with the participation of several political parties, including those of non-marxist disposition.

These basic conditions represent everything in essence which the Holy Crown represents and symbolizes. Anything less would be a morally indefensible trespassing of the commitment of safekeeping so nobly accepted and maintained by the Government of the United States for 32 long years.

Dr. ANDRUS H. POGANY,
Acting Secretary.

CROWNING A COMMUNIST REGIME

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. CRANE. Mr. Speaker, saying one thing and doing another has become a cynical trademark of the Carter administration's foreign policy. On November 4, 1977, the Carter administration, through the State Department, announced that the Communist regime of captive Hungary would be given the sacred crown of St. Stephen.

Those brave Hungarian men, women, and children who died from 1947 on do not deserve the dishonor that President Carter is contemplating. Has the situation in Hungary changed so as to make the return of the crown an honorable gesture? Since World War II, every U.S. President kept the promise that the holy crown, symbol of Hungarian Christianity, nationhood, and legitimacy of rule, would never be returned until Hungary was, again, a free nation. Repression and inhumanity are still the rule in Soviet-dominated Hungary. Shall we allow the President to crown the illegitimate regime? Communism and what it means may have been forgotten by this administration, but it has not been erased from the minds of the people of Hungary, both in Hungary and in the United States.

Following are 10 good reasons not to give away the holy crown. They were sent to me by the Cardinal Mindszenty Foundation, an organization dedicated to preserving freedom and opposing communism through educational programs.

REASONS NOT TO GIVE AWAY THE HOLY CROWN

1. The President and the Congress of the United States assumed the responsibility of official Crown Guard when they took the Crown in trust. By taking the Crown in trust, they have become liable for the historical integrity of one of the world's foremost objects of freedom. Their responsibility to protect the integrity of the Crown is equal to their responsibility to adhere to the United States Constitution and The Bill of Rights. The Crown represents the same ideals.

2. The members of the Holy Crown are the millions of Hungarians all over the world who have been deprived of their country and its independent national existence, by Soviet aggression in 1945 and again in 1956. The United States must act as a trustee for them until Hungary is again free.

3. The Holy Crown is the 1000 year old constitutional basis of legitimate government in Hungary. It is partially religious and partially constitutional in nature. The doctrine of the Holy Crown precludes the Crown's incorporation into a government whose people are denied their essential freedoms.

4. The Crown belongs to a free people. Hungary is not a free nation. Its government is a self-proclaimed revolutionary dictatorship that is not and does not claim to be a legitimate successor of any Hungarian government preceding it.

5. Since Hungary's present government can not claim continuity with governments of the past because of its ideology, there cannot be any transfer of title in the Holy Crown to the Hungarian communist government by succession.

6. In their present captive state, the Hungarian people in Hungary, the beneficiaries of the Holy Crown, cannot exercise their political rights. The United States must remain the trustee of the Holy Crown until the members of the Holy Crown have regained their political freedom and national independence.

7. The people of the Holy Crown are the Hungarian people scattered around the free world. The concepts of freedom and democratic government for which the Holy Crown stands can only be represented by free Hungarians. Hungarians in America and other parts of the free world represent the hope for freedom of Hungary.

8. The Hungarian people living under communist rule have no say in electing their government. The present government is inescapably controlled by the Soviet Union. Handing over the Holy Crown to that government would be a breach of promise, on the part of the United States to the Hungarian people of the Holy Crown.

9. The opinions expressed by the Hungarian people in Hungary are dictated by the government's ideology and repressive tactics. Only Hungarians in the free world can speak for the Holy Crown.

10. The Hungarian government can do nothing more than what Russia allows it to do. The Holy Crown cannot legitimatize or make more independent a satellite of Russia.

MOTHER OF MERCY HIGH SCHOOL, 1977 VOLLEYBALL CHAMPS

HON. THOMAS A. LUKEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. LUKEN. Mr. Speaker, I would like to call my colleagues' attention to a group of young ladies who have worked hard for something and have had that hard work pay off. I am referring to the volleyball team of Mother of Mercy High School in Cincinnati who have recently earned the title of Ohio State Champions in Volleyball for 1977.

The hard work which went into securing this title should not go unrecognized. It is hard to be a good loser, but it is even harder to be a good winner. Their sportsmanship is outstanding and I would like to say my heartiest congratulations to both team and coaching staff. Ladies, a job well done.

Rose Bauer, coach; Joanne Trame, manager; Ceal Franz, Sue Bachman, Bev Day, Joan Hensler, Nancy Hollstegge, Kathy Horn, Amy Klopp, Terri Nichting, Cindy Riehle, Janet Thorpe, Pam O'Brien, and Karen Wernke.

HELP FOR BATTERED WOMEN IN MILWAUKEE AND KENOSHA

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. KASTEN. Mr. Speaker, several months ago, I joined as cosponsor of the Domestic Violence Prevention and Treatment Act, legislation designed to aid the victims of domestic violence. Since that time, I have become increasingly aware of the desperate need for the services and financial support this legislation would provide women who suffer constant physical and emotional abuse from their husbands.

For too long, we have ignored, and in many cases denied, women their constitutional right to the fullest protection of the law. However, in the last few years women have begun to fight back with the formation of special groups, task forces, emergency shelters and self-help facilities which offer battered wives and their children an alternative to living in fear.

Today, I would like to take this opportunity to commend two such groups in Wisconsin, the Battered Women's Task Force in Milwaukee and Women's Horizons in Kenosha, who are fulfilling the unmet needs of battered women in their communities. In addition to providing crisis counseling and supportive services to battered women, these groups have worked to educate the general public and sensitize members of the legal/judicial system to the complex and largely misunderstood problem of domestic violence.

As evidence of the support and interest growing for these programs, the Battered Women's Task Force and Women's Horizons will soon realize one of their primary goals—the establishment of permanent, emergency shelters for the victims of wife abuse.

Milwaukee's proposed Sojourner Truth House, planned as a temporary haven for about a dozen women and children at a time, will function as a joint enterprise by Family Hospital and the Battered Women's Task Force. Ultimately, the shelter will offer battered women physical and psychological treatment, counseling and referral services, child care facilities and will operate a 24-hour, 7-day-a-week telephone crisis line. The task force plans to open Sojourner Truth House in March of 1978.

Women's Horizons, formerly incorporated in October of 1976, plans to open a similar facility in January. In addition to providing primary supportive services to wife abuse victims, Women's Horizons has been working in close conjunction with Kenosha County's social service and law enforcement agencies to more effectively reduce the incidence of violence, not only in the home, but also in the community. With additional funds provided by the Law Enforcement Assistance Administration, Women's Horizons plans to implement a program designed to combat violent crime through increased cooperation between the public and the criminal justice system, improved rehabilitation, therapeutic and counseling programs and efforts to promote greater understanding and awareness of domestic violence within the community.

Both these groups offer excellent examples of the potential services battered women's programs can provide to communities interested in responding to the problem of domestic violence. However, funding still remains the most formidable obstacle discouraging many areas from establishing even very limited programs and facilities.

Enactment of the Domestic Violence Prevention and Treatment Act would alleviate this problem with the authorization of funds for the creation of domestic violence prevention programs at the grassroots level. We must fulfill our obligation to the women of this country whose right to the fullest protection of the law has been ignored. Further delay will mean that the injustice and tragedy of domestic violence will continue.

HOW S. 1437 WOULD SHIFT CRIME JURISDICTION

HON. ELIZABETH HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Ms. HOLTZMAN. Mr. Speaker, although the proposed criminal code revision has generated a great deal of public interest, little attention has been given to how it would expand Federal jurisdiction. The views of Prof. John Quigley on this matter, published in today's New York Times, should be given serious consideration. The text follows:

HOW S. 1437 WOULD SHIFT CRIME JURISDICTION

To the Editor:

Anthony Lewis' "Politics of the possible" column (Nov. 14) is the third recent Times piece commenting favorably on S. 1437, the proposed revision of the Federal crime code. Tom Wicker wrote a column on the bill Oct. 25, and The Times editorialized in its support Sept. 23.

These three pieces have focused on the sentencing provisions of the bill and have ignored what to my mind is an aspect of S. 1437 of greater significance.

S. 1437's greatest significance is that it would plummet the Federal Government in a major way into the law-enforcement business. Whereas from 1789 until the present Federal crimes have been peripheral, with major law-enforcement responsibility at the state level, S. 1437 would give the Federal Government power to punish many crimes that have traditionally been considered to hold no Federal significance.

S. 1437 would give Federal authorities power to punish most blackmail, extortion and bribery offenses committed in the United States, plus a goodly portion of all robberies. It achieves this by liberal use of such jurisdictional handles as employment of the mails or telephone, the crossing of a state line and the affecting of interstate commerce. These so-called "Federal jurisdictional bases" would federalize crimes with no real Federal impact—the only Federal connection would be the happenstance that a phone was used in connection with the crime.

My preliminary study of S. 1437 indicates that it would likely yield a tenfold increase in the number of federally prosecutable crimes. This means that S. 1437 would effect the sharpest break in the history of Federal-state relations since the New Deal.

To my mind, this development is unwise: first, because it is sound public policy in a federation to leave as much as possible to the constituent entities, and second, because such an increase in Federal crime jurisdiction would give rise to a Federal crime bureaucracy of heretofore unthinkable dimensions. More Federal judges, prosecutors and prisons would be needed, and the Federal Bureau of Investigation would grow into a national police force.

These are clearly reforms of great magnitude. I oppose such changes. But what bothers me even more than the changes themselves is that they are being made with the public unaware that they are happening. The bill's sponsors have been silent on this aspect of S. 1437.

S. 1437 is scheduled for Senate floor action soon after the first of the year. It is time that the bill's true impact be discussed publicly before it is too late.

JOHN QUIGLEY,
Professor of Law, Ohio State University,
Columbus, Ohio, November 17, 1977.

URBAN CRISIS FORUM IN CLEVELAND

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Ms. OAKAR. Mr. Speaker, during March and April of this year, the League of Women Voters of Cuyahoga County and the City Club of Cleveland sponsored a series of forums entitled "The Urban Crisis." A number of highly respected experts in urban affairs visited Cleveland to participate in this project, including the eminent chairman of the Banking, Finance and Urban Affairs Committee, HENRY REUSS.

So that all Members may benefit from this excellent series, I am submitting the following excerpts:

THE URBAN CRISIS

REVIVING THE AMERICAN CITY

(Excerpt from remarks of Rep. Henry S. Reuss, Chairman, House Committee on Banking, Finance and Urban Affairs)

Many of our great cities are sick—losing population, losing jobs, losing fiscal solvency, losing the experience of neighborhood and community, losing the convenience and safety which are the reasons a city is put up in the first place. In constitutional terms, we are short on justice, short on tranquility, and very short on the general welfare.

In all of these cities, millions of unemployed, largely, though not entirely, the young, the Black, and other minority, are stranded in the city centers. Blue collar jobs have migrated to the suburban industrial parks, to outlying areas, and to the Sun Belt.

Smog, congestion, wasted energy get worse as millions of white-collar workers and managers commute from the suburbs to the central city.

City after city, mostly in our Northeast and Midwest, our part of the country, faces a money crisis, because revenues go down and the cost of poverty and its associated ills go up. The crisis is heightened because of fiscal mismatches—between the central city and its suburban belt, and between the declining cold belt and the burgeoning Sun Belt.

As a result, the cities' social fabric is strained. Increasing poverty, crime, and drug use, demoralized schools heighten the alienation between citizen and government.

Despite all this I personally believe that the future of the American city is not as bleak and dreary as many are now prophesying. It is within our power, I think, to see to it that the American City survives and flourishes as a viable economic entity, as a livable residential community, and as the cultural center of our age.

What we really need is a coherent national urban policy providing the framework to be approached by the federal government, state government and the cities and counties, and above all the private sector of individuals and organizations to the problem of reviving the cities. Only with such a policy in place can the federal government's various city programs make the slightest sense.

Unfortunately, almost alone in the industrialized world, the United States just doesn't have a national urban policy.

Our committee has recently established a subcommittee on the city to help develop such a national urban policy and to provide a focus in the Congress for all the urban problems, not just the question of housing.

I want to describe today what I think could be the outlines of such a national urban policy. I do so with the hope that by throwing out these burning issues for discussion, you in Cleveland, as in a hundred other American cities, will be able to chew on them and perhaps to come back to us in Washington one of these days, the sooner the better, with your first draft of such a policy.

If the cities do recover, as I've said I believe they can, it is not going to be because of some massive, Washington-based, super Marshall Plan.

If there are four central problems, I'd suggest that Washington probably has to assume primary responsibility for two of them—achieving jobs for people and restructuring the whole gamut of federal aid programs. Those are Washington's job; the other two goals—conservation of neighborhoods, of land, of resources, of energy; and creating equitable metropolitan area burden-sharing, those primarily have to be addressed outside of Washington.

Let's take up number one, and it is advisably number one on my list—jobs. The most straightforward way to help our cities is to come to grips with the terrifying unemployment in our central cities.

As a starter, we have to adopt sensible, National economic policies which go toward our goal of full employment without inflation. During the last years we have not been doing this. We have been creating joblessness deliberately in the misguided belief that that is how you fight inflation. And of course the cities are the ultimate victim of that kind of misguided policy.

At any rate things go much better between the Congress and the Federal Reserve, and I would hope that no longer would there be any excuse, if ever there was for fighting inflation by adding to the cities unemployed.

But you can have the most sensible, overall macroeconomic general monetary and fiscal policy designed to bring about full employment and it still won't have much impact on the people in the central city.

To get there you need specific programs because millions of our unemployed are those who are trapped by poverty or race or under-education in the central city, with only bootleg economic activities available to them. Drug pushing, prostitution, robbery, gambling and whatever. I suggest a three grip handle on the policy which would bring jobs to where the people are and bring the people to where the jobs are, because I think you have to do both.

In bringing jobs to the people the blunt fact is that blue-collar jobs have been disappearing from our central city. They've been skadaddling out to the suburbs and out to the Sun Belt.

Let me suggest some ways of bringing back to the city, both blue-collar and white-collar.

To attract blue-collar jobs back to the city, let the state and local governments do more than they've done so far to assemble the land through eminent domain, let them offer local tax concessions. Then let the federal government with a "central city revival program" which takes a humane attitude about people who may be in the way of such a program and doesn't make it merely a poor people removal programs such as the bad old days of the 1950's.

Washington could also help by getting the Economic Development Administration to change its focus a bit on to high unemployment central cities.

Federal tax policy ought to be part of the solution instead of part of the problem as it is now. As it is now, the federal government gives tax-exempt industrial revenue bonds to any community that wants them whether it be a beleaguered central city or whether it be a Sun Belt area which has no unemployment. That doesn't make sense. We ought to confine that program to areas of high unemployment. Our investment tax credit treats all areas alike, we ought to be giving a slanted credit to central cities, city industries which want to modernize themselves. So there are some things that can be done about blue-collar industry. And since manufacturing jobs pay more than service jobs, wonderful though service jobs are, let's not go overboard about this, let's have a nice mix if we can.

Let's get the service jobs, the white-collar jobs. So how about affecting a little marriage there; how about getting our central city high schools, and community colleges to reorient their teaching toward these jobs.

We ought to get the downtown service industries, and I've names who they are to provide that actual job pot of gold at the end of the educational rainbow.

The federal government could help too on white-collar service industries for our central cities. There is no reason why my hometown, Washington, D.C., should strangle with endless, proliferated, mostly suburban parts of the federal establishment. Let some of them be plunked down in Milwaukee and Cleveland as years ago the Social Security Administration was plunked down in Baltimore, making twenty thousand jobs, well paid and adding a middle class, as a nondiscriminatory basis to that great city.

A few years ago, after many years of trying, I finally got a Federal Reserve office in my hometown of Milwaukee and I saw that that was put right near an area of great central unemployment and the minority employment at the Federal Reserve office is simply excellent. I wish the rest of the Fed would do as well.

So that's how you bring jobs to where the people are, both white collar and blue collar. How about bringing people to where the jobs are.

So it is a one-way deal and utterly wrong and we ought to change the emphasis there so we get some better transport out to where the jobs are.

There used to be out and out discrimination against minorities in the suburbs, but which today masks as a "oh we just want to keep poor people out". We want five acre zoning, and hundred thousand dollar homes, and so on.

I think it is just untenable that Uncle Sam gives grants to suburbs which pursue a dog-in-the-manger policy, which have land which could be used for workers' housing.

Well, that's jobs in the suburbs, but what about the Sun Belt? I'd like our country to be as mobile as possible and while I'm certainly not advocating any totalitarian big population movement, I think we ought to do everything possible to retrain and grub-stake and give travel allowances.

Well, if the government of the United States, could, as it did, transport and give tailor-made programs to millions of Hungarian refugees in '56 and anti-Castro Cuban refugees in 1960 and Vietnamese refugees a couple of years ago; with jobs found and educational aids provided and the general welcome wagon out, we should be able to do as much for our own citizens.

Finally, because all of this takes time: bringing jobs to the where the people are and bringing people to where the jobs are, you need something like a national service corps of larger dimensions than we now have to act in the interim to heal this horrible social cancer of unemployment in our central cities. Until the private sector, the new university-community, the greater born-again Cleveland, can provide the private sector jobs that they need. And here I ask you if FDR, 40 years ago, in the New Deal, could provide a civilian conservation corps with three million young men, can't we maybe get three hundred thousand now that we know so much more and are so much richer 40 years later.

Now that the snow has gone from the streets of Cleveland and Milwaukee, I find enough potholes to keep a million young people busy for an indefinite period of time. And you could go on and on recycling waste, renewing neighborhoods, staffing day-care centers, old folks good food program.

National service jobs could offer a decent job at a living wage, they ought to train enrollees while they are working so that they can get a private sector job that means something down the line.

Restructurnig federal aids has to be done. I believe that the federal government ought to sooner rather than later, to assume the cost of Welfare and Medicaid. That Cleveland is host to so many unfortunate people who are on welfare is not Cleveland's fault.

There ought to be a cost of living adjustment for the people who live in the old and cold and more expensive parts of the country, like ours.

We should re-examine too, the whole problem of federal grants. Suffice it to say that on general revenue sharing, community development block grants, law enforcement assistance: Milwaukee, Cleveland and the rest of us all get gypped in one form or another. This ought to be revised in the national interest so that we can't become the walking wounded and mendicants.

Now the last two things are things that very largely have to be done by you here, not by Mary Rose, and me, and Charlie, and Lou and Ron and the others in Washington. And that is conservation—the neighborhood. Cleveland's got the most magnificent Lithuanian, and Estonian and Slovenian, I could go on but you are not preserving them by letting financial institutions go over the hill and brag about "our man in Singapore"; they ought to be bragging about "our man on the east side or the west side of Cleveland." We ought to encourage local neighborhood economic institutions, neighborhood credit unions, consumer co-ops, neighborhood development corporations. Local institutions, financial institutions, who are always so fearful of "credit allocations" ought to remember that they are giving a monopoly privilege by the state or federal government and just like a television station they ought to report every few years what they are doing for the people whose deposits they take.

Localities ought to revise their tax system. In Cleveland as in Milwaukee, you have a very high tax on improvements and a very low tax on land. That just means that the speculator makes a killing and the home owner who wants to rehabilitate or the businessman who wants to expand takes a shellacking. It ought to be turned around.

The new emphasis on neighborhood conservation ought to encourage the cooperative spirit that is just beginning to show itself, here and there, on part of the country's banks and savings and loans. Many banks and thrift institutions are lending skilled personnel toward neighborhood conservation activities. They are forming financial pools designed to spread the risk of rehabilitating declining neighborhoods. You should be very proud of what many of your financial institutions are doing here in Cleveland under the Neighborhood Housing partnership. There ought to be more of it and I want to commend now those who are participating in it.

We've got to conserve land because it is getting very, very scarce. That means that we are going to have to emphasize multi-family homes, not just garden apartment but rowhouses and cluster dwellings, rather than the single-detached family dwelling.

Wouldn't it be a great idea from here on out if we concentrated on the least expensive, most sensible form of saving energy on travel and transportation, namely good city planning so that by and large people live near where they work, where they worship and where they shop.

While we are at it, our localities, yours and mine, ought to consider getting rid of their ancient and really not very sensible ordinances which say that residences and commercial shopping have to be separate.

The fourth and last thing which we've got to put our minds on is metropolitan burden-sharing and you've been talking about this for the last 88 years. All I would say is, take a look down the Great Lakes at Toronto; they solved it there. They've got a metropolitan burden-sharing arrangement. The only outfit in this country that has done it is Minnesota where the legislature to its great credit a few years ago, set up an arrangement whereby the people in the Twin Cities in effect do metropolitan sharing. In effect, any increase in real estate value, most of which nowadays occurs in the suburbs, accrues to the benefit of the entire metropoltan area; at least 40 percent of it does.

What is all of this going to cost? Well, I haven't in the Washington phrase, costed it out, but I'm very sure, very positive, that it is going to cost a great deal less than if we wait until all the cities of the northeast and the midwest are old and cold and dead, because then the cost would indeed be terrific.

I would suggest too, that if we at the federal level and at the state level would just stop doing so many things that are wrong, the cities would be able to do very well.

Turning to the states. As usual they grumbled about everything that Washington was doing, but so far as I can see, and I studied their resolutions there wasn't one word said about the obligation they as sovereign governments owe to their cities, not a word.

How many are following the state of Hawaii in having the state pick up 100 percent of the cost of local schools instead of loading it all on the local homeowner. How many are doing what my own state of Wisconsin is doing, moving away from the point of origin of tax payments as the sole criterion for distributing state collected funds to the locality and instead getting a more equitable formula based on need and tax effort and poverty. How many states for that matter have a progressive income tax?

I am not for doing in the multi-nationals, I think they have many affirmative things going for them, but I would amend our tax laws, which now in my judgment give an unfair advantage to the multi-nationals and a perverse incentive to export jobs.

A. Would I like to change my philosophy so that by-and-large tax money stay in the community where it originates. Not very much to be honest with you because I think that we are going to keep society strong only as we prevent income disparities between our people from growing too great. I'm distressed for instance at the fact that in the last eight years in this country if you study the census figures, the share of the income going to the 40 percent of the people at the bottom of the American income. That isn't just poor people that is lower middle-class working people has grown less and the share of the 5 percent at the top has grown more. I'm not for egalitarianism or vast redistributions of wealth. I don't want to see us get great disparity because I don't think you're going to keep the body politic together that way. Therefore, no I guess I wouldn't like to see the people in the wealthiest suburbs around Cleveland, keep all the tax money that they generate while the central city continues to get worse and worse.

URBAN HARDSHIP

(Central cities vs. suburbs: Excerpts from remarks of Richard P. Nathan)

One of the themes that we developed in the research that we've done at the Brookings Institute, looking nationally at the problems and conditions of America's cities, is that the nation does not have a single national urban crisis.

One of the themes of my research and of these remarks will be that cities are different, very different and that is important to understand. In our research we took six factors for gauging the economic and social needs of cities. Unemployed; the number of old and young in the community, that is the dependency rate; the number of people over 25 with less than a high school education; per capita income; overcrowded housing; and poverty. And using this six factor index we've looked at all the major cities in the country.

Putting these six social and economic indicators together, how much worse off is the city than its surrounding suburbs. We felt that was an important thing to do and indeed the more we think about it and look at this analysis the more we think it is the right way to think about urban crisis condition. Because indeed, cities compete with each other, city to city in a fairly remote way. But cities and their suburbs interact all the time. The worse things get, the worse things get, because as people move out of the city into the suburbs, as jobs move out of the city into the suburbs, the tax base of the city declines the city has to raise taxes in the typical case and that drives more people out.

So this relationship of cities to suburbs on what we call our hardship index, is an important way to look at central cities and suburbs. And indeed on this basis, as has been reported before, out of the 55 largest metropolitan areas, Cleveland is number 2, that is second from the worst of greatest disparity which is Newark, New Jersey.

While the disparity between Cleveland and its suburbs ranks second, if you compare Cleveland to other cities on the same basis, the city is somewhat better off, ranking 9th out of the 55 places and that is the function of the suburbs being somewhat better off than other suburban communities in the country.

Five factors came together to define the problems of cities like Cleveland. These five factors are politically structured. This city contains 36 percent of the population of the metropolitan area in 1970, whereas Phoenix and other cities contain upwards of two-thirds. So the city is isolated relative to its suburbs.

Second the cities that have the most serious problems are older cities.

Third, these cities typically have a high concentration of low income person and often also a high percentage of minority population.

Fourth, these cities have been losing population.

And the fifth factor, is region. This is a city in the older, industrial parts of our country and these five factors come together to define urban needs of older cities.

Structural isolation, number one, old age, poverty, impaction, population decline, and being located in these older regions.

I wouldn't want to skip over the fact that many of the older suburbs have the same problems. East Cleveland; East St. Louis; Camden outside of Philadelphia; Compton, Mt. Vernon, New York.

Now let me shift the focus and talk for a minute about the prospects for these older cities. And I would have to say that right off the bat, the most important thing to a city's success for the future is the determination and concern of local people.

Why should the suburbs care about the central city? And I said there were two basic reasons why the suburban resident should care about the central cities. The first of these reasons is humanitarian.

Now the second reason is much more practical, and it is the economic reason. Why should the suburbs care about the central city. They should care about the central city because the region as a whole, the Cleveland metropolitan region is very greatly affected by the conditions of its inner city.

So at one end nationally, you have the view of let nature and the market take its course and at the end you have this Marshall plan, billions for the cities point of view. Neither of which in my view will, and I guess I would say, should prevail.

So somewhere in between these two positions, is sort of a realistic, I think, let's look at the cities kind or urban needs perpective that has to be brought to bear all across the spectrum of federal policy.

In this metropolitan area, in Cuyahoga County there are 100 governments and 97 of them can levy property taxes; 56 cities, 4 towns, 33 school districts, 1 county, and 6 special districts.

So we propose, and I'm very proud and happy to say that the proposal that we made, was recommended both by Ford and Carter administration, that the formula be changed. That it be changed in a way that would take into account population decline, and the old age of housing and facilities in urban areas, so that older, hardship cities according to this kind of an analysis would receive more money.

Not a national urban crisis, but urban hardship conditions particularly characteristic of older declining cities, most of which are in the northeast and the midwest.

I had to make one proposal of the one thing that I thought needed to be done next, and I'm happy to say this is high on the list for planning in the Carter administration, what we need is an urban development bank to supplement these grants with loans and loan guarantees that also can be focused on community development projects with the federal government facilitating a banking function for the cities which have particularly significant needs and important opportunities for development, again such as the University Circle project here in Cleveland. These kinds of projects could be aided by an urban development bank. That in my opinion, is the most important and most promising next piece of federal urban policy, which those of you who are interested in this field, and the League has been in the forefront in this area, would work on and press for in the debate this year on domestic policy in Washington.

Q. Dr. Nathan, in your prepared comments, you noted that New York City had 3 governmental units and that Chicago had 600 some odd such units and in the answer to one of the earlier questions you also noted that New York City is poorly managed and in horrible financial position while Chicago is in pretty good financial condition and perhaps quite well managed, are you suggesting that we should splinter up our governmental units?

A. I feel this way that there is a sort of theory in the United States, a view which says to have big regional governments in metropolitan areas is always a good thing to do and that reform should create two-tier metropolitan regional government, which is very impractical and its knocking your head against an awful brick wall.

NEW YORK CITY—CAN IT HAPPEN HERE

(Excerpts from remarks of Roger Star)

Now, I can't tell you whether New York City will happen here in Cleveland unless we have a measure of agreement as to what it is that really has happened in New York City. I can summarize I think in one sentence and that is, New York City, the economic city of New York, no longer produces enough wealth to sustain its population. Its assets do not measure up to its liabilities.

It is beginning to dawn on people that for a city to flourish it must meet its basic economic needs. Now a few years ago, everybody was talking about the urban crisis, just the way they are now. But they meant a wholly different crisis. They meant a crisis of growth, overcrowding, congestion and loss of amenities.

In the United States, we have on the one hand Louis Mumford, who told us that congestion was bad. We had on the other hand, Jane Jacobs, who told us that congestion was good. They both agreed on one thing, that congestion was the way of the future.

Well, you drive around New York City today, you wish you could go back to those good old congested days of ten years. Because if congestion is depressing; vacant, unused, unusable land, burned out buildings, tumbled down places where nobody lives, these are much more depressing than congestion was.

What else has gone wrong in New York City. Now I come to something which is extraordinarily unpleasant to talk about with audience of nice people. The fact is that we have spent far too much money on social services and far too little on hardware.

There isn't one person in this room who at the time wouldn't have said, children, warm lunches, drug programs, social programs come first. But there is no question also, that the human effect of the collapse of that highway by causing people to lose their jobs, by creating unemployment, by creating a permanent dislocation of the ability of this city to deal with its problems on a fiscal basis, has caused not just the collapse of steel beams, but has exacted in tremendous human cost from the most helpless people in the city of New York. This is the kind of thing that has happened in New York City and you have to take it into account.

My feeling about Cleveland is that its basic situation is very different from New York City.

A second issue here. Welfare, at least in part, is a county responsibility. In New York City, the city pays 50% of non-federal welfare which is to say home relief, where in the case of federal aid, like ADC, the city pays 25%.

And we unfortunately instead of saying no to its public employees, we engage in something I call futurizing their demands. We turn present demands for wage increases into higher pension benefits so that somebody else was going to have to pay for them.

In my view nothing could be more damaging to these large number of people to make them or to make it impossible or at least very difficult for them to leave the city in which they are living at risk of reducing their welfare benefits, in order to go somewhere else where they have a better chance to fit into the mainstream of life.

I have sat and talked to many welfare people. The great tragedy they face is not just that they haven't got enough money to live decently but that they are not part of the economic mainstream of American life. And that the best we can do for them is to anchor them forever in the deteriorating neighborhoods in which they live without an opportunity to have their children break out of the trans-generational dependency.

We need for them a program that will seriously direct itself to integrating them into the economic stream of American life.

This not only means job training it also means realistic job opportunities. I think it means the opportunities for migration to those parts of the country which are booming today.

The second thing that we have to do besides doing something about trans-generational dependency, is to do something to cut the web of city services. In my view it is essential that we take a population and encourage it to cluster. Two apartment houses, each half full, will be abandoned. One apartment full and one apartment empty, will at least enable one to survive.

We have for example, a law in New York City that you get priority for admission to public housing if you are the victim of a burn-out. Now one of the results of this is that buildings burn down.

One of the things that I feel more strongly about and that distinguishes me from most other urban problematists, is my hatred of the subway systems. I wish New York had never built a subway system.

A subway system anchors all transportation between two points but it doesn't anchor any of the reasons that make those points necessary or attractive. There is something terribly inflexible about any rail transportation system whether you call it a subway, or a people mover. You have a one use only of the tremendous investment compared to what a street can do. A street gets emergency vehicles from one place to another, it provides a channel for water and sewage to leave, it provides a space for the electric conduits, it provides for the movement of goods, and it provides for bus transportation. I think that buses are the way to go in all urban transportation.

If your population in Cleveland is shrinking, your basic municipal configuration has to be geared to the change in the population size and it may well mean that larger areas of the city are going to be abandoned altogether.

If we are going to get federal government participation on an even greater scale than we have had in the past, you've got to be sure it is not done simply to turn the city into what Norton Long calls a "reservation." Indian reservation to keep people out of the mainstream of American life.

THE CARTER ADMINISTRATION'S PLANS FOR THE CITY

(Excerpts from remarks of Joseph Burstein, counsel to Patricia Harris, HUD)

As I speak today, more than 3 million families are aided by federal-assisted housing. And the Carter administration is adding 1.2 million units to that number in the years 1977-78. The Carter administration $4 billion block grant program to aid American cities, including a $400 million development action grant awaits Congressional approval. Much has been done, clearly much more needs to be done.

Let us first consider housing and then talk about the cities. Despite public and private efforts, over the past four decades, there continues to be a great national need to provide an adequate supply of decent and affordable housing. The Harvard-MIT Joint Center recently published reports on housing needs and documents the fact that there are still 13 million housing deprived families in America. About half of these families reside in physically inadequate housing. The low housing production of the past few years has actually, and incredibly in my opinion, let America fall further behind in meeting the housing needs of the American people.

Although median income is up 47 percent since 1970, the median sales price of new homes is up 89 percent and ownership costs are up 102.5 percent. The facts also show that excess housing costs are a burden for many American households. Five million homeowners have mortgage payments in excess of 25 percent of their income.

10½ million tenants paid more than 25 percent of their income for rent, almost 60 percent of America's families cannot afford to buy the median priced new homes.

Now lets take a look at the condition of our cities. Between March 1975 and March 1976, the United States metropolitan areas lost nearly 400,000 citizens to out-migration. During that same one year period, central cities sustained an incredible net population loss of 2 million people out of the central cities into the suburbs. In 1975 and 1976, many cities were burdened with unemployment rates in excess of 15 percent. Unemployment amongst minority youth reached 40 percent.

The central cities share of metro jobs plummeted from 63 percent in 1960 to 52 percent in 1970 to less than 50 percent today.

Additionally, what was once usable, sound housing starts, have become unsalvageable through lack of maintenance, abandonment, and a combination of other facts. The problems of the older cities go deeper than this. There is the very real threat that in the major population centers there will be a collapse of the municipal interstructure itself.

Finally, we come to the question of poverty itself. In urban America, Nathan Glazer and William Gorman, point out in the urban predicament, that the average income of central cities residents relative to suburban residents is dropping sharply. That from 1960 to 1970, the median income for central city residents as a percentage for the median metro income dropped from 90 to 87 percent in Cincinnati, from 85 to 80 percent in Cleveland, and 90 to 83 percent in Detroit. In other words, although poverty is declining nationally, it is increasing for the older cities.

Of the poor who reside in the central city, the percentage who are black have risen from 37 percent to 50 percent in the past 15 years. And one in every six black Americans, more than 4 million people, are trapped in poverty in the urban ghetto. America faces two great unmet domestic challenges. One to provide more housing opportunities for low and moderate income people, and two, somehow to direct housing as well as other assistance as a means of reviving and rehabilitating those inner city Neighborhoods, so that they once again, perhaps more than ever, provide the economic, social and cultural development and the happiness of family living to attract the people to the cities once again.

First, let us look again to the area of housing. For the rest of fiscal 1977 and for fiscal 1978, the Department presented budget requests which dramatically altered the previous administration's plans. A $508 million supplemental appropriation in section VIII Contract Authority, bringing the program level to 400,000 units for fiscal year 1977. $1.2 billion in Contract Authority to provide an additional 400,000 units for both section VIII and public housing in 1978. $50 million for both 1977 and 1978 for the section 3–12 rehabilitation program. This is a very popular program in many cities which the previous administration had scheduled to end in 1977. $35 million in contract authority to modernize other housing projects. This represents a 700 percent increase over the Ford budget request. Now my secretary looked at 700 percent and thought it was a typo, but it wasn't. A 700 percent increase.

$50 million for the urban homesteading program, which represents a tripling of the previous administration's request and an extension from 20 to 30 years of the Section VIII housing assistance contract for privately financed housing. A move which will facilitate the flow of conventional financing through new Section VIII construction. Here, I'm sure people in the audience who are familiar with the problem will recognize how significant this is. One of the problems of Section VIII is financing and if we can involve the conventional lending monies that are around to finance Section VIII we'll have a tremendous resource that hasn't been available and that is what that amendment is assigned to do.

I should not overlook the fact that additional section VIII funding will allow the department to implement fully the $700 million allotted for section 202. There are quite a few people in this room who are interested in section 202 and the program is going ahead and this should mean an additional 25,000 units of housing for the elderly and handicapped for fiscal year 1978.

In direct response to the plight of the American city, especially the older distressed cities, the administration took the following initiatives and you'll recognize what these initiatives mean in terms of the changes that I was talking about. The out migration, the fact that the older cities are declining much more rapidly, and the poverty levels in the older cities. We have a three-year re-authorization for the community development block grant program. A $750 million increase over the current program to $4 billion annually. Increase to 4.15 billion in 1979 and 4.3 billion in 1980. The inauguration of a new $400 million urban development action grant program which you will be hearing about, and the term you'll hear is U-dac.

Change in the entitlement formula which will have the effect of targeting more federal aid to older cities. What specific effect does this last initiative have on two different areas in Ohio. You will be pleased and maybe surprised to hear this. The two examples are Cincinnati and Cleveland. In 1980 when old Congress agreements are phased out, the city of Cincinnati will go from 10,995,000 under the old formula, to 20,152,000 under the new formula. Cleveland will go from 16,784,000 under the old formula to 40,613,000 under the new formula. Almost a 250 percent increase.

These are the cautions that Secretary Harris noted. First, although what has been suggested is clearly a dramatic improvement of the previous administration's proposals it is still much less than we would like to have. Second, as much as the government does accomplish, it cannot reverse completely the downward trend in urban economics and housing without major assistance from private enterprise. The government can't do it alone and I might add, that business can't be expected to do it without appropriate government assistance. Finally, all that we do now at the public and private fronts are pretty stop-gap methods until this nation finally accepts its responsibility to develop a cohesive, dynamic and inclusive urban policy. And a principal part of any national urban policy is what Secretary Harris said on March 7th, "We must affirm as a nation, that a decent home is a right and that adequate shelter is a basic commodity, equivalent to food and clothing in the spectrum of human needs." She added that this is a point that cannot be compromised and all of who have made this business our life work totally agree.

Let me mention next what I mean by that kind of approach. We have here a distinguished citizen of Greater Cleveland, one Dorothy Duke, who back in the mid-sixties along with several other people representing the National Council of Negro Women, went down to Mississippi and re-developed a form of housing where the families, these poor families are not just renters but they have the opportunity to own these homes. In Cleveland, Miss., by the way, and surrounding area, these families are going to own those houses in about nine or ten years. Now, supposing that we had kept our eye on that ball, ten year ago, or even earlier. Supposing that we had had the national will and the national ability to pursue the endeavor in Mississippi and other rural areas, would we perhaps not have the problems we have in the northern cities today. I wonder.

What seems to be arising out of that, conflagration, are the neighborhood families themselves, are bonding together, rehabilitating their own buildings and managing together to maybe start living again in that part of the inner city.

I wonder if we transported that idea from Mississippi, and it can be transported by the way, we have the tools to do it, in the Bronx or any place else, I wonder if that wouldn't be possibly one of the best solutions to revitalizing or even now rebuilding those burned out areas and we have some old burned out areas in Cleveland, we have them in Washington, D.C., and we'll probably continue to have them.

A SHAMEFUL VERDICT

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, the verdict rendered by Pretoria's chief magistrate following the South African inquest into the death of Steve Biko is a shameful travesty of justice. In spite of testimony that the police kept Biko's head injury a secret from doctors for more than 5 days, the magistrate ruled that the South African police were in no way responsible for Steve Biko's tragic death.

Although the guilty will not be brought to justice in this case, the image of the 30-year-old civil rights leader lying shackled hand and foot, incoherent because of his head injuries, naked, on the prison floor, will remain as a vivid reminder of just how brutal and inhuman South Africa's policy of apartheid truly is.

The verdict is an ominous sign for those 714 South Africans who are currently in jail for the same types of "political crimes" for which Steve Biko had been arrested. Just recently, while the world listened to the evidence in the Biko case, the news came that yet another South African black has died in detention without trial—bringing the number of victims to 21 over the last 20 months.

In the meantime, while the administration rightly denounces the South African policy and Congress does the same in the name of the American people, U.S. corporations continue to do profitable business in a country where blacks are paid one-fourth of the wages that whites receive for the same work. It is time for the Congress to bring this issue to the full attention of the business community and to make it clear that the American people are no longer willing to facilitate investment and trade relations with the Republic of South Africa.

A TRIBUTE TO LOUIS KANASTER

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. ANDERSON of California. Mr. Speaker, the City Council of Los Angeles has designated this December 16 as Louis Kanaster Day. This is a fine tribute to an outstanding citizen.

As a member of the Public Works Committee, I have come to learn something about what it takes to develop a strong community. It may take a little money, or a little luck, but it most definitely requires people like Louis Kanaster. Dedicated, talented people, willing to work long and hard to serve the public.

Lou Kanaster has served. For 6 years, he was a member of the State of California Planning Commission, and for 14 years he was on the Los Angeles County Planning Commission. Of course, until recently he served as executive director of the Los Angeles County Housing Authority. He has clearly utilized his professional expertise to serve the public. Yet, Mr. Kanaster has also given a great deal of his personal time for the betterment of his community. For 40 years, he has been on the board of directors of the San Pedro Boys Club, and served as president of the Boys Club Southern Pacific Regional Council. He has been president of the Fisherman's Fiesta in San Pedro; and of the San Pedro Civitans; and Jaycees. Few have given more of themselves than Lou Kanaster, and we have all benefited.

Lou was born 64 years ago in Bayonne, N.J., but came to San Pedro while still a boy. He graduated from San Pedro High School, and then the University of Southern California. Times were hard then, in the early 1930's, and some people gave up on life. Lou threw himself into it.

We will miss having Lou as executive director of the housing authority. I certainly mean no disrespect to his successor, just as I do not envy his task of trying to fill Lou's shoes. Of course, we will still have Lou. His civic career is not over. This simply means he will have more time to serve us in other ways. And he will have more time to spend serenading his lovely wife Betty on the violin. Over the years, Lou has sometimes had to neglect his study of that instrument, and his stamp collection. But he has never neglected his community and it shows.

Few people ever get to see monuments to themselves. Louis Kanaster can point with pride to the Harbor Hills project;

and the housing complex that was the Maravilla project. And, in retirement, he will be able to watch the growth of newer monuments, such as the Carmelitos project, and that development where Lancaster home has stood.

Under Lou, the housing authority has grown to the point where it now has responsibility for 10,000 low-income housing units. I know that the families residing in those homes join my wife Lee and myself, and all those people whose lives Lou has touched, in thanking him, sincerely, and wishing him all the best in the years to come.

NATO'S ANNUAL REFORGER EXERCISES

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mrs. SCHROEDER. Mr. Speaker, the first week in September the Air National Guard's 140th Tactical Fighter Wing, based at Buckley Air National Guard Base in Denver, took part in NATO's annual Reforger exercises. These exercises are, in part, aimed at demonstrating the ability of U.S.-based forces to move quickly to Europe in wartime conditions and integrate effectively with our NATO allies. The success of this year's exercise for the Colorado unit can add to our faith in both the concept and the readiness of our reserve forces. Some excerpts from an article by Ed Mack Miller that appeared in the Denver Post point to the success of the 140th's mission:

WINGS OF THE ROCKIES OVER HOLLAND

(By Ed Mack Miller)

"France takes Holland!" read a headline in an Air Force publication a few weeks ago. But there was no cause for alarm because "France" was Brig. Gen. John L. France, commander of the Air National Guard's 140th Tactical Fighter Wing, based at Denver's Buckley Air National Guard base.

General France, who turned 44 while at Gilze-Rijen Air Base in Holland, is the jet-flying lawyer who led 18 A–7D fighters across the Atlantic in Operation Coronet Ante the first week in September in support of NATO Cold Fire maneuvers. The deployment was part of the annual Reforger exercises in which U.S.-based forces demonstrate their ability to move quickly to Europe in wartime conditions.

The 140th Wing is a citizen-soldier unit made up of three squadrons in Colorado, New Mexico and Texas. (The Netherlands deployment utilized only the Colorado and New Mexico units because the Texas squadron flies a different type of fighter, the older F–100, for which there was no task assigned in Operation Cold Fire.)

The concept of a citizen-soldier guardsman—who during the week may be lawyer, butcher, baker, hairstylist, accountant or supermarket checker—is not new. It goes back to the days of Lexington and Concord. But in the Air Guard's first deployment ever to the Netherlands, several new concepts were added. Women played a significant role, moving into the jobs they had been trained for one weekend each month at Buckley Field, specializing in such varied fields as intelligence, operations, photography and supply. (Undoubtedly, the next time the Guard deploys to a foreign country, women will be flying some support planes—and eventually, fighters as well.)

But, if the presence of women on Operation Coronet Ante was a new departure, even more so was the fact that the modern guardsman has become a front-line troop, performing his or her mission within a few hours after an enemy attack. Using guardsmen, the United States can double its presence in Europe in hours.

The deployment of 18 A–7D (Corsair) fighters and 300 personnel to Gilze-Rijen Air Base in Holland demonstrated that this new and bold concept is valid. It is a far cry from the old days when a guardsman or a reservist was called up only to fill gaps created by fallen regulars.

While the 140th's role in Reforger was only one small part of the fall NATO exercises in Europe, the Colorado Wing had confidence that it could do the job. But it took a lot of planning, because the logistical problems were extensive and complex: The challenge was not only to move a strike force and its support arms into position, but to collocate with another NATO entity—in this case the Dutch—at one of its bases and function as a team.

Could the Americans and the Dutch work together when even the language could be a problem? Could the U.S. fighters get "a drink" of fuel from Dutch fuel trucks? Would the fuel hoses reach? Would the nozzles fit the receptacles? Would munitions, arms and stores from the Dutch have fittings allowing them to be used on the American "birds"? An exercise like Reforger shows whether the butcher, the baker and the candlestick maker can perform in a professionl military manner.

But this Cold Fire portion of Reforger was not just flying fighters on a lot of missions in any kind of weather. It was also the less glamorous but necessary process of logistics, of supplying beds and chow and munitions and fuel and spare parts. It was also learning Dutch habits, Dutch phrases, finding out where to get the laundry done, where to buy razor blades or the towels you forgot to bring, where to get postage stamps and where to get a beer when the day's work was done.

Within 12 hours after arriving, maintenance crews had turned the tactical fighters around, and the pilots began flying familiarization flights with Dutch pilots in Northrop NF–5s leading the A–7Ds. Once a few of the Guard pilots were oriented, they would return to lead other A–7D pilots through the flying procedures. Once ready, the A–7D pilots stood by "to be tasked" from higher NATO headquarters; then they were off in support of tank and ground troops fighting a mock war somewhere in Central Europe, west of the Iron Curtain.

What made it possible was the fact that nearly all Dutch troops at Gilze-Rijen could speak English. The Dutch had prepared well. (They even sent their cooks off to school at the American base at Soesterberg near Utrecht to learn to fry bacon and eggs for the Yanks. They realized the Americans would have a difficult time with the usual Dutch breakfast fare of sliced cheese and blood-sausage cold cuts.)

Col. Verne Marooney of Denver, wing director of logistics and chief of maintenance for the Colorado Air Guard, summed up the three-week exercise:

"The integration with the Dutch in the various command, control and maintenance functions went more smoothly than anyone could have reasonably expected. Anything we needed and didn't have, the Dutch got for us immediately.

"We flew 368 sorties—853 hours in 15 flying days with 18 aircraft. Our in-commission rate of fully combat ready aircraft was 95.8 per cent for the total operation."

Lt. Col. James W. Van Scyoc, commander of the 188th Tactical Fighter Squadron, Albuquerque, who is of Dutch heritage, said:

"It was a fine operation. Even the weather was great."

The Netherlands fighter pilots threw a final party. Everyone from both sides exchanged everything from wings to nearly full uniforms, squadron insignia (and even cowboy hats for wooden shoes).

The Dutch commander, Col. Van der Spek, in his final salute to the Air Guard troops said: "During the weeks we have been operating together, we learned to know your wing as being highly professional, fully combat-ready and extremely highly motivated." And then he did something unprecedented in Dutch history as far as anyone could remember. He gave the 140th a Royal Netherlands Air Force flag.

The feelings of the troops in working with their Dutch opposite numbers were perhaps best summed up by Tech. Sgt. John Pickette, 41, of Albuquerque, a 17-year Guard veteran: "The Dutch people have been extremely nice and the troops very cooperative. The country is absolutely beautiful. This has been one of the great experiences of my life."

When the Colorado and New Mexico units returned to the U.S., they received this message:

"To all personnel of the 140 Tactical Fighter Wing, 'Welcome Home': Coronet Ante adds another chapter to the distinguished record of the 140th TFW. Your deployments were conducted in a professional manner, your sortie rates unparalleled, and your interface with the Royal Netherlands Air Force a clear message of our commitment to NATO and the defense of Europe. Please express my appreciation to all personnel.

James D. Hughes, Lt. Gen. USAF
12AF Commander"

It was, as the Dutch say, *a goed gedaan!* (a good show). To which they added: "The *Speedwell* made it to the U.S. this time. *Gerveldig! Kom gauwterug!*" ("Marvelous! Come back soon!")

DURHAMS FOSTER PARENTS OF THE YEAR

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. FINDLEY. Mr. Speaker, seldom in my life have I been so moved as by a story which recently appeared in the Springfield Journal-Register about the Wilbur Durham family—all 62 of them. Mr. and Mrs. Wilbur Durham, who I am proud to call constituents, not only raised their own family of four children, but then proceeded to rear 56 other children for varying periods of time.

I can add nothing to the story, which is without question one of the most eloquent and poignant I have ever read, except perhaps this: Through their selfless love, they have been able to do what hundreds of Government programs have not—save the spiritual, emotional, and intellectual lives of abandoned and homeless children. Would that there were more people like the Durhams.

Text of article follows:

THEY'VE CARED FOR AND LOVED 56 FOSTER CHILDREN

(By Fran Bernard)

One by one, the children wake up from their naps and come out to the living room where the "Foster Parents of the Year" are being interviewed.

A three-year-old little bit of a girl crawls up on Wilbur Durham's lap and settles sleepily in his arms for a few minutes, looks up at him and holds out her new red shoes for him to put on.

A four-year-old girl, ribbons in her hair, dances across the floor, quickly followed by another four-year-old.

They run right to Mary Durham, "Grandma," for permission to go out to play in the big back yard. But it's raining, so she tells them to stay in and they head for the playroom at the back of the house where two boys, ages 6 and 7, are already settled in front of the tiny table television set playing a game.

The babies wake up last.

First, a chunky blond 16-month-old boy hungry for his milk. Then a fairhaired 17-month-old girl, who circles the coffee table picking up first one thing, then another, to touch and feel.

She's blind, you see.

When "Grandpa" picks her up, she explores his face, pulling at his nose and patting his cheeks, comfortable in his arms, content in her environment as all seven seem to be.

In a way, they're lucky children.

At least for now, they're in a foster home where there's love and good care and a full measure of devotion to their well-being.

Wilbur and Mary Durham, 1820 E. Keys, have cared for 56 foster children, plus four of their own, since 1962 when they were licensed by the State of Illinois Department of Children and Family Services as foster parents.

Although presently they have just seven, they're licensed for eight and through the years have generally had eight children in placement at a time.

They were not easy-to-place children.

They were Mongoloid, retarded, hyperactive, physically handicapped, terminally ill, abused and neglected children.

"I remember once the agency told me, 'Mary, you've got a perfectly normal baby this time,' and that one turned out to be my crossest baby," says Mrs. Durham, with a smile.

She's never asked for any recognition for her years as a foster parent, nor has her husband.

But Friday and Saturday, statewide recognition will be theirs.

The Child Care Association of Illinois will present them with an award as the "Foster Parents of the Year" at the 1977 fall workshops in Rockford.

"I'm scared to death," says Mary Durham. "I won't know what to do."

Her husband just smiles and says softly, "She'll do all right. She always has."

Mary Durham always wanted a big family.

She grew up in the orphanage at Alton where "everyone was responsible for everyone else."

Before she left at the age of 15, she was responsible for 23 little girls, seeing to it they got to chapel, to meals, and to classes neat and clean and on time. And she came home to a household that included two small half-brothers to help raise.

She married Wilbur Durham 30 years ago and within the next ten years they had four babies, two girls and two boys.

She was 41 when the last one was born, and she started watching other children along with her own. A natural thing to do from her viewpoint . . .

But, she found she had to have a license to watch children.

The Department of Children and Family Services did a study on her home, asked if she would consider going into foster care, and she agreed with the support and encouragement of her husband.

Caring for the children was easy.

Losing them to adoption, the heartbreak.

The second baby, they had almost three years. They still can't talk about the day she left.

Angel was next.

She was four days old when they got her from the hospital. The mother didn't want her, wouldn't even look at her, wouldn't name her.

"They just called her Baby Girl, so we named her Angel," Mrs. Durham says, remembering. "She had a harelip, but after plastic surgery she was beautiful.

"At seven months, they adopted her out.

"I told them, don't bring me any more, I can't stand this.

"Daddy went to the hospital with a kidney condition that flared up. The whole household was upset. But within two weeks, I was on the phone telling them to bring someone else."

A two-year old who was an epileptic is another lump-in-the-throat memory.

"He shaved with Daddy the morning we took him back to his parents. He had his own little shaver. When we got in the car, he kept saying 'I'll be back, Daddy, I'll be back.'

They almost adopted one little boy they had for three years. "Gino," they called him, although that wasn't his real name.

He ran a continuous temperature, and they took him to hospitals in St. Louis and Chicago trying to find out why. He had a large head but was not hydrocephalic. "He was so sweet and such a pretty baby, but nobody wanted to adopt him. We asked for him."

The agency said wait a year, and two months before the year was up he was adopted.

"They never brought him back to see us.

"They couldn't, the ties were so close they were afraid."

Two black babies they took when the girl was four months and the boy seven months were with them the longest—five years.

When they were ready for school, the Durhams knew Fairview school wasn't read for mixed classes, so they asked the agency to take them and place them in black homes. "To this day, one of them still calls me Mother."

They're called "Grandma" and "Grandpa" usually, she explains.

That way the children are ready to accept a new mother and father more easily.

A careful procedure is followed to help the foster children prepare for return to their biological parents or to a new mommy and daddy through adoption.

First, the adoptive parents-to-be come to the Durham's modest home to meet the child and them. After two or three visits, the child begins to recognize them and feel familiar toward them.

Next, the people take the child for out-of-the-house visits. It may be just over to the nearby Dairy Queen, and it may be for a very short time.

The next step is an overnight visit at the people's home and maybe then a weekend, depending on how the child responds.

"And then I take him to the home and leave him for a day so he can get used to my leaving," Mrs. Durham explains. "All of this time we're talking to him, telling him that one of these days he'll get to stay with his new mommy and daddy and won't come back.

"The children accept it, but it takes time."

When the day finally arrives, the Durhams make it a big day. There's always a party before it's time to get in the car and take the child to his new home.

"But I can't say that last good-by," she admits and Wilbur Durham adds "Some you get closer to than others, especially if you've had them quite a while."

Wilbur Durham is every bit as involved as his wife with the foster care program.

He is a quiet, gentle man, a "gentleman" in the true sense of the word. He shakes his head in wonderment as he tells of a remark the 7-year-old boy made recent to him, a boy who has been physically and emotionally hurt over and over again by adults.

"He asked why it was bad for him to tell a lie and not bad for grown-ups. In other words, he's been hurt and lied to so much he just can't understand."

Durham is gone during the day at his job at the Pennington Equipment Company, but weekends he takes over and his wife takes off.

"I get my hair set and go shopping for the children and get out of the house," she says. "He does all the grocery shopping and all the cooking and leaves me free. Maybe on the spur of the moment I'll take four or five of the children out to dinner.

"I've taken off as long as a weekend and left him four babies in cribs. He's just as good as any woman and better than some."

The Durham's own children are now 28, 27, 24, and 20. They help immensely and always have. The married daughters come in and "take over the household" periodically, giving up their own vacations to allow their mother to get away on trips to Hawaii and the Caribbean, for instance.

"She likes to go, and I like to stay home," says Durham, grinning at his wife.

The Durhams have four grandchildren they've helped raise, also. The latest is just over a month old, and his mother is going back to work Monday.

The baby is already used to the crib at the foot of their bed.

"The grandchildren are here with the foster children daytimes," Mrs. Durham says. "They all have their birthday parties together. We have birthday parties all the time here."

The New Year's Eve party is the most fun. The children take a late nap so they can see the New Year in, and they have paper hats and horns and pans to bang on. "Daddy fixes hors d'oeuvres on a big tray on the coffee table and, we open the couch up into a bed so the children can watch television until they fall asleep. Some of them don't quite make it until midnight. . . .

"The grandchildren come, too. You know the younger set likes to go out, and we don't care about it."

Money is a problem for any ordinary family, and the Durhams spend far more on the children than they receive in subsidies from the state.

For an infant, a foster family gets $96 monthly for board and $10 for clothes. For ages 3 to 5, it's $95 for board and $16 for clothes. And from age 5 to 9, it goes up to $100.50 for board, $18 for clothes, and 3.50 a month for personal allowance for the child.

Any parent who has tried to buy a pair of children's shoes in the last year can appreciate the difficulty of stretching that amount of money to cover needs.

"I usually have clothing on hand when a child is brought to me," Mrs. Durham says.

She has to. Many times the call comes in the middle of the night. A baby is abandoned, or abused to the point the police are called, and the authorities know they can turn to the Durhams any time of day or night.

The Durhams have four cribs in one small bedroom presently, plus the small size crib in their room and a trundle bed for the boys. They have five extra beds in the garage and, for emergencies, can open up the living room couch.

They've added an enormous playroom on the back of the house, and the back yard in their double lot has two swing sets, a jungle gym, a good basketball court, and even a big tank for a swimming pool.

"It's a way of life," muses Durham.

Mary Durham has literally saved the life of more than one foster child in her care.

One with serious brain damage had a collapsed esophagus, complicated by a case of thrush. He had to be fed by teaspoon every hour. Another child, a black boy, was retarded and blind and in braces.

A severely abused child described by the doctors as being in a terminal condition was brought back to health by the Durhams, and another with bronchitis that caused him to be tube-fed was rushed to the hospital more than once after completely stopping breathing.

Dr. D. J. Mauro tought Mrs. Durham how to use a stethoscope after she finally bought one herself. "Dr Mauro worked with me and taught me so much," she says gratefully. "I learned how to listen for signs of pneumonia and bronchitis, and he always believed me when I called him."

She sought training from the hospitals and from Hope School and Aid to Retarded Children to better enable her to care for the children.

And she kept daily records on each child's progress which provided valuable assistance in diagnosing and treating the complicated medical problems of her charges.

She's 60 years old now and says she's trying to retire.

"But our work isn't finished," she insists.

Her husband nods in agreement.

"Remember not long ago when we got down to three," he says, "and we thought it would be a good time to kind of phase out. But the next thing we knew, three came back and then a phone call came in the middle of the night . . .

"How could we say no?"

No wonder Wilbur and Mary Durham are "Foster Parents of the Year."

SOCIAL SECURITY

HON. ROBERT E. BADHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. BADHAM. Mr. Speaker, with all the emotional debate of a few weeks ago revolving around universal coverage of the social security program, we heard the emotional outcries of the proponents of the Fisher amendment to eliminate all public employees saying that their benefits would be reduced.

Mr. Speaker, you and I and the Members of this House know that in reality no one's benefits were going to be reduced. To the contrary, we would have required paying into the social security system all those but only those who would potentially receive an eventual benefit.

I received a letter from a constituent of mine which graphically illustrates part of the flagrant abuse of the social security system. This letter demonstrates not the greed of Federal employees but rather the situation of employees of the system forcing almost unwanted dollars on embarrassed citizens.

If this situation is repeated many times, it is clear to see how the system is going broke. The cure for this is universal coverage.

The letter follows:

Dear Bob: An incident occurred yesterday which makes me appreciate much more what you said Friday evening about "universal" membership in Social Security being the answer to Social Security problems.

My next door neighbor came over yesterday to tell me about his experience with SS.I. He is retired from the U.S. Postal Service and as such, gets an adequate retirement income, and his wife is retired on Social Security. His insurance company representative (also a P.O. retirement benefit) told him to go into the Social Security office and apply for "Medicare A" to bolster his insurance benefits, had neither Medicare "A" and "B".

When he went into the Oceanside office to apply for Medicare "A" only, he was told that because of a Supreme Court decision last March (obviously a result of ERA), he also was entitled to Social Security payments on his wife's membership, and he was pressed to fill out an application for it, although he told the clerk he only wanted Medicare "A".

Saturday he received a check from Social Security for more than $950 (I believe it was $954.00). He showed me the check for his payments back to March 1977. He was visibly embarrassed because he said he did not feel entitled to it. He said he is getting enough to get by, which was all he felt entitled to. I asked him if I might write to you about this example of why Social Security is fast going bankrupt, and he said "yes" and that I could use his name in writing.

At first he felt like returning the check and then he thought if it was the law and others received it, it would be a futile gesture to return it.

I thought you might be interested, and it would add strength to your case for universal membership in Social Security.

Sincerely,

Grace E. White.

P.S.—In addition to your Contract of the Month (in your Congressional Update of November 14, 1977), I would like to add the Award of the Year—the more than $6000 Art Award given to the woman who discovered that crepe paper was more artistic in falling than toilet paper when thrown from an airplane! Henceforth, I think all money to encourage art should be deleted from the budget. Also all money for Women's International Year should be deleted. It is obviously only a radical "Women's Lib" dominated organization, not endorsed by the majority of American women.

Thanks for listening.

HORSE CENSUS III

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. BRECKINRIDGE. Mr. Speaker, on April 4, I introduced H.R. 5935, directing the Secretary of Agriculture to conduct a horse census starting in 1978, and reintroduced the bill on May 5, H.R. 6937, to amend its provisions by providing for a $1.25 million authorization annually, beginning in fiscal year 1978. This change reflects the opinion of the Statistical Reporting Service of USDA to the effect that an accurate national census count of equines can be achieved within this funding level in one-third of the States, annually, for the ensuing 3-year period.

Mr. Speaker, in the 7 months since the horse census bill was introduced, hundreds of organizations, businesses, and individuals involved with horses in the United States have written to me expressing the need for, and their support of, this legislation.

Support for the bill has grown in the House and since it was first introduced; there are now 14 cosponsors, including Mr. Eligio de la Garza of Texas, chairman of the subcommittee, Mr. Carter, Mr. English, Mr. Goodling, Mr. Jenrette, Mr. Lagomarsino, Mr. Montgomery, Mr. Perkins, Mr. Quie, Mr. Robinson, Mr. Santini, Mr. Waggonner, Mr. Hightower, and Mr. Chappell. H.R. 6937 is presently before the Department Investigations, Oversight and Research Subcommittee of the House Agriculture Committee.

Mr. Speaker, several horse organizations have also endorsed the bill. The American Horse Council, and its more than 80 affiliated associations, is one of the bill's main backers.

Disease control constitutes an important element of the bill. To promote health research and insure adequate production of vaccines during outbreaks of equine diseases, information as to the number and location of the Nation's horses is essential. Without this knowledge, these diseases can rapidly spread, severely reducing the horse population.

An accurate census is also needed to guide the industry in marketing and other decisions. The horse industry is constantly expanding. Horse owners spend more than $7 billion per year on feed, upkeep, equipment, and services for their horses, and their combined annual investments and expenditures exceeds $13 billion.

The need for the legislation is shown by the service that horses provide as one of our country's greatest sources of recreation and entertainment. There are now over 320,000 young people involved in 4-H horse projects. Over 3,300 horse shows drew more than 112 million spectators in 1975 alone. Horse racing remained the number one spectator sport for the 24th consecutive year, with over 78.5 million people attending races in 1975.

The bill would authorize the Secretary of Agriculture to take a count of the Nation's horses in 1978 and every following year. The census will include the national total of all horses and detailed information for one-third of the States each year, on a rotating 3-year cycle. All the data obtained from the census would be published, annually and cumulatively, for the public's information and use.

Mr. Speaker, the Kentucky Horse Council has conducted—in concert with the USDA—a preliminary report on the number of equines in our State. Our Kentucky Horse Council has been a prime mover and innovator in sparking interest in a horse census. I should like to insert a copy of a press release dated September 14, 1977, from the Kentucky Horse Council, outlining their efforts in counting equines.

The Kentucky Horse Council's press release follows:

Kentucky Reports Over 200,000 Equines

The Kentucky Horse Council, the U.S. Department of Agriculture's Kentucky Crop and Livestock Reporting Service, and the Kentucky Department of Agriculture have jointly released a preliminary report on the size and makeup of the Kentucky equine industry.

The report, a two-page summary of major findings enumerated by the 1977 Kentucky Equine Survey conducted by the Kentucky Crop and Livestock Reporting Service, indicates that as of May 1, 1977 there were an estimated 204,000 equines in the state. Light and draft horses represented 74.3 percent of this total or 151,500. Ponies accounted for

41,500 head and mules and donkeys totaled a surprising 11,000 head.

Pleasure riding was the largest use category, with 94,000 equines owned primarily for recreational enjoyment.

Throughout history, Kentucky has been known primarily as a breeding state—the state's prominence as the horse center of the nation developing because of the quality of the animals born and raised within its borders. It is not surprising then that the next largest use category is that of equines held primarily for breeding purposes, which includes 38,000 head.

Although mechanization came to farming long ago and was partially responsible for the rapid decrease in the number of horses in the United States in the second quarter of the twentieth century, the steep hills and specialized farming in Kentucky have tended to keep the work horse and mule a vital part of today's equine industry. About 24,000 head are used as some sort of work animal. It is not an uncommon sight when traveling through Kentucky to see, for example, a work horse or mule harnessed to a plow threading its way through rows of close growing tobacco.

An almost equal number of Kentucky equines are used mainly for show or racing, 20,000 and 19,700 head respectively. The remaining 8,300 head are used in a variety of other ways, some of which may eventually overlap into the major use categories when the final analysis of the Kentucky Equine Survey is completed.

A formal publication will be prepared and published later in the year and will also include information on the location of equines in the state, the number of horses by breed, the acreage associated with the Kentucky equine industry, and the number of equine operations by type.

Copies of the preliminary report are available from either the USDA Statistical Reporting Service, P.O. Box 1120, Louisville, Kentucky 40201 or the Kentucky Horse Council, P.O. Box 11992, Lexington, Kentucky 40511.

THE TAXPAYERS ARE SUFFOCATING

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. HYDE. Mr. Speaker, a very tiny portion of the President's National Energy Act—Mr. Carter's "moral equivalent of war," is likely to complete the suffocation of the already gasping taxpayer.

Buried in the midst of the President's energy proposal is a section repealing the personal income tax deduction for State and local government taxes imposed on gasoline, diesel fuel and other motor fuels used for nonbusiness purposes, effective for purchases after December 31, 1977.

The Ad Hoc Committee on Energy and the Ways and Means Committee rubber-stamped repeal of this deduction. The Democratic-dominated Rules Committee only allowed debate and votes on certain amendments last August when this body considered the bill, and predictably, prevented debate and vote on the Republican alternative which continued the personal deduction.

According to projections of the Joint Committee on Internal Revenue Taxation, this little-noticed section of the energy bill will cost the American taxpayers $1.383 billion in 1985—and this committee anticipates that no energy savings will result because of the repeal.

Permit me to cite a glaring example of why it is important for the taxpayers to continue this personal deduction:

Last Thursday, at 1 minute after midnight, the total taxes on a gallon of gas purchased in the six-county Chicago area increased to the highest in the Nation with the imposition of a 5 percent regional transit authority gasoline tax. Cook County residents now pay as high as 20 cents tax for each gallon of gasoline they purchase.

Chicago area residents are angry about the RTA tax—5 percent on top of all the other Federal, State, and local taxes they pay on gasoline. Their one meagre consolation was in knowing they would have the option of deducting State and local gasoline taxes when income tax time rolls around next year. Of course, even this is no help to those who do not itemize the deductions.

Residents of the six-county Chicago area are still reeling from the RTA 5-percent tax. Wait until they find out what else is in store for them as a result of the President's energy tax bill!

Last August when this body debated the National Energy Act, some of us concluded the administration's proposals were a one-way ticket to economic disaster, failing to address the vital question of energy production, while using the Federal tax code as the primary element of a national energy strategy. It was a tax revenue program then and it is a tax revenue program now, wherein the administration will set the price and distribute the proceeds politically.

Mr. Speaker, we express our sympathy for every endangered species except one—the battered and bruised taxpayer. Unless some constructive concern is exercised by those who impose these taxes, instead of solving our problems, we will compound them and cause even more erosion of public confidence in our system of government.

The National Energy Act will represent the most significant increase in middle America's tax burden in our Nation's history. Following on the heels of heavy increases in social security taxes, it could be catastrophic.

The American people are frustrated. All they see is higher prices and more taxes. This Congress will only add to their burdens by forcing upon them this gigantic tax increase bill.

There is still time to take the only prudent course—scrap the National Energy Act and start over. History will look more kindly upon the 95th Congress if we exercise more judgment and less ideology in determining the course of our energy policy.

Consider the taxpayers who must foot the bills for whatever we do. At the very least, we should retain the personal deduction for State and local gasoline taxes.

I call upon my colleagues to join me in personally contacting the conferees on the energy bill—urge them to at least retain the personal deduction. Do not be guilty of saddling the taxpayer with another $1.383 billion in taxes on top of everything else.

Let us stop assaulting the taxpayer, or they just might assault back!

NEED TO INCREASE THE STAFF OF THE FARMERS HOME ADMINISTRATION

HON. LES AuCOIN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. AuCOIN. Mr. Speaker, I would like to enter into the RECORD today a letter I wrote, which has been signed by 51 other Congressmen, urging President Carter to allow an increase in the staff of the Farmers Home Administration. Additional staff are absolutely essential if the current employees are to successfully meet the challenges of expanded programs so that more houses, industry, and jobs will be created for the increasing rural population.

The letter follows:

U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., November 9, 1977.

HON. JAMES EARL CARTER,
The White House, Washington, D.C.

DEAR PRESIDENT CARTER: We write with deep concern about the future of Rural America, a concern we know you share. Few federal agencies are more important to the economic well-being of rural areas of our country than the Farmers Home Administration (FmHA).

The FmHA is a major source of credit for a wide range of rural needs—for farmers, small communities, businesses and, of course, those who lack decent housing. The FmHA is uniquely suited to the special credit needs of rural areas because it provides direct service from locally based people in over 1,780 offices.

In addition, it provides direct loans in most of its programs, thus assuring lower costs for the consumer. Today, the FmHA is the largest direct lending federal agency, making more than 250,000 loans and grants valued around $7 billion in FY 1977.

After years of a steady loss in population in rural areas, the first reversal in that trend is now apparent. As a result, the programs of FmHA are more important than ever to assure that new business and industry will be created, that the essential water and sewer facilities will be made available, that small farmers will be able to prosper and that low and moderate-income rural people will be decently housed.

Of particular significance in light of the high unemployment and increasing population in Rural America is the dramatic impact of FmHA programs on the creation of jobs. For example, the National Association of Home Builders estimates that every new house generates two person years of employment. Mr. President, the jobs generated by FmHA are not phony ones—they are real, productive employment.

Department of Agriculture figures indicate that in 1976 FmHA farming, housing and community services programs created and saved more than 1 million jobs in Rural America.

Congress has recognized the importance of FmHA to Rural America by steady and substantial increases in the funding levels for the Agency's programs. Congress also has recognized that a multiplicity of important programs cannot be operated without adequate staff. In response, enough funds for 300 new permanent employees for FmHA were provided in the FY 78 Agriculture Appropriations Act.

We were extremely concerned, then, to learn that the Office of Management and Budget has required a reduction of 1,600 people in the Department of Agriculture's employment ceilings for FY 1978. This brings into serious doubt, the status of the Congressionally mandated 300 person staff increase at FmHA.

Mr. President, during your campaign you stated on a number of occasions that you were going to make the federal bureaucracy more responsive to the needs of the people. In the case of FmHA, the bureaucracy is responsive to its constituents because of its locally based structure and direct loan programs.

However, additional staff are absolutely essential if the current devoted employees are to successfully meet the challenges of an expanded set of programs so that more houses, industry and jobs will be created for the increasing rural population.

We are asking the House Agriculture Committee to hold oversight hearings on FmHA staffing needs, with a major emphasis on the Administration's response to the problem. We trust that you will ensure that the Congressional mandate about FmHA staffing is implemented.

With warm regards,

Sincerely,

Les AuCoin, Bill Alexander, Ed Jones, Stan Lundine, Philip Ruppe, Gillis Long.

Norm Dicks, David R. Obey, Matthew F. McHugh, James L. Oberstar, Frank E. Evans, Lee H. Hamilton, Albert Gore, Jr., Bob Traxler, Walter Flowers, James M. Jeffords.

Helen S. Meyner, Paul E. Tsongas, Michael T. Blouin, Berkley Bedell, Christopher J. Dodd, William F. Walsh, Arlan Stangeland, Robert J. Cornell, Leon E. Panetta, Mike McCormack.

Neal Smith, Charles Rose, Edward R. Roybal, Charles Grassley, Rick Nolan, Donald M. Fraser, Norman D'Amours, Frederick W. Richmond, James C. Cleveland, John Paul Hammerschmidt.

Bo Ginn, Walter Jones, J. J. Pickle, Jim Santini, Dan Glickman, William A. Steiger, James J. Florio, David W. Evans, Tom Harkin, James M. Hanley.

Nick Joe Rahall II, Robert Drinan, David E. Bonior, Don Edwards, Floyd J. Fithian, William S. Cohen.

PERSONAL EXPLANATION

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. McDONALD. Mr. Speaker, due to a commitment made prior to the decision to reconvene the week of November 29, I was unable to be in attendance. If I had been present, I would have voted as follows:

Rollcall No. 747, "No."
Rollcall No. 748, "Yes."
Rollcall No. 749, "Yes."
Rollcall No. 751, "No."
Rollcall No. 753, "No."
Rollcall No. 754, "No."
Rollcall No. 755, "No."
Rollcall No. 756, "No."
Rollcall No. 757, "Yes."
Rollcall No. 759, "No."

THE 19TH MEETING OF CANADA-UNITED STATES INTERPARLIAMENTARY GROUP

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. FASCELL. Mr. Speaker, the Canada-United States Interparliamentary Group will hold its 19th annual meeting February 9–13, 1978. House participation in the group was authorized in 1959 for the purpose of discussing specific issues in United States-Canadian relations. In recent years, we have discussed not just bilateral problems, such as environmental, energy, and trade issues, but we also have considered prospects for United States-Canadian cooperation in dealing with both domestic concerns and multilateral issues.

The agenda for the February meeting is presented below. As chairman of the House delegation, I invite Members to provide me with any suggestions as to additional issues which should be discussed.

Furthermore, the delegation welcomes any statements which members may wish to submit regarding any of the agenda issues.

A report summarizing the discussions will be made to the House shortly after the conclusion of the meeting.

The agenda follows:

DRAFT AGENDA FOR 20TH MEETING OF CANADIAN-UNITED STATES INTERPARLIAMENTARY GROUP

COMMITTEE I—MUTUAL DOMESTIC AND MULTILATERAL ISSUES

1. Nuclear proliferation; Canadian and American safeguards, fast-breeder technology, the problem of nuclear waste, SALT problems.

2. The 200 mile limit; the resolution of Canada-United States maritime boundaries issue for fisheries and resources.

3. The deep-seabed issue of the Law of the Sea Conference.

4. The Canadian political situation.

5. Linkage of U.S.-Canadian issue.

6. Role of internal security forces in a democratic society.

7. Human rights including CSCE.

8. Development assistance.

9. Southern African questions.

10. Grains; international reserves, marketing systems, allocation of supplies in times of shortage.

COMMITTEE II—TRADE AND ECONOMIC ISSUES

1. Trade issues—

(a) status report on automotive trade; possible corrective action on auto parts imbalance;

(b) U.S. convention tax; impact on Canadian current account;

(c) MTN negotiations; bilateral and multilateral concerns and objectives; tariffs and NTBs;

(d) Chicken marketing boards.

2. Metric conversion: a comparison.

3. St. Lawrence Seaway tolls; possible agreement.

4. Cross-border workers; status report.

5. Canadian and U.S. economic situations; how to handle stafflation and unemployment; discussion of OECD McCracken study.

6. Investment climate—

(a) Canadian foreign investment policy;

(b) Provincial jurisdiction over resources; potash, asbestos;

(c) Quebec;

(d) Impact of depreciation of Canadian and American dollars;

(e) Impact on Canada of possible restriction by U.S. of technology transfers.

7. Canadian and U.S. international competitiveness; rising trade deficits; state of the economies; cooperative R and D programme.

COMMITTEE III—ENERGY AND ENVIRONMENTAL ISSUES

1. Status report on supply and price of gas, oil, electricity, and uranium.

2. Status report on the ALCAN gas pipeline agreement. Some ongoing issues: size of pipe, pipeline procurement, offshore competition, financing, administration of pipeline construction, environmental difficulties.

3. Oil pipeline routes in light of restrictions on Cherry Point; feasibility of Kitimat, Port Angeles, cost comparisons, environmental impact.

4. Comparative programmes—Canada-United States—

(a) Conservation measures and policies;

(b) Reserves and storage policies;

(c) Environmental pollution control standards.

5. Energy exploration and transportation; possible environmental problems—

(a) Arctic—Beaufort oil and gas; Eastern Arctic gas; LNG tankers;

(b) East and west coast tanker traffic; hazards and regulation; refinery locations; status report on Eastport.

6. Air pollution; U.S. north-east air pollution of Martimes: Cornwall Island; Boundary Wilderness (Atikokan); Poplar River.

7. Great Lakes Water Quality; status report on revision of agreement.

8. Status report on Garrison Dam, Dickey Lincoln, Flathead River, Champlain Richelieu.

LOOKING OUT FOR AMERICA'S KIDS: A NUTRITION LOBBY

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. NOLAN. Mr. Speaker, development of a national nutrition policy has become a high priority for several Members of Congress in recent years. Already during the 95th Congress, we have passed legislation making substantial improvements in the school lunch and summer feeding programs. That legislation also included provisions to initiate a long-overdue program of nutrition education in conjunction with Federal feeding programs for children.

In the coming months, similarly important legislation will be before us. The highly successful women, infants, and children's feeding program (WIC) will come up for reauthorization, and the issues of quality foods in Federal feeding programs will be the subject of legislation hopefully. In these issues, as in the past, my colleague from California, GEORGE MILLER, will play a key role. GEORGE's knowledge of these programs, and his legislative record on expanding and improving them, is well known to every Member of the Congress.

I am gratified to see, in a recent article in one of George's local papers, a detailed report on these nutrition issues. In particular, I am pleased to know that George's constituents in Contra Costa County are being fully informed of the important role their Congressman has played in providing national leadership on issues regarding nutrition and children's health. I would like to share this article with my colleagues in the House:

Looking Out for America's Kids: A Nutrition Lobby

(By Kathy Batts)

Washington.—These days, there is a congressional caucus or lobby for just about every special interest group in America.

But the newest legislative lobby represents constituents who do not vote and do not give campaign contributions. Most probably never write a letter to their congressman or senator.

They are the future's constituents. And the Children's Lobby consists of a bipartisan group of lawmakers who say they are determined that these future voters grow up healthy.

At the helm of the Children's Lobby is Rep. George Miller, D-Martinez. He's joined by Reps. Frederick Richmond, D-N.Y., William Wampler, R-Va., Richard Nolan, D-Minn., and Sens. Hubert Humphrey, D-Minn., Robert Dole, R-Kans., Edward Kennedy, D-Mass., Jacob Javits, R-N.Y., and James Sasser, D-Tenn.

The group is trying to establish a national nutrition policy for America—the best-fed nation in the world.

Their plan for feeding hungry children will not be a new set of programs. Instead, the congressmen say they will build on existing programs, coordinating them around a basic nutritional plan.

These programs include free and reduced-price school lunches, school breakfasts, the summer feeding program and a special supplemental food program for pregnant women, infants and children (WIC).

Miller often has had a hand in nutrition legislation. In 1975, he introduced the bill extending funding for the WIC program (originally a Humphrey proposal). The bill also marked an achievement in another sense for Miller—it was the first bill by a freshman lawmaker signed into law that session.

This year Miller has introduced the Meals-On-Wheels addition to the Older Americans Act, and the bill extending the school lunch program. He co-sponsored a bill calling for a presidential commission on malnutrition in America.

His plans for next year include a bill on nutrition education and further amendments to the school lunch program, to apply it to institutions, such as orphanages.

Miller's interest in the national nutrition policy, to be formed next year, centers on nutritional quality. He would like to get junk food out of school cafeterias.

This new emphasis on quality will probably become a feature of the national nutrition policy. At least, Miller hopes it will. He says he also would like to see nutrition education in the plan. Although the proposed new policy is expected to be embodied in legislation slated for introduction into Congress next spring, the details of the measure have not been determined.

The national policy will take the place of several statutes and may include some government reorganization, says Brad Michaelson, an aide in Rep. Richmond's office. Participating at the executive end of the policy plan will be the Agriculture and Health, Education and Welfare Departments, plus a nutrition task force set up by President Carter. A White House conference on nutrition, and children in general, is scheduled for 1979.

Miller is optimistic about the chances of establishing a national nutrition policy, if he and his supporters can persuade other congressmen that this policy will get the most for the taxpayers' money. The warning signs for this fiscal attitude were evident in debate this year over the funding extension for the school lunch program.

"It was more a bill of how we account for the taxpayers' money," Miller says. "We've come to a point where this has to happen. The crunch has come."

In writing the nutrition policy next year, Miller says, "We'll take our philosophy of how we feel about nutrition and we'll put on a banker's visor to see how the money is being spent. As long as we keep our books in order, the administration will be sympathetic."

Much of the criticism leveled at current nutrition programs are that they have been badly administered, and overly influenced by the food industry, resulting in skyrocketing costs.

Miller defends what happened to those programs, saying they were created to fill a need in the Kennedy-Johnson era. Those programs, he says, were ammunition in the War on Poverty.

"In those days, there was a great awakening," Miller says. "And the need to do something right then."

"That's why we even have the programs now. But we now have the luxury of giving the programs a tune-up. We know we're making the resources available. The magnitude of the problem is not the same as it was then."

"We can take the time to do it right," he says.

Some of that time will be spent just trying to get people with different viewpoints to join in forming a national nutrition policy.

"We're trying to put people together," Miller says. "We're sitting down with critics and talking to them, too."

Miller says he isn't sure exactly what the policy will say yet.

"What we're doing now is listening to everyone," he says.

THE FOUR PILLARS OF FREEDOM BY EZRA TAFT BENSON

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. McDONALD. Mr. Speaker, one of our more distinguished Americans, former Secretary of Agriculture, Ezra Taft Benson, made a speech to the Devotional Assembly at Ricks College, Rexburg, Idaho, on September 20, 1977. His speech, in slightly condensed form, was reprinted in the Review of the News on November 9, 1977. The main points of his speech were: First, a faith in God and in the universal brotherhood of all mankind; second, strong home and family ties; third, a political climate and governmental system which protects man's inalienable rights; and fourth, elected Government officials who are wise and good, and a vigilant, informed citizenry.

His talk develops these four points in a magnificent fashion and, therefore, I commend the address to the attention of my colleagues:

The Four Pillars of Freedom

(By Ezra Taft Benson)

We are a free and prosperous nation. Our people have high-paying jobs. Our incomes are high. Our standard of living is at an unprecedented level. We do not like to be disturbed as we enjoy our comfortable complacency—our life of ease. We live in the soft present and feel the future is secure. We do not worry about history. We seem oblivious to the causes of the rise and fall of nations. We are blind to the hard fact that nations usually sow the seeds of their own destruction while enjoying unprecedented prosperity.

I say to you with all the fervor of my soul: We are sowing the seeds of our own destruction in America and much of the free world today. It is my sober warning to you today that if the trends of the past forty years—and especially the past fifteen years—continue, we will lose that which is as priceless as life itself—our freedom—our liberty—our right to act as free men. It can happen here. It is happening here. And if we lose our freedom, blood will be required to bring it back. . . . Of all sad things in the world, the saddest is to see a people who have once known liberty and freedom and then lost it.

I have seen the unquenchable yearning of the human heart for liberty on two unforgettable occasions. These two experiences are indelibly etched on the memory of my soul.

I saw this yearning spirit in the faces of many European people in the aftermath of World War II. It fell my lot, under the direction of the President of the Church [*of Jesus Christ of Latter-day Saints*], to be the first Church official to go into war-torn European countries. This emergency mission was twofold—the re-establishment of our missions in Europe and the distribution of food, clothing, bedding, and medical supplies. I saw firsthand entire nations prostrate, flat on their backs economically. I looked into the face of hunger—the pale, the many dressed in rags, and some barefooted. I saw the refugees, the poor unwanted souls who were driven from their homes to destinations unknown. They came with all their possessions on their backs. I visited some of their homes—shacks—where as many as twenty-two people were living in one room—four complete families. I saw men enslaved by habit barter their food and clothing for a cigarette. I saw some, fortunate to get hold of an American magazine, pore over its pages wondering if what they saw could possibly be true. I saw the struggles on every hand to get to America—some legal and others illegal—all in an effort to enjoy freedom and liberty. These were a people who had once known freedom but had let it slip away.

The second such unforgettable experience was when I was in Russia in 1959. We had been touring seven European countries as a part of the objective of the government of the United States to develop world markets and create good will.

Premier Khrushchev and Vladimir Matskevich, the Soviet Minister of Agriculture, had promised me that I would be able to visit a Christian Church in Russia. During our stay there, the government guides did everything possible to prevent this. On the way to the airport, before leaving Moscow, I insisted that we go to a Baptist Church which I had located in that city. It was only a few minutes out of the way. Reluctantly we were taken to the church. Our guides had told us that the churches were empty and had been converted into museums and warehouses, saying that no one attended church anymore, and that religion is the "opiate of the people."

When we arrived at that Baptist Church on this Thursday, we found it full to overflowing. Five services were being held weekly to accommodate the people. We were invited to stand by the local minister. This gave me a good view of the faces of the people. Many were middle-aged and older, but a surprising number were young. As we went onto the stand, the people crowded over to the aisles to make room for the twenty members of the press who accompanied me on our unexpected visit. The people reached out and grasped for our hands to touch us, "almost," in the words of one newsman, "as one would reach out for the last final caress of one's most beloved just before the casket is lowered." They were in misery, and yet a light shone through the misery. They gripped our hands like frightened children.

Later in the service I was asked to address the congregation. I spoke to them about God and Jesus Christ, His Son. I encouraged them to be unafraid and to pray for peace. I witnessed to them the reality of the resurrection and that this life is only a part of eternity. Then, in closing, I told them that truth would endure and that time was on the side of truth.

I don't recall all I said, but I recall being lifted up and inspired by their rapt faces. When I sat down, the whole congregation broke into a favorite hymn of my childhood, "God Be With You Till We Meet Again." As we walked down from the platform to leave, they waved their handkerchiefs in farewell. It seemed that all 1,500 were waving as we left. When we were finally outside, one young lady Russian guide whispered to my wife, "I'm a Christian, too."

It has been my privilege to speak before many church bodies in all parts of the world, but the impact of that experience is almost indescribable. I shall never forget that evening as long as I live.

On the arrival at the airport each of the members of the press (except one) came to me personally and indicated this was the greatest spiritual experience of their lives. The other member of the twenty handed me a note on which was written the following: "Dear Mr. Secretary, I've been wondering why you came to Russia; but after that experience in the Baptist Church tonight, I think I have the answer."

Seldom, if ever, have I felt the oneness of mankind and the unquenchable yearning of the human heart for freedom so keenly as at that moment. Correspondent Tom Anderson described the experience in these words: "The Communist plan is that when these 'last believers' die off, religion will die with them. What the atheists don't know is that God can't be stamped out either by legislated atheism or firing squad. This Methodist backslider, who occasionally grumbles about having to go to church, stood crying unashamedly, throat lumped, and chills running from spine to toes. It was the most heartrending and most inspiring scene I've ever witnessed. With heavy hearts we left to rejoin the smug, smart-aleck atheist guides who took us to the church but refused to go in."

Never will I forget this victory of spirit over tyranny, oppression, and ignorance. Never can I doubt the ultimate deliverance of the Russian people.

But dangers remain. In perilous circumstances such as the world finds itself suffering today, it is quite natural that people would have a common concern about the ever-present external threat of war. Freedom from aggression is a justifiable concern. As historians have pointed out, however, great nations do not usually fall by external aggression, they first erode and decay inwardly, so that like rotten fruit, they fall of themselves.

The history of nations shows that the cycle of the body politic slowly but surely undergoes change. It progresses:

From bondage to spiritual faith.
From spiritual faith to courage.
From courage to freedom.
From freedom to abundance.
From abundance to selfishness.
From selfishness to complacency.
From complacency to apathy.
From apathy to fear.
From fear to dependency.
From dependency to bondage.

The greatest threat to the freedom of any nation is erosion; not erosion of the soil, but erosion of the national morality and character. What we have to fear is not force from without, but weaknesses from within.

Every nation yearns for liberty, but too frequently its own self-indulgence precludes the possibility of freedom. I speak of the trend of pleasure without conscience, wealth without work, business without morality, politics without principle, and worship without sacrifice. I believe personally there is a strong relationship between a strong, prosperous nation and the faith and righteousness of its people. This brings me to the crux of my message.

There are indispensable conditions which must be met if a nation is to preserve freedom and prevent its own downfall. Such truths are self-evident to all responsible people everywhere. Today, I mention four of these truths—pillars upon which our nation's security rests. The first pillar is:

1. A faith in God and in the universal brotherhood of all mankind.

I believe with all my heart the words of the patriot Patrick Henry, who on the eve of the Revolution said, "There is a just God who presides over the destinies of nations and who will raise up friends to fight our battles for us." Further, it is part of my faith that no people can maintain freedom unless their political institutions are founded on faith in God and belief in the existence of moral law. God has endowed men with certain inalienable rights, and no government may morally limit or destroy these.

The Founding Fathers of this country seemed to have a clear realization that, to survive, the new nation would need a reliance on the protection of God. In the Declaration of Independence there is an appeal to the "Supreme Judge of the World," and to "the laws of nature and nature's God." The document is concluded with this affirmation: "And for support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

Here we see that the principle of supremacy of the individual over government is rooted in religious precept. The corollary to this recognition and reliance upon God is the belief in the worth of the individual. The two precepts go hand in hand. The truth is very evident and simple. There is a God in heaven who is the Sovereign Power of the universe, and we are His literal offspring. He has endowed us with inalienable rights among which are life, liberty, and the pursuit of happiness. This He has implanted in the human breast. This is why men cannot be driven indefinitely or led despotic rulers to intellectual or physical slavery and bondage. Fear and despotism may rule for a generation or two, or three, but in time the human spirit rebels, the spirit of liberty manifests itself, and its tyrannous hand is overthrown.

Yes, as the offspring of God, we share a common paternity that makes us literally brothers, and thus we share a common destiny. When this truth sinks into the human heart, men demand their rights—life, liberty, and happiness. It is as the Apostle Paul told the Corinthinans: "Where the spirit of the Lord is, there is liberty."

A second pillar of freedom is:

2. Strong homes and family ties.

The home is the rock foundation, the cornerstone of civilization. No nation will rise above its homes, and no nation will long endure when the family unit is weakened or destroyed. If you accept the truth of these statements, then you must conclude that the American family has serious problems.

Divorce is epidemic. The father's place at the head of the home is being challenged, and mothers have, in many instances, left the hearth to join the work force, which weakens the stability of the home. Children, growing up without strong parental guidance and spiritual influence, are allowed to roam freely. Not only does this lack of training and permissiveness sponsor indolence, but many of these youth, out of boredom, have turned to drugs, juvenile delinquency, or crime.

One great Church leader has wisely said, "No other success can compensate for failure in the home." If this nation is to endure, then the home must be safeguarded, strenghened, and restored to its rightful importance.

As I have thought about this, I am convinced that there are some fundamental things we might well give attention to in our nation if the family is to be preserved. I will mention five.

First, one of our greatest needs is more time of parents in the home. Youth of the nation need more than physical comforts. We will need to leave them more than lands and stocks. They need more than a modern automobile and a lovely modern building to live in. There is no satisfactory substitute for mother, and no one can take care of her children as she can.

Second, we need daily devotion in the home. We need to return to the practice of family prayer, secret prayer, the old-fashioned practice of devotion in the home, daily, night and morning; the singing of hymns; the reading of scriptures. How much more happiness there would be, how many fewer divorces there would be, if these simple practices were followed as was the custom in the early days of this country, according to the diaries of our early founders.

Third, I think one of the great needs is more paternal instruction on life's problems. I know there is a tendency for parents to shrink from this responsibility, the instructing of their own children in the problems of sex, the relationship with other young people, the problems of dating, and all of the many temptations that confront a growing boy and girl. These instructions should not be left to the school or a class in sociology. The safest place, the best place, to give this vital counsel, these sacred instructions in matters of moral purity, should be in the home on a basis of confidence between parent and child.

Fourth, I believe there is a great need for family recreation and cultural activities together. We should do things together as a family. It may mean a reduction of participation in women's clubs, in men's clubs, but if families could only seek their recreation and cultural activities more as a family unit, I am sure that untold benefits and blessings would accrue.

And fifth, we need a closer parent-child relationship. This is closely related to the other four needs. One of the greatest needs of our young people is a closer, more frequent, companionship with father and mother. There is no satisfactory substitute. In homes where these principles are stressed, there is no "generation gap."

Yes, the second pillar is strong homes and family ties. For a third pillar, I name:

3. A political climate and governmental system which protects man's inalienable rights.

Every governmental system has a sovereign, one or several who possess all executive, legislative, and judicial powers. That sovereign may be an individual, a group; or the people themselves. Broadly speaking, there are only two governmental systems in the world today. One system recognized that the sovereign power is vested in the head of state (a monarchy or dictatorship) or a group of men (an oligarchy). This system is as old as history and rests on the premise that the ruler grants to the people the rights and powers he thinks they should have. It is the basis of Roman or *civil law*, and all dictatorships of history. The system is wrong regardless of how benevolent the dictator may be, because it denies that which belongs to all men inalienably—their right to life, property, and liberty. Since all men are brothers, it follows "that it is not right for any man to be in bondage one to another."

The other system is that which had its historic origin two hundred years ago in 1776, the year of our independence. The Founding Fathers were men who understood the tyranny that can come out of the system of *civil law*. They had been indoctrinated in a different system of thought, that of *common law*, which was premised on the idea that true sovereignty rests with the people. Believing this to be in accord with truth, they inserted this imperative in the Declaration of Independence: "That to secure these rights [*life, liberty, and the pursuit of happiness*], governments are instituted among men, deriving their just powers from the consent of the governed."

Later, when our nation had won her independence through the Revolutionary War, a free people's representatives drafted a second document, the Constitution of the United States, which opens with this preamble: "We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, *do ordain and establish this Constitution for the United States of America.*"

Here the people were speaking. They recognized *their* sovereignty, not that of a king, emperor, or oligarchy. All rights and powers not granted specifically to the government were retained by themselves. This is the difference between freedom and despotism!

There are only two possible sources of man's rights. Rights are either God-given as part of the divine plan, or they are granted by government as part of the political plan. Reason, necessity, tradition, and religious convictions all lead me to accept the divine origin of these rights. If we accept the premise that human rights are granted by government, then we must be willing to accept the corollary that they can be denied by government. I, for one, shall never accept that premise. As the French political economist, Frederic Bastiat, phrased it so succinctly in his important book *The Law*, "Life, liberty, and property do not exist because men have made laws. On the contrary, it was the fact that life, liberty, and property existed beforehand that caused men to make laws in the first place."

We must ever keep in mind the inspired words of Thomas Jefferson, as found in the Declaration of Independence: "We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed . . . ."

Since God created man with certain inalienable rights, and man, in turn, created government to help secure and safeguard those rights, it follows that man is superior to government and should remain master over it, not the other way around.

And we need to keep before us the truth that people who do not master themselves and their appetites will soon be mastered by government. In 1801 Thomas Jefferson, in his First Inaugural Address, said: "With all these blessings, what more is necessary to make us a happy and prosperous people? Still one thing more, fellow citizens—a wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned."

It seems pertinent to ask, are we rearing a generation of Americans who do not understand the basis of our economic prosperity and the principles upon which prosperity is predicated? The principles behind this American philosophy can be reduced to a rather simple formula:

1. Economic security for all is impossible without widespread abundance.
2. Abundance is impossible without industrious and efficient production.
3. Such production is impossible without energetic, willing, and eager labor.
4. This labor is not possible without incentive.
5. Of all forms of incentive—the freedom to attain a reward for one's labors is the most sustaining for most people. Sometimes called the profit motive, it is simply the right to plan and to earn and to enjoy the fruits of your labor.
6. This profit motive diminishes as government controls, regulations, and taxes increase to deny the fruits of success to those who produce.
7. Therefore, any attempt through government intervention to redistribute the material rewards of labor can only result in the eventual destruction of the productive base of society, without which real abundance and security for more than the ruling elite is quite impossible.

It is evident that, when the willingness to work sharply declines, there will be increased frustration of an economic plan, however well intentioned or well conceived. "Poverty is abolished by economic growth, not by economic distribution," and economic growth requires work. As we more and more become "welfare conscious," it is essential to reaffirm the scriptural imperative that "the idler shall not eat the bread of the worker." To operate contrary to this is soul-destroying to the idler, and incentive-reducing to the worker. We should never forget the wise words of President Grover Cleveland that ". . . though the people support the Government, the Government should not support the people."

Students of history know that no government in the history of mankind has ever created any wealth. People who work create wealth. But because of the tendency for almost everyone to feel that their wage or profit is not enough, there is more and more of a tendency to look to the federal government for help. Increasing numbers of Americans today are subscribing to the myth that you get something for nothing—as long as the government is footing the bill. In fact, they believe it is the duty of government to take care of them from the cradle to the grave.

But there is no such thing as a free lunch. Everything we get from the government—everything—we pay for in debilitating taxes. Everything that government gives to the people it must first take from the people. Agricultural subsidies, price supports, government grants, federal loans, subsidized housing, welfare benefits, and other government benefits all are paid for by the wage earner or businessman. It is automatic that when government paternalistically provides, it controls and regulates. The Supreme Court has so declared. To the extent that a state, an industry, or an individual is regulated by the government a degree of freedom has been lost. This is something few Americans appear to understand.

Socialism is simply government ownership and control of the means of production and distribution. Most loyal Americans are repelled by the very word. If a candidate were running this year under a socialist label, as some are, he almost certainly would garner few votes. Yet, consider these grim facts.

We have accepted a degree of socialism in our country. The question is how much. The amount of freedom depends upon the amount of socialism. A good measurement is to determine the amount, or percentage, of income of the people which is taken over and spent by the state. Russia, it is reported, takes well over 80 percent of the income of the people. Scandinavia takes about 65–70 percent. England some 60 percent. The United States is now taking approximately 40 percent. What is our direction?

In the past fifteen years, government spending on social programs grew from twenty-one billion dollars to one hundred fifty billion dollars a year. Eighteen million people now receive food stamps. Eleven million participate in aid to dependent children. Thirteen million participate in medicare. Twenty-three million are now medicaid beneficiaries. Our present social security program has been going in the hole at a rate of twelve billion dollars a year, and with increased benefits and greater numbers of recipients, even though the tax base has been increased, we will probably have larger deficits in the future. Today candidates in both parties are advocating a comprehensive national health insurance program; in other words, socialized medicine. The challenge before organizations such as yours is to determine where you stand in relation to this proposal. Will you stand on the principle that sets us apart from all other nations—free enterprise—or will you give in to the trend as so many special interest groups have done over the years?

I have just returned from Great Britain, that nation which has provided the free world with a tradition of freedom and democratic rights, stemming from the Magna Carta and coming down through other important historical documents and statements by famous Englishmen. Yet England today is losing her freedom and democracy. She has become a giant welfare state. Today government spending in Great Britain amounts to 60 percent of her national income. This has led the renowned University of Chicago economist, Dr. Milton Friedman, to forecast: "I fear very much that within the next five years the odds are at least fifty-fifty that British freedom and democracy as we have seen it will be destroyed." Recognizing the past record of the British people for stamina and courage, I am hopeful—even confident—that they will disprove this prediction. I hope and pray they will meet the serious challenges facing them.

We say, "It can't happen here." The lesson of New York City should tell us that this same thing is happening here—to us—now. New York City is no longer governed by its elected officials. It is governed by a committee of overseers appointed by the State of New York. New York City has partially lost its freedom! When will we learn the lesson that fiscal irresponsibility leads to a loss of self-government?

Margaret Thatcher, head of the Conservative Party in Great Britain, in a speech given appropriately in New York, gave a simple lesson in economics that even a child could not misunderstand. She said:

You cannot pay yourself more money unless you do more work.

You cannot print more money unless you produce more goods.

You cannot have more jobs unless you have more investment.

You cannot have more investment unless you have more savings.

You cannot have more savings unless you keep faith with the saver.

You cannot keep faith with the saver unless you have sound money.

You cannot have sound money if you spend beyond your means.

And you cannot increase your means unless you increase your efforts.

America was built on the principles of self-reliance, the profit motive, individual action, and voluntary charity. It was built by those who believed that the surest helping hand was at the end of their own sleeves. These forefathers of ours shared one thing in common—an unshakable faith in God and a faith in themselves. Today, Washington is being looked to as the provider of whatever is needful . . . at no cost to ourselves. If this trend is permitted to continue, the states and counties will be but hollow shells, and we will find ourselves in the same predicament as England.

It was heartening for me to see recently a testimony of the principles of faith in God and individual initiative in action. As you know, the eastern sector of Idaho was devastated by the Teton Dam flood. I went over the entire area by helicopter and car. Immediately after the flood, government relief agencies were dispatched to the area. Government officials, veterans to the scenes of national disasters, were amazed at the reactions of these people to this seeming tragedy. Though victims of property loss, they are not victims of despair, despondency, and defeat. They collectively met in their Church meetings and thanked God for their lives, then they organized themselves and rolled up their sleeves and went to work. Even though welfare assistance and government food stamps were made available, these victims, by and large, chose the route of self-reliance. Because of this, they will emerge from this catastrophe stronger and more faithful.

Any country which pursues policies that cause the self-reliance, initiative, and freedom of its people slowly to drain away is a country in danger. And though this truth is not as evident to many as it once was, we hope that it will be a truth upheld by our great institutions. This leads me to the final pillar:

4. Elected government officials who are wise and good, and a vigilant, informed citizenry.

You will note that I have qualified what, to me, should epitomize those fit to lead. They must be both good and wise. Some men are good, too naïve to be wise statesmen. Other men possess great intellect, but are not morally good. A nation, to endure, must have leaders at the helm whose mandate is higher than the ballot box. When James Russell Lowell was asked, "How long will the American Republic endure?" he replied: "As long as the ideas of the men who founded it continue dominant." Constitutional government, as designed by the framers, will survive only with a righteous people. "Our Constitution," said John Adams (first Vice President and second President), "was made only for a moral and religious people. It is wholly inadequate to the government of any other."

Righteousness is an indispensable ingredient to liberty. Virtuous people elect wise and good representatives. Good representatives make good laws and then wisely administer them. This tends to preserve righteousness. Unvirtuous citizenry tend to elect representatives who will pander to their covetous lustings. The burden of self-government is a great responsibility. It calls for restraint, righteousness, responsibility, and reliance upon God.

As presiding officer of the Constitutional Convention, George Washington appealed to the delegates in these words: "Let us raise a standard to which the wise and the honest can repair." Wise and honorable men raised that glorious standard for this nation. It will also take wise and honorable men to perpetuate what was so nobly established.

If a government is really the sum of its people, and they are sovereign, then it follows that they must be watchful, vigilant, and informed lest their liberties become gradually usurped by naïve or unscrupulous leaders and they awaken to find their liberty gone. Despotism does not arise on the platform of totalitarianism, or anything resembling it. It is voted into office on platitudes of "democracy," "freedom," "national planning," "New Dealism," "The Great Society," and "New Federalism." In reality, government should do nothing economically for a people that they can do for themselves. To pursue policies to the contrary weakens national initiative and destroys character; and, politicians who prey on the gullibilities of the electorate to stay in public office are unworthy of the trust given to them. A citizen of this Republic cannot do his duty and be an idle spectator.

It was Alexander Hamilton who warned that: "Nothing is more common than for a free people, in times of heat and violence, to gratify momentary passions, by letting into the government principles and precedents which afterwards prove fatal to themselves."

These, then, are the pillars upon which any nation's national security rests:

1. A faith in God and in the univeral brotherhood of all mankind.

2. Strong homes and family ties.

3. A political climate and governmental system which protects man's inalienable rights.

4. Elected government officials who are wise and good, and a vigilant, informed citizenry.

I have great faith in America and its people. This is a choice land. If we live and work so as to enjoy the approval of a Divine Providence, will endure as a nation. Without God's help, we cannot long endure.

Today we face a crisis situation in our beloved Republic. There is first of all a spiritual crisis among our people. In our quest for material things, we have forgotten God. There is a crisis for competent, honest, and moral leadership in government at all levels. There is an economic and political crisis, where our basic freedoms stand in jeopardy because of a departure from fundamental principles. We must return to these basic principles if our free Republic is to survive.

Yes, in the words of Thomas Paine, "These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country; but he that stands it now, deserves the love and thanks of man and woman." That was said on December 23, 1776. Now, 200 years later, Paine's words are even more apropos to our situation.

The days ahead are sobering and challenging and will require the faith, prayers, loyalty, courage, and moral integrity of every American citizen. May God bless us to be equal to the task.

BANK RECORD PRIVACY

HON. EDWARD W. PATTISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. PATTISON of New York. Mr. Speaker, there is considerable interest in the issue of bank record privacy, and I would like to take this opportunity to discuss what is now being done about this issue in the House Committee on Banking, Finance and Urban Affairs, on which I serve.

In September of this year the Subcommittee on Financial Institutions Supervision, Regulation and Insurance, chaired by FERNAND ST GERMAIN, held hearings on the proposed Safe Banking Act. Along with other issues, the subcommittee considered the need to protect the confidentiality of bank customers' records.

Although on the full committee, I do not serve on the Financial Institutions Subcommittee. However, that panel did invite me to participate in their discussion of bank record privacy on September 20.

Title XI of the proposed Safe Banking Act is entitled the "Right to Financial Privacy Act." The language of that portion of the bill is derived in large part from the Bill of Rights Procedures Act, H.R. 215. In the last Congress I served on the Judiciary Subcommittee on Courts, Civil Liberties and the Administration of Justice; we spent a total of more than 40 days considering the Bill of Rights Procedures Act, authored by Senator MAC MATHIAS and then-Congressman Charles Mosher. This year, I am a cosponsor of that legislation as it was reintroduced by Senator MATHIAS and Representative CHARLES WHALEN.

My testimony before the Financial Institutions Subcommittee indicated that I thought they had made several substantive improvements over the original Bill of Rights Procedures Act. In particular, I noted the Right to Financial Privacy Act's application to State and local government officials, as well as those at the Federal level. Also, I thought its application to electronic funds transfer systems and its specification of the customer's right to standing in a motion to quash a subpena were sound improvements.

However, I also noted several areas where I thought changes were needed in the legislation before the subcommittee. Speaking for myself, and also on behalf of the sponsors of the Bill of Rights Procedures Act, I offered several proposals for changes to be made in the pending legislation. I am pleased to note that most of our suggestions appear to have met with the approval of the subcommittee.

Congressman JOHN CAVANAUGH, a member of the subcommittee, is the principal architect of the Right to Financial Privacy Act. Last month he reintroduced that legislation as H.R. 9909, incorporating several key changes.

First, the new bill extends its coverage beyond banks and other depository institutions, to include credit card issuers. This, I believe, is a great improvement, as the privacy of credit card records should be guarded just as closely as that of bank records.

Second, the language of the proposed Right to Financial Privacy Act has been modified to much more closely parallel that found in section 1205 of the Tax Reform Act of 1976, which established rules for Internal Revenue Service agents' access to bank records. This change in the new legislation will make it much easier for bankers to comply with the law, because they will not be confronted with two different sets of standards and procedures.

Third, the proposed legislation has been revised to specify that if a customer objects to enforcement of an administrative subpena, the Government must go to court in order to overcome the objection. This was implied in the original version, but the new language removes any ambiguity.

Fourth, the section on search warrants has been revised, to provide that customers must be notified that their files have been examined. When necessary, a Federal court could order a delay in the delivery of the notice, though. Restoration of the notice requirement, I believe, is an important safeguard against abuse.

Fifth, language has been added to the bill, requiring written notice to the bank or credit card issuer if an objection is lodged to enforcement of a subpena, and also requiring certification to the record holder that the objection has been withdrawn or overcome before the records can be released. This is in keeping with the idea that the record holder should be protected against being forced to make subjective judgments about the disclosure of records.

The procedures set forth in the new language are still a bit cumbersome, and I will endeavor to help refine it further, but it does reflect a fair improvement.

At this point, it is not clear whether the Financial Institutions Subcommittee will take up bank record privacy as a separate issue in the next session or if it will continue to regard it as a part of the larger, more controversial bill, the Safe Banking Act. In any event, I am pleased to note the general progress being made toward perfecting the Right to Financial Privacy Act. I think the prospects for its enactment next year appear reasonably good.

Mr. Speaker, in the testimony presented on September 20, I said:

> When I was in private law practice in Troy, New York, my firm represented a number of small banks, both commercial and thrift. I know, from my dealings with bankers in New York State and with trade association representatives here in Washington, that financial institutions are very concerned about maintaining the confidentiality of their customers' records.

Subsequently, I sent copies of my prepared remarks to bankers in my district. Along with the testimony, I sent an explanatory note and a request for their comments.

At this point in the RECORD, I wish to insert excerpts from some of the letters I received in the past month from bankers in my district. Their comments are just one more indication of the popular support, both within the banking industry and among the general public, for improved protection of bank record privacy. The letters follow:

GLENS FALLS NATIONAL BANK
AND TRUST CO.,
Glens Falls, N.Y.,
Greenwich Office, October 31, 1977.

Hon. NED PATTISON,
Congress of the United States, Longworth House Office Building, Washington, D.C.

DEAR MR. PATTISON: I am in agreement with the points made by you in your testimony before the Subcommittee on Financial Institutions Supervision. More and more, my customers question me as to who may have access to their records. The vast majority have nothing to hide, but are concerned that someone besides their banker will know their business. I realize that different government agencies must have information from time to time, but my thought is that in many cases an agent could more readily obtain the needed information from the person involved instead of turning to the bank first. As you pointed out, it is very costly and time consuming for us to search our records, and on some occasions has cost us a customer.

I appreciate your asking for my thoughts and hope that the above is helpful to you.

Sincerely,

WILLIAM H. G. CLARK,
Assistant Cashier and Branch Manager.

ALBANY SAVINGS BANK,
Albany, N.Y., November 3, 1977.

Hon. NED PATTISON:
House of Representatives, Longworth House Office Building, Washington, D.C.

DEAR NED: I thoroughly endorse the thrust of your suggestions to the Subcommittee.

As both a banker and a citizen, I strongly favor whatever legislation is necessary to insure privacy for our citizens not only in the conduct of their banking business, but in their affairs generally. The less government prying and in fact the less government regulation that we can obtain, the better off we will be as a society.

As a banker, of course, I appreciate your efforts to insure that in being responsive to legitimate governmental demands for information concerning the records of our depositors and borrowers, we may be protected by appropriate legal safeguards.

I would be pleased to give any further evidence of my support for your proposal as you might find appropriate.

Sincerely,

VINCE.

THE FIRST NATIONAL BANK
OF GLENS FALLS,
Glens Falls, N.Y., November 9, 1977.

Hon. EDWARD W. PATTISON,
Longworth House Office Building,
Washington, D.C.

DEAR NED: The thoughts contained in your statement of September 20 before the Sub-Committee are well thought out and very needed. I have taken the liberty of sharing your statement with several of my associates and they all agree with your concern about the issue of confidentiality of customer records.

We feel strongly that your point that the customer is entitled to know at some point that his records have been examined, by whom, and for what purpose, is a good one. Not only does the customer need to be treated fairly, but he must always feel he can have confidence in his bank and know they are treating his records fairly.

We would not make any changes in your statement and, in fact, commend you for your position on this issue. It will be of interest to us to follow the progression of this through Congress. Good luck and thank you for seeking our views.

Cordially,

WILLIAM T. CLARK,
Chairman.

BALLSTON SPA NATIONAL BANK,
Ballston Spa, N.Y., November 16, 1977.

Hon. NED PATTISON,
House of Representatives, Longworth House Office Building, Washington, D.C.

DEAR MR. PATTISON: Thank you for the opportunity to comment on your recent testimony concerning "confidentiality of Bank customers' records."

As a representative of a small (approximately $32 million) commercial bank, I heartily concur with your observation that "The banker is an innocent bystander to any exchange between his customers and the government; . . ." and you are to be commended for recognizing the difficult position that has been forced upon bankers.

In response to your five points:

First, a clear cut set of rules governing access to financial records would certainly help to relieve the unnecessary burden which we now face. However, it would be even more meaningful if it were possible to require agents of the various States, such as the Crime Task Force, the Department of Audit and Control, and the BCI, to also be included under the same rules. We find that compliance at best is costly, but it becomes even more costly when agents seek access but have not come prepared with the necessary supporting subpoenas.

Second, we heartily support your recommendation that credit issuers be included under the Bill. Piecemeal legislation has consistently been one of the horrors of the banking industry.

Third, we make every effort to contact the customer and notify him that his records have been subpoenaed. However, the execution of our fiduciary responsibility could be greatly enhanced if a Government agent should be required to certify to the bank at the end of a reasonable waiting period that no objections have been filed by the customer.

Fourth, every person should be entitled to a notice whenever his records are examined by persons from outside the financial institution or its supervisory agencies and for what purpose. As you stated, the Courts could act in those rare instances where there is a need for a particular search to be kept secret until after an investigation is completed.

Fifth, as a point of principle, we support your concern as it relates to the need to clarify the manner in which conflicts between customers and Government agents will be resolved.

Confidentiality of customer records is a very sensitive issue to us; and, as bankers continue to be overwhelmed by mandated legislative and regulatory directives and controls, we should, at a minimum, be entitled to expect a clear cut definition of the ground rules and accepted procedures.

Sincerely yours,

JAMES WHELDEN, *President.*

GLENS FALLS NATIONAL
BANK AND TRUST CO.,
Glens Falls, N.Y., November 25, 1977.

Hon. EDWARD W. PATTISON,
House of Representatives,
Washington, D.C.

DEAR NED: With respect to financial privacy, we share your views and support the position you have taken. We are very much concerned with this matter. Private citizens are upset and blame the banks for the virtually unlimited access to financial records by government agencies.

Orderly and rational procedures should be established for granting access to our records, and they should be uniformly applied to all government agencies. The exemption of I.R.S. agents would effectively establish two sets of rules. Moreover, it is not clear that present laws and regulations adequately protect the individual tax payer under I.R.S. special procedures for third party summonses. Under the present section 7609, exceptions seem to be granted for purposes of gaining information concerning identity or to assist in collections against persons already assessed.

We agree with your contention that this bill should be expanded to cover records held by credit card companies and other credit issuers subject to the jurisdiction of the Banking Committee.

We strongly agree with your third recommendation that agents seeking records be required to certify that no objections have been filed after the customer has been duly notified.

In this context, we also agree with your fourth recommendation concerning notice to customers by the government agency involved whenever their records are examined by persons outside the financial institution or its supervisory agencies.

If, as you indicate, the customers' rights in resolving conflicts with government agencies are not clear, they should be revised.

In summary, we are completely in accord with your remarks, and appreciate your efforts.

Respectfully,
Robert P. Larson, C.F.A.,
President.

First Commercial Banks, Inc.,
Albany N.Y., November 10, 1977.
Hon. Edward W. Pattison,
House of Representatives, Longworth House Office Building, Washington, D.C.

Dear Ned: After reading your statement before the Subcommittee on Financial Institutions Supervision of the House Banking Committee, I can assure you that we are pleased with your position. Your understanding of the bankers problem is very encouraging to us and we hope you will be successful in moving your ideas forward.

I am sure you have a sticky one to resolve on Title XI relating to customer notification of record examination. The intent is good, I would only hope that the mechanics of such wouldn't be just one more burdensome and expensive requirement for the bank.

Overall, we're with you all the way on this. Good luck!

Cordially,
H. Newcomb Steuart, Jr.,
Executive Vice President.

THE NEW CHAIRMAN OF ACIR

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. BROWN of Ohio. Mr. Speaker, I have the pleasure of serving on the Advisory Commission on Intergovernmental Relations. The Commission, formed in 1959, provides Congress with objective, scholarly studies on the intergovernmental aspect of serious public policy problems. Since 1959 the Commission has produced a prodigious number of studies, has become a repository for facts on the Federal system, and has distinguished itself as an objective, no-nonsense body that can be relied upon for solid public policy research.

The Advisory Commission on Intergovernmental Relations was established by Public Law 86-380 passed in 1959 in the 86th Congress, and the oversight jurisdiction of the Commission was given to the Committee on Government Operations of the U.S. Senate and House of Representatives. Both these committees have responsibility to try to encourage the economy and efficiency of the Federal Government. The recommendations of the ACIR during its distinguished 18-year history have been consistent with that mandate of its oversight committees. Its first Chairman was named by President Dwight Eisenhower who, befitting the bipartisan nature of the Commission, selected Frank Bane, a Virginia Democrat, as the first Chairman. Bane served 6½ years and was replaced by Farris Bryant, who served 2 years before he was replaced by the present Chairman, Robert E. Merriam. Merriam had served in the Eisenhower administration and worked on the legislation originally creating the Commission and has continued its bipartisan traditions since his accession on October 30, 1969.

My concern and the thrust of my remarks today is whether this fine record will continue. Soon-to-be ex-mayor of New York City—Abraham D. Beame—has recently accepted an offer from President Carter to be Chairman of the Commission. I would like to take a moment now to express to you my disappointment that this particular job has been offered to and accepted by this particular man.

If there is one man whose service seems to embody the problems which have befallen government for a lack of sound management, it is Mr. Beame. His service as mayor of New York City and, immediately prior to that, comptroller of that city, spans the era in which the Nation's biggest city fell deeper and deeper into the quicksand of financial management difficulties. The indictment that Mr. Beame was unable to extricate his city from these problems would not be as damning if he had not had prior responsibility for recognizing and addressing the problems as the city's comptroller. In the recent election in New York, he was turned out of the office of mayor. The political burden of the city's near collapse during his incumbency was too great to bear.

Perhaps Mayor Beame should receive some charity for the efforts he has made since the problems of his city became public knowledge, but one cannot help but wonder why he failed to recognize these problems and call attention to them earlier. And now, to be named to chair the very commission which did recognize the financial management problems of New York and call public attention to them before Comptroller/Mayor Beame did would seem to be some kind of sarcastic joke.

In a report entitled "City Financial Emergencies: The Intergovernmental Dimensions," based on studies undertaken in 1972 and published March 9, 1973, ACIR identified the financial problems of several of the cities of the country and drew attention to the problems of New York which did not receive great public attention until a couple of years later.

Over the past few years, in daily news coverage, in the testimony of public officials and of business and financial analysts, the Nation has been made aware of the financial crisis facing the city governed by Abraham Beame. To anyone who has cared to read about New York since March of 1975, it has been made clear to the public that the city has been on the brink of financial disaster. The cause of this disaster has been manifold. Clearly, however, gross misjudgment in city leadership and financial mismanagement has been most responsible. It was argued by many at the time that Federal action had to be taken to prevent the financial collapse of the city if dire consequences were not to befall the Nation and the world. One could not help but wonder at the time whether this was truly a national problem as argued by the leaders of New York, or whether it was a lot of rhetoric, a purposefully designed strategy to scare money out of Washington to avoid the obvious need to cope at home with the problems.

In the 1972 study, ACIR undertook on the intergovernmental dimensions of city financial emergencies, ACIR studied 30 cities, including New York, that had serious financial problems. The Commission came to the conclusion in 1972 that not one of the cities had financial conditions such that timely action by local officials (or in a few cases, State officials) could not avert or promptly relieve a financial emergency. The key to a secure financial picture lay in a sound national economy and sound financial management at the local level. The Commission's report outlined the warning signs of coming financial disaster, and it provided a number of very specific recommendations calling for: an improvement in local financial management, severe regulation of short-term borrowing, and regulation of local retirement systems. It is my opinion that those recommendations are all as relevant today as they were in 1973.

Yet, it is only today, after a long and painful crisis, that the city is showing any sign of starting to take these recommendations seriously. From 1972 through 1975, when the crisis came to a boil, it was business as usual in New York City. The capital budget was used to finance operating expenses, short-term debt increased, revenues were over-estimated, expenses were under-estimated. The budget was balanced in name only. We could have all been spared this New York City debacle if the local officials of New York City, such as Mr. Beame, had taken ACIR's admonitions and recommendations seriously.

The question that we must ask is: Why did not New York put its house in order when the warning was sounded and there was still time? Were the officials of that city ignorant of what they were doing? I suspect not. What I suspect is that they were always confident that they could get someone to bail them out and that the strategy from the beginning was design to do just that.

The early strategy in New York was not one of conservation, retrenchment, and better management, but one of expanding the crisis, bringing the pot to a boil, and trying to precipitate a solution from outside. The city fathers apparently believed that if they drove the city far enough into bankruptcy, made the collapse as spectacular as possible, and tied other governments—particularly New York State—to the debacle, Federal aid would ultimately be forthcoming.

The strategy was a not-too-subtle form of blackmail. The spectacular almost occurred. The aid did come. But now the Federal Government is inextricably intertwined in the local affairs of New York City and local government and autonomy has received a severe setback if not a fatal blow. Where Federal moneys go, so goes the heavy Federal hand. New York City and other local governments have become addicted to Federal aid and are paying the price with their economic autonomy and political independence.

As I see it, the philosophy and purpose of the ACIR, as seen in its very charter and demonstrated in its works over the last 18 years, is totally at odds with the philosophy and demonstrated leadership abilities of Mr. Beame. While the ACIR was warning local governments in early 1973 to take action to prevent financial collapse, Mr. Beame and his cohorts in New York City were continuing the very dubious practices that the ACIR was trying to discourage. While the philosophy of the ACIR is to promote a strong Federal system balanced between national, State, and local governments, the strategy employed by the Beame administration to cope with the financial crisis in New York City was to strike a serious blow to that system.

RESOLUTION OF CONGRATULATIONS TO THE PEOPLES OF EGYPT AND ISRAEL

HON. CHRISTOPHER J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. DODD. Mr. Speaker, last week Congress passed a concurrent resolution commending the President of Egypt, Anwar el Sadat, and the Prime Minister of Israel, Menachem Begin, for the courageous steps they have taken to resolve the differences between their nations and to bring peace between Israel and her Arab neighbors through face-to-face negotiations in the context of a Geneva conference.

This resolution was offered in the House by the distinguished majority leader, Mr. Wright, and cosponsored by the distinguished minority leader, Mr. RHODES. I and about 50 other Members joined in cosponsoring this resolution, which I believe truly expresses the sense of Congress and the American people that the United States should encourage the parties to the Arab-Israeli conflict to reach a just and lasting settlement through the process of direct negotiations.

There are many critical issues which comprise the Middle East problem, but in my view there is one central issue—the willingness of the nations in the region to live in peace with each other within secure and recognized borders.

The steps taken by Israel and Egypt during the past 2 weeks indicate that the two most important adversaries in the Arab-Israeli dispute are ready to forgo war as an instrument for settling their differences. I fervently hope that Israel, Egypt, and the other parties to the conflict will move as quickly as possible to establish a lasting and fruitful peace in the region.

Mr. Speaker, just after the Sadat visits I submitted a "Resolution of Congratulations to the Peoples of Egypt and Israel" (H. Res. 914) applauding the efforts of President Sadat and Prime Minister Begin and urging all the nations of the Middle East to follow their example in beginning direct negotiations leading to peace treaties that will establish permanent peace and full normalized relations in the Middle East. Over 50 of my colleagues have cosponsored my resolution, which has been referred to the Committee on International Relations.

In light of the passage of the Wright resolution, I am sure that all of the cosponsors of my resolution would wish to join me in full support of House Concurrent Resolution 417.

At this point in the RECORD, I would like to include the texts of House Concurrent Resolution 417 and House Resolution 914. I would also like to include the names of all Members who have thus far cosponsored either resolution:

H. CON. RES. 417

Resolved by the House of Representatives (the Senate concurring), that it is the sense of the Congress that Anwar el Sadat, the President of Egypt, and Menachem Begin, the Prime Minister of Israel, be commended for the courageous steps they have taken to resolve the differences between their nations and to bring peace between Israel and her Arab neighbors through face to face negotiations in the context of a Geneva conference. We hope this will result in further face to face negotiations which will lead to a comprehensive, just and durable peace.

H. RES. 914—RESOLUTION OF CONGRATULATIONS TO THE PEOPLES OF EGPYT AND ISRAEL

Whereas the people of the United States earnestly hope that peace may be negotiated in the Middle East; and

Whereas President Anwar Sadat and Premier Menachem Begin have shattered the barriers separating Egypt and Israel by commencing direct negotiations; and

Whereas the two parties have agreed to continue their dialogue, paving the way toward negotiations resulting in the signing of peace treaties in Geneva between Israel and all the neighboring Arab states; therefore be it resolved that:

It is the sense of the House that the United States offer its congratulations to the people of Egypt and Israel, and that the United States encourage all the states of the Middle East to follow their example in beginning direct negotiations leading to peace treaties that will establish permanent peace and full normalized relations in the Middle East.

COSPONSORS

Wright, Rhodes, Brademas, Rostenkowski, Zablocki, Fascell, Rosenthal, Dodd, Bingham, Foley, Long of Louisiana, Yates, Fountain, Rooney, Alexander, Howard, Carney, Moakley, Danielson, Waxman, Blanchard.

Quillen, Skubitz, Hamilton, Carter, Hammerschmidt, Fraser, Cochran, Solarz, Wolff, Pepper, Zeferetti, Boland, Bonior, Thompson, Le Fante, Young of Missouri, Reuss.

Guyer, Ketchum, Corman, Marks, Hyde, Cornwell, Kildee, Flood, Conte, Edgar, Krebs, and Corrada.

Addabbo, Rogers, Don H. Clausen, Gilman, Erlenborn, Mitchell of Md., Lundine, Roe, Kemp, Lloyd of Cal., Mineta, Burke of Fla., Fenwick, Lott, Glickman, Wolff, Winn, and Yatron.

Edwards of California, Lagomarsino, Huckaby, Mikulski, Eilberg, Hughes, Gammage, Bedell, Roybal, Edwards of Oklahoma, Crane, Pease, Carr, Frenzel, LaFalce, Ottinger, and Ford of Tennessee.

KANSAS CITY

HON. IKE SKELTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. SKELTON. Mr. Speaker, those of us who live in and around the city of Kansas City, Mo., have known for some time of that city's many outstanding virtues and of the extraordinary civic pride of its citizenry. Recently, that city and its populace were severely tested by a flood which inundated a large portion of the metropolitan area. But, as Shakespeare says, "sweet are the uses of adversity." The people of Kansas City responded magnificently to the challenge. Acts of selfless heroism were so common that they were the norm, rather than the exception. Since the flood, the city has bounced back quickly and is showing every sign of being stronger than ever. Paul Harvey, the noted commentator, paid tribute to the spirit and determination of Kansas City in a recent speech. In a world where sacrifice and stick-to-it-ive-ness are sometimes thought of as disappearing, I think it is altogether fitting that Paul Harvey's remarks be recorded here:

[From Paul Harvey News, Oct. 29, 1977]

KANSAS CITY, LEAD ON

Kansas City, I love you! While the rest of us are debating and deliberating how to put the spurs to our lethargic economy without a resultant runaway—you are out front SHOWING the way. Lead on, Kansas City. This generation in this room right now inherited a city with tired blood. . . . An inadequate fog-shrouded riverfront airport . . .

Historic but outdated hotels . . . Smelly stockyards and provincial shops.

And you, in the snap of a finger as historical time is measured—a dozen years more or less—you watered these hillsides with sweat—You built a citadel city bound with ribbons and bows of concrete—And presented to the rest of us living evidence that the American dream is still good.

Your "show-me" citizenry sure enough showed us!

Nobody anywhere on planet earth has a sports complex to compare with yours. Nobody has an airport more nearly ready for the inevitable arrival of tomorrow. Your shopping areas, outdoors and indoors, are incomparable. There are no finer hotels than your newest. And all this without paving the parks, without obliterating history—and without forgetting the recipe for real and true BARBEQUE!

Then along came the storm clouds of 1977 to throw mud at your beautiful citadel. You didn't shake your fist at the sky and demand to know why. . . .

You didn't weep for yourselves or wait for Washington to bail you out. You bailed yourself out. Over there at Forty-eighth and Harrison police officers Gurrin and Price are diving for trapped people in parked cars when their police car floats away.

Some nameless somebody offered them a rubber raft so they could continue the rescue . . . When that got punctured they swam to anyone stranded . . . Our TV and radio stations have been inundated since with calls from people saying thanks to people they never got to know . . . Look at the Star and Times still getting notes of appreciation to whom it may concern who quote "rescued me but never gave his name."

I happen to know it was a carpenter named Dennis Watts who grabbed a man with one hand and a tree branch with the other and held his head above water for two hours in the dark . . . until firemen came.

And somebody in a floating VW on Wornall Road in the Plaza area may never know who threw a rope from the Nichols Parkway Bridge and pulled him through the sunroof to safety.

And when it was over . . . Kansas City had defended its beachhead on the river . . . With shovels and mops . . . the dug-in city dug out. No haggling over profits or losses or wages or hours . . . As the high and dry reached out to the hurt and the homeless . . . you picked yourselves up and wrung yourselves out and dried one another's tears and today the sun shines on a Kansas City proud and prospering and scrubbed brighter than ever.

Thank you, Kansas City, for showing the rest of us, fearful, timid souls who are likely to run scared from such trifling inconsequentials as Dow and Jones . . . Thanks for showing us again . . . The inevitable victory for indomitable men . . . Kansas City—lead on!

SCIENTIFIC EVIDENCE AGAINST MARIHUANA: PART I

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. McDONALD. Mr. Speaker, promarihuana propagandists have dominated the media for the last dozen years, urging legalization of cannabis on the ground that it is a "safe" euphoric drug, nonaddictive and without harmful side effects, and which has none of alcohol's hangover drawbacks for frequent prolonged use. In the past several years, scientific research has shown that all of those claims are false. Yet in the 1976 annual report to the President by the Domestic Council Drug Abuse Task Force, this information was reduced to a mere footnote by the political pressures in favor of legalization of marihuana and other psychotropic drugs. That footnote read:

> Recent research indicated that marihuana is far from harmless, and * * * chronic use can produce adverse psychological and physiological effects. Therefore, its use should be strongly discouraged as a matter of national policy.

This year the President's special adviser on mental health and drug abuse, Peter G. Bourne, M.D., expressed his support for legalization of both marihuana and cocaine. This position was a shock to the scientific community where researchers have been presenting papers on the deleterious effects of marihuana to international scientific meetings for some 3 years. Generally the pro-marihuana lobbyists have not been Presidential advisers, but rather members of radical nihilist political movements who view the use of euphoric psychotropic drugs as a weapon in the war against the continuation of America's political, economic, and social institutions; a faction of extremist civil libertarians who argue that society has no right to protect itself from dangerous psychotropic drugs like marihuana and yet generally support Government restrictions on substances like saccharine; other drug users; and drug dealers looking to expand their markets. In the latter context, Keith Stroup, who runs one of the more strident pro-pot lobbies called the National Organization for the Reform—formerly "Repeal"—of Marihuana Laws (NORML), admitted in an interview last year that some of NORML's funding has come from anonymous cash contributions from drug dealers.

Dr. Hardin B. Jones, professor of medical physics and physiology at the University of California at Berkeley, in 1967 was a hero of the marihuana legalization movement when he was quoted in the student newspaper as stating he knew of no evidence suggesting marihuana was harmful and, therefore, supported its legalization. Over the past 10 years, Professor Hardin has sharply revised his earlier position as his research has shown important harmful effects from marihuana.

Professor Hardin's article from the October issue of the Executive Health newsletter is a particularly lucid examination of the recent marihuana research findings which I commend to the attention of my colleagues:

[From Executive Health, October 1977]

ON THE PROBLEMS EXECUTIVES MUST ANTICIPATE WITH THE GROWTH OF MARIJUANA SMOKING

(By Hardin B. Jones, Ph. D.)

"Men occasionally stumble on the truth, but most of them pick themselves up and hurry off as if nothing has happened."—WINSTON CHURCHILL.

The Senior Scientist at the world-renowned Donner Laboratory of Medical Research, University of California, Berkeley, explains some little-understood facts that executives should know as the growth of marijuana use continues among employees.

Today, many adults, including some executives, smoke marijuana. Some start using marijuana to help themselves stop drinking. Some use it in an attempt to revive their failing sexual powers. Some find marijuana a substitute for tranquilizers or other medication. Some use the drug to keep up with the younger generation. Although the reasons older users smoke marijuana may differ somewhat from the reasons given by younger users (who may use it for peer identification or to alleviate social and sexual problems associated with adolescence and early adulthood), the deleterious effects are much the same. Those past the years when they plan to become parents may not worry so much about genetic damage as should younger users but the damage to the brain and the sexual mechanisms caused by marijuana should still be a subject of concern.

For more than a decade, we have been subjected to a flood of articles, books, and reports supporting the idea that smoking marijuana is simple fun and has no serious consequences. Earlier observations that marijuana was linked to mental disorders, to the use of narcotics, and to personality changes have been declared "obsolete" or "exaggerated." That these early observations are now supported by scientific studies and that many of the early studies were carefully conducted have been ignored.

There are problems with many of the reports supporting the harmlessness of marijuana. First, examinations of marijuana smokers early in their use do not reveal the long-range effects. Second, as marijuana causes adverse behavioral changes that the user cannot recognize in himself, some investigators may have been deceived by their own experiences with the drug. Because they cannot feel the ill effects themselves, many investigators have assumed that marijuana would turn out to be as free of long-term effects as most well-tested medicines.

Throughout the same period that the promarijuana reports were being published, the World Health Organization has continued to warn against the use of marijuana. Although some promarijuana inquiries in the past were sponsored by the British and Canadian governments, these governments have since issued clear warnings about marijuana.

THE EFFECT OF MARIJUANA IS PROBABLY NEVER TRANSITORY

Marijuana is an unusual drug in that the active ingredient, tetra hydrocannabinal (THC), is retained in the body for long periods of time. One study, conducted by Louis Lemberger of the Indiana University School of Medicine, has indicated that 30 percent of the THC is retained in the body at the end of a week. Similar retention occurs whether the users are heavily or lightly exposed to marijuana. From animal studies it appears that the 30 percent retained at the end of a week is eliminated much more slowly than the first 70 percent. Therefore, with repeated exposure, THC accumulates in the body.

THC is changed only slightly by metabolism. In this process, some is converted to a more psychoactive form. (There are about fifty cannabinoids in marijuana; those that have been studied retain their basic cannabinoid structure and fat solubility even though partly altered by metabolism.) THC is highly fat soluble and is, therefore, deposited in the fatty outer membrane of cells. THC appears to have adverse effects on all body cells, but there is reason to be especially concerned about its effects on brain cells and on the reproductive process.

ON DAMAGE TO THE CELL MEMBRANE

An important source for information on the toxic effects of THC on cells is the report of a symposium on marijuana presented at the Sixth International Congress of Pharmacology held in Helsinki in 1975.

More recently W. D. M. Paton, professor of pharmacology at Oxford, and Robert Heath, chairman of the Department of Psychiatry and Neurology at Tulane University, and their colleagues have shown the profound changes that occur in the surface membranes of brain cells in animals exposed to doses of marijuana within the range of typical human doses. Changes have been found to occur in the membrane of brain cells, red and white blood cells, liver and lung cells, and sperm.

ON BRAIN DAMAGE

Marijuana appears to injure the fine, hair-like extensions of the brain cell membranes that communicate with the other brain cells. Such damage is critical, for although each cell has tens of thousands of these connectors, the brain needs them all. They are the mechanisms of the mind.

One important study on the damage caused to the brain by marijuana has received too little attention. The late A. M. G. Campbell of the Department of Neurology, Bristol University, conducted a study of ten consecutive cases of young marijuana users who showed marked behavioral changes. X-ray examinations of their brains revealed that they all suffered from cerebral atrophy. The degree of atrophy correlated with the duration of marijuana use.

In the United States, Harold Kolansky and William Moore, professors of psychiatry at the University of Pennsylvania, were able to correlate the appearance of the symptoms of organic brain disease with marijuana use. In the *Journal of the American Medical Association* (June 2, 1975), they stated: In our reports, we detailed the toxic psychological effects of cannabis use in 51 of our patients, all of whom demonstrated symptoms that simultaneously began with cannabis use and disappeared within 3 to 24 months after cessation of drug use. Moreover, a correlation of the symptoms to the duration and frequency of smoking was established. When these observations were coupled with the stereotyped nature of the symptoms seen, regardless of psychological predisposition, we presumed that with intensive cannabis use, biochemical and structural changes occurred in the central nervous system."

That marijuana can cause brain damage has recently been confirmed by Robert G. Heath. In his study, Heath exposed monkeys for six months to doses of marijuana corresponding to moderate and heavy human doses. Before the brains of the monkeys were examined they were taken off marijuana for eight months. The site and degree of brain atrophy in the monkeys were similar to those in the young men in the Campbell study. Heath also examined the hair-like extensions of the brain cell membranes and found that these synaptic structures were also altered.

The findings of the Heath study were important confirmations of the Campbell study. The brain damage associated with marijuana observed in these two studies appears to account for the behavioral changes often observed in marijuana users.

ON GENETIC AND EMBRYOLOGIC DAMAGE

THC has been associated with genetic changes through the suppression of cell division and the alteration of protein synthesis. E. Sassenrath (in the *8th Technical Review on Genetics and Drug Abuse,* August 1976) has reported recent findings on the increase in malformations in the offspring of monkeys exposed to marijuana. These results, the first definitive findings on primate malformation associated with marijuana, confirm the results of earlier studies involving laboratory rodents. As many developmental abnormalities were found in the offspring when the father monkey alone was exposed to marijuana as when the mother was.

Even before Sassenrath's study was published, there was reason to suspect an association between malformation in human offspring and exposure to marijuana. Statistical tabulations on the number of malformed infants born in the United States over the past decade are now available. Although malformations had been on the decline in the United States for thirty years, since 1970 (coincident with the rise in marijuana use) there have been striking increases in malformations of the hip joint and of the cardiovascular system. It will take several years to compile more complete data, but it seems probable that marijuana use is the cause of this epidemic of malformation.

Two major studies have shown genetic and developmental damage in laboratory rodents after exposure to marijuana. One unpublished study, conducted by du Paul Lynch of Saint John's University, New York, examined the transmission of defects to succeeding generations. Excessive abnormalities appeared in two generations after exposure of the original animals. In this instance only two generations were studied. The other study conducted by Peter Fried of Carlton University, Canada, establishes a variety of genetic changes in offspring of rats exposed to marijuana. Developmental abnormalities were found to be equally frequent after the exposure of either male or female parents.

There are indications that the risks involved with "normal" marijuana use probably exceed the genetic risks associated with exposure to sublethal levels of radiation.

ON DAMAGE TO THE RESPIRATORY SYSTEM

The correlation between cigarette smoking and lung cancer, emphysema, and other respiratory problems is well known. Emphysema is found in 52 percent of those who smoke more than a pack of cigarettes a day; only three percent of nonsmokers develop emphysema. The death rate among cigarette smokers exceeds that of nonsmokers by 83 percent.

Tobacco smoking diminishes lung capacity. The amount of oxygen transported in the blood is decreased when some hemoglobin unites with molecules of carbon monoxide rather than oxygen. In addition, the lungs are irritated by the smoke and become inflamed.

With marijuana, because fewer cigarettes are smoked, less carbon monoxide is taken up in the blood. However, the lungs of the marijuana smoker become more irritated than those of the tobacco smoker. The irritation is greater because TCH is more tightly bound to the carbon particles in the smoke than nicotine is, and, in order to get an effect, the marijuana smoker must inhale deeply and hold the smoke in his lungs. After even a short period of exposure, as the carbon particles accumulate, the lungs of the marijuana smoker change permanently from pink to black.

According to the Leuchtenbergers, working at the Institute of Experimental Cancer Research in Lausanne, Switzerland, marijuana smoke causes a greater range and degree of damage to lung cells than tobacco smoke. Studies by the U.S. Army indicate that lung impairment occurs more rapidly with marijuana. Precancerous lesions have been observed in the air passages of the lungs of marijuana smokers, and autopsy examinations of the lungs of heavy marijuana smokers have revealed severe breakdowns in the lung structure.

ON MARIJUANA VS. ALCOHOL

Marijuana is often said to be like alcohol, but the two drugs are not at all alike. THC, the principal active ingredient in marijuana is highly soluble in fat and insoluble in water. THC remains in the fatty structures of cells for long periods and, with repeated use, accumulates there. Alcohol is a water-soluble food and is metabolized to provide cell energy. It leaves the body rapidly and completely. There is no residue.

Molecule for molecule, THC is 10,000 times stronger than alcohol in its ability to produce mild intoxication. For example, one drink containing 19 grams of ethyl alcohol is metabolized in an average-sized person in about one hour into carbon dioxide, water, and acetone; 50 grams of alcohol produces mild intoxication and is metabolized in about five hours. Only 5 milligrams (0.005 gram) of THC are required to produce the same degree of intoxication. THC is removed slowly from the body, and many months are required to recover from its effects. The marijuana user is under the influence of the drug even between highs.

Marijuana is a complex mixture of many cannabinoids, each of which may have different effects on the body. In addition, the retention of the cannabinoids in the body means that even small doses may have adverse effects. Many of the adverse effects correlate with the duration of the use rather than with the size of the dose, and there may be no truly safe range of exposure. With alcohol the adverse effects are brought about by the larger doses.

It takes decades for irreversible brain changes to appear in the heavy drinker. In the marijuana smoker, irreversible brain changes may appear within three years. Comparing alcohol and cannabis, W. D. M. Paton, professor of pharmacology, Oxford University, said: "The price [in health] for [marijuana] overuse is paid in adolescence or in early life; the price for alcohol overuse is paid in later life."

Along with cancer and cardiovascular disease, which are linked to cigarette smoking, alcoholism is another of the major health problems of this country. With the increasing use of marijuana, another major health problem has now been added. The problem is increased when marijuana is used with alcohol, as it often is. The two drugs *in combination* have a greater effect than the sum of their individual effects.

SENSUAL DRUGS AND THE PLEASURE CENTERS

Sensual drugs, of which marijuana is one, are drugs that the body has no need for but give the user a strong sense of pleasure. These drugs affect the reflex centers located deep within the cerebrum that appear to be the site in the brain of the pleasures we derive from the body, including the pleasures of eating, feeling alive and fit, and sex. The pleasure centers are probably very important in the development of learned behavior, for, along with pain, they form the basis for conditioning. Self-activation, emotions and mood, memory storage and recall, perception and awareness, desire, satisfaction of appetites, and sexual activity are dependent on the balance of reactions in these reflex centers.

The pleasure centers become active after marijuana is smoked. This has been demonstrated by Heath, the discoverer of the pleasure centers. Heath observed the response to marijuana of humans who had undergone brain surgery during which electrodes were placed at the site of the pleasure centers deep within the brain. He conducted similar studies on monkeys.

Although the pleasure centers are activated *artificially* by marijuana, the process would probably be more properly termed *irritation,* as the normal operation of the pleasure reflexes becomes impaired after they have been activated by marijuana. With heavy exposure to marijuana, the operation of the pleasure centers is suppressed. This suppression seems to correspond to what many researchers have called sensory deprivation. Sensory deprivation becomes progressively more severe the longer marijuana is used.

Even those who do not seem to be much affected by marijuana show a marked degree of recovery of their sensory perception and thought processes after several months of abstinence. The user's memory is the first thought process to improve; then his thought formation becomes more vigorous; finally, after several months of abstinence, he begins to notice that he feels more alive. The recovery of the sensual capacity comes last. The restoration of sexual inclination and capacity is a pleasant surprise to the person recovering from the chronic effects of marijuana. Although the user often was not aware of the gradual dimming of his mental and sensual functions he feels his recovery and is impressed by this proof that marijuana had indeed had adverse effects.

I have had less opportunity to study adults than I have men and women in their late teens and early twenties, but they seem to follow the same pattern in their recovery: mental functions that had not been missed return, especially memory and the accuracy of thought formation. However, for older people, recovery may be slower. This is to be expected. The body metabolism gradually declines with age and decreasing physical activity. The accumulated marijuana is eliminated from the body through the circulation and is excreted in the bile; this process is vigorous in youth and declines as we get older.

ON ADDICTION

Contrary to many reports and popular belief, marijuana is chemically addictive. It is addictive because the user can develop tolerance to its effects and suffers withdrawal symptoms when he abstains. The withdrawal symptoms are mild, so mild, in fact, that until recently they were not recognized as withdrawal symptoms. The mild symptoms include irritability, restlessness, and sleeplessness. More intense withdrawal symptoms have been observed in persons exposed for a few weeks to high doses of THC; restlessness, sleeplessness, rapid onset of irritability, loss of weight, nausea and vomiting, diarrhea, salivation, sweating, hot flashes, runny nose, hiccups and electroencephalographic changes during sleep.

The mildness of the marijuana withdrawal symptoms is explained by the fact that THC accumlates and is retained in the brain and body fat. Other sensual drugs that are not stored in the body produce more marked withdrawal symptoms.

Much debate over the dangers of specific drugs centers on the question of chemical or psychological addiction. A purely psychological addiction is usually considered controllable through conscious effort. Chemical addiction is considered less susceptible to mental control. Drugs thought to be merely psychologically addictive are considered relatively harmless; those that are chemically addictive are thought to have more serious consequences. Actually, there is an inseparable relationship between chemical and psychological addiction, and the two forms coincide when the addictive substance is a pleasure-giving drug.

The sensual drugs give pleasure chemically by stimulating the pleasure centers below the conscious level. The brain produces psychological responses to the chemical stimulation of its pleasure mechanisms. The brain's controls then become adjusted so that unmistakable discomfort results if the chemical is not supplied. Thus, chemical and psychological addictions are developed at the same time. Breaking a chemical addiction may be simple compared with breaking the psychological addiction. In fact, a psychological need for chemically induced pleasure drives even occasional users to repeat drug use.

ON MARIJUANA AND SEX

Some adults begin to use marijuana in an attempt to revive their failing sexual powers. They say marijuana does this by expanding the sense of time and by increasing the senses of touch, sight, and hearing. The aphrodesiac effect some users claim marijuana has can also be explained through the power of suggestion. Because the user believes in the effect, he actually feels the effect, at least for a time.

If the user, however, becomes tolerant of the drug and begins to take larger doses or more potent kinds of marijuana, he may find that he is decreasing the amount of sensory information his brain interprets as pleasurable. The magnification effect fails, and the sensory endings become anesthetized. The sense of touch diminishes. As a result, although marijuana may seem to enhance sex at the beginning when taken in small doses, it becomes progressively less satisfying as a sexual stimulant.

Older users who take marijuana to enhance their sex lives may find that at first the novelty itself increases their desire and makes the sex act more exciting. With continued use, however, their pleasure usually decreases. If they stop using the drug, they may find that they have become conditioned to arousal only with the aid of the drug and so cannot perform without it. If they are willing to try higher doses, the numbering effect increases and they may have difficulty reaching a climax. They may blame their difficulties or impotence on advancing age. Many of them, however, could probably recover their physical and mental health through the proper effort.

The vigor or failure of the sexual capacity is usually not dependent on the sexual organs. These organs are merely appendages of the skin, and, except for trauma or prolapses that may affect either men or women and which rarely occur, the sexual organs remain mechanically functional for the life of the individual. The sexual reflexes—sexual inclination, erection, preorgasmic events, orgasm, and postorgasmic changes—all center in the brain.

Many separate brain functions are involved in the sexual cycle, including the functions of both divisions of the autonomic nervous system (the divisions of the brain below the level of consciousness that rule over the vegative functions of the body and also regulate mood). The norms for the balance of the functional divisions of the brain necessary for sexual activity are probably narrower than for other types of responses. In the young and healthy person, the brain is able to compensate for much disturbance of the balance of the divisions of the autonomic nervous system brought on by alcohol, marijuana, or more powerful drugs. Thus, in the young, the sexual functions may not show many signs of disturbance. With age, the autonomic nerve centers lose their capacity to adjust, and the sexual response mechanisms are much more likely to be severely affected.

EFFECTS OF MARIJUANA ON OTHER MENTAL FUNCTIONS

We have all seen examples of the tragic effects of marijuana on the mind. Marijuana smokers seem to suffer from distorted emotional responses, disordered thinking, dullness, and slothfulness. Early in the use of the drug, these behavioral changes appear to be reversible, but as exposure continues, recovery is less and less complete. Those most severely affected are usually not employed. There are, however, many marijuana users in factories and offices who appear to be normal but who suffer chronically from an altered judgment that may affect the quality of their work.

The most extensive study of the lingering effect of the hemp drugs was conducted at the request of the Egyptian government by Professor Soueif. Over a period of twenty-five years, he observed 850 cases of hemp-drug users, which he matched against control cases. Both the users and the controls were given standardized tests of mental function. The tests showed that "those with a higher level of education—and/or intelligence—show the largest amount of deterioration from marijuana use." It appears that the cumulative detrimental changes induced by marijuana result in impaired judgment and a diminished capacity to take responsibility.

Marijuana has an adverse effect on the performance of high-level jobs. The user is frequently lethargic, lacks motivation, is prone to error, has trouble remembering important details, and cannot think practically about the future. These transformations are gradual and are not marked by the obvious signs of impaired ability; it is easy to spot the alcoholic, but not so easy to spot the marijuana user.

The dullness of the marijuana user appears long before he can actually be called amotivated. Although there have been no proper quantitative studies of the degree to which marijuana use induces carelessness, lack of attention, or failure to achieve the highest job performance level, the cost of marijuana use to the individual and to society appears to be high. In industry there appears to be as much reason to limit the job responsibilities of the marijuana user as to limit those of the alcoholic.

Studies of the influence of marijuana on drivers have shown that marijuana impairs judgment and reduces the driver's ability to gauge distance, speed, and road conditions. The severely altered behavior typical of the chronic marijuana user suggests that driving performance would be impaired even between uses; the user is never free from the burden of the active material.

There are other reasons for believing that the judgment of marijuana smokers is impaired. Marijuana users often accept the use of LSD, heroin, or cocaine, while the nonusers reject these more powerful drugs. The adverse effects of marijuana ranks next to the adverse effects of opiates as the reason given for admission to federally financed treatment centers. Marijuana use interferes with practical success and produces alienation, sometimes mild, but sometimes severe enough to be called paranoia.

Recognizing the marijuana user in the early stages of use presents a problem. The appearance of the residues of the cannabinoids in urine can be used to indicate use within the past twenty-four hours. The level of THC in the blood, fat, or feces can be used as an indication of the average level of intake over a period of many months. Chemical testing for these residues is now possible but expensive; rapid, inexpensive methods will probably be developed. A legal issue will then arise: Does a firm have the right to require that employees take a test for marijuana use?

A CASE OF HISTORY

Until recently most of the requests I received for advice about marijuana were from people in their teens and early twenties. Now I am receiving more and more requests for help from older people.

Recently an executive who read my article in Private Practice telephoned me. "Your article described me," he said. "It enabled me to comprehend how desperately I need help." He had started to use marijuana a few years ago, he told me, at the invitation of a just-out-of-college salesman he had hired. He found smoking marijuana a great way to unwind and began to smoke more and more frequently. "I now roll and smoke a joint six or seven times a day," he said. "To have enough appetite to eat, I usually have to start smoking before breakfast. If I haven't toked up since the previous evening, I get so paranoid by morning that I can't bear my awful thoughts. I got my wife started on marijuana, and now she is even worse off than I am. She has begun to have headaches continuously. We've tried to quit now for several months, but we can't; we need help. What shall we do?"

Bit by bit, under my questioning, he revealed that his income, which had been quite high, had fallen to a minimum. He had changed from a robust, healthy, enthusiastic, sexually active man, in love with his wife and devoted to his family, to a man emotionally empty and sexually and physically inactive. He and his wife, he felt, had stayed together only because there was no better alternative for either of them. He has begun, he said, to lose weight—his buttocks are now too thin to sit on a hard chair; his face is thin and sallow; his fingers tremble; and his memory plays tricks on him. His wife's headaches have become worse and worse. (From interviews with drug users, I have found that women get headaches after prolonged exposure to marijuana, whereas men get headaches during withdrawal.) Both he and his wife desperately want to return to the life they had before they started smoking marijuana.

They are already on the way back, for they sincerely want to stop using marijuana. But to be able to abstain completely, they will undoubtedly need professional help. Their recovery should be striking after six months of abstinence; their full recovery will probably take several years.

"WHY HAVEN'T WE BEEN TOLD THIS BEFORE"

The belief that marijuana is safe has become so entrenched that the steadily mounting proofs of its dangers are ignored. The political movement to "decriminalize" (legalize) marijuana has distracted attention from the health hazards. There are those in government, education. and science who have chosen to cope with the marijuana problem by making light of it or by condoning the use of the drug. For example, the following statement was treated merely as a footnote in the 1976 Annual Report to the President by the Domestic Council Drug Abuse Task Force: "Recent research indicated that marijuana is far from harmless, and . . . chronic use can produce adverse psychological and physiological effects. Therefore, its use should be strongly discouraged as a matter of national policy." When such statements as this are buried in footnotes, it is easy to see why people become confused.

This situation must change, for, in my experience, people are eager to know the facts. When I explain the effects of marijuana to audiences, someone always asks, "Why haven't we been told this before?"

I believe that if people know the evidence indicating the real dangers of marijuana, they will be discouraged from using it. In my teaching of drug abuse courses at the University of California and in my counseling around the world, I have found that by explaining how the brain functions and how marijuana affects this functioning, I was able to help people stop using the drug and to keep others from experimenting. The study of the brain is fascinating. The brain is the master control for both mind and body. It governs sensations, moods, thoughts, and actions, not by a magical process, but by a complex series of chemically regulated controls that are easily upset by sensual drugs. People become interested in knowing about the programming of sexual development in the brain; how the brain's control of sexual functioning and sexual dreaming can be disturbed by drugs; how drugs can cause the brain to make colors appear brighter, sounds clearer, and odors more intense; how drugs distort images and the sense of time. They learn the causes of drug-induced hallucinations, flashbacks, memory loss, pleasure and pain, and changes in mood. They are usually surprised to learn that these effects occur in the brain and that, although fascinating, they are indications of disturbed brain function.

ALL THAT WE ARE IS IN THE INTERACTIONS OF OUR BRAIN CELLS

Our thoughts and perceptions as normal persons cannot be improved by drugs. All that we are is in the interactions of our brain cells. With this understanding of how our brains work, the false notion that the mind is expanded by drugs can be replaced by a more profound appreciation of the complexity of our being. When potential drug users come to understand that the disorders induced by drugs are *interferences rather than additions to perception*, they will be in a better position to reject the use of mind-altering drugs.

To sum up: The risk is great for the persistent marijuana user, and part of the risk is that he may harm himself before he can recognize the warning symptoms. In the long run, executives who deal with life's situations through perseverence, self-discipline, and effort will be in a better position physically and mentally than those who depend on drugs to solve their problems. The pleasures of sensual drugs may be immediate, but they are not gratifying or sustained, and they are not greater than the naturally-induced pleasures. Natural stimulation through the senses, thought, and communication can expand the mind to give pleasure and gratification that do not fade.

INVESTING IN APARTHEID

HON. ELIZABETH HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Ms. HOLTZMAN. Mr. Speaker, American operations and investments in South Africa continue to be substantial despite the system of apartheid and the oppressive denial of civil rights there. Tom Wicker's analysis of how American corporate investments support apartheid merits further consideration. The text of his article on this subject, published in today's New York Times, follows:

INVESTING IN APARTHEID

(By Tom Wicker)

Following the death of Steve Biko and the Government's crackdown on the press, condemnation of apartheid in South Africa has become fashionable. Once again, as during the Soweto riots, the South African story is on the front pages and featured in the nightly television news reports.

Yet, as reported by Michael C. Jensen in The New York Times, about 350 American companies—Ford, G.E., Coca-Cola, I.B.M., Mobil, any number of others—have substantial operations in South Africa. Their aggregate direct investment in that country is nearly $1.7 billion, about 17 percent of all foreign investment there. American banks have outstanding loans and credits in South Africa totaling $2.2 billion, some of them directly to the Vorster Government; by some estimates, about a third of all borrowings by South African Governments and corporations come from American banks.

In the current issue of More magazine, Daniel Schechter, a journalist who was a founder of the Africa Research Group, reports that the United States imported nearly $1 billion in South African goods in 1976, while shipping about $1.85 billion in American products to South Africa. And he points out that Britain, traditionally this country's closest ally, has a $7 billion economic investment in South Africa—more than three times that of the United States.

Apartheid or no apartheid, Steve Biko or no Steve Biko, the United States does thriving and important business with South Africa. It follows, therefore, that the United States could have substantial influence on the South African Government if it were to use either economic sanctions or the plausible threat of them to try to bring apartheid to an end.

Unfortunately, it also follows that such economic sanctions would also interfere with profitable business operations in South Africa by American companies; Mr. Schechter's article says that in 1974 the return on investment in South Africa was 19.1 percent, compared to the world average of 11 percent.

In The Times, Mr. Jensen cited some examples of corporations recently reducing activities in South Africa, or banks re-examining the terms on which they might make further loans to that country. But he found that most, including all the giants, plan to continue or perhaps expand their South African operations. The rationale they offer, which is more or less officially shared by the U.S. Government, is that American investment in and business dealings with South Africa provide jobs for blacks, thus a higher standard of living than they might otherwise have, and that this ultimately will undermine the apartheid system.

Some company and Government officials may honestly believe that, but it's hard to see why. As Mr. Schechter points out, apartheid is not merely a system of segregating blacks but "an organized and highly structured method of controlling and exploiting black labor." Apartheid enables South Africa to finance, in effect, its industrial and agricultural development with cheap, virtually captive labor. Anti-union laws and strict regulation of the black population's movements and locations insures the availability of such labor; apartheid is virtually a system of peonage.

Even with all that American and British investment, moreover, unemployment among South African blacks runs at an estimated 40 percent. That helps insure cheap labor, and suggests that South Africa is not the booming economic bonzana that's sometimes pictured—not for South African blacks.

Seen in this light, unquestioning and unprotesting American investment in and trade with South Africa is bound to prop up the system of apartheid, not erode it. These dealings promote the stability of the Government, the prosperity of the dominant whites and the facade of respectability that South Africa tries so desperately to maintain. While the money pours in, the criticisms bounces off.

And what about South African blacks, who are supposedly being so greatly helped by American business? Mr. Schechter says that virtually every black South African leader favors economic sanctions; and that now includes Chief Gatsha Buthelezi, the leader of 5.8 million Zulus, who is known as a moderate.

A total American pullout from South Africa is neither practical nor necessary; but some stern American corporate decisions, to cut back or limit business-as-usual in that contorted country might have substantial impact. Official Government economic sanctions might be even more effective. At the least, American businessmen ought to stop kidding themselves, or disguising their profit motives; when they invest in South Africa, they invest in apartheid.

A DESIRE TO LIVE IN ISRAEL

HON. DAVID L. CORNWELL

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. CORNWELL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D.C., December 2, 1977.
General Secretary BREZHNEV,
Presidium of the Supreme Soviet of the U.S.S.R., Moscow, The Kremlin, U.S.S.R.

DEAR MR. CHAIRMAN: We are writing to ask that you allow Mr. Lev Ovsishcher to emigrate to Israel.

Mr. Ovsishcher, along with his wife and daughter applied to emigrate in 1973. Throughout his life he has been a law abiding citizen who in fact served his country heroically during World War II. For this service, Mr. Ovsishcher was recommended for the highest military award bestowed by the Soviet Union, the Hero of the Soviet Union, in recognition of his flying ability and brave acts as commander of an air squadron near Stalingrad.

After the war, Mr. Ovsishcher graduated from the Highest Military Air Academy in the Soviet Union, and subsequently retired with rank of colonel. Later on, he worked in the Scientific Research Institute of Mathematical Research in Economy.

Since he applied to leave the Soviet Union, Mr. Ovsishcher has been harassed, threatened and lost his military pension. All he wants to do is spend his last years in Israel with his wife and daughter after having served the Soviet Union for most of his life in different capacities.

Because you signed the Helsinki Human Rights document, we now strongly urge you to grant Lev Ovsishcher, his wife and daughter permission to emigrate to the State of Israel as soon as possible.

Sincerely,

Bill Brodhead, Steven Solarz, Jack F. Kemp, Dale E. Kildee, Claude Pepper, Frank Thompson, Jr., Henry A. Waxman, Antonio Borja, Won Pat, Margaret Heckler, Joe Moakley, Larry McDonald, Ted Weiss, C. B. Rangel, Lou Frey, Jr.,

Tom Downey, Raymond F. Lederer, Max Baucus, Liz Holtzman, Norman Lent, Joshua Eilberg, Bill Hughes, Bill Lehman, Henry J. Hyde, Dan Glickman, Parren J. Mitchell, Richard L. Ottinger, Peter H. Kostmayer, Ed Koch,

Daniel J. Flood, James J. Blanchard, David L. Cornwell, Paul Simon, Robert J. Lagomarsino, Mickey Edwards, Donald Fraser,

Members of Congress.

SENATE COMMITTEE MEETINGS

All committees, subcommittees, joint committees, and committees of conference are required to notify the Office of the Senate Daily Digest of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

The Office of the Senate Daily Digest will periodically prepare this information for printing in the Extensions of Remarks section of the CONGRESSONAL RECORD.

MEETINGS SCHEDULED

DECEMBER 13

8:30 a.m.
Energy and Natural Resources
To hold hearings on the nomination of Lincoln E. Moses, of California, to be Administrator of the Energy Information Administration.
3110 Dirksen Building

9:00 a.m.
Agriculture, Nutrition, and Forestry
Agriculture Research and General Legislation Subcommittee
To hold hearings on the safety of workers in the production of pesticides.
Until 5:00 p.m. 322 Russell Building

10:00 a.m.
Judiciary
Constitution Subcommittee
To hold hearings on S.J. Res. 67, proposing an amendment to the Constitution with respect to the proposal and the enactment of laws by popular vote of the people of the United States.
2228 Dirksen Building

DECEMBER 14

9:00 a.m.
Agriculture, Nutrition, and Forestry
Agriculture Research and General Legislation Subcommittee
To continue hearings on the safety of workers in the production of pesticides.
Until 2:30 p.m. 322 Russell Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To hold oversight hearings on the New York City Seasonal Financing Act.
5302 Dirksen Building

Commerce, Science, and Transportation
To hold hearings on the nomination of Ernest Ambler, of Maryland, to be Director of the National Bureau of Standards.
5110 Dirksen Building

Judiciary
Constitution Subcommittee
To continue hearings on S.J. Res. 67, proposing an amendment to the Constitution with respect to the proposal and the enactment of laws by popular vote of the people of the United States.
2228 Dirksen Building

DECEMBER 15

9:00 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee.
To hold hearings on the United Nations conference on science and technology for development in 1979.
Until 5:00 p.m. 5110 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To continue oversight hearings on the New York Seasonal Financing Act.
5302 Dirksen Building

DECEMBER 16

10:00 a.m.
Banking, Housing, and Urban Affairs
To continue oversight hearings on the New York City Seasonal Financing Act.
5302 Dirksen Building

DECEMBER 20

10:00 a.m.
Select Small Business
To hold hearings on the problem of agricultural labor certification for nonimmigrant aliens and small growers.
424 Russell Building

DECEMBER 21

10:00 a.m.
Select Small Business
To continue hearings on the problem of agricultural labor certification for nonimmigrant aliens and small growers.
424 Russell Building

JANUARY 17

9:30 a.m.
Judiciary
Citizens and Shareholders Rights Subcommittee
To hold hearings on problems associated with the rights and remedies of insurance policy holders, especially on questions of the cost to and coverage for such policy holders.
2228 Dirksen Building

JANUARY 18

9:30 a.m.
Judiciary
Citizens and Shareholders Rights Subcommittee
To continue hearings on problems associated with the rights and remedies of insurance policyholders, especially on questions of the cost to and coverage for such policyholders.
2228 Dirksen Building

SENATE—*Wednesday, December 7, 1977*

The Senate met at 12 meridian and was called to order by Hon. EDWARD ZORINSKY, a Senator from the State of Nebraska.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Prepare us, O Lord, for the journey to Bethlehem and to newness of life. May we be star-led to the manger-cradle and find Thee right in the family circle. May the tenderness of Mary deliver us from hardness of heart and the patience and love of Joseph save us from harsh judgments. May the shepherds watch keep our eyes open for every sign of Thy coming. Give us ears to hear the music of the skies. As wise men of old followed the star, move us to follow Thy guiding light to the place of peace.

In Thy holy name we pray. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., December 7, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable EDWARD ZORINSKY, a Senator from the State of Nebraska, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. ZORINSKY thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, December 6, 1977, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations placed on the Secretary's desk.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations will be stated.

NOMINATIONS ON THE SECRETARY'S DESK

The second assistant legislative clerk proceeded to read nominations placed on the Secretary's desk in the Coast Guard and the National Oceanic and Atmospheric Administration.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to move to reconsider en bloc the vote by which the nominations were confirmed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I make that motion.

Mr. SCHMITT. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(The nominations confirmed are printed at the end of today's Senate proceedings.)

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

DEVELOPMENTS IN PANAMA

Mr. ROBERT C. BYRD. Mr. President, two of the Panamanian newspapers, Critica and Matutino are reporting that the Panamanian Government has moved to abrogate two of the laws, or decrees, which were the subject of the delegation's discussions with Torrijos. I refer to the delegation which I recently led to Panama.

According to the press reports, the General Council of State, composed of legislative representatives and Cabinet members, has abrogated law 341 relating to the right of assembly and law 342 which was the summary administrative trial and detention provision—said to have been needed for "terrorism" cases.

Torrijos has been quoted as saying these actions follow his commitment to the delegation. He has also said that he will be discussing law 343 on press freedom with the journalists union.

These are, of course, very encouraging developments—both for the Panamanian people and for United States-Panama relations. They indicate that Torrijos is acting in good faith and is determined to meet the commitments he made to the delegation.

The State Department will keep us informed to further developments. It is to be hoped that Torrijos will follow through on these actions and will take definite action on press freedom.

Mr. President, on December 3, 1977, General Torrijos wrote a letter which has been delivered to me by Ambassador Gabriel Lewis, the Panamanian Ambassador to the United States. I ask unanimous consent that that letter from Gabriel Lewis, which contains a communication addressed to me from the Chief of Government, Brig. Gen. Omar Torrijos, be printed in the Record at this point.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Embajada De Panama,
Washington, D.C., December 3, 1977.

Hon. Senator Robert Byrd,
U.S. Senate,
Washington, D.C.

Dear Senator Byrd: I have received the following message from our Chief of Government, Brigadier General Omar Torrijos Herrera, with the request it be delivered to you immediately:

Hon. Senator Robert Byrd,
Majority Leader, US. Senate,
Washington, D.C.

Dear Senator: This is to inform you that our Council of State on December 2, 1977, at Frallón, repealed in its entirety Decree 342 of October 31, 1969, which refers to crimes against constitutional order and the State. This means that such crimes will be dealt with the Penal and Judicial Codes which remain as they were prior to 1968.

This is also to inform you that certain articles of Decree 341 which suspended constitutional guarantees also were repealed. These articles now repealed referred to prohibitions to hold public meetings in Panama City and Colon. Therefore, this public activity may be carried out throughout the country, including Panama City and Colon, as it always was in practice.

Within the next few days, proposed laws regarding public communication and printed matter will be discussed. We are awaiting recommendations by the Journalists Union which has expressed concern that repeal of the present law would make previous legislation applicable and that such legislation is considered as requiring updating.

I am keeping my word. Please convey this to your colleagues whom I dearly trust.

(Signed) General Omar Torrijos H.

I avail myself of this opportunity to renew the assurances of my highest esteem and consideration.

Gabriel Lewis,
Ambassador.

Mr. ROBERT C. BYRD. Mr. President, I yield back the remainder of my time.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from New Mexico.

Mr. SCHMITT. Mr. President, I yield such portion of the minority's time as the Senator from Virginia (Mr. Scott) requires to pay tribute to Mr. Arthur E. Scott.

TRIBUTES TO ARTHUR E. SCOTT

Mr. SCOTT. Mr. President, last Friday, with the death of Arthur E. Scott, I lost a friend and a neighbor from Fairfax County. The Senate lost one of its most familiar and friendly faces. Although we bore the same surname and lived in the same general area of Fairfax County, we were not related.

Arthur, or Scotty, as he was generally known on the Hill, came to work as a photographer for the International News Service in 1934. He became a photographer for the Republican Senatorial Committee in 1955, remaining until his retirement from the Senate last year. His wife Grace was a caseworker in my office for 10 years. She retired with her husband.

Perhaps Scotty was best known to Members of the Senate for his cheerful, friendly face, his smile, and his desire to share his photographic talents representing Senators pictorially in the best possible manner. He was a perfectionist in his work and persisted in placing us in what he considered to be the proper position in obtaining the best angle, the best background, and the best overall presentation of a specific happening of the moment.

I ask unanimous consent, Mr. President, to have printed in the Record at this point a more detailed statement with regard to Arthur Scott.

There being no objection the statement was ordered to be printed in the Record, as follows:

Arthur E. Scott

Born in Montpelier, Vermont, March 14, 1913. Moved to Washington with his parents and brother Clifton in 1925. The family ran a rooming house known as the Loch Raven Hotel at 3rd and Constitution Ave., on the site that is now occupied by the Department of Labor. Arthur often kidded about going to Arthur School on Arthur Place, just about on the spot where the fountain sparkles in the park above the Senate garage.

His career began as a copy boy on the Times-Herald newspaper in 1930 and he retired as the first photo-historian of the United States Senate in 1976. During these years he made many pictorial contributions to the history of our country, recording the activities of many national and international figures on the Washington scene. Scotty's ability as a photographer won him many prizes, as well as recognition among his colleagues. He served as President of the White House News Photographers Association in 1945, and later as Regional Director of the National Press Photographer's Association, of which he was a charter member. He was the Historian of both of these organizations at the time of his death on December 2, 1977.

When Arthur retired he mentioned that there was not one member of the Senate remaining who was there at the time he started covering the Hill for International

News Photos in 1934. These years also brought before his camera the wartime heroes and foreign dignitaries who appeared before the Senate and its Committees, and he became a popular figure at the Capitol with his ready smile and willing spirit.

In 1955, when the Republican Senatorial Committee was looking around for photographers, Scotty was one of the two chosen to provide photographic services for Republican Senators. This was a new approach to keeping the constituents aware of the day by day activities of the Senators in Washington and his pictures went to all sections of the country, depicting legislative activities and current events in the Nation's Capitol. He covered the Republican National Conventions from 1956 through 1972, as well as many other momentous occasions during this period. The click of his camera is silenced but his pictures will be a living record of his efforts to preserve the history of our country for those who will build the future.

Mr. SCOTT. Mr. President, I extend my deepest sympathy to Grace and to the other members of the family on the loss of this fine man.

I am glad to yield to the distinguished Senator from West Virginia.

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

Mr. RANDOLPH. Mr. President, Scotty, as he was known for so many years by those of us who work on the Hill, was not exclusively a Republican photographer, although he was a part of the organization of those who sit on the other side of the aisle. There were many times when I would need a photograph with a constituent or constituents. It could be a hurried photographic request. The Democratic photographer would not then be available. Scotty had led me to feel that if there were such an occasion I could call upon him. If he were available he would fill in, he would help.

I knew Scotty so very well. I know Grace. I have talked with her since his passing. He was a superb photographer, of course. He had a certain diligence about him as he did his job. The Senator from Virginia (Mr. SCOTT) has characterized him correctly when he has spoken of Scotty as a cheerful person. He certainly was always that. When men like Scotty leave not just a profession but the area in which they have labored, there are many of us who do not forget them. It will be so with me in Scotty's passing.

Mr. SCOTT. Mr. President, I appreciate the kind remarks offered by the distinguished Senator from West Virginia. Scotty was a Republican and I believe was on the payroll for a period of years of the Republican senatorial campaign committee. He did love the Senate and, I believe, each Member of the Senate.

Mr. CURTIS. Mr. President, I wish to pay tribute to a good man, a gentle man, a kindly man, whom we all called Scotty because we loved him. He is gone from our midst, for this radiant Christian has been called to his reward.

Scotty will be remembered as he walked around these Halls with his camera, ever ready to record in pictures an interesting moment for a constituent, as well as for a Senator. During the years that he served as an official photographer for the Senate Republicans he won a host of friends because he was a friend to all.

Scotty was never impatient, always courteous, and always willing to do a little more or to take a little more time than was required. As a photographer he was an artist. His work was superb.

Mrs. Curtis and I extend to his widow, Grace, and to the rest of the family our most sincere sympathy in his passing.

Mr. DOLE. Mr. President, Arthur Scott, a friend of mine and many other Members of the Senate, especially Senators on this side of the aisle, died last Friday of cancer. I would like to express my sympathy to his wife, Grace, and other members of his family.

Many of us saw Scotty almost daily, sometimes several times a day, in his capacity as Republican Senate photographer. His winning manner with constituents, his humorous approach to his work, and his ability to be several places at once when different Senators were ready to have their picture taken, made him a truly outstanding servant of the Senate.

His ability to keep constituents entertained while waiting for a Senator to arrive—and his way of getting the very best pose for the photograph in a very few seconds, marked him as a truly outstanding photographer. He was very good to our constituents, and was very good to us.

I would like to express my gratitude for his many years of service and pass along my condolences to his wife and family

TRIBUTE TO THE APOLLO MISSIONS

Mr. SCHMITT. Mr. President, just a personal observation about today, December 7. It is often remembered as a day that, as I quote, "will live in infamy." But it is a day of great importance to this Nation, not only because of our entry into that great war, World War II, but because of another event that occurred just 5 years ago today. That was the beginning of the last of the Apollo missions to the Moon, a mission which I was privileged to serve upon, along with Capt. Gene Gernan and Comdr. Ronald Evans. I just want to pay tribute to those hundreds of thousands of Americans, most of whom were in the private sector, but many of whom were in NASA and in the Department of Defense and other agencies of the Government, who made possible possibly one of the greatest sequence of events in the history of mankind. That was man's first evolutionary step into the universe.

It hardly seems that 5 years have passed, but they have. Captain Cernan and Captain Evans and I, as we talked on the telephone yesterday and reminisced a little bit, all had the feeling that the next 5 years are going to be even more exciting for us personally than have been the last, and that the potential for the future of this country is even greater now than it was when the Apollo programs stopped.

We used for the motto of our particular mission to the Moon, Apollo 17: "This is the beginning, not the end." I think that should certainly hold for the country as a whole and certainly, I hope, for our future as a nation in space.

Mr. President, I have no further need for the minority's time. I yield that time back.

ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, there will now be a period for the transaction of routine morning business for not to exceed 10 minutes, with statements therein limited to 2 minutes.

ORDER FOR ADJOURNMENT UNTIL 1 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until the hour of 1 p.m. tomorrow.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

VITIATION OF ORDER TO HOLD BILL AT DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order to hold at the desk pending further disposition a bill by Senator HUMPHREY and others, designated as S. 2345, be vitiated. It was not the Senator's intent to introduce the bill, but only to have it printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE HOUSE

At 12:05 p.m. a message from the House of Representatives delivered by Mr. Hackney, one of its reading clerks, announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9375) making supplemental appropriations for the fiscal year ending September 30, 1978, and for other purposes; that the House recedes from its disagreement to the amendments of the Senate numbered 2, 5, 8, 10, 15, 25, 28, 29, 31, 32, 35, 44, 48, 49 through 51 inclusive, and 53 to the bill, and concur therein; that the House recedes from its disagreement to the amendments of the Senate numbered 1, 7, 16, 22, 23, 37, 52, and concurs therein each with an amendment; and that the House insists on its disagreement to the amendment of the Senate numbered 43, and requests that the Senate concur therein.

The message also announced that the House has passed the following bills and joint resolution, in which it requests the concurrence of the Senate:

H.R. 1405. An Act for the relief of Jennet Juanita Miller;

H.R. 1450. An act for the relief of Hildegard G. Blakeley;

H.R. 1777. An act for the relief of Cathy Gee Yuen;

H.R. 1787. An act for the relief of Paz A. Norona;

H.R. 5466. An act for the relief of Doris Mauri Coonrad;

H.R. 6760. An act for the relief of Charles M. Metott;

H.R. 8212. An act for the relief of Charles P. Bailey;

H.R. 8481. An act for the relief of M/Sgt. George C. Lee, U.S. Air Force;

H.R. 9071. An act to confer jurisdiction upon the U.S. Court of Claims to hear, determine, and render judgment upon the claim of John T. Knight; and

H.J. Res. 489. A joint resolution granting the status of permanent residence to certain aliens.

The message further announced that the House has agreed to House Concurrent Resolution 432, to assure quality health care for populations located in rural areas, in which it requests the concurrence of the Senate.

At 2 p.m., a message from the House of Representatives, delivered by Mr. Hackney, one of its reading clerks, announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6666) to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes.

The message also announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9418) to amend the Public Health Service Act to require increases in the enrollment of third-year medical students as a condition to medical schools' receiving capitation grants under such act, and for other purposes.

At 5 p.m., a message from the House of Representatives delivered by Mr. Hackney, announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 305) to amend the Securities Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such act to maintain accurate records, to prohibit certain bribes, and for other purposes.

The message also announced that the House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978.

The message further announced that the House agrees to the amendments of the Senate to the bill (H.R. 9378) to amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for 2 years, the date on which the corporation first begins paying benefits under terminated multiemployer plans.

The message also announced that the House agrees to the amendment of the Senate numbered 1 to the resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes; that the House agrees to the amendment of the Senate numbered 2, with an amendment in which it requests the concurrence of the Senate.

HOUSE BILLS AND RESOLUTIONS REFERRED

The following bills and joint resolution were read twice by their titles and referred as indicated:

H.R. 1405. An act for the relief of Jennet Juanita Miller; to the Committee on the Judiciary.

H.R. 1450. An act for the relief of Hildegard G. Blakeley; to the Committee on the Judiciary.

H.R. 1777. An act for the relief of Cathy Gee Yuen; to the Committee on the Judiciary.

H.R. 1787. An act for the relief of Paz A. Norona; to the Committee on the Judiciary.

H.R. 5466. An act for the relief of Doris Mauri Coonrad; to the Committee on the Judiciary.

H.R. 6760. An act for the relief of Charles M. Metott; to the Committee on the Judiciary.

H.R. 8481. An act for the relief of M/Sgt. George C. Lee, U.S. Air Force; to the Committee on the Judiciary.

H.R. 9071. An act to confer jurisdiction upon the U.S. Court of Claims to hear, determine, and render judgment upon the claim of John T. Knight; to the Committee on the Judiciary.

H.J. Res. 489. A joint resolution granting the status of permanent residence to certain aliens; to the Committee on the Judiciary.

The concurrent resolution (H. Con. Res. 432) to assure quality health care for populations located in rural areas, was read by title and referred to the Committee on Human Resources.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, December 7, 1977, he presented to the President of the United States the following enrolled bills:

S. 1316. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out State cooperative programs under the Endangered Species Act of 1973; and

S. 2328. An act to amend Private Law 95-21 to make a technical correction therein.

REFERRAL OF S. 2236

Mr. INOUYE. Mr. President, when S. 2236, the Omnibus Antiterrorism Act of 1977, is reported by the committees to which it has already been referred, I request that it be referred to the Select Committee on Intelligence pursuant to the provisions of Senate Resolution 400.

The ACTING PRESIDENT pro tempore. Pursuant to Senate Resolution 400, the bill will be so referred.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ZORINSKY) laid before the Senate the following communications, which were referred as indicated:

EC-2388. A communication from the Deputy Assistant Secretary of Defense (Installations and Housing), reporting, pursuant to law, six construction projects to be undertaken by the Army National Guard (with accompanying papers); to the Committee on Armed Services.

EC-2389. A communication from the Director, Defense Security Assistance Agency and Deputy Assistant Secretary (ISA), Security Assistance, reporting, pursuant to law, on the Departent of the Navy's proposed letter of offer to Australia for defense articles estimated to cost in excess of $25 million (with accompanying papers); to the Committee on Armed Services.

EC-2390. A communication from the Assistant Secretary of the Army (Research, Development and Acquisition), transmitting, pursuant to law, a report on Department of the Army Research and Development Contracts for $50,000 or more which were awarded during the period 1 April 1977 through 30 September 1977 (with an accompanying report); to the Committee on Armed Services.

EC-2391. A communication from the Assistant Deputy Chief of Naval Material (Contracts and Business Management), transmitting, pursuant to law, the Department of the Navy's semiannual report of research and development procurement actions of $50,000 and over, covering the period October 1, 1976, through September 30, 1977 (with an accompanying report); to the Committee on Armed Services.

EC-2392. A communication from the Attorney General, transmitting, pursuant to law, a report on the activities of the Department of Justice in the enforcement of title II of the Consumer Credit Protection Act for the fiscal year 1977 (with an accompanying report); to the Committee on Banking, Housing, and Urban Affairs.

EC-2393. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on the activities of the Office of Energy Information and Analysis, Federal Energy Administration, December 5, 1977 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC-2394. A communication from the senior adviser and director for International Narcotics Control, Department of State, transmitting, pursuant to law, planned changes in allocations of fiscal year 1978 funds authorized and appropriated for the international narcotics control program (with accompanying papers); to the Committee on Foreign Relations.

EC-2395. A communication from the assistant legal adviser for treaty affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within 60 days after the execution thereof (with accompanying papers); to the Committee on Foreign Relations.

EC-2396. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on "Combined Truck/Rail Transportation Service: Action Needed to Enhance Effectiveness," December 2, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2397. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on "Illegal Entry at United States-Mexico Border—Multiagency Enforcement Efforts Have Not Been Effective in Stemming the Flow of Drugs and People," December 2, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2398. A communication from the chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council of the District of Columbia on October 25, 1977, which would order the closing of an east-west public alley from 50th Street NE., to the rear property lines of Lots 42 and 53 in Square 5202, 50th and Meade Streets NE. (Act 2-101) (with accompanying papers); to the Committee on Governmental Affairs.

EC-2399. A communication from the chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council of the District of Columbia on October 25, 1977, which would order the closing of a north-south public alley between the East Washington Railroad right-of-way and an east-west public alley in Square 5217, bounded by 55th, Nannie Helen Burroughs Avenue, 56th, and Foote Streets NE. (Act 2-103) (with accompanying papers); to the Committee on Governmental Affairs.

EC-2400. A communication from the chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council of the District of Columbia on October 25, 1977, which would order the closing of an east-west public alley abutting on Lot 110, Lot 111, and two north-south public alleys in Square 754, bounded by 2d, E, 3d, and F Streets NW. (Act 2-102) (with accompanying papers); to the Committee on Governmental Affairs.

EC-2401. A communication from the chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council of the District of Columbia on May 17, 1977, and ratified by a majority of the registered qualified electors of the District voting in the referendum held for such ratification, which would amend the Charter of the District of Columbia to provide for initiative, referendum and recall (Act 2-46) (with accompanying papers); to the Committee on Governmental Affairs.

EC-2402. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on "Inequities in the Federal Withholding Tax System," December 2, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2403. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report on "Summary of Open GAO Recommendations for Legislative Action as of Sept. 30, 1977," December 5, 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-2404. A communication from the Assistant Secretary, Indian Affairs, Department of the Interior, transmitting, pursuant to law, two orders covering cancellations and adjustments in reimbursable charges existing as debts against individual Indians or tribes of Indians, May 12, 1977, and September 9, 1977 (approved Sept. 23, 1977) (with accompanying papers); to the Select Committee on Indian Affairs.

EC-2405. A communication from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, orders in the cases of aliens who have been found admissible to the United States (with accompanying papers); to the Committee on the Judiciary.

EC-2406. A communication from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, orders suspending deportation, as well as a list of the persons involved (with accompanying papers); to the Committee on the Judiciary.

EC-2407. A communication from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, orders entered in 826 cases in which the authority contained in section 212(d)(2) of the Immigration and Nationality Act was exercised in behalf of such aliens (with accompanying papers); to the Committee on the Judiciary.

EC-2408. A communication from the Chairman, Federal Election Commission, transmitting, pursuant to law, correspondence which it has sent to the Office of Management and Budget (with accompanying papers); to the Committee on Rules and Administration.

EC-2409. A communication from the Chairman, Nuclear Regulatory Commission, transmitting, pursuant to law, a report on "Abnormal Occurrences," July-September 1977 (with an accompanying report); to the Committee on Environment and Public Works.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs:

A special report on the conduct of monetary policy (together with additional and supplemental views) (Rept. No. 95-610).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

James K. Logan, of Kansas, to be U.S. circuit judge for the 10th Circuit.

Robert S. Vance of Alabama, to be U.S. circuit judge for the Fifth Circuit.

George C. Carr, of Florida, to be U.S. district judge for the middle district of Florida.

John L. Kane, Jr., of Colorado, to be U.S. district judge for the district of Colorado.

Alexander O. Bryner, of Alaska, to be U.S. attorney for the district of Alaska.

John H. Cary, of Tennessee, to be U.S. attorney for the eastern district of Tennessee.

Julian K. Fite, of Oklahoma to be U.S. attorney for the eastern district of Oklahoma.

Larry R. McCord, of Arkansas, to be U.S. attorney for the western district of Arkansas.

Michael H. Walsh, of California, to be U.S. attorney for the southern district of California.

Edward G. Warin, of Nebraska, to be U.S. attorney for the district of Nebraska.

Harry D. Mansfield, of Tennessee, to be U.S. marshal for the eastern district of Tennessee.

Rex O. Presley, of Oklahoma, to be U.S. marshal for the eastern district of Oklahoma.

Thomas Arny Rhoden, of Mississippi, to be U.S. marshal for the southern district of Mississippi.

John A. Roe, of Iowa, to be U.S. marshal for the northern district of Iowa.

Andrew E. Gardner, of North Carolina, to be U.S. marshal for the western district of North Carolina.

Edward P. Gribben, of South Dakota, to be U.S. marshal for the district of South Dakota.

(The foregoing nominations to be U.S. attorneys and U.S. marshals were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. THURMOND:

S. 2347. A bill for the relief of John A. Mitchell and Audrey E. Mitchell, of Columbia, S.C.; to the Committee on the Judiciary.

By Mr. INOUYE:

S. 2348. A bill to amend the Merchant Marine Act, 1920, by establishing a program of development grants for those seaports located in the domestic offshore States, territories, and possessions of the United States; to the Committee on Commerce, Science, and Transportation.

S. 2349. A bill for the relief of Margaret Perry; to the Committee on the Judiciary.

S. 2350. A bill for the relief of Thavorn Wong; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND RESOLUTIONS

By Mr. THURMOND:

S. 2347. A bill for the relief of John A. Mitchell and Audrey E. Mitchell, of Columbia, S.C.; to the Committee on the Judiciary.

S. Res. 331. A resolution to refer the bill (S. 2347) entitled "A bill for the relief of John A. Mitchell and Audrey E. Mitchell, of Columbia, S.C.", to the Chief Commissioner of the U.S. Court of Claims for a report thereon; to the Committee on the Judiciary.

JOHN A. AND AUDREY E. MITCHELL

Mr. THURMOND. Mr. President, on May 15, 1976, Chief Petty Officer John Henry Mitchell, Social Security No. 247-04-8073, U.S. Navy, of Columbia, S.C., died of Hodgkins disease, while a member of the Naval Service. It is alleged that his death was due to negligence by naval doctors because of the delay in treatment and diagnosis of the ailment, as Hodgkins disease.

In an effort to resolve differences of opinion concerning alleged negligence, I am introducing a private relief bill in behalf of Mr. and Mrs. John A. Mitchell, parents of the deceased. Concurrently, I am also introducing a resolution to refer this case to the Commissioners of the U.S. Court of Claims for review and submission of findings to the Senate.

Mr. President, I ask unanimous consent that the private relief bill and the resolution be printed in the RECORD.

There being no objection, the bill and resolution were ordered to be printed in the RECORD, as follows:

S. 2347

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $——— to John A. Mitchell and Audrey E. Mitchell of Columbia, South Carolina. The payment of such sum shall be in full satisfaction of all claims of the said John A. Mitchell and Audrey E. Mitchell against the United States for the loss of their son, John H. Mitchell, who died on May 15, 1976, while serving in the United States Navy and whose death, from Hodgkins disease, allegedly resulted from a failure on the part of naval medical personnel to make a timely diagnosis and treatment of such disease.

Sec. 2. No part of the amount appropriated by this Act in excess of 10 percent thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, any contract to the contrary notwithstanding. Violation of the provisions of this section is a misdemeanor punishable by a fine not to exceed $1,000.

S. Res. 331

Resolved, That the bill (S. 2347), entitled "A bill for the relief of John A. Mitchell and Audrey E. Mitchell of Columbia, South Carolina", now pending in the Senate, together with all the accompanying papers, is referred to the Chief Commissioner of the United States Court of Claims. The Chief Commissioner shall proceed according to the provisions of sections 1492 and 2509 of title 28, United States Code, and report back to the Senate, at the earliest practicable date, giving such findings of fact and conclusions that are sufficient to inform the Congress of the nature and character of the demand as a legal or equitable claim against the United States or a gratuity, and the amount, if any, legally or equitably due from the United States to the claimant.

By Mr. INOUYE:

S. 2348. A bill to amend the Merchant Marine Act, 1920, by establishing a program of development grants for those seaports located in the domestic offshore States, territories, and possessions of the United States; to the Committee on Commerce, Science, and Transportation.

DOMESTIC OFFSHORE COMMUNITIES SEAPORT DEVELOPMENT ACT OF 1977

Mr. INOUYE. Mr. President, I am introducing today a bill—the Domestic Offshore Communities Seaport Development Act of 1977—that takes necessary cognizance of Hawaii's and its sister noncontiguous States, territories, and possessions', unique and almost total dependence on ocean shipping for movement of its commerce, both interstate and foreign, by authorizing seaport development grants to those public agencies having qualified seaport development projects. The purpose of such grants is to financially assist such agencies in the construction, improvement, or repair of a publicly owned area or facility used for the docking of ocean-going cargo vessels; the receiving, sorting, segregation or delivery of cargo; and for other purposes—all with the objective of modernizing such area or facility and increasing its productive capacity.

If the shipping public and consumers are to have an efficient, lowest possible cost, surface transportation system linking them with the U.S. mainland, it is not enough that carriers performing such service have high-speed, modern vessels in operation. Of equal importance is the presence of modern and efficient seaport facilities through which cargo can be quickly processed and moved to and from the vessel.

Because of congestion and other factors at existing seaport facilities in my own State of Hawaii, this objective of efficiency and lowest cost is not presently realized.

The State of Hawaii's capital budget is necessarily subject to limitations which can result in postponement of, or delay in completion of these important projects at the Port of Honolulu, or other ports in the State. In connection with the financing of such projects, it should be pointed out that the citizens of Hawaii, through the medium of wharfage and dockage charges and other fees assessed by the State's Department of Transportation which are ultimately included in freight charges collected by ocean carriers serving the State, are already paying millions of dollars for the development and maintenance of seaport facilities.

Freight rates are already high and one factor in giving us living costs in Hawaii some 18 percent higher than in Washington, D.C. Federal assistance is essential if we are to achieve some measure of transportation equity with mainland areas. Ocean terminal development assistance for off-shore areas is a logical means of providing such assistance.

ADDITIONAL COSPONSORS

S. 123

At the request of Mr. INOUYE, the Senator from Pennsylvania (Mr. HEINZ) and the Senator from North Carolina (Mr. MORGAN) were added as cosponsors of S. 123, a bill to amend the Social Security Act to provide for the payment of services by psychologists, and for other purposes.

S. 676

At the request of Mr. BENTSEN, the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 676, a bill to provide loans for small businessmen.

S. 1997

At the request of Mr. INOUYE, the Senator from Oregon (Mr. HATFIELD) was added as a cosponsor of S. 1997, a bill to amend the Internal Revenue Code of 1954 to allow a deduction from gross income for social agency, legal, and related expenses incurred in connection with the adoption of a child by the taxpayer.

S. 2004

At the request of Mr. INOUYE, the Senator from Connecticut (Mr. RIBICOFF) was added as a cosponsor of S. 2004, a bill to amend the Internal Revenue Code of 1954 to permit an individual who is an active participant in a retirement plan to claim the deduction for retirement savings for amounts contributed by him to an individual retirement account, for an individual retirement annuity, or for a retirement bond, to the extent that the amounts paid by him or on his behalf under the retirement plan does not equal the maximum amount of the retirement savings deduction to which he would be entitled if he were not an active participant in such plan.

S. 2119

At the request of Mr. BENTSEN, the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 2119, a bill for the relief of Calvin Graham.

S. 2250

At the request of Mr. BENTSEN, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 2250, a bill to amend title II of the Social Security Act to eliminate the waiting periods for disability benefits and hospital insurance benefits with respect to any individual who becomes disabled as a result of a traumatic spinal cord injury.

S. 2300

At the request of Mr. ROBERT C. BYRD (on behalf of Mr. BAYH), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Minnesota (Mr. ANDERSON), the Senator from Illinois (Mr. STEVENSON), the Senator from Colorado (Mr. HASKELL), and the Senator from New York (Mr. MOYNIHAN) were added as cosponsors of S. 2300, the Civil Rights Commission Act of 1978.

SENATE JOINT RESOLUTION 101

At the request of Mr. DOMENICI, the Senator from Washington (Mr. JACKSON) was added as a cosponsor of S. J. Res. 101, a joint resolution to authorize the President to issue a proclamation designating a Memorial Sunday for firefighters who have been disabled or killed in the line of duty during the preceding year.

SENATE RESOLUTION 326

At the request of Mr. KENNEDY, the Senator from South Carolina (Mr. HOLLINGS), and the Senator from Minnesota (Mr. ANDERSON) were added as cosponsors of S. Res. 326, amending the Standing Rules of the Senate to require that reported bills and amendments containing or extending tax expenditures provisions be referred to the Committee on Appropriations and the committees having legislative jurisdiction over the subject matters involved.

SENATE CONCURRENT RESOLUTION 34

At the request of Mr. DOLE, the Senator from Indiana (Mr. LUGAR) was added as a cosponsor of Senate Concurrent Resolution 34, a resolution relating to the Holy Crown of St. Stephen of Hungary.

SENATE RESOLUTION 332—SUBMISSION OF A RESOLUTION RELATING TO THE PRESIDENT'S VISIT TO POLAND

(Referred to the Committee on Foreign Relations.)

Mr. DOLE submitted the following resolution, which was referred to the Committee on Foreign Relations:

S. Res. 332

Whereas the President will hold talks with Edward Gierek, the head of the Polish Communist Party, and other Polish Government officials on questions of mutual concern to the governments and peoples of Poland and the United States; and

Whereas the United States and Poland are signatories to the Final Act of the Conference on Security and Cooperation in Europe, known as the Helsinki Accords: Now, therefore, be it

Resolved, That it is the sense of the Senate that the President in his upcoming trip to Poland should discuss with officials of the Polish government—

(1) the restrictions imposed on family reunification and emigration, the free flow of information, and the practice of religion in Poland, and the effect of such restrictions on the Polish people; and

(2) the great importance that Americans in general and the Congress in particular attach to compliance with the human rights provisions of the Helsinki Accords.

SEC. 2. The Secretary of the Senate shall transmit a copy of this resolution to the President.

Mr. DOLE. Mr. President, President Carter is planning to visit Poland this month to discuss with Communist party leader Edward Gierek the various problems that Poland is having and how they can be resolved. One of the major topics of discussion will undoubtedly be the state of the Polish economy.

POLISH ECONOMY UNDER STRAIN

At the present time, the Polish economy is undergoing severe strains in trying to expand its agricultural and industrial base. To offset a worsening shortage of meat, Poland will continue to need grain imports to feed its livestock. Up to now, it has used Commodity Credit Corporation credit to provide a substantial part of its agricultural import financing. However, unless economic conditions improve in Poland, there is a possibility that Poland could in later years become ineligible for this form of credit. As a result, it would have to resort to cash payments to cover its agricultural purchases.

In order to raise the hard cash, its domestic industrial potential has to be developed and at the present time this can only be done by importing Western technology, again with the help of Western financing. In spite of the availability of credits at reasonable rates from the United States through the CCC, the Export-Import Bank, as well as most favored nation treatment, Poland has a $10.2 billion debt and an uncertain future in being able to meet interest and principal payments. According to some financial analysts, in 1980 when many Polish loans mature, it will be hard pressed to meet its obligations.

POSSIBLE POLISH DEBT CRISIS

The problem with the Polish debt is twofold. First, is its debt size in comparison to its exporting capacity, the debt service ratio? According to Eastwest Markets, the Chase Manhattan Bank's newletter, the Polish ratio at the end of 1976 was 47 percent, while 25 percent is considered generally acceptable by western bankers. Second, the total Soviet bloc indebtedness according to the best estimates is $40 billion. Poland alone owes $10.2 billion or more than 25 percent of the total debt owed to western countries.

There are an increasing number of experts who believe that a debt crisis is possible, not just in Poland but in all the eastern bloc and Soviet Union. Richard Portes, professor of economics at the University of London, wrote in the July issue of Foreign Affairs that there would be no easy exit from this crisis and a large default would shake confidence in European money markets.

I have brought up these economic issues because they have a direct bearing on President Carter's upcoming trip.

U.S. CONCERN FOR HUMAN RIGHTS

According to the Washington Post on November 1, 1977, the Poles are "looking for some economic payoff in return for what is expected to be a warm reception for Carter." I find this to be an inadequate payoff. The economic considerations are complex and difficult and to help in their resolution, if even possible, is not going to be easy for the United States and could endanger the stability of Western financial institutions.

If Gierek talks to President Carter about problems close to his heart, then President Carter should bring up the very great concerns we in America have over the Polish restrictions on family reunification and emigration policies. The Polish Government has allowed only 2,000 persons to emigrate a year. At this time there are 145 immediate families—consisting of spouses and their unmarried children—and 832 nonimmediate families—any relatives, either by blood or marriage—still seeking reunification.

RELIGIOUS DISCRIMINATION

Nor is Poland totally without discrimination against believers and without restrictions on their right to profess and practice their religious beliefs free from state interference. Children can only attend public schools, members of religious orders are formally prohibited from teaching in schools, certain documents of the Holy See cannot be published, chaplains are not admitted to prisons and religious processions and pilgrimages require permits which are given only selectively.

These are just a few of the restrictions and harassments that the Polish Government resorts to against believers. And these practices are unacceptable in terms of the Helsinki Final Act to which the Polish Government is a signator. The President should bring up each and every one of these violations. It is for these reasons that I am introducing a sense of the Senate resolution.

SENATE RESOLUTION 333—SUBMISSION OF A RESOLUTION FOR BETTER HEALTH THROUGH NONSMOKING

(Referred to the Committee on Rules and Administration.)

Mr. LEAHY submitted the following resolution, which was referred to the Committee on Rules and Administration:

S. RES. 333

Whereas, it is important that the Senate of the United States be not only a legislative body but also an example-setting body;

Whereas, it has been determined that cigarette smoking is a hazard to the health our citizens and remains the largest single unnecessary and preventable cause of illness and early death;

Whereas, cigarette smoking in enclosed areas results in being detrimental not only to the smoker but also to the non-smoker or "involuntary smoker"; now, therefore be it

Resolved by the Senate that from this day forward cigarette smoking shall be banned from all Senate hearing rooms while a public hearing is in session.

Mr. LEAHY. Mr. President, we have become painfully aware in recent years of the health hazards of smoking. In an effort to reduce the number of smokers, the advertisements have been banned from television and all others must include warnings. We are constantly informed by the American Cancer Society that there is a direct relation between smoking and heart and lung diseases. With all the information we have available to us, it is simply amazing the number of Americans who continue with this most unhealthy habit. We spend millions of dollars each year as we should on cancer research though one of the best preventive methods is right at our finger tips.

The rights of the nonsmoker has become quite an issue lately. We see smoking more and more either banned altogether from public places or being permitted only in restricted areas. I firmly believe that the nonsmoker has the right not to be inflicted with the toxic fumes of another person's cigarette. In that regard, I would hope that the Senate would agree to the resolution I am submitting today which would ban smoking in Senate hearing rooms while a public hearing is in session.

NOTICES OF HEARINGS

COMMITTEE ON HUMAN RESOURCES

Mr. WILLIAMS. Mr. President, I wish to announce that the Committee on Human Resources has scheduled a hearing on Thursday, December 8, 1977, at 2:15 p.m. in room 4232, Dirksen Senate Office Building, on the nomination of Leila I. Kimche, of Maryland, to be Director of the Institute of Museum Services.

SUBCOMMITTEE ON THE CONSTITUTION

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Senator from Indiana (Mr. BAYH), I wish to announce that the Subcommittee on the Constitution of the Committee on the Judiciary has scheduled hearings on S. 2300, the Civil Rights Commission Act of 1978, on Thursday, December 15, 1977, on Wednesday, January 25, 1978, and Thursday, January 26, 1978. The hearings will be held on all 3 days in room 2228 of the Dirksen Office Building.

ADDITIONAL STATEMENTS

DR. LAURENCE WOODWORTH

Mr. HATHAWAY. Mr. President, the United States is diminished today with death of Larry Woodworth. It is difficult to contemplate the loss of such a man—his warmth and grace coupled with technical brilliance will be difficult to replace. His credentials said "Doctor," but to all of us who knew him, it was Larry.

He was serving this country as Assistant Secretary of the Treasury (Tax Policy) at the time of his death. Prior to accepting that challenging position, he was chief of staff of the Joint Committee on Taxation.

Larry was a remarkable man. He has left his imprint on the solutions to the most technical problems of this country—taxation. His counsel and expertise will be missed as the administration and the Congress wrestle with tax issues.

There is a far greater gap left with Larry's passing. To paraphrase Will Rogers, "I never met a man who didn't like him."

Larry brought a warm and gracious presence to all who knew him. He captivated people with his sensitivity and wit. Larry's integrity and consideration were his hallmarks.

No one can claim a greater honor than to say: "I was a friend of Larry's."

I know we shall all miss him. All of us extend our sympathy to Margaret and the children.

The void left by Larry's death has diminished us all.

Larry Woodworth has left behind an extraordinary record of achievement and as many friends as those who ever met him.

When people ask, "What makes a great public servant?" I shall answer, "Look to the career of Larry Woodworth."

DEATH OF LARRY WOODWORTH

Mr. KENNEDY. Mr. President, Larry Woodworth's untimely death this morning deprives the Nation of one of the ablest and most respected public servants ever to grace the Halls of Congress or the executive branch.

The many public honors he earned throughout his career are a tribute to the extraordinary skill with which he guided the deliberations of Congress for so many years in the sensitive and extremely complex field of taxation and tax policy.

It was natural, therefore, that President Carter, in seeking the best, should turn to Larry Woodworth to fill the high position of chief tax adviser in the Treasury Department, and to be the architect of the President's comprehensive tax reform program.

It is fortunate for the country that his preparation of this program had been so nearly completed in recent weeks. But it is a special tragedy that we shall not have his wise assistance in the future, as the program moves through Congress.

In recent years, taxation and tax reform have been perennial issues before the Senate. Few, if any, pieces of legislation are more complex than the Nation's tax laws. You could tell when floor debate was about to begin on a major tax bill or on a conference report on tax legislation, because Larry Woodworth would arrive a few minutes in advance of the appointed hour, to confer with Senator Long, or the Senate leadership or the Parliamentarian, or other players in the forthcoming debate.

He was a master at making the hard ones look easy. He would have been a great teacher, because he had the rare ability to decipher even the most arcane passages of the Internal Revenue Code, and translate them into understandable provisions and clearcut policy choices on which the Senate could exercise its judgment.

Our respect for him was enhanced by the realization that he did everything twice. The same skill and judgment that served us so well in the Senate were also constantly at the service of the House of Representatives, as he guided tax measures through that Chamber, too. There are few, if any, more demanding staff jobs on Capitol Hill, and Larry Woodworth performed his dual House and Senate role in a way that earned him the friendship, affection, and respect of all of us.

Part of Larry's immense appeal was his great ability to steer an accurate middle course between conflicting viewpoints on complex issues. His advice and assistance were always available to any side in any debate. None of us ever left a floor debate without new admiration for Larry—not only for his knowledge, but also for his fairness and impartiality. Under his leadership, the Joint Tax Committee staff maintained an unsurpassed reputation for excellence and service on Capitol Hill.

All of us who knew Larry Woodworth deeply regret his sudden and tragic death. I extend my deepest sympathy to his family, and I shall miss him as a friend and wise counselor.

Mr. President, last January, on the occasion of Larry's appointment to his Treasury position, I had the occasion to write a letter to the editor of the Washington Post, expressing my support and respect for him. I ask unanimous consent that the letter be printed in the Record.

There being no objection, the letter to the editor was ordered to be printed in the Record, as follows:

Promising Appointment

I take mild issue with the comment in David Broder's otherwise perceptive column of Jan. 23, to the effect that, in choosing Dr. Laurence Woodworth as Assistant Secretary of the Treasury for Tax Policy, President Carter yielded too easily to the pressure of Sen. Russell Long.

I have no direct knowledge of the moves behind Dr. Woodworth's selection for the position, which is one of the most important jobs in the executive branch. But as a longstanding advocate of tax reform in the Senate, I think it is an excellent appointment, one for which Dr. Woodworth is doubly qualified—as an expert on the tax laws and on the way those laws are written by Congress. I believe the choice of Dr. Woodworth holds great promise for the cause of tax reform and for the early fulfillment of President Carter's commitment to that goal. My only regret is that the administration chose, at least for the present, not to upgrade the position to the level of Under Secretary.

President John Adams once said that, of his accomplishments, the one in which he took most pride was his gift of Chief Justice Marshall to the people of the nation. In a similar vein, it may turn out one of Sen. Long's most notable contributions to tax reform is his gift of Dr. Woodworth to the Carter administration.

Edward M. Kennedy,
U.S. Senator (D-Mass.).

Washington.

TRIBUTE TO SENATOR JOHN L. McCLELLAN

Mr. WEICKER. Mr. President, I join my colleagues in expressing sincere personal sorrow at the passing of our friend and colleague, Senator John L. McClellan.

Though never his intimate, in my brief service on the Appropriations Committee I have come to know my chairman as a leader worthy of great respect and a gentleman of the highest integrity. As a public servant for more than 50 years, his achievements present an unequaled legacy. His courage and diligence will be truly missed in the U.S. Senate.

DEATH OF SENATOR JOHN L. McCLELLAN

Mr. HUDDLESTON. Mr. President, I would belabor the Senate if I spoke at any length about the late John McClellan's career here in this place because there are those in this body who have served with him for more than a quarter of a century and know firsthand of his achievements. Nevertheless, I do wish to take an opportunity to briefly recount some of the events in John McClellan's life that stand out in my mind.

Mr. President, the stories that we have heard about John McClellan and his purposeful life are legion. Perhaps the one that best exemplifies those characteristics of hard work and careful preparation that marked his career here in the Senate is a story that appeared on the front page of the Sunday St. Louis Post-Dispatch almost 65 years ago. The headline reads "Plowboy at 17 Admitted To Bar Under Special Act of Legislature" and goes on to relate "Arkansas Farm Lad Is Youngest Lawyer in the United States." The news report of that time recounted that young John had been attending school whenever he could spare time from his farm work since he was 4 years old and "reading Blackstone since he was 10." Upon completion of his course of reading law, he passed a "grueling examination," conducted by the "veterans of the circut court in a strange town." He then successfully "applied to the State lawmakers to lift the ban that would bar him from practicing his profession for 4 years," and thus became the youngest lawyer in the United States. I think the extent of John McClellan's achievements come as less of a surprise once one hears that story of unrelenting persistence.

Mr. President, as I returned from the funeral of our late departed colleague, John L. McClellan, I could not help but marvel at the great outpouring of esteem, admiration, and affection for John that took place in Little Rock. The clergy, especially, were extraordinarily eloquent in recounting his long career of public service and accomplishment and his triumph over tragedy and adversity in his private life.

As the Members may recall John McClellan utilized his knowledge of the law to good advantage in the Senate, first in ferreting out the criminal element in the spectacular hearings conducted by the Permanent Investigations Subcommittee of the Government Operations Committee and later in his role as the chairman of the more powerful but less visible Appropriations Committee.

Over the past few years, I have been privileged to serve on the Appropriations

Committee. During that time I came to know John McClellan as a judicious chairman with a singular respect for due process, the country lawyer searching for the facts, impatiently cutting short the irrelevancies. He was always quick to extend every possible courtesy to senior and junior Members alike. For his many personal kindnesses to me I will always be grateful.

As the clergy at John McClellan's funeral recounted, his personal life was marred many times by hardship, anguish, and tragedy. He lost his mother when he was only 3 weeks old. His first two wives died. One son died while serving in World War II. Another was killed in an automobile accident while traveling to the reburial service of the first son. A third died in an airplane crash. He bore these burdens and fortunately he had the opportunity to enjoy the lives of his two daughters, Doris McClellan and Mary Alice McDermott.

Those who knew him better than I tell me that the two sustaining strengths during those difficult years were his faith in God and his present wife, the former Norma Myers Cheatham, whom he married in 1937 and for whom he had the greatest respect and affection.

John McClellan was a self-described conservative "I am proud of it but I am not a conservative to the point of being a reactionary, I am a conservative to conserve the resources of our Nation and preserve the integrity and solvency of our country," he would often say. Many times he has publicly declared that he would "war against crime and criminals, because society cannot withstand these assaults and we will have chaos if the trend is not reversed." These two thrusts constituted his political creed.

Yet, his legacy also includes active support for programs beneficial to his people in Arkansas, for he was a man of compassion with understanding for those constituents who were forced to cope with grinding poverty. He was especially proud of his efforts to secure $1.2 billion for development of the Arkansas River navigation system which now bears his name.

Finally, I mention the effort that may yet prove to be his crowning achievement—the first codification of the criminal laws in the Nation's history, an effort over which he has labored for many years.

Mr. President, I salute the memory of John McClellan, his inspiring leadership, his magnificient energy and his dedication to his country.

Mr. President, I ask unanimous consent that an editorial that appeared in the November 29, 1977, issue of the Washington Post be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHN LITTLE MCCLELLAN

John L. McClellan, the Arkansas Democrat, was nearing the end of his fifth term in the Senate when he died yesterday at the age of 81. So, his career spanned some enormously important—and occasionally convulsive—changes in the country's public life; and it also brought him the entitlements and rank that go with longevity in office: Sen. McClellan was chairman of the Senate Appropriations Committee when he died, and he had previously been chairman of the Senate Committee on Government Operations. He had played a prominent role in the civil rights battles of the postwar years, the Army-McCarthy hearings, the labor and crime legislation that took shape in the past two decades.

In much of this we had found ourselves on the opposite side from John McClellan, especially where racial and civil-liberties questions were concerned. But none of that alters our view that Sen. McClellan was a man of personal dignity and fairness, who did not abuse his power in the Senate or seek to close out the views of those who disagreed with him. And wherever others, ourselves included, may have fetched up concerning his principal interest—i.e., the creation of conditions that would restore respect for authority in this country—no one could deny the relevance of this preoccupation to our public life in recent years. One didn't have to share Mr. McClellan's conclusions on how to deal with crime to share his outrage at the organized depredations of the labor and Mafia racketeers.

Sen. McClellan does leave one indisputably monumental achievement: the enormous and enormously complex codification of the nation's criminal laws on which he had worked for many years and which he had not so long ago managed to accommodate to the views of some of his critics, such as Sen. Edward Kennedy. The negotiated result, now before the Congress, is legislation of great stature and importance—truly of landmark quality.

We would mention only one further aspect of the senator's record. That is the sad and terrible record of personal tragedy that befell him as a father three times bereaved in a life that was stark and Job-like in its accumulated ordeals. John McClellan fought back, mastered his sorrow, overcame the temptation to self-pity and, with hard work, built a new life. This is a town where accomplishment is often measured in terms of legislative monuments alone. But we put Sen. McClellan's personal strength in the face of adversity at the top of the list of his life achievements.

TRIBUTE TO SENATOR McCLELLAN

Mr. JACKSON. Mr. President, I join my colleagues in paying tribute to a great American, Senator John L. McClellan of Arkansas.

I have been a Member of this body for 25 of the 35 years John McClellan served here. It was my great good fortune to work with him closely throughout those years. I knew him as a wise counselor, a close friend, and as a trusted leader in historic tasks undertaken by this body. The Senate is not the same without him. Mrs. Jackson and I extend our greatest sympathy to Senator McClellan's widow, Norma, and to other family members.

As his colleagues so well know, John McClellan was above all a person of solid integrity. You could count on him: his word was his bond and I never knew him to back down on a commitment.

I discovered this very early after coming to the Senate in 1952. I found myself serving with John McClellan on the Permanent Subcommittee on Investigations, then chaired by Senator Joseph R. McCarthy. Those were dark days, but John McClellan—the ranking Democrat on the subcommittee—was stalwart in opposition to the vilification of witnesses and the arbitrary conduct of the inquiry. He led us in the walkout on McCarthy, and when the Democrats gained control of Congress in 1955 and Senator McClellan became the subcommittee chairman, he promptly authored a set of rules for the conduct of congressional inquiries that provided witnesses a measure of security from harassment, and served the purposes of a bipartisan Congress.

I had the privilege of serving with Senator McClellan for 25 years on the Permanent Subcommittee on Investigations. In 1973, I assumed the chairmanship of that subcommittee when he became chairman of the Senate Appropriations Committee.

No other chairman of a congressional investigating committee in the history of the U.S. Congress produced more substantive results than did Senator McClellan. Senator McClellan's ability as a cross-examiner was unequalled in the Senate. His style was stern but fair. He was judicious in his approach. Friendly witnesses were subject to the same scrutiny as adversaries. The reputation he achieved as chairman of the Permanent Subcommittee on Investigations stemmed mainly from his adherence to the rules of fair play.

When he was still a boy, John McClellan had ridden the circuit with his lawyer father and gained a deep respect for the law. When he was admitted to the Arkansas bar at the age of 17 he was the youngest lawyer in the United States at the time.

From that early start, John McClellan became a staunch guardian of our constitutional, democratic heritage. He believed in protecting and strengthening the standards that encourage fair and lawful relationships among our citizens.

Landmark legislation which he authored was aimed at enhancing law enforcement: the Omnibus Crime Control and Safe Streets Act of 1968 and 1970, and the Organized Crime Control Act of 1970. He exercised a major influence on judicial and legal reform as a member of the Senate Judiciary Committee and chairman of its Criminal Laws and Procedures, and Patents, Trademarks, and Copyrights Subcommittees. Right now, the Senate has under consideration his pioneering piece of legislation: a complete revision of the U.S. Criminal Code.

Senator McClellan, of course, was more than the Senate's leading investigator. He was also an innovative, persuasive, and effective spokesman in Washington for the needs of his own State of Arkansas. He played a major role in bringing new economic growth to Arkansas.

And over the years, in critical votes, John McClellan stood up and was counted for a strong national defense, and for the support of our basic alliances including the North Atlantic Treaty Organization. In the last few years, as chairman of the Appropriations Committee, Senator McClellan continued his responsible consideration of national defense programs.

In his long and productive life, John McClellan gave the full measure of dedication and devotion to the high purposes of this Nation. We shall miss him. He was the kind of statesman-legislator we need today more than ever before.

THE LATE SENATOR JOHN L. McCLELLAN

Mr. EASTLAND. Mr. President, I ask unanimous consent that a telegram addressed to me as President pro tempore of the Senate from the Honorable Peter M. Towe, Canadian Ambassador to the United States, be printed in the Record.

There being no objection, the telegram was ordered to be printed in the Record, as follows:

[Telegram]

Washington, D.C.,
November 30, 1977.

Senator Eastland,
President pro tempore of the Senate,
Dirksen Senate Office Building,
Washington, D.C.

I was greatly saddened to learn of the sudden passing of your illustrious colleague, the late senior Senator from Arkansas, John L. McClellan. His long and distinguished career of service to his country will continue to inspire and provide an example to all Americans. I am sure Sen. McClellan's friends and parliamentary colleagues in Canada would join with me in extending to you and your colleagues in Congress as well as to the family of the late Senator, our deepest sympathies on your great loss.

Sincerely,

Peter M. Towe,
Canadian Ambassador,
Washington, D.C.

HARD TIMES DOWN ON THE FARM

Mr. TALMADGE. Mr. President, I have great sympathy with the farmers of Georgia and throughout the Nation because of the multitude of economic problems presently confronting them.

I think it can be said without fear of contradiction that this has been a very bad year for farmers and American agriculture.

Farmers all over the country suffered a severe drought last summer which put many of them on the verge of bankruptcy. To complicate an already grave situation, Federal farm disaster loan programs were short of funds and lacking in adequate processing and administration. In an effort to break the logjam, I supported legislation to increase funding for farm disaster loan programs under the Farmers' Home Administration and the Small Business Administration. Also, I personally met in Washington and in Georgia with officials of FmHA and SBA to devise ways and means for streamlining these programs and carrying out the intent of the law in an effort to provide drought stricken farmers with needed aid.

Because of the drought, because of the disaster aid program mess, and because of the agriculture cost-price squeeze, it is no wonder farmers are up in arms. So, as I say, I am sympathetic with the American farmer. Farmers are fully justified in focusing attention on their problems and they have my full support in their efforts to achieve their goals. Their basic goal is neither unreasonable nor unrealistic. What farmers want and what they are fully entitled to is their fair and equitable share of the national income in keeping with their hard work and importance to the American economy.

Agriculture is the Nation's biggest business. It is the most important. It is directly responsible for the employment of 4.4 million people, which is more than the number of jobs in our automobile and steel industries.

Yet, net farm income is down approximately $10 billion less than 4 years ago. While farm income has been going down, the price of everything else, equipment, fertilizer, and energy, has been going up. As a result, farmers are caught in the intolerable situation of having to sell their commodities for less than what they cost to produce.

There appeared in the December 6 edition of the Wall Street Journal an excellent front-page article on this problem. I bring it to the attention of the Senate and I ask unanimous consent that it be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Farmers Are Troubled, And the Ripples Move Through the Economy

(By Joseph M. Winski)

Chicago.—Crop prices are down and U.S. farmers are up in arms.

A new farm group calling itself American Agriculture is calling on farmers to "strike" on Dec. 14—to stop producing crops and stop buying nonessential goods. Agricultural observers acknowledge the flair of the movement's leaders who managed to get thousands of farmers to stage a protest tractor parade in Plains, Ga., a few weeks back, but they doubt that any broad strike will materialize. (See story on page 6.)

There is widespread agreement, however, that hard times have hit the U.S. farmer. And strike or no strike, evidence is mounting that the shock waves from those hard times are beginning to ripple through the U.S. economy.

Nobody knows what the ultimate impact will be, of course. That depends largely on how long the current farm squeeze lasts. Some people say that the squeeze—a product of the generally sagging crop prices and a continuing rise in farmers' costs—could last several years.

On the other hand, farmers' fortunes could turn up again as suddenly as they did in 1972, when large foreign purchases of U.S. grain ushered in a boom in the U.S. agricultural economy.

SOME HOPEFUL SIGNS

Indeed, there were signs in recent weeks that things were looking up for the farmer. The Russian grain crop was reported to be much smaller than originally anticipated, and the Chinese were rumored to be planning large purchases of grain and soybeans. Though the result may be larger foreign purchases than were expected earlier, few observers believe they will be massive enough to bail out the U.S. farmer.

"Things have become a bit more bullish, but not much more," says Dean Chen, head of agriculture for Wharton Econometric Forecasting Associates Inc. of Philadelphia.

So for the moment at least, the farm boom has turned to bust, and the potential effects are considerable. Despite a steady decline in farm employment, the nation's 2.8 million farms still provide jobs for about 4.4 million people, including the principal operator, working family members and hired hands. That's more jobs than are provided by such industrial heavyweights as autos and steel.

Thus, the present financial difficulties of farmers, like layoffs in major industries, could result in large cutbacks in consumer spending for appliances, furniture, automobiles and the like. In fact, some consumer-oriented companies with stakes in the farm community, such as Minneapolis retailer Gamble-Skogmo, Inc., have already reported earnings declines related to reduced spending by farmers.

Probably of greater concern, though, is the likelihood that farmers will be cutting back the sizable spending they do as businessmen. This prospect worries farm-equipment makers, fertilizer companies and other suppliers of goods and services to farmers.

ABUNDANT PRODUCTION

Farmers' present difficulties reflect two straight years of abundant crop production in the U.S. and generally good crops in other countries. The result has been crop prices that farmers say are well below their costs of production.

Despite a rise in prices following a recent flurry of export talk, corn is selling in Chicago for about $2.20 a bushel, down from $2.42 a year ago and from more than $4 in 1974. Wheat is selling in Kansas City for about $2.75 a bushel, up slightly from depressed year-ago levels, but well below the $6-plus levels of 1974. Soybeans and cotton also are selling for well below their peak prices in 1973.

The carryover of unused corn on Oct. 1 amounted to a record 879 million bushels, and record production this year may push the carryover up another 40% by next Oct. 1, analysts say. U.S. farmers are harvesting a record 1.68 billion bushels of soybeans, up a third from last year; soybean carryover stocks are expected to double during the current crop year.

DROP IN EXPORTS PREDICTED

U.S. farm exports managed to rise 5.5% to a record $24 billion in the crop year ended Sept. 30, but they weren't large enough to make much of a dent in the burdensome supplies. Moreover, Agriculture Department analysts say that the value of exports in the current crop year could drop between 5% and 10%, while agricultural imports of such things as coffee and cocoa, which increased by 27% last year, are expected to rise again, to about $13.5 billion.

That won't be good for the country's trade balance because agricultural exports are the one consistently positive contributor to the U.S. balance of payments. In four of the last 10 years, such exports were responsible for the country's receiving more money in exports than it was shelling out for such things as imported oil. And exports have a so-called "multiplier effect." In the case of agriculture, the government estimates that every $1 increase in exports adds another 90 cents of income to the rest of the economy.

Another possible side effect is an increase in the number of farmers seeking off-farm employment. Even in flush times, farmers rely heavily on off-farm income; last year such income accounted for 59% of the total income received by farmers. Continuing declines in income, observers fear, probably would raise the number of farmers looking for other jobs, and at a time when unemployment among nonfarmers remains high.

The plight of the farmers extends far beyond the farmstead in another important respect. All taxpayers are affected because the government is back in the agriculture business. Under recently enacted farm legislation, it will make subsidy payments to wheat farmers of more than $1 billion by the end of the year.

Not all farmers find themselves in dire straits. Low prices for feed grains have considerably brightened the outlook for livestock producers, for example, and large-scale, efficient farmers who haven't plunged heavily into debt in recent years should be able to weather the storm quite nicely, says Gene Hamilton, economist for the American Farm Bureau Federation.

But on the whole, farmers appear to be in far worse shape than they were a few years ago. Even including government support payments, farmers' realized net income this year is expected to be about $20 billion, down from $21.9 billion last year and more than a third lower than the record $29.9 billion of 1973. Mr. Chen of Wharton Econometric says his firm expects a further decline this year, to about $19.5 billion.

Last year's average income per farm, the Agriculture Department says, was $7,885, compared with a peak of $10,529 attained in 1973.

Not surprisingly, recent surveys by the Federal Reserve banks of Chicago and Minneapolis indicate a sharp increase in the number of bankers who say farmers are having loan-repayment problems.

It now appears that the drop in commodity prices may be leading to what some observers feel would be the most telling development of all: a drop in the value of farmland. Average national farmland prices haven't fallen since the 1950s, and they've risen 114 percent in the last five years alone. The sharp rise is the major reason total U.S. farm assets reached a record $643 billion last year, according to the Agriculture Department.

But the Federal Reserve Bank of Chicago reports that farmland prices in its district (Iowa and most of Illinois, Indiana, Michigan and Wisconsin) declined 1.2 percent in third quarter as compared with the second. The bank said the decline was the first in its district since the fourth quarter of 1960. The Federal Reserve banks in Kansas City and Dallas also reported slight declines for most categories of farmland in the third quarter.

Rising farmland prices have been crucial to the continued spending increases by farmers. By virtue of their landholdings, many of them have achieved net worths of more than a million dollars, and thus are able to borrow to finance further spending. A downward trend in land prices would mean reduced borrowing power and otherwise seriously imperial the economic health of farmers and those industries that depend on them.

Bearing the immediate brunt of current conditions, probably, will be that large chunk of U.S. agribusiness that supplies the farmers with what he needs to produce. Farmers last year spent more than $60 million on such goods and services.

The farm-equipment industry already appears to be slumping. Sales held up through the first half of the year but began dropping in July. Through October of this year, according to the Chicago-based Farm and Industrial Equipment Institute, tractor sales were down 6.9 percent to 125,507 units. Sales of the large four-wheel-drive tractors that were the industry's hottest item a few years ago have been hardest hit, plunging 28 percent through October.

Fertilizer producers were the glamour companies of agribusiness during the farm boom. Between its fiscal years 1973 and 1975, for example, International Minerals & Chemical Corp.'s earnings increased nearly sevenfold. It's agricultural earnings have fallen since then, and domestic fertilizer earnings might do so again in the year ending next June 30. Richard A. Lenon, president, says the company expects foreign demand should be strong.

Businesses that buy farm products rather than sell things to farmers—makers of bakery mixes, for example—can benefit in a time of abundant supplies and low farm prices. And at least one industry that sells things to farmers—makers of grain-storage bins—is doing fine. Butler Manufacturing Co. says it can't keep up with demand from farmers who want a place to put their grain until prices rise.

WATERWAY USER CHARGES: WHAT IS AHEAD ON THE WATERWAYS

Mr. DOMENICI. Mr. President, the Federal Government has spent several billions of dollars in recent years to construct new and improved inland navigation projects. Each and every one of these projects was built at taxpayer expense. And each and every one is being used by the barge industry without a penny of charge.

The Corps of Engineers has estimated that there are some $7.5 billion in new navigation projects now under construction or authorized and awaiting construction.

Moreover, new navigation ideas continue to pop up, ones the Congress has not even considered as yet and are not included in the $7.5 billion figure. For example, one of the latest involves a recommendation from the corps' North Pacific division to replace Bonneville lock, the lowermost lock on the Columbia-Snake River waterway. It is estimated that a new 675-by-86-foot lock would cost $94,300,000. It would provide nearly twice the capacity the corps estimates will be needed in the year 2040.

The corps is also studying plans to extend navigation into Kentucky and West Virginia tributaries of the Big Sandy River well beyond the 7 miles now dredged for navigation. There is talk of reviving navigation on the Pearl River Canal system between Louisiana and Mississippi, at full taxpayer expense.

This is all being considered for an industry that has received more net subsidies than all other transportation modes put together, according to the Library of Congress. It is an industry that annually receives a taxpayer subsidy of $2 on every $5 in revenues, according to the Congressional Budget Office.

I do not believe Congress will ever be able to develop a rational consideration of new waterway projects until we can assure the taxpayers that the users of these waterways are paying a portion of the cost of the projects. This point was underlined effectively in a recent Senate report 95–215 that evaluated the need for waterway user charge legislation:

> It will be increasingly hard to win taxpayer, and thus political, approval of continued financing for new work on the waterways without some form of user charge. A gradual imposition of a reasonable user charge system meets that problem.

Mr. President, I ask unanimous consent that a partial list, prepared by the Corps of Engineers, of some $10 billion in inland projects finished in the past decade, plus those under construction and those authorized but not yet initiated, be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

CORPS OF ENGINEERS INLAND NAVIGATION PROJECTS

OPERATIONAL STATUS ATTAINED AFTER JANUARY 1, 1967

Project:	*Total Federal cost*
Alabama-Coosa River	$178,400,000
McClellan-Kerr Arkansas River Navigation System	1,029,210,000
John Hollis Bankhead Lock and Dam, Black Warrior and Tombigbee River	53,400,000
Calcasieu River Salt Water Barrier, Calcasieu River	4,197,000
Cordell Hull Dam and Reservoir, Cumberland River	78,100,000
Freshwater Bayou Lock, Freshwater Bayou Channel	7,116,000
Kaskaskia River Navigation	127,160,000
Opekiska Lock and Dam, Monongahela River	25,200,000
Hannibal Locks and Dam, Ohio River	87,500,000
Willow Island Locks and Dam, Ohio River	76,700,000
Belleville Locks and Dam, Ohio River	62,200,000
Racine Locks and Dam, Ohio River	65,900,000
Cannelton Locks and Dam, Ohio River	97,300,000
Newburg Locks and Dam, Ohio River	106,900,000
Uniontown Locks and Dam, Ohio River	99,100,000
Temporary Lock 52, Ohio River	10,100,000
Jonesville Lock and Dam, Ouachita/Black Rivers	43,700,000
Columbia Lock and Dam, Ouachita/Black Rivers	33,300,000
Total	2,185,483,000

UNDER CONSTRUCTION

Total estimated Federal cost October 1976 price levels

Project:	
Bayou La Fourche and La Fourche Jump Waterway	$11,500,000
Mississippi River Regulation Works between Ohio and Missouri Rivers	151,000,000
Missouri River, Sioux City To Mouth	450,000,000
Smithland Locks and Dam, Ohio River	243,000,000
Temporary Lock 53, Ohio River	37,200,000
Pelsenthal Lock and Dam, Ouachita/Black Rivers	61,420,000
Callon Locks and Dam, Ouachita/Black Rivers	45,577,000
Red River Waterway, Shreveport to Mississippi River	905,000,000
Tennessee-Tombigbee Waterway	1,410,000,000
Wallisville Lake, Trinity River	28,800,000
Total	3,343,497,000

AUTHORIZED FOR CONSTRUCTION, WORK NOT INITIATED

Project:	
Big and Little Sallisaw Creek Navigation, Arkansas River Basin	$1,200,000
Coosa River Channel, Montgomery to Gadsden	500,000,000
Gulf Intracoastal Waterway, St. Marks to Tampa	185,000,000
Gulf Intracoastal Waterway, Petit Anac, Tigre and Carlin Bayous	4,260,000
Gulf Intracoastal Waterway, Rigolets Lock	14,125,000
Gulf Intracoastal Waterway, Seabrook Lock	20,995,000
Gulf Intracoastal Waterway, Vermillion Lock	20,600,000
Illinois Waterway Duplicate Locks	769,000,000
Kansas River Navigation	5,000,000
Mound City Locks and Dam, Ohio River	277,000,000
Red River Waterway, Shreve-	

port to Daingerfield, Texas	355,000,000
Project:	*Total Federal cost*
Trinity River	2,010,000,000
Yazoo River	130,000,000
Total	4,272,180,000

ELLSWORTH H. MORSE, JR.

Mr. HUDDLESTON. Mr. President, I wish to call to the attention of the Senate the sudden passing of Mr. Ellsworth H. Morse, Jr., Assistant Comptroller General of the United States, on November 29. Mr. Morse, an employee of the GAO for 31 years, was an extraordinarily able and experienced policy adviser to the Comptroller General for many years and was the deserved recipient of the National Civil Service League Career Service Award.

As chairman of the Legislative Appropriations Subcommittee, I have been very interested in the work of the General Accounting Office in stimulating improvement in Federal Government accounting practices. Mr. Morse was long active in both Federal and private efforts to promote the financial management disciplines throughout the Federal Government.

My sympathies are extended to Mr. Morse's wife and daughters, to Comptroller General Elmer B. Staats who lost a trusted friend and adviser, and to the employees of the General Accounting Office who have lost an experienced and dedicated leader.

By unanimous consent, I request that a portion of the official statement of the General Accounting Office be inserted in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT

Mr. Morse's career in the General Accounting Office spans many years and his contribution to its development is hard to overstate. He loved the GAO and was completely dedicated to its mission. High professional and ethical standards—which he personally epitomized—were basic to the policies and standards which he did so much to establish and maintain for the General Accounting Office. His sights were high and he held these high standards as always before us.

DICK MOORE

Mr. MATHIAS. Mr. President, at the end of this month a respected Maryland journalist, Richard L. Moore, will retire as editor of the Salisbury Daily and Sunday Times.

When Dick Moore first joined what was then the Salisbury Times, front page stories carried such headlines as, "Four Killed, Five Lost in British War," just before the start of World War II, and "Jack Garner Home, Is Glad Of It," which told of that irrepressible Vice Presidents return to his home in Uvalde, Tex.

Dick Moore has touched on nearly every major story since then in some journalistic capacity, and he has done so with insight and judgment that have deservedly earned him the respect of his peers and his readers.

In a career that spanned 38 years as a reporter, photographer, and editor, Dick became recognized throughout Maryland and the Delmarva Peninsula as a "compleat" journalist, and a man of unquestioned integrity.

After 12 years as editor of the Times, he is retiring a year short of the mandatory age to pursue a semi-retirement career in free-lance writing and public relations. His contributions to his community and to the world of communications have been many.

On November 28, WBOC–TV and Radio in Salisbury broadcast a farewell editorial to Dick Moore. It well sums up the regard with which we in Maryland hold him, and I would like to share it with my colleagues, for Dick Moore is a leader and a man one is privileged to have as a friend.

Mr. President, I ask unanimous consent that the WBOC editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DICK MOORE

When a person has been on the job with a particular company for a long period of time, and in leadership capacity, there seems to be a tendency to consider him as the embodiment of all that a particular organization actually is. One person who would fit that general description would be Dick Moore, editor of the Daily Times. And when Dick would be the first to admit that the growth of that paper has been an organizational affair . . . and not an individual feat . . . the fact remains that to many people, Dick Moore is the Daily Times.

Now, Dick is going to retire at the end of the year . . . and we had to let you know how happy we are for him, but how we also shall miss him. Richard L. Moore joined the paper in 1939 as a reporter . . . became managing editor in 1942 . . . and upon the death of Oscar L. Morris twelve years ago, became the editor. He has seen the paper grow from an 8 page, 4,000 daily circulation paper to what it is today . . . and while company growth is never a one-man job, his efforts were part of the pattern.

We can remember the days when call letters on our microphones were blacked out if they were going to be visible in a picture to be printed in the daily paper—and we were not always charitable in our comments either. But those days have long gone . . . and there exists mutual rapport and respect between the printed and electronic press in this town . . . and Dick Moore had much to do with this.

His retirement comes a full year ahead of the mandatory age. He has things he wants to do . . . including free-lance writing and public relations work . . . and he is an expert with a camera too.

Dick Moore has fully earned his retirement. We will miss him, but wish him well. We suspect he will continue to contribute to the community, even though his efforts will no longer be made over the editor's desk.

BANKERS AND CONSUMERS WORK TOGETHER IN WISCONSIN

Mr. PROXMIRE. Mr. President, a meeting recently took place in Madison, Wis., which typifies the cooperative relationship between bankers and consumers that has developed in Wisconsin.

The Wisconsin Bankers Association recently sponsored a daylong seminar designed to improve communications between consumers and bankers. Consumers were encouraged to speak their minds on the whole spectrum of banking issues and services. In addition to answering questions, bankers conducted workshops designed to explain the provisions of various Federal and Wisconsin consumer protection laws.

This seminar is a good example of how bankers and consumers have cooperated in Wisconsin for their common good. Another excellent example is the Wisconsin regulations in the EFT area. Last year, bankers, consumer groups, and State regulators sat down together and jointly agreed on consumer safeguards in EFT systems which are the most comprehensive and progressive in the Nation.

Our experience in Wisconsin illustrates that the air of combativeness which often exists between bankers and consumers is unnecessary. It makes sense for bankers and consumers to get together and trade ideas, and I hope that this attitude will be adopted in other States as well.

Mr. President, I ask unanimous consent that a recent article from the American Banker describing this conference be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Banker, Dec. 5, 1977]

BANKERS HEAR PUBLIC'S VIEWS AT WISCONSIN BANKING ASSOCIATION PANEL

(By James Rubenstein)

MADISON, Wis.—The Wisconsin Bankers Association acted as host recently for an unusual all-day financial information conference aimed at letting consumer leaders voice their concerns on banking issues directly to banking industry representatives.

The educational session, designed primarily to help clear public confusion on consumer protection laws and regulations, included presentations by bank regulators and Wisconsin bank presidents who answered questions from the participants on everything from debit card reconcilement and equal credit rules to Truth-in-Lending violations and escalator clauses.

During one segment of the program, the bank regulators and Wisconsin BA lawyers assumed the roles of bank officers and customers to dramatize potential violations of bank consumer laws.

The skit as well as the entire day's events was prepared under the guidance of a Milwaukee consumer counseling firm hired by the Wisconsin BA last June as part of a year-long program to upgrade banking's image in the state and lessen the combative atmosphere between banks and consumer groups.

Contending the banking industry is undergoing an historic upheaval in the way it treats its customers, John C. Geilfuss, president of the Wisconsin BA, told the 50 consumer leaders his trade group seeks to promote an active "give and take" between financial institutions and consumer organizations.

In this way, he explained, it can avoid the confrontations that have existed in other parts of the country between these groups.

In some cases, these clashes have become needlessly "automatic" but might have been avoided had the two sides tried to resolve their differences through "workable, mutually beneficial ways," declared a 100-page notebook distributed to the conferees.

Beside emphasizing the cooperative theme, the color-coded pamphlet contained synopses in outline form of the various consumer laws and regulations which Wisconsin banks must comply with.

Many of the speakers addressing the gathering told the consumer heads that the plethora of laws and regulations have become highly burdensome to banks and eventually the compliance costs will be passed on to the public.

"We are finding that we have to spend long hours training our loan officers to comply with these regulations taking away valuable time which should be spent in teaching them how to handle difficult loan situations," asserted Lee E. Gunderson, president of the $10.8 million-deposit Bank of Osceola.

In the long run, he said, communities will suffer if local banks are unable to function as credit providers because of excessive regulatory burdens.

Discussing other areas, John F. Kundert, president of the $46.5 million-deposit Commercial & Savings Bank, Monroe, urged the consumer representatives to seek out their bankers for advice on financial matters as they would look to their family doctors for medical advice.

"The banker has nothing to sell you," Mr. Kundert told the audience assembled in a student center on the University of Wisconsin campus.

He said that as insurance agents, accountants, tax men and members of other professions are selling their services, the local banker can become an impartial source for advising customers on financial subjects.

Robert C. O'Malley, president of the $63.8 million-deposit United Bank & Trust Co. Madison, said banks remain "guardians of privacy" for their customers by refusing to carelessly divulge information about their financial habits or personal lives.

He said banks only "grudgingly" provide the data to government agencies and then "only under court order."

In the meantime, he said banks are asked to act as "policemen for the world" in supplying the Internal Revenue Service interest rate reports for income tax purposes.

Theodore I. Arneson, president of the $10.6 million-deposit Barneveld State Bank, also emphasized banking's defense of privacy in handling customer accounts, adding that consumers should recognize the strong role played by community banks, particularly in one-bank towns.

Questioned by the consumer representatives about commercial banking's apparent withdrawal from home financing, the bank presidents maintained that residential loans, particularly in smaller institutions, make up a larger portion of their portfolios than ever before—even though some banks would prefer that this not be the case.

Mr. Gunderson, a candidate for 1978 president-elect of the American Bankers Association, said the Osceola bank has 40% of its loans in residential mortgages, adding "we work together with our savings and loans" in sharing home financing for the community.

The bank presidents agree that rural banks are currently in a better position regarding loan demand than their urban counterparts. Mr. Kundert said, "I think there are some big city banks which like to have our problem."

Despite a rise in agricultural and residential demand, loan-to-deposit ratios in some cases have become uncomfortably high, the bank president agreed. The state average is 67%.

Mr. O'Malley said United B&T is experiencing a 73% loan-to-deposit ratio as a result of booming business activity in the state capitol and as a result of inflation factors affecting all customers.

Much of the questioning by the consumer leaders came in a panel discussion of electronic funds transfer systems led by J. Frederic Ruf, president of TYME Corp., a Milwaukee-based EFT related firm which was formed by banks in the area and James L. Brown, acting director of the University of Wisconsin Extension Center for Consumer Affairs, Milwaukee.

"How do we help motivate people to keep track of their checking records in EFT?" asked Louise Young, of the University of Wisconsin extension service in Madison and a past president of the Wisconsin Consumers League, referring to the problem that debit card customers have in reconciling EFT transactions with regular checks.

"I don't really have the answer to that one," Mr. Ruf replied, adding that it will require the public "to change its habits" to adapt to the new EFT environment.

Besides being president of TYME Corp., Mr. Ruf is also vice president of the $636 million-deposit M & I Marshall & Ilsley Bank, Milwaukee.

In his remarks, Mr. Ruf acknowledged there is indeed "an element of fear" in EFT but consumers are not alone in expressing alarm over what seems like a "loss of ability to master their own affairs."

Small banks, too, he said, fear the advent of EFT because they see larger institutions taking advantage of them. Despite these concerns, the industry as a whole looks at EFT as beneficial because it reduces paper volume and at the same time provides a convenient service to the public.

Commenting on the recently-issued report of the National Commission on Electronic Fund Transfers, Mr. Brown, an attorney representing the extension service, said that despite the passage of EFT laws in many states, including a liberal measure in Wisconsin, there remains a "legal vacuum" in EFT, an area which to date "is sparsely regulated."

Taking part in the role-playing skits—moderated by Wisconsin BA attorney Lawrence Bugge—were Robert Patrick, legal counsel to the Wisconsin Commissioner of Banking; Richard Victor, assistant attorney general for the Wisconsin Department of Justice and John Knight, Wisconsin BA general counsel and partner in the "Madison firm of Boardman, Suhr, Curry & Field.

In the dramatization, Mr. Bugge, a partner in the firm of Foley & Lardner here, blew a whistle each time a violation occurred in the re-enactment of two scenes involving a loan officer and a borrower and the loan officer and his superior, a bank president.

During the conference, speakers cited the generally amicable meetings between BA executives and Wisconsin consumer groups which have taken place over the last four years in enactment of the EFT law as well as the 1973 passage of a model consumer act which has been used by other states across the country in dealing with consumer protection, defaults, holder in due course and rate limitations.

Mr. Geilfuss, who is also chairman of the $439.1 million-deposit Marine National Exchange Bank, Milwaukee, noted in his opening remarks that "there are darn few things we can't iron out if we can only sit down and talk with one another."

Since the Wisconsin BA began its consumer enlightenment program last spring Mr. Geilfuss and other members of the association leadership have met frequently with newspaper, radio and television reporters across the state "to show bankers as human beings," according to Mary B. Kuester, a partner in Consumer Concepts, Inc., the Milwaukee counseling firm hired by the Wisconsin BA to handle the program.

Starting Dec. 11 Wisconsin bankers will appear on a weekly TV show answering questions from media representatives on banking topics, Ms. Kuester said. Taping of the first program to be paid for by the Wisconsin BA is to begin Dec. 3.

A probable title for the series will be "Money in the Bank."

Aside from EFT, Truth-in-Lending and rural loan demand, the Madison conference also dealt with some of the most complex technical areas of consumer legislation including lengthy sessions on "Multiple Party and Agency Accounts" and "Rights of Recission."

Other laws covered included the Real Estate Settlement Procedures Act, Fair Credit Reporting Act, Fair Credit Billing Act and the Equal Credit Opportunity Act.

Ironically a frequent question put to the bankers and regulators was "How does a person like me get into banking?" The replies focused on the wide opportunities available to individuals with varied skills.

Apart from the direct appeal of the Wisconsin BA to foster "improved communications" with consumer leaders, bankers attending the Madison conference also supported commercial bank savings rate equality with thrifts.

Bryan K. Koontz, executive director of the Wisconsin BA, warned the group of the "dislocation of deposits" as a result of the differential on savings and he said studies show that "a lot of money moves for a quarter of a point."

He said the rate advantage afforded thrifts "discourages people from doing business with a bank" and the end result is that local communities suffer the loss of lendable funds to sustain a healthy economy.

"You couldn't have picked a better audience—consumer leaders—to give such a message," remarked one industry official after Mr. Koontz finished his remarks, "these people are the ones whom legislators really listen to.

TRADING WITH VIETNAM

Mr. HUMPHREY. Mr. President, a publication of the U.S. Department of Agriculture recently carried an article which reported that Vietnam's grain import needs for 1977 will reach a minimum of 1 million tons. Vietnam's import needs, which have been generated by a persistent drought, will be met by a number of our leading agricultural trade competitors, including Canada and Argentina.

I must share with my colleagues my feeling of concern that not 1 ounce of these imports will directly come from U.S. granaries. This is particularly distressing, given our unprecedented trade deficit and our depressed prices caused by overflowing stocks. To deny ourselves this market does not make sense to me in either political or economic terms.

Our self-imposed prohibitions on food exports to Vietnam are, for practical purposes, ineffective. There is no meaningful way to safeguard against the transshipment of U.S. grains by second parties to Vietnam. We, in the Senate, can legislate all we want, but in the end there is no guarantee that the food we produce will not show up in the prohibited nation. Even if food from U.S. farms did not go to these countries, our exports to favored nations would simply displace their domestic requirements, allowing this new surplus food to be transshipped, thereby improving their own trade balances.

In 1977 the Vietnamese will purchase 200,000 tons of wheat from the Soviet Union; 120,000 tons from Canada; 50,000 tons from Sweden; 17,680 from the Netherlands and the European Community; 100,000 from India (on loan) and about 200,000 tons from other sources. France, Turkey, and Argentina are shipping more than 150,000 tons of flour, and Thailand has sold the Vietnamese 50,000 tons of corn and 30,000 tons of rice.

Mr. President, I am not able to calculate what percentage of this market the United States could tap. I have no assurance of even an indication that the Vietnamese would buy U.S. food if we wiped out our prohibitions. I do know, though, that if we choose to continue the status quo, we will never find out. Instead, we will only be able to watch our competition make significant inroads in this market.

In closing this statement, I would like to point out that France, which dominated the Vietnamese peninsula for several decades before leaving in humiliating defeat in 1954, is now one of Vietnam's leading trade partners. There is, in my opinion, no sound reason to deny ourselves this obvious trading opportunity. To do otherwise is to penalize American commerce.

SENATOR ABOUREZK ADDRESSES THE NATIONAL CONVENTION OF RURAL AMERICA

Mr. ANDERSON. Mr. President, on Monday of this week my colleague from South Dakota, Senator Abourezk, delivered a very important speech to the National Convention of Rural America. Senator Abourezk had some very important observations to make on the current crisis in energy and agriculture, and I ask unanimous consent to have the address printed in the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

We Can't Eat Nostalgia: A Brief for Meeting the Real Needs of Rural America

I welcome this opportunity to speak with you this morning because—frankly—the time has come for serious discussion about the real problems confronting the survival of the foundation on which this country was built—the rural American.

During the past year we have been forced to endure the bipartisan bombast of the Bicentennial and its attendant turgid excesses. But now reality has replaced the rhetoric—and what do we find? Too many pay homage to the ideals professed in the Declaration of Independence—that "all" are created equal—that we as citizens have certain "unalienable" rights, among which are "Life, Liberty and the Pursuit of Happiness"—that when "any Form of Government becomes destructive of these Ends, it is the Right of the People to alter or abolish it. . . ."

But these hopes and beliefs have been temporized—and traumatized—by the agents of social conformity—and reinforced by their surrogates in the churches, the schools, official pronouncements and the organs of mass communication. Rather than honor diversity and dissent, we decry it.

For too long the official governmental reality has been that all are created equal—except—foreigners with whom we have gone to war, Blacks who have not been singled out for "special" attention, Indians who will not submit, Latinos who treasure their language and cultural heritage, women who no longer will be servile, the elderly who are powerless—and anyone without money.

What are most alienable are the lives of young men sent off to die in unjust wars and the liberties of people helpless against authority. Should any group of people choose to challenge the prevailing assumptions of the power elite—that of greed and exploitation—the government, resorting to the righteous rhetoric of national security, now asserts its right to alter or abolish those challenges through harassment, persecution, imprisonment—and even murder. It is in this context that Richard Helms is able to walk the streets a free man, wearing his "badge of honor" while the Wilmington Ten languish in jail for their "crimes" of defending their own civil rights.

In the same vein, Lincoln's hope for a government of the people, by the people—and for the people has been subverted by the oligarchy of power which controls both the Republican and Democratic parties. Today, our government is, in too many instances, a government of the few, by the few—and not for you, the ordinary citizen—without power, and without money to obtain power.

How did this sad state of affairs come to pass? Do we have the power to promote—and pass—progressive legislative reform? What can you—as a collective umbrella organization—do to help? Let's try to examine these questions in the context of these basic problem areas confronting rural Americans today:

First of all, the necessity for providing basic human services in the areas of housing, health care, education and employment.

Secondly, the necessity for securing the survival of the small farm, the cornerstone of rural society.

Thirdly, the regional, national and global impact of the so-called energy crisis.

In 1890, the U.S. Census Bureau formally proclaimed the closing of the American frontier, a myth soon certified as "historical fact" in Professor Frederick Jackson Turner's famous essay. In the same year, 1890, a supposed "final solution" to the Indian problem was effected by the bloody massacre of the Sioux at Wounded Knee. The "official" closing of the frontier intensified the ongoing struggle for economic primacy between the rural-agrarian and urban-industrial forces in our society.

The first real trauma in effecting this transition occurred in 1893, with the onset of the first industrial depression in our history. In Massillon, Ohio, Jacob S. Coxey, a successful businessman and a Populist with a conscience, called for action. He wanted the government to act as an employer of last resort. He asked for training and jobs for the dispossessed farmers and unskilled workers victimized by the machine age. To dramatize both his program and the tragic consequences of mass unemployment he led "a petition in boots" to Washington. He and his army marched to the very steps of the national Capitol. There Coxey passionately proclaimed that: "Up these steps the lobbyists of trusts and corporations have passed unchallenged on their way to committee rooms, access to which we, the repiesentatives of t toiling wealth producers, have been denied." The Congressional response was to have Coxey arrested for treading on the Capitol lawn without a permit. Contrary to Bob Dylan's words, the times haven't changed that much. . . .

To make matters worse for rural Americans, the numbers—the money—and the power—have steadily moved to the other side. In 1790, the first nationwide census revealed that more than 95 percent of the country's population were engaged in some form of agricultural endeavor. By 1920 the Census Bureau had decreed that, for the first time in our history, America could now be labeled as an urban, rather than a rural nation.

The Great Depression afflicted all, but the combination of New Deal reforms and the prosperity engendered by the second World War rescued millions from the blight of economic disaster. Major portions of urban and suburban America rushed forward in mad pursuit of the bitch goddess, Success. They left trampled in the dust the millions of rural America to be content to diet on the leftovers of shattered dreams and broken promises. For too many Americans the horrors depicted in John Steinbeck's Grapes of Wrath and the portrait of privation described in James Abee's Let Us Now Praise Famous Men are still an everyday reality of life.

Starkly stated, the facts of the rural crisis cry out for prompt—and constructive—resolution. As an intoduction to the enormity of the problem, consider the following:

In a nation of 214 million people, rural Americans comprise 31.4 percent of the total population.

But of all persons 65 years or older, 36.6 percent are rural residents.

Of all persons 25 years or older having less than a high school education, 36.7 percent are rural residents.

Approximately 60 percent of all subsidized housing is located in rural areas. More than 60 percent of all Indians living on reservations are forced to live in housing requiring either total replacement or substantive rehabilitation.

More than 30 thousand smaller rural communities lack safe water systems. The absence of adequate waste disposal systems affect millions more.

The median family income in rural America is less than 80 percent of its urban counterpart.

Woman in rural America comprise only 20 percent of all women of child-bearing age, but they account for 50 percent of all maternal deaths in the country.

Since 1955, the infant death rate among Indians has been halved. However, the current rate is still 50 percent higher than for the general population. The national death rate for Indian women is still 20 percent greater than the national average.

In 1973 the ratio of population to physician nationally was 1 to 768. In rural areas it varied from 1 to 1,432 in the larger towns to as much as 1 to 2,512 in isolated rural areas. Since 1963 the number of counties without a single physician has increased from 98 to 135. In a large number of rural counties the number of doctors has declined.

More than 26 million Americans cannot afford to purchase an adequate diet. Over 11.2 million of them received no assistance through the Federal food program. Of this number more than half live in rural America.

Unemployment in much of rural America is more than double the national rate. There is a direct correlation between unemployment and the number of people living on incomes below the poverty level. Nowhere is this more acute than among the Indian population. The 1970 Census reported that 48.8% of the Indian population had incomes below the poverty line. This was more than 3½ times the national rate, and even twice the incidence of poverty among all rural people.

What is being done to revise this discouraging trend? What can be done through concerted pressure from organizations such as yours to improve the situation? Let's examine some of the current programs and possibilities.

At present the major federal housing and community facility programs for rural areas are operated by H.U.D., the Farmers Home Administration and the Community Services Administration. To be blunt, the delivery systems for providing proper services are either outmoded, redundant, or too restrictive, in terms of a priori mandates. Too often the majority of programs pit small towns against urban areas in an unequal contest for funds. In too many rural areas, the lack of trained housing personnel is the biggest impediment to the effective operation of delivery systems. The best solution might be the creation of a new independent department, operating under the aegis of the Rural Development Act of 1972. A department which would embrace all the current functions of H.U.D. and the U.S.D.A., while promoting the most effective coordination of federal, state and local activities in these areas. If properly implemented this would accomplish the twin objectives of improved delivery services at less cost to the taxpayer.

It should be obvious to everyone here that the time is long overdue for a national health care program. We can not tolerate one day longer the barbaric notion promulgated by the American Medical Association that proper preventive and restorative health care is a privilege and not a right. Nor should we tolerate piecemeal, patchwork solutions such as the Appalachian Regional Development Act of 1965 which, in the first ten years of "service" to rural counties in thirteen states, spent more than 60% of its total budget for highway construction, while less than 10% was spent on regional health care.

Nor should we be willing to accept the way in which the present Administration has handled the funding of the Indian Health Care Improvement Act of 1976 (P.L. 94–437). The President's proposed budget for Fiscal Year 1978 requested only about one-fourth the amount authorized by the Congress. Moreover, HEW failed to fully implement the bureaucratic regulations of Title I under the Act. This would have provided hundreds of thousands of dollars in scholarship money for health care professionals currently in training for service to the Indians. As a result, almost three hundred medical students around the country, including some at schools such as South Dakota, Stanford, the University of California at Berkeley and the University of Rochester were denied scholarship funds for the Fall semester. Some of them had to drop out of school because of the government's bureaucratic incompetence.

What is needed—now—is a national health care program which guarantees full medical, dental and hygienic treatment. The Kennedy-Corman bill is only the first step in this direction. A much more comprehensive measure, and one which fully meets the needs of rural America, is that introduced by Congressman Ronald Dellums of California (H.R. 6894).

The situation in rural education has reached crisis proportions. A 1975 Census Bureau survey found that more than two million rural adults have been exposed to less than five years of formal education, and thus were considered to be functionally illiterate. 24.1% of all Black adults and 30.7% of all Hispanic adults in rural areas had dropped out of school by the fifth grade. Sadly, the trend continues. At the present time more than 5% of all rural school aged children are not enrolled in any school. This is a non-enrollment rate nearly double that of urban areas.

While the major burden for making reforms in this area rests with the state and local agencies, the federal government could make a solid contribution through the sponsorship of rural in-service training programs designed to meet specific curriculum and student needs. They might also consider the possibility of federal subsidies to rural areas with a low property tax base or a teacher-subsidy program designed to offer competitive salaries as a means of attracting dedicated—and competent—teachers from more wealthy regions of the country.

II

There can be no doubt that the small farmer is the hub of rural American society. He must be the cornerstone of any foundation for rebuilding a vital—and viable—rural America.

On the economic battlefields of production, prices and trade the American farmer has always been asked to be first in war. But he has been relegated to last in peace—and he is seldom in the hearts of his countrymen when the need arises for the passage of progressive legislation . . . legislation which would insure the individual farmer his fair share of the economic profit pie.

Worst of all, in times of economic stress and depression, it has always been the farmer who was first asked to turn the other cheek and to make sacrifices for "the good of the country." Well, the farmer has turned all four cheeks in recent years—and what does he have to show for it? A left hook from a disdainful public, a right uppercut of Executive and Congressional indifference, and two swift kicks in the rear from the agribusiness "insiders" and the oil companies.

Make no mistake about it—we are in the midst of a life and death struggle to preserve the best of agricultural America—the small farm—from exploitation by those who farm the farmers. . . . The commercial grain traders, the packing houses, the agribusiness conglomerates, and the money men who provide the financing.

Sad to say, the problems—and the power—confronting the farmer are basically the same as they were a century ago when the Populists made an heroic effort to change the face—and fabric—of American society.

Now—as then—the farmer is confronted with an ever-higher mortgage indebtedness. His cost of production is too high for the price he receives. The land-owning farmer's only "salvation" today is an increase in the loan value on his land. He can't receive prices that return his costs, but he can borrow more on his land. So farmers now have the "privilege" of staying in the farming business—if—they will pay the price in higher interest rates and greater mortgage debt.

Now—as then—the farmer is the captive of unfair transportation rate structures, arbitrary grain grading standards and price fixing. Adverse marketing arrangements are too often dictated by such agribusiness moguls as Bunge, Continental Grain or Cook Industries.

The classic example of this rip-off mentality at the expense of the farmer was the Great Grain Robbery of 1972. Thanks to the secretive duplicity of the Commerce Department and the venality and stupidity of officials in the Department of Agriculture, the Russians cornered a quarter of the world grain market. The agribusiness "insiders" were able to make millions more in profits because of their exclusive knowledge of the pending sale.

In both the short and long term the American farmer suffered, because of the poor public image pinned on him. Without really profiting from the sale, he was further victimized by the inflationary spiral of escalating production costs. The biggest factor here was the fourfold increase in energy prices in the wake of the O.P.E.C. oil embargo. As a result of the search for easy scapegoats and the ideological paranoia prevalent in certain areas of our society, the American farmer has been inhibited in recent years from aggressively seeking new markets for his products.

The search for new markets at home and abroad must be intensified. Let me offer some suggestions. The use of government buying power, whether at the federal, state, county or municipal level—to support small, local producers is a potential source of revenue. If the buying power of federal agencies, including the military, state institutions, school systems, day-care centers, etc. were re-directed to aid small farmers, the income impact could be measured in billions of dollars.

On the international scene, consider the following. A recent study by the Food and Agriculture Organization (F.A.O.) reveals that, because of drought and other severe climatic conditions, there are already drastic crop failures and food deficits this year in at least fifteen major countries, including China, the Soviet Union and Egypt, among others.

Think of the possibilitiies of re-opening agricultural trade with Cuba, a country which used to be the 7th largest importer of U.S. agricultural products. And what about the prospects for trade with the Arab states of the Middle East? Think what a reciprocal exchange of food for oil would mean for the economies of both countries.

In a world in which at least 15 million children will die of hunger and malnutrition this year—wouldn't it be better to have this government more concerned with the expansion of our agricultural markets than with the incessant promotion of arms sales to all comers, regardless of ideology? If we can export missiles to the Arabs, AWACS to Iran, jets to the Israelis, computers to the Poles and Romanians, corporate bribes to the Italians and the Japanese, and kidnapping and assassination to Chile and Korea, then why can't we ship our agricultural exports to whomever we want—and at fair prices and profits—without government interference or collusion with the corporate middlemen? Think about it. . . .

At the present time the two biggest obstacles to the survival and growth of the family farm concept are the menace of agribusiness conglomerates and the indifference of the Department of Agriculture. It is a statistical fact that small family farm units are much more efficient than conglomerate farms. Conversely, the only areas in which conglomerate agribusiness displays any efficiency is in gathering capital and obtaining huge amounts of credits. This enables them to accumulate more land in order to control—in many instances—all aspects of production—from the seed to the supermarket.

Thus I am gratified to see that Rural America plans to take an active role in the question of acreage limitations for federal reclamation projects. This is a crucial problem area, for there are 9 million acres irrigated by federally supplied and subsidized water. Much of this land is owned by non-farming absentee investors who pay only 18% of the actual cost for irrigation while their rural counterparts are expected to pay 64% for the same type of service.

There is a two fold opportunity here for constructive action. The Interior Department, prodded by a lawsuit from the National Land for People group, has issued new regulations which would limit ownership to 160 acres per direct family member. They would also impose much stricter residency requirements.

Secondly, I have introduced, along with Senators Nelson, Metcalf and Haskell, the Reclamation Lands Family Farm Act. As framed, this bill is a frontal assault on the power of the agribusiness conglomerates and the absentee owners. It would also enable those who cannot afford to purchase the land outright to lease it with an option to buy. Hearings on the bill are scheduled for late January. It faces a difficult course, so it will require your vigorous support for successful passage.

I have also introduced an additional bill which would make rural water supplies more available to all rural residents at more reasonable rates. A special word of thanks is due here to the National Demonstration Water Project. Their data gathering efforts and pilot projects have been instrumental in focusing attention on this neglected area.

I am also pleased to note that this conference will be devoting some of its sessions to alternative agricultural methods and to agricultural research.

Earlier this year, I held hearings on this subject, and was strongly impressed by the evidence indicating the urgent need to move away from chemical, energy and capital intensive agricultural practices of the recent past. If we persist in the current overuse of chemical pesticides we are laying the groundwork for the total destruction of the soil and the highest cancer rates in the history of the planet.

In the realm of agricultural research, the Department of Agriculture, in spite of protests to the contrary, has continued to subsidize giant corporate agribusiness, at the expense of the research needs of the small farmer.

A close examination of the Federal Research and Development budget provides a pathetic commentary on our inverted priorities. The defense budget consumes 48% of the total, with space research a distant second at 16%. Agricultural research is a paltry 2% of the total—approximately $700 million. The overwhelming portion of this figure goes exclusively for the promotion of agribusiness interests.

The Congressional hearings which I chaired in October dealt with the current research priorities of the Agriculture Department. The findings clearly indicated that small farms are not receiving the attention they deserve from government and land grant college research. Even worse, at the present time, there is no long range plan or focus in the Department of Agriculture research program. The Agriculture Department, in these hearings, pledged more of their future resources to the concerns of small farmers. But, like you, I am more interested in performance than promises. It is our mutual task to hold the Department up to intense public scrutiny until these services are delivered.

III

Finally, it cannot be emphasized too strongly—that rural America—and the family farm—*cannot long survive* if energy prices continue to rise at their present rates. It is the farmer who has been—and will be—the first to feel the catastrophic impact of a new round of energy price increases before any other segment of our economy. Every piece of machinery that is used in farming requires a great deal of energy for its manufacture. When that machinery is used in the fields it requires even more energy for operation. Natural gas, which is used to heat 60% of the homes in this country, is also the basic element in the production of farm fertilizers used in massive amounts throughout the country.

So let me lay it on the line—rural America ought to have the biggest stake in constraining the power of the Big Oil companies. . . . Companies whose sole motivation for acting in this manner at the present time is their unmitigated greed. I'm here to tell you that the American oil industry has no concern whatever for the public interest. Their only concern is to maximize their profits, and they will use any means available to them, legal or illegal, to achieve their objective.

In 1956, when the oil industry first tried to deregulate natural gas in the Congress, they attempted to bribe South Dakota Senator Francis Case. But Senator Case reported the bribe attempt and publicly denounced the oil industry from the Senate floor. That sent them scurrying like rats down a hole, and there they remained for almost twenty years.

In 1973, the oil industry saw a golden opportunity for achieving its objective—the renewal of war in the Middle East. They attempted to exploit the crisis by claiming the existence of a severe supply shortage. In this manner they tried to coerce the Congress and the public into raising both oil and natural gas prices—whether or not such prices were needed for additional research and production. The renewed attempt at deregulation, in the form of an amendment proposed by then Senator James Buckley of New York was defeated by only two votes in the Senate.

However, the oil industry continued to attack. Encouraged by promises from a Federal Power Commission under Richard Nixon's control that deregulation was inevitable, the oil industry made the withholding of natural gas reserves an integral part of its basic strategy. The dual purpose of this move was to create artificial shortages and to save their gas reserves for the day that deregulation would come. So in 1975, Senators Bentsen of Texas and Pearson of Kansas offered another deregulation amendment which passed, 50 to 41. Fortunately, the House of Representatives refused to accept total deregulation, which is tantamount to an express train to economic oblivion for the American farmer and consumer.

It is important that we look behind the facade of oil industry propaganda and get at the true facts of the situation. When the Arab nations placed an embargo on their oil exports in 1973, only 6 to 10 percent of our annual oil imports came from that region. Seventy percent of the oil we used was produced right here in the U.S. But the oil companies scapegoated the Arabs and pocketed billions of dollars in profits—at the expense of American consumers.

Make no mistake about it—it was the unconscionable increase in the U.S. oil prices that sent tidal waves of inflation cascading across the American economic landscape. One needs only to examine the profit margins reported by the major oil companies during the past three years to grasp the full dimensions of the oil industry's total disregard for the public's welfare.

In the same vein, the oil companies lied to the Congress and the public about last year's shortages. They were not caused by a supply shortage. The real reasons were the unusually severe winter of 1976–1977 and the demonstrably inadequate gas transmission facilities currently in use.

This year, faced with a new round of scare tactics and arm-twisting seldom, if ever, seen in the Congress, I joined with Senator Howard Metzenbaum of Ohio in trying to slow down the oil industry's steamroller.

We began one of the most difficult tasks in the U.S. Senate, a prolonged filibuster designed to prevent the oil industry from having its way on the issue of deregulation. After a thirteen day struggle we lost by four votes. But I think we accomplished one major objective. After two weeks of bitter floor fights in the U.S. Senate, the American public is finally aware of the oil industry's blatant attempt to plunder the public purse.

However, after being involved in the U.S. Senate with the President's proposed energy bill for the past year, it's my firm conviction that Mr. Carter should withdraw his support from the bill that is emerging from the joint energy Conference Committee of the Congress.

Why? Because it is a case study in utter chaos and confusion, something which reminds me of the lines from Carl Sandburg's poem, "Under the Capitol Dome". In that poem he noted that:

There are those who speak of confusion today as though yesterday there was order rather than confusion.

There are those who point to confusion today as though if given a chance they could tomorrow transform it into order.

There are those who find benefits in confusion and make it a labor of delight to render any confusion more confounded.

The President's original bill was, at best, a mixed blessing. Now that the Congress has eliminated nearly everything from the bill except higher prices, the bill stands as a bizarre commentary on the concept of government by committee.

It is crucial to realize that neither the President's original proposals, nor the disastrous bill that the Congress is currently negotiating, go to the core of the energy problem. To be very candid, the United States cannot continue for very long its dependence on ever more costly fossil fuels and nuclear power. The inevitable, catastrophic consequences will be the total ravaging of our environment and permanent economic subservience to Big Oil.

Listen for a moment to some somber facts that you won't find in the public relations media blitz perpetrated by the oil companies. Their theory is that the difference between rape and seduction is the degree of salesmanship. What they won't tell you is that the top twenty oil companies in this country control 84% of the production process, ~~92% of~~ the pipeline shipments, and 80% of the refinery business.

Even more ominously, the top twenty oil companies are now expanding their tentacles of control to other sources of energy. In the past five years they have obtained control of almost 40% of the nation's known coal deposits. At the present time 7 of the 15 largest coal companies are subsidiaries of the oil companies. Note also that, as Big Oil's coal ownership increased, so have coal prices—up 300% in the past five years. In the field of nuclear energy deposits a similar pattern is developing. Responsible estimates indicate that Big Oil now controls well in excess of 50% of all known uranium reserves. As for shale and geothermal lands, virtually all those leased to date have gone to the oil companies.

So for our own economic and environmental survival a constructive long-range solution must include the conversion to so-called renewable resources like solar and wind power. Any new energy bill must require mandatory conservation measures such as honest minimum mileage standards on cars, a stringent ban against the wasteful burning of natural gas to produce electricity, and a long-range program to rebuild the nation's decaying rail system.

Any sound national energy policy must focus on conversion to solar energy, not conversion to coal—on natural gas obtained from alcohol and new processes like bio-energy—not deregulation of gas prices—on research to perfect solar energy—and not on the mortally perilous pursuit of a nuclear energy economy.

In conclusion, our mandate is simply this. We must prevail over the James Schlesingers of this society—that is—IF—we want to leave our children a legacy of sanity and safety in the search for new energy sources.

So the message I bring today is not one of happiness—but of hope—not one of despair—but of dedication—not one of complacency—but of commitment. It is a commitment to do what is right and best for all our citizens, especially those most in peril from the avarice of the affluent and the indifference of political incumbents. Like Woody Guthrie, we are secure in the knowledge that this land is our land—and we intend to keep it. But, like Langston Hughes we will no longer tolerate a concept of a dream deferred.

The crisis has been upon us and the time for action is now. All of America needs Rural America's best efforts. I pledge mine. I hope you'll do the same in the days and months ahead.

Thank you very much.

DO NOT FORGET GENOCIDE

Mr. PROXMIRE. Mr. President, the last few weeks have witnessed a rekindling of interest in human rights issues with three important actions.

First, President Carter recently went before the U.N. General Assembly to sign two human rights accords.

Second, Secretary of State Cyrus Vance has spoken out against the discriminatory actions of the South African Government against the black majority. These repressive actions included such actions as arresting black leaders, closing of black newspapers, and further restriction of movement of blacks. His statements were followed by U.S. support of a resolution establishing an arms embargo against South Africa.

Third, introduction and passage by the House of Representatives of a resolution protesting recent acts of repression by the South African Government is another significant development. This resolution is the first of its kind to pass the House of Representatives and President Carter personally called Representative Cardiss Collins, the sponsor of the resolution with congratulations.

Human rights issues are among the most important issues facing the world community today. I am pleased and reassured to see such concern and forthright action by leaders of both branches of our Government.

It is ironic though, that the Genocide Treaty, one of the most basic human rights, has been forgotten.

America's role as a spokesman for human rights around the world has been jeopardized by our failure to ratify the Genocide Treaty. I am deeply disturbed that the United States has apparently decided to make genocide a "back burner" issue. This is inconsistent with every recent action taken by the United States. The basic right of a group of people to exist can never become a "back burner" issue. For this reason I urge my colleagues to quickly ratify the Genocide Treaty.

CONGRESS AND ADMINISTRATION ACT ON HUMAN RIGHTS POLICY

Mr. HUMPHREY. Mr. President, during the past year, the United States has moved boldly to make human rights a central tenet of its foreign policy. This new emphasis on human rights has restored the link between our Nation's own democratic values and our foreign policy. It stresses the rights and dignity of the individual and allows each American to understand better the direction of our foreign policy. The executive branch has now begun the task of instituting this new policy emphasis on human rights when it makes decisions on foreign assistance.

Many of the basic guidelines of America's human rights policy have been set by the Congress. This especially true in the case of countries receiving U.S. foreign assistance. During the past 2 years, Congress has enacted legislation linking a country's human rights performance to all four major kinds of foreign assistance: security assistance, bilateral development assistance, multilateral assistance, and Public Law 480 food aid. To insure that human rights considerations are factored into U.S. assistance policies, Congress has established certain procedures and guidelines for the executive branch to follow. In addition, the Congress has requested reports on human rights practices in each country for which security and economic assistance has been requested.

The guidelines have been set and we are now entering a period where the implementation of these guidelines will be crucial. The laws enacted by Congress must be implemented vigorously but with balance. The executive branch must strive for consistency in implementing these laws but it must recognize that each case presents a different set of facts. It must also implement these laws in such a way that the poor people of a country are not punished because of the repressive action's of their leaders. I am concerned, for example, about a recent case in which Public Law 480 food assistance to more than a score of countries was delayed while State Department officials made judgments about human rights situations in those countries. There are also instances in which America's security interests are involved with the security of foreign aid recipients whose human rights practices are questionable. In such cases, the U.S. must vigilantly continue its diplomatic efforts for human rights reform in those countries without adversely affecting U.S. security interest in the process.

As the Subcommittee on Foreign Assistance undertakes its effort to rewrite the Foreign Assistance Act of 1961 we will carefully review U.S. human rights policy, its implementation, and its impact. The staff has recently done a preliminary report cataloging human rights legislation, its implementation, and its impact. I commend it to the attention of my colleagues.

Mr. President, I ask unanimous consent that this staff report be printed in the Record.

There being no objection, the staff report was ordered to be printed in the Record, as follows:

Recent Human Rights Legislation and Its Implementation

This memorandum contains a brief review of recent human rights legislation, its implementation, and some recent positive developments which may be in response to U.S. policy.

TAB A—Legislative guidance related to human rights and foreign assistance;

TAB B—Human rights legislative sanctions on specific countries (1976–1977);

TAB C—Executive Branch implementation of legislative guidance on human rights.

The following preliminary conclusions might be drawn from the three tabs and other information available to the staff.

LEGISLATIVE RECORD

Congress has now passed legislation providing human rights guidance for all major military and economic aid programs.

Specific aid sanctions have been legislated or agreed to against 18 countries in the 1976–77 period and subsequent Administration action has affected an additional 15. In total, aid to 33 countries has been affected in some way. (See Tab B).

In 13 legislated cases military aid was affected and in 12 cases economic aid was affected.

Seven countries have been especially hard hit in FY76 and FY77 by both economic and military sanctions (Argentina, Cuba, Chile, Cambodia, Laos, Vietnam, and Ethiopia). Aid to Uganda has been prohibited since 1973.

The recent human rights focus in Congress has been on the IFIs (both for general guidance and specific sanctions) in part because these funds reach some countries with whom the U.S. has no bilateral programs.

Appropriations legislation has increasingly served as a vehicle for sanctions.

Decisions on specific legislative sanctions appear to be made on an ad hoc basis.

In some cases committee report language or non-binding resolutions are used in lieu of sanctions because of U.S. national security interests (i.e., South Korea) or because of the concern that reprisals might be forthcoming (the Case Resolution condemning murders in Uganda).

IMPLEMENTATION

The Executive Branch has taken steps to implement all four provisions of law relating to aid sanctions for human rights violators. (Tabs A & C).

In many cases this implementation is symbolic, consisting of opposition in IFI assistance, delaying assistance, and sending demarches.

At least 25 countries have been affected by such Administrative action and in 15 cases there were no specific legislative sanctions against these countries.

Much of this action has not been publicized.

In terms of U.S. aid programs, Chile remains the only country formally designated by the U.S. with having a "consistent pattern of gross violations of human rights."

A new interagency human rights coordinating mechanism has been established but coordination problems still exist.

IMPACT

The Administration cites 19 developing countries in which it believes that at least cosmetic progress has been made recently in human rights. In at least 7 of these 19 cases, some action was taken which threatened or halted U.S. assistance.

It is premature to judge the effects of U.S. human rights policy on national security objectives and the traditionally non-political IFIs.

NEW INITIATIVES

The Administration has already taken steps to reward countries for improvements in their human rights record (i.e., by providing additional P.L. 480 to Peru in 1978 and signing the 1977 FMS agreement with Nicaragua).

New proposals are currently being considered to expand the use of P.L. 480 as a human rights tool.

Congressman Pease has introduced legislation in the House to establish a trade ban on Uganda.

TAB A: Legislative Guidance Related to Human Rights and Foreign Assistance.

1. SECURITY ASSISTANCE

Section 301 of the International Security Assistance and Arms Export Control Act of 1976 created a new Section 502(b) of the FAA. This provision 1) states that it is U.S. policy that no security assistance be provided to any country that engages in a consistent pattern of gross violations of human rights; 2) requires annual individual country reports on the status of human rights in the eighty or so countries that receive security assistance; 3) establishes a new position of Coordinator for Human Rights at State to be confirmed by the Senate, the objective being that human rights factors be given a bureaucratic priority; 4) establishes a procedure whereby the Committee can request a human rights report from State on any individual country. The Congress, by point resolution, could reduce, terminate, or restrict security assistance to that country after triggering this request for the individual report.

2. BILATERAL DEVELOPMENT ASSISTANCE

Section 116 of the Foreign Assistance Act of 1961 prohibits provision of development assistance to the government of any country which engages in a consistent pattern of gross violations of internationally recognized human rights unless such assistance will directly benefit the needy people in such country. In determining whether a government is engaged in such conduct, the Administrator of AID considers in consultation with the Assistant Secretary for Human Rights and Humanitarian Affairs the extent of cooperation of the government in permitting investigations of violations by international organizations and specific actions which have been taken by the President or Congress relating to multilateral or security assistance because of human rights practices.

The Act also requires a report concerning the status of human rights in each country receiving development aid and the steps the Administrator of AID has taken to alter U.S. development aid programs in any country because of human rights considerations.

The International Development and Food Assistance Act of 1977 earmarked $750,000 in FY 78 for studies to identify and openly carry out program and activities which encourage or promote increased adherence to civil and political rights.

3. P.L. 480 FOOD AID

The International Development and Food Assistance Act of 1977 added a Human Rights provision to P.L. 480. Section 112 of P.L. 480 now prohibits Title I sales to any country which engages in a consistent pattern of gross violations of internationally recognized human rights unless such sales will directly benefit the needy people in the country. The provision states that, for the purposes of this section, Title I sales will not directly benefit the needy people unless either the commodities themselves or the proceeds from the sale will be used for specific projects or programs which the President determines directly benefit the needy people. Further, the law requires that a Title I sales agreement shall specify how the projects or programs will be used to benefit needy people. The provision also calls for a report to the President within 6 months after the commodities are delivered on how the program benefits the needy.

The P.L. 480 amendments also include a requirement to consider the extent of cooperation of the government with international investigations of its human rights practices and a full and complete report regarding steps the President has taken to carry out the provisions of the section in the annual presentation materials.

4. INTERNATIONAL FINANCIAL INSTITUTIONS

Section 701 of the omnibus International Financial Institution Act of 1977 (P.L. 95-118) requires the U.S. Government to advance the cause of human rights with its voice and vote in the international financial institutions including seeking to channel assistance toward countries not guilty of human rights violations or harboring hijackers, and opposing (vote no, abstain, vote present) assistance to those who are, unless that assistance is directed specifically to basic human needs. In addition, Section 701 requires the U.S. Government to (1) take into consideration in determining whether a country is guilty of human rights violations, its cooperation with international agencies conducting investigations, (2) initiate a wide consultation to develop a viable standard for basic human needs and protection of human rights, (3) seek to channel assistance to projects which address basic human needs, (4) instruct the Executive Directors to take into consideration in carrying out their duties specific actions on bilateral assistance programs relating to human rights, the extent to which the assistance will directly benefit needy people, whether the recipient country has detonated a nuclear device or is not a State Party to the Nonproliferation Treaty, and whether Vietnam, Laos, and Cambodia have provided a more substantial accounting of American MIAs. The human rights sections of the Inter-American Development Bank and African Development Funds Acts are repealed. Finally, a report to Congress on the implementation of this provision is required one year after enactment. Subsequently, amendments concerning prohibitions of multilateral aid to specific countries were considered for the FY 1978 Appropriations Bill (see Tab B for details).

TABLE B.—HUMAN RIGHTS RELATED LEGISLATIVE SANCTIONS ON SPECIFIC COUNTRIES (1976–77)

	Military					Economic			
Country	FMS credits on guarantees	FMS sales	Ccmmercial sales	Military assistance (MAP)	Military training (IMET)	Multilateral aid (IFIs)	Bilateral development aid	Supporting assistance (SSA)	Food aid (Public law 480)
Latin America:									
Argentina	(3)	(1)	(1)	(1)	(2)			(1)

FOOTNOTES

[1] Section 11 of the International Security Assistance Act of 1977 prohibits the following types of assistance and sales to *Argentina* after September 30, 1978: FMS credits and sales, commercial arms sales to the Government of Argentina, grant MAP, IMET, and SSA. The September 30, 1978 date would put Argentina on notice but would allow Congress to review Argentina's response. No authorization was provided by FY78 FMS credits since they were rejected by Argentina.

[2] The FY78 Appropriations Act prohibits IMET for *Argentina* in 1978.

[3] The FY 1978 Appropriations Act prohibits FMS credits for *Argentina, Brazil, El Salvador*, and *Guatemala* for FY78 after those countries rejected all FMS credits in response to President Carter's human rights policy. The President had announced limited human rights cuts for Argentina, Ethiopia, and Uruguay.

[4] Section 406 of the International Security Assistance and Arms Export Control Act of 1976 prohibits the following types of assistance and sales to *Chile:* FMS credits and sales, commercial sales, MAP, IMET, and SSA. It also prohibits all deliveries of military equipment and placed a $27.5 million ceiling on bilateral development aid unless the President determined that human rights improvements were made.

[5] The Young/Crane/Ashbrook Amendments to the House FY78 Appropriations bill would have prohibited the use of direct or indirect assistance to *Cuba, Vietnam, Cambodia, Laos, Uganda, Mozambique*, and *Angola*. This primarily affects the IFIs (indirect) since no bilateral aid was requested or authorized for any of these countries and in most cases previous law prohibits such bilateral aid. In a letter to Rep. Long the President stated that for FY 1978 he would instruct U.S. Executive Directors of the IFIs to vote against loans to these seven countries and tied this decision to Congressional human rights concerns. The Long Amendment was subsequently dropped in conference.

[6] The SFRC Committee Report for the International Security Assistance Act of 1977 indicated that Committee approval is necessary before any FMS credits are disbursed to *Nicaragua* by FY 1978. Appropriations language prohibiting 1978 FMS credits to Nicaragua was dropped in conference. The Administration has obliged already authorized FY77 FMS credits for Nicaragua but has with-

held bilateral economic assistance pending a human rights review. Bilateral economic assistance can be obligated at any time while FMS credits must be obligated before the end of the fiscal year.

[7] The FY 1977 Appropriations Act (Section 505) prohibited FY77 funds for MAP, IMET, and FMS credits to *Uruguay*. No funds were requested or authorized for these programs to Uruguay in FY 1978. The FY78 Appropriations Act specifically prohibits use of funds for these three programs in Uruguay.

[8] The International Security Assistance Act of 1977 adds a Section 620B to the FAA to prohibit MAP, IMET, SSA, FMS credits and sales, and deliveries of USG financed military equipment to *Ethiopia*. The President can waive the prohibitions if this is in the national interest. The FY 1978 Appropriations Act similarly prohibited MAP, IMET, and FMS credits to Ethiopia in 1978 without a specific waiver provision.

[9] The International Security Assistance Act of 1977 prohibits the use of SSA funds for *Mozambique, Angola, Tanzania,* and *Zambia* unless the President determines such aid to be in the U.S. foreign policy interest. The prohibition was not explicitly linked to human rights by the conference report.

[10] The FY 1978 Appropriations Act reduces the FMS credit request for the *Philippines* by $1.5 million, the MAP program by $1.5 million, and the IMET program by $100,000; and stated the reason as human rights violations.

[11] The International Development and Food Assistance Act of 1977 prohibits provision of aid to *Cuba, Cambodia, Laos,* and *Vietnam*. The conference report notes that other statutes put trade restrictions on these countries.

TAB C.—EXECUTIVE BRANCH IMPLEMENTATION OF LEGISLATIVE GUIDANCE ON HUMAN RIGHTS

The following actions have been taken by the Executive Branch to implement legislation on human rights:

Security assistance

The Administration has delayed or halted some or all security assistance to 12 countries. It declined to sign the FY77 FMS agreement with Argentina. All arms sales to South Africa were halted under the UN Security Council Resolution.

Bilateral development aid

Loans to 6 countries have been delayed or dropped, and demarches linking U.S. aid and human rights policies have been sent to 9 countries. Aid to Chile was cut to zero in FY78 and obligation of FY77 aid to Nicaragua was delayed.

P.L. 480

A proposed increase in food assistance to a West African country was rejected and demarches are being considered in several cases.

IFI loans

The U.S. has abstained in 8 proposed IFI loans including those to South Korea, Ethiopia, Benin, and the Central African Empire. It voted against loans to Argentina and Chile. It further has sent 25 demarches relating the U.S. position on human rights to future loans.

Administration testimony and statements indicate that the Executive Branch has taken some action related to human rights in 25 non-European countries, including the following:

Latin America

Argentina, Brazil, Chile, El Salvador, Guatemala, Haiti, Nicaragua, Uruguay.

Africa

Benin, Central African Empire, Ethiopia, Guinea, South Africa, Uganda.

Asia

Philippines, South Korea, Thailand, and possibly Indonesia.

Middle East

Iran.

In 15 of these 25 cases there were no specific legislative sanctions against the country in question.

THE PASSING OF DR. LARRY WOODWORTH

Mr. GRAVEL. Mr. President, at this time, mere words seem to belittle the accomplishments of our steadfast associate and friend, Dr. Larry Woodworth. The Nation has lost a dauntless public servant; the Congress has lost a friend. Larry will be missed for his professional ability and his human traits. His passing should make us all reflect on the price this Nation exacts for selfless public service. I am shocked and greately saddened that so vibrant and vital an individual was with us one day in person, and was gone the next. As I pause to pay my personal respects to him, I am confident Larry will serve as an example to all of us. I am thankful that he was with us as long as he was. I will miss him.

STRATEGIC MOBILITY AT SEA

Mr. INOUYE. Mr. President, recently Rear Adm. John D. Johnson, Jr., Commander, Military Sealift Command, delivered a very timely address on our need for a strong and viable merchant marine if we are to have strategic mobility. By "strategic mobility," Admiral Johnson means the combination of people, equipment, procedures, and plans required to move men and equipment to any part of the world in response to a shooting war, political contingency or natural disaster.

To those of us closely involved with our national policy to promote a strong and viable merchant marine, Admiral Johnson's pessimistic assessment of our present merchant cargo resources comes as no surprise.

In the days ahead when Congress considers legislative proposals to support our national shipping policy, we would all do well, in my judgment, to keep Admiral Johnson's remarks in mind.

I. therefore, ask unanimous consent that his address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ADMIRAL JOHNSON

I am delighted to have been invited to speak to you today and to share with you some of my thoughts. Although I am a rather recent arrival to the maritime world, I have been impressed from the very start by the need for a strong community voice and by the outstanding efforts of the Propeller Club to help generate and sustain such a voice. The maritime industry and Department of Defense need desperately to be heard and our many and severe problems must be articulated accurately and with enough volume to be understood, not only by the administration but by the American public as well. We are all in trouble and our situation is not getting any better. This state of affairs has been repeatedy publicized and was again highlighted during the recent Propeller Club convention in Galveston.

The health and welfare of the merchant marine is of very special concern to me as the Department of Defense sealift commander. Sealift is a critcal element in virtually all of our contingency plans, and failure of the sea link in an emergency would almost assuredly spell disaster. So how do we stand today.

During the next few minutes I would like to give you a quick overview of our sealift capabilities as they appear within the broader framework of strategic mobility. I trust my comments will strike an even balance, and will not overstress the negative aspects.

When I speak of strategic mobility I am talking about the combination of people, equipment, procedures and plans required to move men and equipment to any part of the world in response to a shooting war, political contingency or national disaster.

Note that I said combination. It is essential to recognize that the core of strategic mobility is a closely coordinated system, not a group of unrelated, uncoordinated individual elements. Thus, while sealift is without question a major component, it cannot function in isolation. Ships, aircraft, trucks, trains, the human element, and a vast inventory of management devices must all respond to a bewildering array of requirements like a well-oiled machine. There can be no mismatches, no disconnects and no petty quarrels. Teamwork, reinforced by solid planning and exercising is the order of the day if we are to assure mobility of our forces.

Our mobility team is a complex entity that must be capable of functioning within a broad spectrum of scenarios ranging from an all-out NATO conventional war to brush fires, evacuation of American citizens, and disaster relief.

The diversity of these scenarios and the vastness of the world stage require our country to maintain a means of response that is both rapid and flexible. Mobility assets must be of the highest quality and must be ready to respond at the drop of a hat. This is not an easy matter, for our mobility resources are geographically dispersed, in short supply and frequently optimized to civilian rather than defense needs. This last comment is not, by the way, voiced as a criticism, but merely recognizes that the complexion of our civilian mobility resources is regulated by economic considerations, and appropriately so.

We have only to glance at the globe or to flick through the pages of recent history to realize that sealift has been, and will certainly continue to be, an essential and major player on this strategic mobility team.

I well realize that this is obvious to such a distinguished audience. I don't mean to insult your intelligence by dwelling on this fact of life. However, I have found from bitter experience that the role of sealift has in recent years been increasingly misunderstood and misinterpreted.

Typical of this is the view that airlift with its great responsiveness and speed has made sealift obsolete. This is a tragic misperception of strategic mobility. Sealift and airlift are not competitors in this arena. They, and all of the other strategic mobility components, are complementary and are part of a necessarily integrated system. Let me illustrate by reviewing two basic scenarios: a general war in Europe and a typical nonmobilization contingency.

The war in NATO would represent our most severe mobility challenge and so is of special interest. Our potential enemy in Europe is very strong, and getting stronger. He is fully capable of interdicting the line of communication over virtually its full length. His submarines and warships can wreak havoc with our merchant shipping. His aircraft can strike at our sea and airports, roads, rail lines, ships and transport aircraft. We have only to look back to World War II to envision what enormous difficulties we would face and how tenuous our mobility bridge would be.

Although we and our Allies have significant forces already positioned within NATO nations, the majority of U.S. men and equipment remains in the continental United States. These forces and their resupply represent many thousands of tons of cargo.

Most of it must be moved by air, rail and road to aerial and sea ports of embarkation. Timing, speed and flexibility are the criteria here. We must match what has to be lifted to the right kind of vehicle. We have to maintain unit integrity so that our port loadouts do not result in a meaningless jumble of men and machines.

Above all, we must initiate and sustain a smooth, uninterrupted traffic flow which feeds through our domestic ports into ships and aircraft without serious backlogs, or idle lift assets. The air and sealift mix for the intra-theatre movement must be carefully optimized to ensure the best possible delivery profile to support NATO requirements. This means that we must plan in exacting detail so that each aircraft and each ship is carrying that cargo for which it is best suited.

In general, people and highly time-sensitive material will be moved by air. But, at best, this represents only about 4 or 5 per cent of the total tonnage. The remainder must go by sea. Both modes are essential and they are complementary. Air gives us badly needed speed of response and short transits. But it is tonnage limited.

So it is up to sealift to move the mountains of equipment for the initial reinforcement of Europe and for the follow-up resupply. The diversity of the cargo, its volume, and the unique characteristics of a substantial segment of the lift combine to make this an incredible challenge for all of us in the world of sealift.

Now let's get down to some specifics concerning our ability to meet the challenge at sea. Looking at our marine cargo resources does not give me the warmest of feelings. The Military Sealift Command owns six specialized dry cargo ships, three of which are not very well suited to the strategic role. They obviously are not a significant resource factor in wartime.

The remainder of the MSC controlled, general cargo fleet of 21 ships consists of commercial charters, and would of course be fully involved.

Next and most importantly we have the merchant fleet of approximately 270 militarily useful dry cargo ships. This is our most significant U.S. capability, both in terms of ship technology and capacity. Added to this is the National Defense Reserve Fleet numbering some 140 largely aged cargo ships. Next is the flag of convenience fleet with about 11 militarily useful dry cargo ships, but carrying the inevitable question mark of availability. Cumulatively, these assets are not anywhere near enough to do the job. Thus we must also depend in this scenario on significant numbers of NATO ships to meet our delivery requirement deadlines. Not a very comfortable posture, especially if we are faced by a short warning situation which woud virtually eliminate any attrition free mobilization lift.

Let us be very realistic about shipping losses in the first few days of such an all-out war at sea. Losses will be heavy in spite of our our very capable anti-submarine and anti-air forces. Our already rather slim sealift will be stretched even thinner. If the war is of short duration we will not have the time to build back up, World War II style. With a come-as-you-are war a possibility, the need for an in-hand sealift capability of the highest order becomes even more vital.

The initial phase of reinforcement/resupply poses some special problems. Not only will we be faced with potentially higher attrition rates, but our requirements for shipping will be more challenging than in the steady-state resupply of the later time frame. Not only must we get ships on berth very very quickly, but we must control the mix of ships.

The nature of the reinforcement equipment, with its heavy concentration of wheeled and tracked vehicles and aircraft, makes the inclusion of specialized ships such as ro/ro mandatory.

Another early-on challenge is the availability of adequate specialized offloading facilities at the European ports. The industry trend away from self-sustaining ships, while economically attractive in peacetime, is unattractive in war. It reduces the flexibility of port assignment and leaves us highly vulnerable if specialized port capabilities are lost to enemy action.

I could go on for several hours on this subject, but I think you can see that our sealift problems are numerous and difficult. This does not mean that we cannot do the job, or that we are facing disaster. It does mean though that we must recognize our substantial deficiencies and work very hard as a community to solve them. Neither does it mean that as a group we have failed to do anything about the problems in the past, for we most certainly have. We must, however, do more.

What about mobility in a non-mobilization contingency? The challenge can be just as great but its complexion is different. Here we are usually not concerned with the enormous tonnages of a major war, nor are we necessarily addressing a shooting situation. What we almost always face in this area is the requirement for speed of response and the need for great flexibility in tailoring the response to the task. Airlift with its quick reaction time is very attractive in many of these situations, and plays a significant role.

But its partner, sealift, is also very attractive since it too can react with surprising speed, can carry much larger volumes of cargo, and avoids the political vulnerability of aircraft overflight and landing rights.

We have only to look back at the magnificent job our merchant marine did on extremely short notice during the evacuation of refugees from Vietnam to realize how essential a responsive sealift is to our national interest. Every year sealift is involved in some measure in the support of our country in unexpected emergencies. It has never failed us, but we cannot take it for granted.

Long-term or especially demanding contingency scenarios can and do pose a special set of demands. As in the case of the mobilization scenario, we must depend heavily on our merchant marine to augment our extremely limited Navy controlled fleet of less than 30 commercially-owned ships. The Sealift Readiness Program with 124 ships is absolutely vital in any large scale contingency. At the same time our planning must recognize the potentially disruptive effects that callup of ships under this program might have on industry.

As you reflect on my comments so far you may conclude that most of what I have said to this point sounds pretty negative. Perhaps it is, but I don't want to create an impression of inevitable doom. Rather, I would want to leave behind a clear sense of challenge, pride in past accomplishments and a recognition that we must solve our problems as a community.

We in the Defense Department must clearly acknowledge that the maritime industry is controlled by economic realities. We cannot expect ship owners to build ships to meet defense needs if these needs result in a less than economically viable cargo carrier. This does not mean that we are at an impasse on additional defense oriented improvements, but it does demand that we are both imaginative and realistic about them. Thus we must work very hard with the industry to create a more effective utilization of the maritime asset within these constraints.

The area of improved communications equipment is typical of the type of initiative we can undertake without degrading the economic health of the maritime industry. There are, I am convinced, a number of other initiatives we can take if we put our collective minds into the problem-solving mode.

As has been pointed out on a number of other occasions, we in Defense must also communicate our specific lift requirements more accurately to top management in the industry. In this regard, we are working very hard to overcome the hurdles of classified information so that our statements of requirements can be meaningful. After all, if industry and defense are to be true partners, each must be able to lay his cards on the table. The success of our recent tests in over-the-shore loading/offloading of merchant shipping, and in the use of merchant tankers for at-sea consolidation of fleet support ships is clear evidence of a community ability to solve difficult interface problems.

The nurturing of the defense/maritime industry partnership is a matter of sheer necessity, and we must get on with it. But we cannot let the details of this process obscure the central issue which faces us—now and in the years ahead. Our best community efforts to build a better sealift team and thus assure strategic mobility will be little more than window dressing if we do not have as our foundation a strong and viable merchant marine.

As I said at the outset of my remarks, our collective voice must be heard. We cannot afford to whisper, to quarrel among ourselves or to defer to the future. We must act, and act now. In the battle for an effective and responsive sealift force, you and your Propeller Club associates must continue to be in the forefront. I know that you will.

WOMEN'S CONFERENCE FAR OUTSIDE U.S. MAINSTREAM

Mr. McCLURE. Mr. President, the events surrounding the National Women's Conference held this November in Houston, Tex., have added to the controversy surrounding the activities of the National Commission on the Observance of International Women's Year. The national plan of action adopted by the delegates to the conference which includes recommendations for Federal funding of abortion and to vindicate homosexual activity will soon be presented to Congress. Most of us will agree that the controversial proposals adopted by the conference are not representative of the majority of American women. Others have maintained that the delegate selection process and organization of the State meetings promoted by the National Commission on IWY were designed to purposefully exclude many women from participating in these meetings by reason of their political or religious beliefs.

I was extremely shocked to learn further that the National Commission on International Women's Year apparently had printed and mailed, under the franking privileges of the U.S. Department of State, material which was extremely critical of the Church of Jesus Christ of Latter-day Saints. The eight-page publication equated the Mormon Church with the Ku Klux Klan and other extremist groups. But beyond that, it accused the women members of that religious organization of subverting the efforts of IWY.

I believe the record should be made clear in that regard, that in my State of Idaho, women of many political and philosophical persuasions attempted to be represented at the State and national IWY conventions. As a matter of fact, certain segments of women felt they were excluded from participation through a variety of methods. The IWY convention, both in State and national levels was not representative of a democratic process, but serves as a learning tool of how the democratic, representative form of government can be subverted and destroyed by those few who do not believe a wide variety of opinions should be represented.

That is perhaps why I, and many responsible residents of my State, are gravely concerned that taxpayer funds were used to prepare and mail literature which chastizes the LDS Church. This is fraud of the very worst kind, and those responsible should be held accountable for their actions. I have joined others in demanding a full explanation of this totally inappropriate use of taxpayer money.

Another point needs to be made. There were many well-meaning women who went to this conference with worthy goals and desirable objectives to pursue. How regrettable that their efforts were so badly undermined by the kind of people mentioned in the article I am about to insert who turned the conference into a Roman circus.

Mr. President, the following report by John Lofton in Human Events outlines the Houston convention as he saw it. More than that, he takes the time to pay tribute to Senator Jesse Helms for the work he has done in exposing some of the excesses of the International Women's Year. It is a tribute well-deserved. He has done the work for the rest of us who never found the time. He deserves a sincere thanks from all of us who had hoped the IWY would help promote the genuine interests of women. We can only be embarrassed for those prominent American ladies who by innocence or stupidity allowed themselves to be used so shamelessly by the extremists running the show in Houston.

Mr. President, I ask unanimous consent that the article referred to be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Women's Conference (Far) Outside U.S. Mainstream

(By John D. Lofton, Jr.)

Houston.—Since the IWY sprang full-blown from the brow of Bella Abzug over two years ago, Sen. Jesse Helms (R.-N.C.) has been a man ahead of his time vigorously opposing the idea of a federally funded International Women's Year conference. After investigating just exactly how the delegates to this get-together were selected, and just who the people were running this show, Sen. Helms told the Senate this past July:

"Of the 42 members of the International Women's Year Commission appointed by President Carter on March 29 of this year, there is only one who opposes the ratification of the Equal Rights Amendment. There is not a single member who belongs to such groups as STOP ERA, Eagle Forum, or a Right to Life chapter. Not one state coordinating committee is chaired by a member of one of these anti-ERA pro-life groups who speak for a large number of women across this country."

Because this was so, Sen. Helms predicted that the meeting being held here would be "a rubber-stamp, unrepresentative debacle" which would be used "to promote the goals of a militant feminist minority."

Well, as one who has closely watched this freak-show for the past three and a half days, I hereby give Sen. Helms the 1977 First Annual Jeane Dixon Gift of Prophecy Award.

During the time I've been here I have, not surprisingly, been in many arguments with many women about many subjects. But the one assertion I am absolutely unable to challenge is spelled out on a large sign stapled to the wall of the National Gay Task Force (NGTF) booth in the IWY exhibit hall. It reads: "We Are Everywhere!" Indeed, they are.

This conference is loaded with lesbians. It is wall-to-wall weirdos. If it is true, as the conference sponsors allege, that this Valley of the Dykes is representative of the female population at large, then 150% of American women are homosexuals.

Like they say, they are everywhere. How many? When I ask, a woman(?) in the NGTF booth says, with a laugh, "thousands." Perhaps as many as 500 lesbians are delegates, she(?) says.

Another booth in the IWY exhibit hall, operated by a group pushing the idea that homemakers should be salaried, bears a huge banner reading: "Lesbians for Wages for Housework." I buy a booklet titled "Lesbians Organize: Wages Due Lesbians—Wages for Housework Campaign." Its cover has a Peanuts-style drawing on the cover showing Lucy and another female holding hands. The caption: "Who Needs Charlie Brown?" Another book being offered: "The Power of Women and the Subversion of the Community."

When I ask a Ms. Marshall of Black Women for Wages for Housework just how much she thinks housewives should be paid, she says $20,000 a year. When I note that 40 million women are housewives, which means that her proposal would cost a mere $800 billion annually, and ask who will pay these salaries, she is obviously bored with such details, replying:

"When you bog yourself down with petty points of an issue, you don't move, okay? The thing is when there's an issue and you have clout behind it, they find a way to do it, okay?" Right on, I say, but who are "they"? Who will pay these salaries? Well, there are "profits from corporations and money within the government," she says. Like where, I say, pointing out that the federal government is running a $50-billion deficit. Does she know this, I ask?

"Okay, that's fine," she says. "But, you look at Watergate, at the senators running the country, those corporations with profits. The money's going somewhere. I don't know where. They're saying there's a deficit but I do know there's red tape, redundance, and people taking it off the top."

When, in a parting observation, I explain that if business is saddled with an additional expense of $800 billion annually, they'll most likely pass along this increased cost of doing business to those who buy their products, people like lesbian houseworkers, she says: "This is okay, they'd probably do it anyway." Hmmm. Never thought of that.

On my way over to the San Francisco Bisexual Center (SFBC) booth, I am handed a copy of the current issue of "Defending Women's Rights Newsletter." The back-page article is headlined: "Defend Lesbian Rights." Its author: Cheryl Adams, a New Yorker delegate to the IWY convention, who is also the Lesbian Rights Coordinator for the Empire State's National Organization for Women (NOW).

When I reach the SFBC booth, I am handed a flyer by bisexual author Ruth Falk, promoting her book, *Women Loving*. The flyer bears an interesting promo blurb: ". . . an honest, sinewy book; its pace is electric; its shock enduring." To ignore this book, says the promo author, "would be to block out an important part of women's lives as well as our own." The promoter? Les Whitten, co-author of Jack Anderson's syndicated column.

They are everywhere. But not everything they do can be shown in a family newspaper.

The night after the IWY convention approves a lesbian rights resolution, hundreds of lesbians and their sympathizers rally outside the convention hall. A downcast Houston *Chronicle* photographer shows me "a great" photo he took of two women kissing. But, he says, his paper didn't run it. Oh, well, I console him, what can you expect from a publication run by white, uptight, probably straight men.

They are everywhere. When at one of the so-called "Briefings from the Top," presidential aide Midge Costanza finishes her talk and asks for questions, the first one—a statement actually—is from a woman (?) who identifies herself as a member of the Socialist Workers party and a lesbian who "refuses to compromise my rights." Costanza empathizes. She notes that in a Father's Day interview with the AP, President Carter, saying "more than any President ever said before," had declared that he knew people who were taught by homosexuals and "they were never negatively affected by that." Says Midge:

"I get very emotional about this issue because I feel very strongly that you should have the right to love whomever you want. I do." Applause.

Watching Costanza's fist-waving, head-shaking, loose-mouthed macho performance, one realizes why she stays in hot water. At one point, she brags that her first act as a member of the Rochester, N.Y., City Council was to appropriate some money to clean up Susan B. Anthony's grave-site. She says that in her first life as Susan things were much more difficult. Laughter. "Yep, Jimmy and I believe in that stuff," she says. "His [the President's] error was that he made the mistake of coming back as himself." More laughter, applause.

Later, she is asked if Mr. Carter will campaign actively for ERA. Yes, he will, says Midge, and she doesn't mean just make phone calls, which she admits has not been successful. She tells how the phone call strategy backfired because those state lawmakers who were called promptly held news conferences announcing that the President could not intimidate them. Costanza refers to these legislators as "nincompoops." Laughter.

They are everywhere. But not everyone is eager to take up their cause. IWY Big Wig, actress Jean Stapleton, who plays Archie Bunker's wife Edith on "All in the Family," is asked how "Edith" would handle the lesbian rights issue. She ducks this one, telling a Houston Chronicle reporter: "I believe that we'd have a number of story conferences to resolve that issue." Too bad the convention didn't approach the subject this thoughtfully.

A footnote: In fairness to the other far-out crazies working this confab, it ought to be noted that lesbians and their supporters weren't the only weirdos working this gathering. Also in the IWY exhibit hall was the extreme left-wing Pathfinder Press booth which was selling a wide variety of Communist and Socialist literature including the Guardian newspaper. Outside the convention hall, free sample copies of the Communist Daily World were being given away.

Also being handed out free of charge were copies of a newspaper published by the ultra-left Prairie Fire Organizing Group of San Francisco. Last but not least, prowling the halls and holding press conferences here was Margo St. James, the head of what she calls "a loose organization," COYOTE—Call Off Your Old Tired Ethics. Pushing her favorite cause, the legalization of prostitution, St. James was passing out the program from her group's 4th Annual Hookers Masquerade Ball, held last February in—where else?—San Francisco.

It's 9:15 a.m., Sunday morning. I am about to listen to a panel of women discuss "peace and disarmament." The literature on the table is a sign of what is to come. All the material is pro-unilateral disarmament stuff. There's a press release from the Women's International League for Peace and Freedom; a "Bread—Not Bombers!" handout from the Women Strike for Peace; and a pamphlet from the Institute for World Order telling how reduced defense spending is good for the economy.

The meeting comes to order. "The reason we scheduled this thing," says Rep. Pat Schroeder (D.-Colo.), "is because women are no longer going to be observers in the area of peace, disarmament and all that. We're no longer going to be a passive rubber stamp. Arms control is not just men's work." She says something about trying to grope with the issue of the way certain countries, headed by men, need certain "technological things" to parade through the streets but don't have good health care, education, etc. Nuclear weapons are sexist.

Randall Forsberg, an "arms control specialist" from Harvard, endorses a "safe" defense policy and a "wide margin" of arms reduction (ours). She says "almost none of our defense budget goes for defense." I don't understand her explanation. But, she's from Harvard. It must be me. I never went to college.

Forsberg talks about the U.S. and the U.S.S.R. having almost the same number of delivery vehicles. But she doesn't mention the tremendous Soviet advantage in so-called throw-weight, which is very important. She talks about our bombers as if all of them would be able to deliver their bombs in an attack on Russia. But she never mentions Soviet air defenses, which we lack. She talks about our general purpose forces as existing to defend Western Europe. She sounds like this isn't important. Forsberg is opposed to a "militarized foreign policy." Suddenly, I'm glad I never went to college.

The next speaker is a Dr. Helen Caldicott, introduced as a specialist in cystic fibrosis who also was very active in opposing the French nuclear tests near Australia. Or the Australian nuclear tests near France. Whatever. Sounds like the plot for a Woody Allen movie. I'll stay a while longer.

Dr. Caldicott is on the program to talk about the horrible physical effects of atomic radiation, a subject about which I was unaware there was any debate among either men or women.

Nuclear weapons are "hideous," a "diabolical force" which she has fretted about since she was 17. They are the "ultimate insanity" causing "a lot of vomiting and diarrhea," as they did in Japan. Surveys have shown Japanese women whose babies, damaged in utero, were born with tiny brains caused by radiation. The audience is silent. This pro-abortion crowd isn't too big on the problems of the unborn.

There is "no way" to survive an atomic war, says the doctor. Only cockroaches would survive. Such a war would cause "severe psychiatric consequences" for the survivors of a nuclear war, "if there were survivors." The neutron bomb is also a "diabolical" weapon, a terrible way to "kill your fellow brothers." Nixon had the Black Box taken away from him because he was "unstable" the last few weeks of his presidency. The doctor asks:

"Have any of the world's male politicians ever seen a 12-year-old die of leukemia? Obviously not. We must eliminate all nuclear weapons. Women are the civilizers of the human race. We carry life in our bellies. The ultimate in preventive medicine is to abolish all atomic weapons." Standing ovation.

On the way out, I see anthropologist Margaret Mead in the audience sitting in an aisle seat. I ask her if the whole IWY thing is worth $5 million? She looks at me with disdain. "Certainly," she says. "How much of a bomber can you buy for $5 million? I suggest you study how much is spent on instruments of death."

As an expert on culture, I say, do you think the IWY convention is representative of the American female population at large? She taps her walking stick on the floor a couple of times. She's thinking. She replies: "Nothing in this country ever reflects anything at large." I wonder: Does a wet bird fly at night?

It is late Sunday evening, very late. As I lie on the floor of the convention hall's Music Center watching a seven-foot clown woman on stilts playing "As the Saints Go Marching In" on a kazoo, I think of that memorable moment in the main convention hall when a delegate from Guam, speaking Guam talk, is told by the Chairthing that she was not being understood because she was, well, speaking Guam talk and there was no one to interpret.

I know of nothing I've ever agreed with Betty Friedan on. But when she says of this convention: "I have never seen anything like this," I agree. And I hope I never do again. But, if I do, I at least hope I'm not helping pay for it.

So, enough of the feel, the flavor of this phantasmagoria of nuttiness. Now to the hard facts and demographic data as regards this orgy of sexism.

Is this conference affording, as Bella Abzug predicted it would two years ago, "an opportunity for every kind of woman, representing every viewpoint, in every state of this nation to make a statement of her concern"? Does this carnival of kookiness represent the kind of women who are potential recruits for the Republican party, as has been stated by former GOP National Chairman Mary Louise Smith, and former RNC Co-Chairman Elly Peterson?

Mrs. Smith is quoted by the Washington Post as saying here that GOP women "have the responsibility to show that Phyllis Schlafly is not a role model for Republican women." Well, maybe Phyllis should or should not be. That's obviously debatable. But one thing is for sure and it is this: Phyllis Schlafly is much more in the mainstream of female American thought than are the women delegates to this get-together.

If Mrs. Smith had bothered to stop by the Houston Astrodome to attend the so-called Pro-Family, Anti-IWY rally, which attracted between 15,000 and 20,000 grassroots Americans of all sexes and ages, she would have seen this. This gathering was, in many ways, the real story happening in this city. All of the people in this group paid their own way, unlike the IWY delegates who had their expenses completely financed by federal tax dollars.

How do the women IWY delegates compare and contrast with American women in the U.S. population? The following is extracted from data released by the IWY Commission itself and from information based on statistics provided the Commission by the Department of Labor, the Census Bureau, the National Opinion Research Center in Chicago, and a 1975 poll of American women taken by the Detroit-based organization, Market Opinion Research (MOR).

First, some attitudinal questions. Do you agree that "it is much better for everyone involved if the man is the achiever outside the home and the woman takes care of the home and family?" This question, which is literally the do-you-believe-a-woman's-place-is-in-the-home-question, was put to a representative sample of American women by Market Opinion Research. Over half, 52%, of all women agreed. Most of the females at this conference would punch your face if you even asked them this question.

Next: Do you agree "it is more important for a wife to help her husband than to have a career of her own?" Fifty-five per cent of all American women told MOR that they agreed. Most women here would look at you like you were crazy if you asked them this question.

Finally: Do you agree "if a wife earns more than her husband, the marriage is headed for trouble?" Fifty-two per cent of all American black women agreed; 58 per cent of all Spanish-American women agreed. One would be taking one's life in one's hands to ask such a question of the black and Hispanic women at this conference.

According to the MOR poll, the magazines most read by all American women are, in ranking order, the *Reader's Digest, Ladies' Home Journal* and *Good Housekeeping*. It is inconceivable that most of the women here read these publications with any degree of frequency. This is a *Rolling Stone* crowd all the way.

Now, the demographics of this convention. First, I will give the category, then the percentage of all women in this category, and then the percentage of the women delegates in this category here at the IWY conference. What the following figures show is that this convention was in dire need of one of those affirmative action-quota plans that it so enthusiastically endorsed.

Age: 16–25, in the population, this group is 22 per cent; in this convention, 7.5 per cent. Ages 26–55, population, 49 per cent; convention delegates, 77.8 per cent. Ages 56 and over, population, 29 per cent; convention 14.8 per cent. Thus, younger IWY delegates, who tend to be more liberal, are significantly over-represented, while the older delegates, who would tend to be more conservative, are under-represented.

Race: in the population, 84.4 per cent are white; this convention, 64.5 per cent. Blacks, population, 10.4 per cent; convention, 17.4 per cent. Hispanic, population, 4.3 per cent; convention, 8.3 per cent. Asian-Americans, population, .6 per cent; convention, 2.7 per cent. American Indians, population, .6 per cent; convention, 3.4 per cent. Clearly, despite the claims of representatives of the U.S. female population at large, here racial minorities are over-represented and the majority is under-represented.

Income: Under $7,000 a year, population, 78 per cent; convention, 23.1 per cent. Women who make $15,000 or more annually comprise less than 3 per cent of the population. But at this convention, 14.1 per cent of the delegates make over $20,000 a year. This is, relatively speaking, a rich woman's conference with poorer women drastically under-represented.

Religion: Protestant population, 65.8 per cent; convention, 46.5 per cent. Catholics, population, 25.6 per cent; convention, 24.2 percent (finally, an approximation); Jewish, population, 2.8 per cent; convention, 8.9 per cent.

At the beginning of its poll report for the IWY Commission, "American Women Today and Tomorrow," Market Opinion Research inserts a disclaimer reading: "The views expressed in this report reflect public opinion and do not necessarily represent the views of the National Commission on the Observance of International Women's Year or any other federal agency."

I'll say. Any agreement between the opinions of American women at large in this country and the opinions of those gathered here is strictly coincidental.

PORTLAND VA HOSPITAL

Mr. HATFIELD. Mr. President, on November 3 the House-Senate conference committee met to act on the first supplemental appropriations bill for fiscal year 1977. One of the components of the bill of particular interest to me and to people in Oregon and Washington was an item designated to provide replacement facilities for the present Veterans' Administration hospitals in Portland, Oreg., and Vancouver, Wash. The first approval of plans for these facilities was in 1962 and since then there have been numerous refinements and adjustments in these plans. The present proposal calls for a 648-bed acute care facility near the present location of the Sam Jackson Hospital in Portland, plus an outpatient facility in downtown Portland and space and administrative functions at the location of the present Barnes Hospital in Vancouver. It should be noted that the VA recommendation constitutes a somewhat smaller facility than the present hospital, with its 816 acute care beds.

In response to a plea that the Veterans' Administration had not adequately considered an alternate site near the present Emanuel Hospital in Portland, the House Appropriations Committee sent investigators to Portland to examine the two locations and consider the positive and negative features of each. Since that report was available on November 3 when the conferees met, but the VA had not yet had time to respond, the committee decided to defer action until the next supplemental appropriations bill.

Mr. President, the Veterans' Administration has now responded to the House report and to assure that these points are readily available to my colleagues and others who are interested, I ask unanimous consent that the report be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HATFIELD. Mr. President, while I do not pretend to be an architect or engineer and I realize that there still may be honest differences of opinion on some of the issues, I feel that the VA has responded very satisfactorily to the House objections. The VA disagrees with the House estimate of construction cost at the Emmanuel site, but readily admits that there will be approximately 5 percent in additional cost to build at Marquam Hill. This is not wasted money, but a reasonable payment for assuring a close and healthy relationship with the Health Sciences Center of the University of Oregon. As is typically the case with VA hospitals, medical school personnel provide a great part of the professional care. The VA report provides convincing evidence of a correlation between the quality of care in a VA hospital and the distance between the hospital and the medical school.

The VA report provides satisfactory solutions to the very real traffic and parking problems posed by the Marquam Hill site and I personally intend to see that VA mental bill, as soon as possible in 1978.

EXHIBIT 1

COMMENTS OF THE VETERANS' ADMINISTRATION

The comments of the Veterans Administration on the report of the Surveys and Investigations Staff of the Committee on Appropriations, United States House of Representatives concerning plans for the replacement of VA facilities in Portland, Oregon and Vancouver, Washington are contained herein.

I. INTRODUCTION

The VA presently operates three facilities in the Portland/Vancouver area including a 527-bed hospital on Marquam Hill in Portland, a 376-bed hospital in Vancouver and a satellite outpatient clinic in downtown Portland.

The VA has proposed that a single new hospital be constructed on the site of the present Portland Hospital as a replacement for both of the existing hospital facilities and that certain outpatient and logistical support facilities for the hospital be located in Vancouver. The present downtown clinic would remain in operation although it would be relocated closer to the hospital site and afford the opportunity to be used as a fringe parking area for hospital employees.

In May 1977 the Committee on Appropriations of the House of Representtaives directed the Surveys and Investigations Staff of the Committee to conduct a study of plans proposed by the Veterans Administration to construct facilities in Portland, Oregon and Vancouver, Washington to replace the existing antiquated facilities.

The Survey Report concludes that the replacement VA facilities should be constructed on the site of the Emanuel Hospital. This recommendation is based on the investigators' analysis of the several issues which impact on this decision. Each of these issues will be discussed in these comments.

II. PLANNING FOR THE REPLACEMENT HOSPITAL

The report criticizes VA planning for the proposed hospitals as being ineffective. "Because of a lack of effective long-range planning, the Portland Hospital project has been placed in the VA's construction program before being fully developed." The primary basis for this criticism is the absence of specific spatial needs for individual hospital services, and the use of historical data on space requirements and costs for estimating purposes. The report cites a previous study of the investigative staff which found weaknesses in the VA's construction program. At this point in time, the planning process of the VA was to develop cost and space data on an historical basis although it should be noted that for the first time a special planning technique was used for the eight hospitals including the Portland replacement hospital. This study, conducted by the Griffin-Balzhiser firm, was a unique and additional planning mechanism used for Portland and not for hospital construction prior to 1975.

A. The development of the space requirements for a construction project such as this replacement hospital is dependent upon the availability of several items of information including the location of the various functions, bed levels, inpatient and outpatient workload information, and data on the numbers of staff who will be working in the facility. When this information is available, project development can move forward. In the event however that policy or programmatic decisions are made which change this base-line information, the detailed development of the project must begin again. This has been the case as relates to the Portland Replacement Hospital project.

The original proposal of the VA approved by the President in May 1976 was to consolidate all functions at the site of the new hospital. The facility was proposed to include 770-bed hospital and a 120-bed nursing home care facility. In June 1976 the Congress directed the VA to reassess the matter of this replacement hospital in light of the various concerns which had been raised. As part of this reassessment, the VA concluded that it would be appropriate to retain in operation the downtown Portland outpatient clinic without diminishing the quality of care provided. This division of functions and reduction of requirements at the hospital itself necessitated that much of the developmental work previously accomplished be re-done. This decision was made in January 1977.

Shortly after the appointment of the present Administrator of Veterans Affairs, the VA received numerous requests from interested parties including members of the Congress, that the new Administrator examine thoroughly the many aspects of this issue. The Administrator undertook such a review including a personal visit to the area and concluded that the location of certain activities in Vancouver would be beneficial. This decision which was made in April 1977 required another beginning of the detailed project development.

The most recent major change in plans for the replacement hospital came in August 1977 when at the direction of the Congress the VA reduced the number of hospital beds planned from the original 770 beds to the present level of 738 beds.

Each time these basic decisions were made, developmental efforts had to be recycled and thus specific information on space requirements had to be continually redetermined.

B. The VA has developed an advance planning capability in part as a result of the concerns expressed by the Congress regarding the VA construction process. The Fiscal Year 1978 VA appropriation includes funding to develop major construction projects through the completion of preliminary plans. This planning tool will provide for a greater opportunity to review alternatve concepts and develop refined cost estimates in advance of the request for design and construction funds. This Advance Planning Fund mechanism was not available for use on the Portland project. However, whatever planning capability is being utilized, detailed redesign will always be required each time the basic plan is changed.

C. The report concludes that there exists a lack of coordination between the VA's Department of Medicine and Surgery and the Office of Construction. The report presents no evidence to support this conclusion. In December 1962, President Kennedy approved the closure of the Vancouver Hospital and the expansion of the Portland facility. Prior to that decision and at each stage in the long history of this project, the Department of Medicine and Surgery and the Office of Construction have worked together. The report cites only a discrepancy in information provided by the various offices as to when relevant developmental data was provided to the Office of Construction. As indicated above, it was necesary to revise his information several times.

III. BED SIZING METHODOLOGY

In regard to the recommendation that the VA revise its hospital sizing methodology to develop bed requirements on the average length of stay data in community hospitals, the report contends that this bed estimating technique would result in less beds and therefore a reduced cost. The report points out that for specific diagnoses, the average length of stay at the Portland Hospital exceeds that for similar diagnoses treated in community hospitals in a six county area. For example, the report specifies that cancer patients in community hospitals experienced an average length of stay between 13–15.4 days while VA patients consumed 28 days. In addition, for such diagnoses as cerebrovascular disease or pneumonia, community hospital patients averaged between 12-14 days per case while VA cases recorded average length of stays of 63 and 21 days respectively. The report fails to mention the pertinent fact that the VA 1985 bed estimate for internal medicine was based on a 14 day average stay. The diagnoses identified in the report would be hospitalized in internal medicine bed sections. The differences in the VA and community patient populations also introduce major differences in length-of-stay data. These differences include socio-economic status, marital status, incidence of secondary diseases, and the distance between the hospital and the patient's home.

The report references the GAO report of May 1977 to the Chairman of the Subcommittee HUD-Independent Agencies, Senate Committee on Appropriations citing that GAO "in its review specifically analyzed the proposed bed size for three new VA hospitals that have been authorized for construction—Bay Pines, Little Rock, and Richmond. GAO disagreed with the VA's methodology in determining the size of the proposed hospitals—GAO suggested a methodology that would project acute bed needs . . ."

The report suggests that application of the GAO methodology to these three hospitals produced bed estimates significantly different than those resulting from the VA estimating procedure. However, the actual difference in the two estimates were in fact very minor. For the three hospitals combined, GAO's model estimated a need for ten more "acute non-psychiatric" beds than did the VA model in projections involving 1275 beds in the three hospitals.

In its responses to the Chairman relative to the GAO report, VA pointed out some of the inadequacies of the GAO model; the most significant being that it produced one estimated bed value termed "acute care beds." Included in this bed classification, but not uniquely identified were the bed needs for internal medicine, surgery, neurology, etc. Other major shortcomings of the model were its inability to generate estimates for psychiatry or intermediate care.

At the urging of the Senate Appropriations Subcommittee, VA and GAO agreed to meet in an effort to develop mutually agreeable estimating techniques. At the initial meeting in September, the GAO officials verbally presented a new bed estimating model which was different than that used in their May 20, 1977 report to the Chairman. The written description of the new model was recently made available to VA and is now being reviewed.

IV. CONSTRUCTION COSTS

The primary basis for the recommendation of the report that the replacement hospital be located on the Emanuel site is the view of the investigative staff that the VA would save $27,410,300 by selecting that location as opposed to Marquam Hill. The VA has previously estimated that the utilization of the Emanuel site in conjunction with the downtown clinic and the clinic/logistical support at Vancouver would have a construction cost of $143,239,700. The VA estimate has been prepared by a staff of experienced professional estimators. The Survey report, although highly critical of the VA's estimating techniques, utilizes the same approach in developing a new estimate for the Emanuel site. The report accepts the VA estimate for constructing on the more complicated Marquam Hill site. This new estimate of the investigative staff for Emanuel, which accepts many of the basic estimates provided by VA, is $124,688,700.

The VA has conducted a review of each of the line items which comprise this new estimate and we have also closely examined our own estimate. We find that the report makes some very basic estimating errors in arriving at the $27.4 million dollar savings. We will address each instance where a difference in the estimates exists; but first it should be noted that VA has always acknowledged that the construction cost at Emanuel would be less than Marquam Hill. This additional cost was in the past and remains now part of the mix of factors to be considered in the site selection decision.

The first difference occurs in the area of site acquisition and preparation. The VA originally estimated this cost to be $3.4 million. The report estimates the cost to be $3.76 million. We have revised the VA estimate to agree with the report with one exception. In the judgment of the investigative staff based on conversations with the Griffin-Balzhiser consulting group, a neighborhood park at the Emanuel site will not be required. It is the judgment of the VA that the park will be required if the Emanuel site is selected. Thus, VA includes a cost of $50,000 to cover the expense of relocating this park. A chart is appended to this report which compares item by item the original VA estimate, the new estimate of the report, the VA's revised estimate and the cost differences. The reader will note that the current distribution of site acquisition costs is somewhat different from that of the earlier estimate because approximately one million dollars is now shown as reimbursement costs instead of site acquisition costs. This change was made so that the VA estimate could clearly be compared to the estimate in the report.

The investigative staff's estimate has deleted altogether any phasing cost at Emanuel. The VA has previously included a one million dollar allowance to cover potential delays at the Emanuel site. We believe this is justified in view of the fact that the start of detailed design and construction on the Emanuel site would be contingent upon action by parties other than the VA in connection with site acquisition negotiations, relocation of existing Emanuel functions on the site, and evacuation of these buildings. There is an apparent potential delay in each of these steps which could delay design and construction activities or change their sequence. The one million dollar allowance is included to cover that potential.

A major difference between the VA's estimate and that of the investigative staff is in the cost of providing adequate parking at the Emanuel site. This difference represents $5.6 million. The VA believes that the estimate of the investigative staff is not valid. The savings are found in large measure in the assumption by the investigative staff that the unit cost per car on the lowest level of the parking structure would be the same as for exterior surface parking. In a parking structure, the cost of the lowest level must be counted the same as the upper levels in determining the unit cost of construction. Moreover, all of our studies of the cost of structural parking facilities indicate a base construction cost of approximately $5,500 per car as a reasonable figure. The average cost per structured parking space according to the investigative staff's estimate is $1,816 per car. The VA believes such a figure is grossly unrealistic. It should also be recognized that, if the survey staff's parking cost estimate is to be accepted at Emanuel, it must also be applied to the parking cost at the Marquam Hill site reducing that cost approximately $2.9 million.

The VA estimate for Marquam Hill and Emanuel included a 6 percent allowance to cover unknown factors. The Investigations Staff has arbitrarily reduced this to 3 percent at the Emanuel location. The report explains the reduction in this way: "Due to the uncertainty of costs in building on a steep site, the percentage for unknown factors is 6 percent on Marquam Hill; whereas the factors is only 3 percent at Emanuel resulting in a $3.2 million cost difference." The VA takes exception to this reduction because the allowance for unknowns is intended to cover many potential additional cost factors than just those attributable to site complexity. These include medical program changes, spatial criteria changes, construction code changes, design changes, etc. The differential cost for building on the steep hill site has already been included under "Abnormal Foundations" and cannot again be included in "Unknown Factors." The unknown factors by definition cannot be apportioned among the various elements and thus the reduction to 3 percent at Emanuel has no basis.

The remaining difference between the estimates (and the biggest single difference) is a reduction by the Investigations Staff of $5.7 million in the category which they identify as "Additional Cost Savings." The report attributes these savings to the effect of general site conditions on the contractors ability to work effectively. The report breaks down the savings as follows: contractor accessibility, 0.5 percent; material and equipment deliveries, 0.33 percent; construction staging area, 1.0 percent; construction employee travel and parking, 0.33 percent; and reduction of total construction time, 2.5 percent; total, 4.66 percent. This reduction is absolutely without any sound basis.

You cannot save money that does not exist in the first place. The VA estimate for Emanuel does not contain a special allowance for site complexity as does the estimate for Marquam Hill. We recognize the additional cost of construction on Marquam Hill by the inclusion of special allowances for abnormal foundations and phasing. The base construction costs at Emanuel are less because of the absence of these complexities. The report in effect tries to save this money twice.

The survey report suggests by implication in Recommendation 4 that the VA is trying to hide the cost of new support facilities in the estimate for demolition. This is not true. The term, "demolition", in the VA estimate represents the cost of demolishing and clearing the site. Because the water storage tank is vital to the continued functioning of the existing hospital during construction, it is appropriate that its relocation costs be included in the site clearance item. This is also the case for the pumping equipment and piping associated with the site clearance.

We conclude then that the estimate in the Surveys and Investigations report is inaccurate and that the more reasonable estimate of savings at Emanuel is $8.2 million which is 5.4 percent less than the proposal for Marquam Hill.

It is clear that the preparation of the report relied to a great extent on information received from the firm of Martin-Brewster. As indicated in the report, the Martin-Brewster firm had been retained in the past by the Emanuel Hospital to develop cost estimates for construction at Emanuel. Their estimate presented to the Congress was within $400,000 of the estimate developed by the Investigations Staff for this report. We have appended to this document copies of the Martin-Brewster presentation and the associated VA comments in response.

V. PORTABLE EQUIPMENT

The report recommends that VA "furnish a further detailed estimate of 'portable' equipment costs." The report rejects the estimating of equipment costs based on historical data and suggests that a detailed list of equipment should be required for estimating purposes. The equipment estimate for the Portland Replacement Hospital was based on actual budgeting data gathered from funding records of recently built hospitals. The per bed cost is used because it is the best indicator based on the fact that all VA hospital GM&S activities will contain the same medical services and equipment. During the investigation, VA provided to the investigators a sample listing of equipment and offered to make available the complete list of equipment placed in recently completed hospitals. It is from such detailed itemized data that the VA estimates are made.

The funding for portable equipment is provided as part of the VA's medical care appropriation. This is a one year appropriation and the funding request would not be made until the year in which the money is actually required. It is not considered a part of the construction cost since it is not provided through the construction appropriation. It would be impractical to develop a total itemized list of equipment at this time for several reasons. The technology of sophisticated health care equipment advances rapidly and significant progress in this respect can be anticipated before the Portland Hospital is completed. A detailed equipment list developed now would be totally inadequate 2–3 years hence. Furthermore, as we approach the completion of the hospital, we will evaluate the existing equipment in use in the replaced facilities to determine that which can be retained in use at the new hospital. The functional layout and design of the new hospital and the transportation systems employed will also impact on equipment purchased. These decisions cannot be made at this time. This cost item, "Portable Equipment", would of course be the same regardless of the location of the hospital.

VI. EXCESS COMMUNITY BEDS

The report addresses the question of excess community beds and recommends that the Congress grant authority to the VA to utilize excess community beds for the care of non-service-connected veterans. The report also recommends that the VA consider the availability of excess community beds in determining VA bed need. This is an extremely complex issue which is not peculiar to the Portland replacement hospital and which could only be addressed superficially by the investigative staff. The report does not discuss the nationwide impact of the recommendation nor does it address the resources which would be required to implement such a recommendation. The VA believes that this issue cannot and should not be addressed tangential to the Portland controversy. It is a major policy consideration which strikes at the basic Congressional mandate to the VA.

VII. PROXIMITY TO THE HEALTH SCIENCES CENTER

The paramount concern of VA in the considering the location of the replacement hospital has been and continues to be the quality of care that can be provided to the veteran. This issue has focused on the strength of the medical school affiliation and the relationship of distance to the effectiveness of an affiliation. It is the consistent experience of this agency that an effective medical school affiliation enhances the quality of care that can be provided in a VA hospital, and that a close relationship, in which large numbers of professional staff, residents, and other trainees flow freely between the VA hospital and the school, encourages a more effective affiliation and thus creates an appreciably higher level of quality.

It has never been held that proximity is a sole factor determining the strength that an affiliation and its consequent impact on quality of care. It is a factor, however, that exerts its beneficial or deleterious impact for the life of the facility.

The VA hospital in Portland has, at the present time, a very close association with the Health Sciences Center. As indicated in the report of the Investigations Staff, ninety percent of the 400 residents at the Health Sciences Center rotate through the V.A. hospital. The remaining 40 residents rotate through other area hospitals. In addition, approximately 600 students in other health manpower occupations are in training at the VA hospital. These include nurses, dental students, physician assistants, radiology technicians and students in a variety of other allied health fields.

A primary reason for the VA selection of the Marquam Hill site for the replacement hospital is the strong belief that distance between the hospital and the school has a direct impact on the strength of the affiliation and the numbers of individuals who will move routinely to and from the VA hospital for purposes of patient care. The VA is concerned about taking action which might curtail rather than enhance the willingness of highly qualified staff to participate fully in the affiliation and which could discourage residents from desiring VA as their training location. The reduction of the affiliation's intensity associated with these attitudinal changes would have a serious impact on the care provided. The movement of patients between the VA hospital and the teaching hospital is also very important. In radiology alone, for example, 286 patients were transported to the Health Sciences Center last year to receive over 8,000 radiation therapy treatments.

The exact effect on the intensity of the affiliation by relocating the hospital to the Emanuel location is difficult if not impossible to quantify. There are some items which are assumed to reflect quality and which are quantifiable. These include the characteristics of physician board certification, average length of patient stay, and the corresponding patient turnover rate. A review of this data for affiliated hospitals nationwide reveals the following information.

Distance of VA hospital to medical center	Number of VA hospitals	Percentage of physicians boarded	Average length of stay (days)	Average monthly turnover rate
0 to 1 mi....	41	65.1	21.2	203.3
1 to 5 mi....	19	60.0	25.8	174.7
Over 5 mi....	78	56.1	33.8	144.4

This data would indicate that the shorter the distance, the greater the chances are of a strong affiliation and a comparatively higher standard of patient care.

The report of the investigative staff has concluded that proximity of the VA hospital to the Health Science Center is not necessary for a high quality of patient care. This view was formed after interviewing staff at the VA hospital in Portland, the Health Sciences Center, and the community hospital facilities. The report points out that only thirty percent of affiliated VA hospitals are within one mile of the affiliated medical school and that many hospitals with greater distance separation have succesful affiliations. These exceptions do not disprove the VA's contention that strength of affiliation and institutional proximity are correlated. Many of these successful affiliations have a lower level of intensity than does the present VA hospital on Marquam Hill.

The report indicates that many of the staff interviewed at VA hospitals located away from their medical school affiliations reported that proximity had no bearing on their ability to provide quality care. It might be unreasonable to expect a physician to endorse the premise that the issue of proximity has a relationship to quality of care in a situation in which that individual is a participant when the location of the VA hospitals is not adjacent to its affiliate. The investigative staff found that the overwhelming majority of professionals at the VA hospital Portland and the Health Sciences Center and the trainees at these institutions favored the Marquam Hill site and placed importance on the proximity question. The report discounts the views of these individuals as being opinionated. These are the individuals who will hopefully be functioning in the affiliated situation and their opinions will have profound effect on their acceptance of the relationship.

The VA firmly believes that the present close location of the VA hospital to the Health Sciences Center has been responsible for the development of the present strength in the affiliation. To increase the distance would diminish this strength. The training of health manpower is a recognized part of the VA mission. This is enhanced by remaining close to the university. The allied health training programs, which the report refers to only in passing, and involves undergraduates for the most part, could be impaired. These individuals, many of whom presently walk back and forth between the hospitals, would be seriously inconvenienced if the hospitals were at separate locations as suggested.

We do not believe the investigative report to be accurate in concluding that proximity is unimportant in the success of an affiliated VA hospitals. The VA has recommended proximity historically when the opportunity arose and will continue to do so.

VIII. SITE GEOLOGY

There has been a great deal of discussion about the seismic and geological characteristics of the Marquam Hill and Emanuel sites. The Marquam Hill site is generally referred to as a "steep site" whereas Emanuel represents a "flat site."

Seismically, the two sites are similar. This is reported in the investigative staffs report and has been presented in the report of the Griffin-Balzhiser firm. The nature of the construction at any site in the area would involve strengthening to protect the structure in a seismic event.

The report identifies the Marquam Hill as a slide hazard area because of the sloping characteristics. The topography of Marquam Hill does lend itself to the possibility of earth slides. This potential on the site however will be contained through the construction process.

The report states that earth slides would block access to the hospital and render the hospital unusable. There are three access routes to the hospital—from the north and south on Terwilliger Boulevard, and through the university and it is extremely unlikely that earth slides would block Terwilliger Boulevard from both directions at the same time. The entrance through the university is off Terwilliger Boulevard, but it occurs prior to the area susceptible to slides. Since the VA hospital opened in 1928, there has never been a land slide which impacted on the operation of the hospital. Therefore, the point made in the report that the Marquam Hill site can be isolated by a possible earth slide is not supported by historical fact.

The VA recently commissioned the Dames and Moore engineering firm to study the Marquam Hill site. Their report of October 21, 1977 concludes that the characteristics of the Marquam Hill site in no way preclude construction of the hospital on that site.

IX. ACCESSIBILITY AND PARKING

The report is critical of the accessibility to Marquam Hill and includes in this section discussion concerning the present parking situation, difficulties in movement by wheelchair bound patients, and the access routes. The current availability of parking on the Marquam Hill site is irrelevant to this issue. The new construction will entail the provision of an adequate number of parking spaces to accommodate patients, staff, and visitors to the hospital.

In the development of any new VA hospital, multiple design factors are employed to adapt the facility to meet the needs of handicapped persons. This includes the convenient location of parking, sufficient vertical transportation systems, and the removal of the impediments to insure freedom of movement by wheelchair patients on the grounds and within the hospital. This will occur at the Emanuel location as well as Marquam Hill.

There are measures to improve the access of motor vehicles to Marquam Hill and these must be fully developed. It is important that a primary emphasis be placed by VA on traffic control measures. The present parking situation is a primary contributor to the preception of a major access problem. When adequate parking is provided through the new construction, a great deal of difficulty will be eliminated. Steps are available and in fact underway to diminish the need for ingress to the property and a discussion of these follows later in this document. The road network on the site itself and the design of the hospital entrance is contributory to a problem of congestion. Re-design of the entrance and VA street pattern will prevent bottlenecks occurring as vehicles enter and leave the property. Public transportation and transportation to the site from the other VA locations in the area can be improved.

X. COMMUNITY RESPONSE

The issue of the Portland Replacement Hospital has been controversial and many elements of the community have expressed opinion.

The views of the veterans in the community are very important to the VA. The veterans service organizations have consistently favored the Marquam Hill location over the Emanuel site. The VA rejects that portion of the report which alleges that the views of the service organizations have been influenced by VA. The report refers to a Vietnam veteran who opposes Marquam Hill because of the problems with the movement of the handicapped. As discussed elsewhere in these comments, the design of the new facilities will eliminate this problem.

The residents of Marquam Hill have expressed concern about increased traffic in their neighborhood. VA has worked with this neighborhood group and explained measures which can be taken to alleviate this problem. It is VA's understanding that because of the many efforts being taken to curb traffic, the Homestead Neighborhood Association no longer objects to the location of the hospital on Marquam Hill. The Governor of Oregon has endorsed the VA hospital on Marquam Hill as well as the Board of Higher Education and the governing body of the University. The local Health Systems Agency, while opposed to the VA system, has concluded that if a hospital is to be built, it should be in Portland.

The report indicates that the residents of the Emanuel neighborhood support the location of the hospital at Emanuel. It is our understanding that at two public hearings held on the subject in Portland, objection was voiced by several area residents who were opposed to the relocation of the VA hospital into their neighborhood.

XI. TRAFFIC

A major concern of Portland area residents and city officials is that the location of the replacement hospital on Marquam Hill will generate large increases in the volume of traffic coming to the area and that this additional traffic will exceed the capacity of the road network. It has been estimated by the City of Portland that the hospital will generate an additional 1,300 vehicular trips per day (5.3%) and that potential residential development will increase traffic on the access routes to the hospitals by 4,840 trips (20%).

The VA has taken several steps to minimize any potential increase in traffic coming to Marquam Hill. The retention of the downtown clinic and the operation of a clinic in Vancouver will reduce the number of outpatients coming to the hill by almost 50 percent. The real concern about traffic is during the peak periods. It is at these times in the morning and afternoon when employees are moving to and from work that the streets are the busiest, and it is these times that the VA efforts focus on. We plan to locate the laundry and supply warehouse activity at Vancouver as well as the medical district staff. This action and operating the two clinics will significantly reduce the number of VA employees who come to the hill. We will also take several steps to reduce the number of hospital employees who drive to the hill. We plan to relocate the downtown clinic to a location closer to the hill and establish a fringe parking area off the hill at which employees can park and ride a shuttle bus to the hospital. We are working with the University in the hope that they will locate part of their outpatient activity at the VA clinic away from Marquam Hill and thus reduce the number of university employees and outpatients who come to the area.

We will be fully exploring ways to stagger employee shift times and will be encouraging additional use of employee car pools. The university will be asked to do the same.

These efforts are very encouraging that the increase in traffic if any will be held to an absolute minimum. In view of this, the neighborhood association has stated that they do not object to the new facility. The investigative staff report has indicated that the Mayor of Portland would have no objection to the Marquam Hill site if no additional traffic is created.

XII. SAFETY AND SECURITY

The report includes data on the number of crimes reported in the areas of Marquam Hill and Emanuel. The data however is not comparable because the reporting units are of varying geographical size and population density. This is noted by the investigative staff. The reporting "grids" of the Health Sciences Center and the VA hospital are much larger and have a significantly greater population.

The security force at the VA hospital reported that during the 12 month period ending June 30, 1977, 94 offenses occurred on the hospital premises. The Director of Security at the Emanuel Hospital reported that in the 6 month period ending June 30, 1977, 154 offenses occurred in the 55 acres patrolled by that security force. The Griffin-Balzhiser consultant reported similar information regarding a higher number of offenses in the Emanuel area compared to the Marquam Hill area.

It should be noted that throughout the high volume of correspondence received by VA on this issue, security in the Emanuel area has been a common theme.

XIII. SITE SELECTION

The VA selected the Marquam Hill site because of our belief that this location affords the best opportunity to meet the veteran health care needs in a facility which provides the highest possible quality of care This decision recognized that the cost of construction would be higher (5.4%) and that the Marquam Hill site exhibits a less convenient ease of access than would some of the other sites. On balance, these aspects although important were outweighed in the judgment of the VA by the quality of care issues and by the views of veterans and veterans service organizations.

The VA consultant on this issue, Griffin-Balzhiser, recommended a site on Marquam Hill. This fact is not diminished by the survey reports allegation that VA influenced the consultant to recommend a site other than their first choice. The importance which has been placed on the scoring methodology of Griffin-Balzhiser is unwarranted. This scoring method, developed for its study is an interesting, initial, and unvalidated attempt to rank competing sites. The VA has rejected the methodology as did Griffin-Balzhiser in their final recommendation. As noted, this mechanism was not intended as the final arbiter, but only as tool to narrow down the number of sites for further consideration. This produced three sites—two on Marquam Hill and the Emanuel location.

The Emanuel site was included originally because of the presumption by the consultant that this location had something to offer in terms of health care. This report by the Investigations Staff however does not touch on this aspect; but recommends the Emanuel site because of the smaller cost to construct and the accessibility in terms of road networks and public transportation. This recommendation is made after discounting the views held by VA relative to quality care and distance to the affiliated school.

The investigations Staff has in effect presented a new criteria by which to judge potential sites for hospital construction. If acepted, then one must presume that a variety of other sites in the Portland/Vancouver area would have these characteristics of reduced construction cost and accessibility. The other sites would not have been considered earlier because they could not meet the original criteria; but must be now identified and examined if these new criteria are to become primary considerations.

XIV. SUMMMARY AND CONCLUSIONS

The report of the Investigative Staff makes eight recommendations to the Committee.

Recommendation 1

Include in its budget justification to the Congress for proposed construction projects, sufficient planning and design work to formulate realistic estimates of scope and cost.

Recommendation 2

Describe to the Committee what interface has taken place between the VA's Department of Medicine and Surgery and its Office of Construction for the Portland Hospital project.

Recommendation 3

Justify to the Committee its basis for:

a. Estimating the proposed Portland Hospital space requirements and unit cost solely on the basis of gross square feet per bed.

b. Basing unit construction costs for the Portland and Vancouver facilities on the *average* of construction award costs for past hospital projects.

VA Comment

These recommendations have been fully addressed in the foregoing comments.

Recommendation 4

Submit to the Committee the rationale behind its adamant position to build the new facilities on Marquam Hill in the face of enormous added construction costs peculiar to building in this area.

VA Comment

This recommendation is based on the belief of the staff that $27.4 million would be saved by locating the hospital at Emanuel. The VA believes that a more realistic savings is $8.2 million or 5.4% less than the cost of constructing at Marquam Hill.

Recommendation 5

Explain why estimated expenses of over $1 million in new support facilities and relocation of utilities have been included in demolition costs for the new hospital.

VA Comment

The term demolition in the VA estimate represents the cost of demolishing and clearing the site. The relocation of the utilities is a necessary part of this site clearance.

Recommendation 6

Furnish a further detailed estimate of "portable" equipment costs, it being noted $22.4 million has been estimated by them thus far for this type equipment, based only on a "per bed" cost, with no itemized list available.

VA comment

As discussed in the foregoing, it is premature to develop such a detailed list at this time. When nearing completion of the hospital decisions will be made regarding which items of equipment in the existing hospital can be continued in use and at that time the latest advances in health care technology can be incorporated in the items of equipment to be purchased. This equipment estimate is unrelated to the issue of site selection, is not included in the construction appropriation, and can only be precisely estimated when the hospital is nearing completion.

Recommendation 7

Revise its hospital sizing methodology to develop bed requirements on the basis of average length of stay data in community hospitals.

In the matter of VA bed requirements, the Investigative Staff suggests the Congress consider granting the VA authority to use underutilized community hospitals and related services in connection with its care of veterans' nonservice-connected illnesses and the feasibility of considering surplus beds in the community hospitals in its determination of bed size requirements.

VA comment

These issues are of nationwide impact to the VA system and are not relevant to site selection.

Recommendation 8

Reevaluate their position that the new hospital should be built on Marquam Hill and build a single facility at the Emanuel site, consolidating all of their health care services at this location.

The Investigative Staff is of the opinion, after a careful analysis and evaluation of all the pertinent issues just discussed, that Emanuel is the better and more conomical site, for the following reasons: a. Proximity of the Veterans Hospital to the HSC is not necessary for a high quality of patient care.

VA comment

As discussed, the VA finds that proximity to the Health Sciences Center is an important aspect of maintaining and enhancing the affiliation which presently exists. The affiliation has a direct impact on quality of care and to relocate the VA hospital to the Emanuel site would lessen the intensity of this affiliation. The data presented in our comments shows that VA hospitals which are closer to the medical school affiliate generally have a greater percentage of board certifications, a shorter length of patient stay in VA hospitals, and a more rapid turnover rate. The information contained in the report does not demonstrate that relocation to the Emanuel site would preserve the strength of the affiliation and the quality of care provided.

b. Excessive costs are required to build on Marquam Hill.

VA comment

The construction cost at Marquam Hill is 5.4 percent greater than the Emanuel location.

c. Due to the topography of the Marquam Hill area, a slide hazard does exist there.

VA comment

This is discussed in our comments. There has not been a slide that has impacted on the VA hospital since it opened in 1928.

d. The elected and appointed officials of Portland, for reasons of possible increased traffic volume on Marquam Hill and the resultant costs to the city, favor the Emanuel site.

VA Comment

This is not correct. It is our understanding that the Portland city commissioners are split on this issue.

e. The lack of accessibility to the current VA hospital site on Marquam Hill is very real.

VA Comment

The accessibility to Marquam Hill is primarily a function of traffic. As discussed in the report, steps are and will be taken to curb any increase in traffic.

f. To satisfy the homeowners interests on Marquam Hill, the VA would have to fragment their health care services over several locations.

VA Comment

The VA decision to locate functions away from the hospital had several bases and not solely "to satisfy the homeowners' interests." The first considerations was to insure that any action taken would not impair the health care delivery of VA in the area. The VA proposal would not be detrimental to quality of care. The downtown clinic is a long standing operation and will be strengthened in the VA plan. The retention of this clinic in downtown Portland and the establishment of a clinic in Vancouver facilitates entry into the VA system. The ancillary services to be located in Vancouver will not seriously impair the operation of the health care system.

The VA has thoroughly analyzed the report of the Investigative Staff and has concluded that the evidence presented in the report does not justify the abandonment of the Marquam Hill site and the relocation of the VA hospital to the Emanuel location.

	VA estimate dated Aug. 29, 1977		Investigative staff's estimate, Emanuel	VA estimate revised, Oct. 27, 1977, Emanuel	Cost difference, estimates (3) and (4)
	Marquam Hill (1)	Emanuel (2)	(3)	(4)	
Site acquisition and preparation:					
Site acquisition		$1,900,000	$942,200	$942,200

MARSHALL COMMENDED FOR OSHA REFORM

Mr. BUMPERS. Mr. President, I would like to commend the Secretary of Labor, F. Ray Marshall, for his decision to halt enforcement of 1,100 of OSHA's silliest job-safety rules. OSHA—the Occupational Safety and Health Administration—has become synonymous with intrusive, meddling, high-handed, inflexible, nitpicking, and infuriating bureaucracy. This may be unfair to some extent, for certainly the intent of the legislation forming OSHA was to protect the American worker from death and injury. OSHA has many employees whose dedication to job safety is unquestionable.

Unfortunately, much of the public, including notably small businessmen, perceive OSHA as bureaucracy run amok. Ever since I came to Washington, this image has continually been reinforced by the mail I have received from constituents. An automobile dealer was cited for failure to have a bulletin board. A small screw manufacturer got in trouble for not having a guard around a compressor belt that was virtually inaccessible between a huge machine and a wall. The complaints have poured in, and the combination of petty, ridiculous regulation with arrogant inspection and summary judgment has laid OSHA open to ridicule and contempt. This state of affairs detracted seriously from the very laudable aims of the job safety program. Employers have been so busy cursing OSHA's shortcomings that they have not been inclined to support its many good regulations.

Thus, it is with great pleasure that I take note of Secretary Marshall's burial of 1,100 of the regulations that he considered "nitpicking." That amounts roughly to one-tenth of all of OSHA's health and safety regulations. It is amazing to me that the most dedicated of bureaucrats could have dreamed up so many foolish rules, but there you have it. We should count our blessings, and hope that further review will exercise even more of these needless regulations.

Among the regulations just chosen for death are these:

A ban on "open-front type" toilet seats;

A rule that fire extinguishers can be no more than 3½ feet off the floor in some cases and 5 feet in others;

A requirement that kiln tenders be provided with a warm room.

Mr. President, I will spare my colleagues a verbal listing of the remaining 1,097 regulations that have just been declared "nitpicking."

In congratulating Secretary Marshall, I would just like to add the suggestion and the hope that President Carter will put pressure on the other Federal agencies to emulate the Labor Department's example. I feel certain that the President is serious about streamlining the Federal bureaucracy, and I earnestly hope that the step just taken by OSHA is only the first step out of the undergrowth. In fact, I am so heartened by this development that I allow myself to imagine that the Department of Health, Education, and Welfare may be the next agency to do away with 10 percent of its more foolish aggravations.

AMERICAN STEEL AND THE CARTER ADMINISTRATION—WHERE ARE WE NOW?

Mr. HEINZ. Mr. President, in this week's Newsweek, Columnist George Will eloquently summarizes the situation in the American steel industry today, particularly the extent to which it is affected by subsidized competition from abroad. Mr. Will points out that while free trade may be an elegant ideal; in fact, our trade is anything but free. We no longer have a real market economy in steel in the world, and instead we are competing with foreign companies that, if not owned outright by their governments, are heavily subsidized by them. The result is that the rest of the world is playing the game by different rules, and if we continue to ignore that fact, the situation is only going to get worse.

The adminstration today made public its plan to help the steel industry, which includes as its centerpiece a "reference price" system to provide a swifter, surer determination of dumping when it is occurring. Despite the respectability of the administration's goal in this program—reducting steel imports to the 12- to 14-percent level from the current 20-percent level—I have serious doubts as to whether this program will achieve these goals.

The system will be cumbersome and complicated to develop and administer. The Government has had little success in recent years in attempting to influence or control prices, and it is quite likely that the reference price concept is going to be subject to the same problems, omissions, and inequities that crippled the price control program of several years ago.

One serious inequity is that, by basing the reference prices on Japanese production costs, European steel will still be dumped in this country. Since European costs are higher than the Japanese, they will be able to sell here below cost yet still be above the reference prices. This means the system will impact less heavily on European steel and, therefore, will provide little or no relief for those American companies that compete with the Europeans. Regionally, this means the East will suffer, while the West and South will gain a measure of protection from Japanese imports. Nationally this could mean a net gain for the industry—assuming the whole system works—but regionally it promises significant disparities, disparities that will adversely affect the Northeast—the center of steel activity in the country.

The Treasury Department has yet to explain how it plans to deal with this problem, but it is something Congress will scrutinize carefully in the next month.

Another disturbing disparity is that between the plan and what the President promised last month. Setting reference prices is not law enforcement against unfair trade as the President promised, it is price setting by the Government, a process which is inevitably subject to political influences. This procedure represents a Government intrusion into decisionmaking in the steel industry which will have serious long-term consequences.

Finally, all should realize that trade problems are only a part of the total situation. The administration's proposals for modernization, pollution control tax incentives, and assistance to impacted communities will have the most significant long-term impact on the industry. In the case of all these, however, the administration proposals have not yet appeared in any detail and may not for some time. Any modernization or pollution control tax incentives will emerge as part of the general tax reform program due next year. Other comments in today's report on pollution control and community assistance were vague in the extreme. An earlier reference to $21 million in EDA funds that were to be made available for distressed steel companies has mysteriously disappeared from the final report, leading one to wonder the real depth of the administration's commitment to doing something on behalf of those already laid off.

These and other questions will be examined by the members of the Senate and House steel caucuses in the coming weeks. The administration's plan is carefully designed to require no legislation, but there is no question we will not hesitate to propose legislation—as we already have with respect to trade procedures and buy American legislation—to correct the deficiencies in the administration proposals.

Mr. President, George Will's column is an excellent commentary on the problems of the industry and the need for us to reorient our thinking on trade. I am doubtful that the administration's program can solve the problems posed by Mr. Will, and I fear that Congress may have to take the initiative. I ask unanimous consent that the George Will column from Newsweek be printed in the Record.

There being no objection, the column was ordered to be printed in the Record, as follows:

Big Steel and Big Government

(By George F. Will)

Ladles of molten minerals and rolling ribbons of glow make steel mills the great industrial spectacles. Not all eyes are pleased by such spectacles. In 1787 Robert Burns scratched this poem on the windowpane of an iron foundry:

We cam na here to view your warks,
In hopes to be mair wise,
But only, lest we gang to hell,
It may be nae surprise.

But there is poetry in people manipulating the violence of a volcano.

Steel is the symbolic metal of the industrial age, as gold was of aristocratic ages. Steel is everywhere, in the rails that first knit America together and in the skeletons of skyscrapers, cathedrals of commercial civilization. Steel towns, like Donora, Pa., where Grandfather Will ministered to Lutheran souls, still have what much of the nation has lost: a sense of the role of hard physical labor.

Although steel is only a $36 billion industry in a trillion-and-a-half-dollar economy, it is a symbol of national strength. Today the U.S. steel industry is ailing, and just as its robustness once typified the prodigies of private enterprise, its problems reflect the transformation of that system.

The industry's problems are writ large in losses and layoffs. Bethlehem's third-quarter loss of $477 million was the largest quarterly loss ever by a U.S. corporation. More than 60,000 steelworkers are eligible for government aid because of the impact of imports.

IMPORTS AND SMALLER CARS

The trouble is not just imports. During the 1930s, demand was so low that U.S. steelmakers had no reason to modernize for efficiency. During the 1940s and part of the 1950s, demand was so strong that there was no need to be more efficient. Capital spending by U.S. industry is sluggish, and capital goods account for more than half of steel production. Cars are shrinking, so Detroit's appetite for steel is, too. (Chevrolet's Malibu shed 396 pounds of steel this year, and Detroit's diet has just begun.) Steelworkers' salaries and benefits are high.

However, imports have been a growing problem for years. For fifteen years, steel has been part of the nation's balance-of-payments problem. Last year the U.S. imported $2.8 billion more steel than it exported, and imports currently capture about 19 per cent of the U.S. market. In the first half of 1977, imports won 74 per cent of the growth of U.S. demand.

To regard this as simply the proper outcome of "free trade" is to obscure reality with a concept that is increasingly irrelevant to a world of politicized economies. The idea of "free trade" implies competition between producers who are comparably disciplined by market forces. But U.S. steel companies compete less with foreign companies than with foreign governments. About 44 per cent of world steel production is by government-owned companies.

THOSE 'PRIVATE' FOREIGN FIRMS

Outside the U.S., the major "private" companies are subsidized and directed by governments that use them as instruments of economic policy to promote employment and trade. Between 1950 and 1975, the number of nations with steel industries grew from 32 to 71. The expansion of steel capacity in many countries does not reflect calculations of domestic demand. When the production levels are determined by employment priorities, price levels are determined by the problem of moving the product through aggressive exporting. This is one reason for predatory pricing, such as "dumping" (selling the product abroad below cost).

The largest steel company, Nippon, is part of the fabric of government agencies—and what are smilingly called "private" enterprises—that constitute Japan's economy, known as "Japan, Inc." Japan's steel industry pays 173 per cent more for oil than it did before the price increases. But the average for all Japanese industry is 282 per cent more. Steel gets a subsidy worth $5 a ton in reduced costs. About 83 per cent of the Japanese steel industry's capital structure is debt. This compares with 23 per cent in the U.S. industry. Government policy, sustained by the Bank of Japan, gives steel firms an abundance of capital. (In the U.S., government policy will require the steel industry to sink perhaps 25 per cent of its capital spending over the next few years in antipollution equipment. Japan's industry bears no comparable burden of investment in nonproductive facilities.) If U.S. firms tried to form joint-production ventures to match the economies of scale that Japanese firms enjoy, government antitrust lawyers would pounce.

In steel, governments are decisive, worldwide. In 1975, Common Market governments forced Japan to limit exports to Europe, thereby diverting steel to the U.S., where in 1976 Japanese imports rose 37 per cent. It is altogether fitting that the President's special trade representative is Robert Strauss, former Democratic National Chairman and a politician to his fingertips. International business is political business.

Even in periods when "free trade" is the ascendant ideology, governments that espouse it believe, as Benjamin Disraeli did, that "free trade is not a principle, it is an expedient." A nation respects market forces when those forces respect its interests. Nations have trade policies; they treat trades as an instrument of political purposes. Of course Japan, Inc., pursues economic dynamism with the fervor of a nation that otherwise would have to export people. This is not the first time the world has had reason to notice that Japan is an archipelago where the ratio of population to resources means that aggressive exporting is not optional. The second world war was, in part, about how (and where) Japanese should live. The answer seems to be: by exports.

ECONOMIC METAMORPHOSIS

The U.S. Government could help the U.S. steel industry by enforcing anti-dumping laws; by changing antitrust laws, by changing tax laws to speed depreciation of equipment, and to base deductions on replacement costs rather than historical costs; by quotas; by duties on steel sold below "reference prices" (perhaps based on real Japanese production costs, if anyone can decipher them); even by straight cash subsidies.

Some forms of assistance would involve more collaboration between government and business than Americans generally consider proper. But the consensus in most industrial societies is that enterprise generally, and especially basic industry, is permeated with public interests and so government should be an active, even dominant, collaborator. Because the distinction between public and private sectors is decreasingly meaningful, traditional "free trade" ideology is increasingly anachronistic. And the steady politicization of major economies exerts pressure toward further politicization of the U.S. economy, which cannot be impervious to the worldwide dynamic of collectivization and semi-socialization. It is perhaps, fitting that steel, symbol of the traditional enterprise economy, today dramatizes the metamorphosis of that system.

IS THERE A B-2 BOMBER IN OUR FUTURE?

Mr. PROXMIRE. Mr. President, the decision by the House of Representatives to continue construction of two additional B-1 bombers renews a controversy that has captured the attention of Congress for 4 years. As President Carter is reported to have said:

> The B-1 seems to have a life of its own.

Although the most recent House vote may only prolong the agony of a final decision for another month or two, the longer term issue involves replacing the B-52's with another bomber—be it a penetrator or a standoff platform.

Clearly, the case for the FB-111H is the weakest of the alternatives being considered, while the cruise missile carrier promises the greatest cost-benefit ratio. Nonetheless, it is not assured that either the most obvious or rational choice will be made. There are many complicating factors: Regional politics, SALT considerations, bureaucratic interests, and lobbying by defense corporations.

Placing these conflicting elements in perspective is often difficult to accomplish. Therefore, I recommend a recent article published in Arms Control Today to students of the B-1 controversy. It is written by Ron Tammen, a brilliant young expert and a member of my staff who has followed the B-1 debate for a number of years.

I ask unanimous consent that the article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

The Bomber Debate: Is There a B-2 in Our Future?

(By Ronald L. Tammen)

"The B-1 seems to have a life of its own," the President is quoted as saying a strategy meeting with Congressional leaders. And so it did. It required a Presidential declaration, 15 separate votes in Congress, a nationwide grass-roots campaign and the evolution of the cruise missile to halt development of the B-1. Even then, the margin was razor thin at every step, and support continues to run high for another manned, strategic, penetrating bomber program to replace B-52s.

The key to stopping the B-1 was forged by Sen. John Culver (D-Ia.)—the delay amendment. Anticipating a Democratic victory in the 1976 Presidential campaign, Sen. Culver succeeded in convincing a majority of the

Senate to delay full-scale production of the B-1 until February of 1977. Although his proposal was not accepted by the House of Representatives, a similar amendment by Sen. William Proxmire (D-Wis.) was signed into law as part of the military appropriations bill.

With the election of President Carter, the Air Force decided to delay the B-1 production decision even further, until the summer of 1977. Then, on June 30th, despite widespread expectation of B-1 approval, the President chose the B-52s and the cruise missile as alternatives to the $24 billion B-1 program. The Air Force suffered a severe shock but recovered quickly and set in motion a number of back-up strategies.

Nor did the President's announcement end the Congressional debate. The Senate voted overwhelmingly for cancellation. The House, which on June 28th had supported the B-1, later narrowly rejected it by a vote of 202-199. But the House Appropriations Committee refused to allow the President to stop spending $462 million in "prior-year" funds for two more B-1 aircraft. To further confuse the issue, another "new" manned penetrating bomber emerged as an alternative to the B-1. The President's decision seemed in danger of reversal.

THE CONTENDERS

When the President cancelled the B-1, he cited the cruise missile and the improved B-52 as the near-term replacement with cruise missile carriers (an aircraft designed to carry the new air-launched cruise missile) as a possible future option. Yet he did not completely rule out either the B-1 or another manned, penetrating bomber. This ambiguity led to three perhaps unanticipated responses. First, it gave hope to B-1 supporters that, given a fortuitous event, the program could be resurrected. Secondly, it encouraged the Air Force and defense contractors to pursue other manned bomber alternatives. Thirdly, and perhaps most importantly, it raised once again, but in new circumstances, the entire question of the future of the bomber portion of the Triad of strategic deterrent forces.

Several schools of thought have emerged. Some advocate a pure "stand-off" force of aircraft armed with cruise missiles to replace the B-52 fleet, while others argue for a predominantly "penetrating" force of new bombers. Still a third view is that the bomber force should be mixed, so as to complicate further an adversary's air defense problem. Adherents of this approach differ, however, over whether this mixed bomber fleet can be achieved by modifying existing aircraft or whether it requires new planes. The Administration favors the former option, calling for B-52 modifications and improvements while examining the long-term potential of the cruise missile carrier.

Believing that the bomber force provides insurance against "unexpected breakthroughs" in anti-submarine warfare and anti-ballistic missile technology, but without provocative first-strike implications, the Administration wants to preserve this so-called "air-breathing" component of the deterrent force (as contrasted with the submarine- and land-launched ballistic missiles). It calculates that the improved B-52 followed later by a cruise missile carrier will permit a survivable, retaliatory (second-strike) capacity that will match or exceed projected Soviet strategic growth in warheads, megatonnage, throw-weight, and hardened target destruction capability through a least 1986 *without* the B-1 or other new bomber and *without* the new MX mobile missile. This approach, moreover, would save $10 billion in constant fiscal year 1978 dollars, as compared to the cost of a moderate force of 150 B-1 bombers.

The Administration backed up its position by sending Congress a $449 million supplemental military authorization bill requesting funds for upgrading the B-52s, for accelerating development of the cruise missile and for early testing of a cruise missile carrier. No funds were sought for a new, manned, penetrating bomber.

Nonetheless, a contender was waiting, the FB-111H. Proposed as early as 1973 by its prime contractor, General Dynamics, the FB-111A medium bomber, with which it shares a 43 percent common structure. Though similar to the FB-111A, the new "H" model would be 12 feet longer, have a more restricted wing arc, use B-1 engines and electronics, and carry a modified tail section.

The Air Force enthusiastically embraced the FB-111H. No longer the unmentionable stepchild of the B-1, the FB-111H was widely praised and its supporters recommended a full development plan to Secretary of Defense Harold Brown, who initially refused to make a for-or-against decision.

At the same time, the cruise missile carrier was coming under attack. The military supplemental bill contained a request for $90 million to purchase and test a cruise missile carrier. Under scrutiny by B-1 supporters in the House and Senate Armed Services Committees, the Administration's plan was found to be almost non-existent. There was no specific spending plan for the $90 million, soon revised downward to $50 million; there were none of the timetables, cost estimates, or performance indicators essential for a go-ahead decision.

Though denigrated by some, the cruise missile carrier concept is popular with other Congressmen because of its cost-effectiveness. A force of 50 cruise missile carriers could be deployed with about 3,000 cruise missiles at a cost of $5.8 billion for the aircraft and $3.4 billion for the missiles. A fleet of 100 carriers with 6,000 missiles would cost $16.5 billion. This compares to a 240-aircraft B-1 program cost of $24 billion. The roughly 5,000 nuclear "loadings" of the B-1 force, including short-range attack missiles, would account for another $4-5 billion.

Rockwell International, the B-1 prime contractor, sought to capitalize on Washington's renewed interest in the bomber issue. It was already making a major effort to retain manufacturing capability for the B-1 until 1981 by encouraging the House of Representatives to deny the President's rescission of fiscal year 1977 B-1 funds, thereby allowing production of two more aircraft. Noting Congressional and Air Force interest in the FB-111H, Rockwell designed two lower-cost versions of the B-1. A fixed-wing cruise missile carrier option was proposed to compete with the FB-111H by carrying 16 internal and 14 external missiles at about two-thirds the B-1 cost. A higher-cost, combined penetrator/cruise missile carrier was also conceived. This proliferation of options and arguments encouraged bomber enthusiasts and brightened prospects for some form of new manned, strategic bomber.

SENATE STRATEGY

While it appeared that the House of Representatives might simply either resurrect the B-1 or fund the FB-111H, a more comprehensive plan emerged in the Senate Armed Services Subcommittee on Research and Development.

First, the Administration's poor showing in justifying the cruise missile carrier program was used to support a cut in requested funds from $50 million to $5 million for a "definition study." Rejecting a plea from Secretary Brown that "this option is extremely important particularly because it would allow us to expand our strategic capability rapidly," the Subcommittee held that a "costly aircraft flight demonstration" is unnecessary due to a "lack of urgency."

While the Subcommittee cut monies for the cruise missile carrier, it funded the FB-111H at a level of $20 million. Since no funds for the FB-111H had been requested by the Administration, Chairman John Stennis (D-Miss.) would not include this item in the supplemental military authorization bill until formal approval could be obtained from the Defense Department. After a personal conversation, a letter was received from Secretary Brown indicating that he would agree to $20 million for preliminary development work as a "prudent step."

The third element was the Subcommittee's addition of a special $5 million authorization for a study of another manned, penetrating bomber called the BX. Again, this was not requested by the Administration.

HOUSE AND SENATE BOMBER PLANS COLLAPSE

The letter from Secretary Brown to Senator Stennis on the FB-111H touched off a protest in the House from B-1 advocates and critics alike. B-1 advocates decried the FB-111H funding as not cost-effective. Critics saw the aircraft as the "Son of B-1." This unusual coalition struck the FB-111H funding recommended by the House Armed Services Committee in the supplemental military authorization bill. The Senate, however, restored the money in the Conference Committee on the authorization measure.

When House B-1 supporters attempted to resurrect the entire program through the supplemental appropriation bill, only a plea for party unity by Speaker Tip O'Neill and a strong lecture on deterrence by Appropriations Chairman George Mahon defeated the amendment to restore $1.4 billion for full-scale production. The Administration, in contrast to its earlier efforts, also mounted an effective lobbying campaign. With that vote, the B-1 issue seemed to be settled, with only the "prior year" funding question remaining to be decided in late November.

A compromise on the cruise carrier was reached when the Senate agreed to fund a study at the level of $15 million, higher than the $5 million recommended by the Senate Armed Services Committee but less than the revised Administration request for $50 million. The House agreed to the $15 million figure. Ultimately, the unrequested funds for study of the new BX strategic bomber were deleted entirely.

Finally, the unsought FB-111H option was knocked out of the supplemental appropriations bill in the Conference Committee by House conferees, who were adamantly against it. The FB-111H proposal is not entirely dead, however. The conferees agreed that the deletion of the FB-111H funds was done "without prejudice to the program" and that they would consider any official request this year or next for more funds. For the FB-111H supporters this invitation may prove irresistible, now that the complicating issue of the B-1 appears settled.

IS THE FB-111H THE BOMBER OF THE FUTURE?

Assuming a need to extend the life of the bomber force, the FB-111H seems a poor candidate for this role in the 1980s. In terms of basic capability, it cannot compete with the B-52 fleet. Current plans call for a mixed force of about 300 B-52s, with 150 B-52Gs as stand-off cruise missile carriers and about 150 D and H models as penetrators. The modifications recently approved by Congress will extend the life of the B-52 into the 1990s, allowing a mixed force for penetrating and stand-off missions for the next 10-15 years without producing a new bomber.

As shown on the accompanying chart, the FB-111H has about half the cruise missile capability of the B-52 and less range regardless of the assigned mission. Its radar cross-section and infrared signature provide improved protection against air defenses, but it remains much more vulnerable than a 19-foot cruise missile.

If the B-1 is not cost-effective, there is no calculation that can make the FB-111H cost-effective for the same mission. A force of 165 FB–111Hs would have a 20-year life cycle cost of $17 billion compared to an equal alert force of 61 B–1s at $11.5 billion. The production cost for modifying 65 FB–111s and manufacturing 100 FB–111Hs by 1985 would total $7.02 billion, barring future cost growth. There would be no competitive bidding for the airframe or engines for this aircraft, which are manufactured by General Dynamics (with a sole-source contract) and General Electric, respectively.

Two major strategic bomber studies have, in recent years, analyzed the FB–111H. In commenting on the Joint Strategic Bomber Study during the Ford Administration, one defense official noted that the FB–111H was "markedly cost-ineffective compared to all other forces" and that it is deficient in range, payload and electronic countermeasures. According to Secretary Brown, whose B–1 study resulted in the cancellation of that program: "We eliminated the FB–111H. Our analysis showed no significant advantage in cost or effectiveness over the B–1." He also concluded that the BX recommended by the Senate R&D Subcommittee could not save money and would take too long to develop.

It appears that the B–1 as such is dead. Nevertheless, the bomber debate is not, and, given past support in the Congress and the Air Force, could still lead to another manned, penetrating bomber.

COMPARING STRATEGIC BOMBERS

Characteristics	B52G/H	B-1	FB-111H
Length (feet)	159	151	88
Width (feet)	185	70/137	45/70
Maximum takeoff gross weight (pounds)	488,000	395,000	140,000
Crew size	6	4	2
Internal nuclear payload	12	24	4
External nuclear payload	12		10
Cruise missile capability (internal and external)	20	24	10-14
Low altitude penetration (mach)	.53-.55	.85	.85
Penetration altitude (feet)	400	200	200
Maximum high altitude (mach)	.90	1.6	1.6
High altitude cruise (mach)	.77	.70	.75
Ferry range (high altitude unrefueled—nautical miles)	c. 8,000	c. 7,000	c. 6,000
Total program cost (billions of inflated dollars)		24	7
Program unit cost (millions of inflated dollars)		102	45

DR. LAURENCE N. WOODWORTH

Mr. DOLE. Mr. President, I was deeply shocked to hear of the death of Dr. Laurence Woodworth. Those of us on the Finance Committee have lost a valued friend and adviser. The suddenness of his death comes as a surprise, since many of us saw him hard at work shortly before his stroke last weekend.

Larry Woodworth served as the chief of staff for the Joint Committee on Taxation for 12 years and had worked as an economist there for 20 years before that. When he left the joint committee earlier this year to become Assistant Secretary of the Treasury for Tax Policy, he was widely praised by members of the Finance Committee of both parties for the work which he had done over the years. Anyone who ever attended a markup session of the committee during those years knows the value of the technical advice which Dr. Woodworth provided.

When President Carter tapped him for the Assistant Secretary's position, the President brought to the executive branch a dedicated, principled, and thoroughly knowledgeable public servant. He was one of those rare individuals with expertise in a thoroughly complex subject who retained the ability to explain that subject in a fair, impartial, and comprehensive manner to nonexperts. Likewise, you could depend on his advice for its technical accuracy and precision.

His brilliant counsel was as widely appreciated as it will now be missed.

In the very finest sense of the word, Dr. Woodworth was a professional. When he left the joint committee to move into the executive branch, the Finance Committee was consoled with the knowledge that it would still benefit from his help and assistance when needed. When he left us to take his new job, we knew that his tremendous talents would continue to serve the American taxpayer. Sadly, there is no such consolation today.

Especially today, with the proposals for tax simplification and reform a major topic, he will be sorely needed, and sorely missed. His passing will leave an enormous void, accented by the reliance which many had placed in him.

Mr. President, I join my colleagues in expressing our deep sympathy to Dr. Woodworth's wife, Margaret, and to the rest of his family.

MEMORIAL TRIBUTE AND PRAYERS AT THE FUNERAL OF JOHN L. McCLELLAN

Mr. BUMPERS. Mr. President, a beautiful tribute to John L. McClellan, late a Senator from the State of Arkansas, was delivered by our Senate Chaplain, the Reverend Dr. Edward L. R. Elson, at the Immanuel Baptist Church in Little Rock on November 30, 1977. This tribute was delivered as part of the funeral services for Senator McClellan, and I want to take this opportunity to share it with the Members of the Senate and the public.

Mr. President, I ask unanimous consent that the memorial tribute and prayers delivered by Dr. Elson on this occasion be printed in the RECORD.

There being no objection, the tribute and prayers were ordered to be printed in the RECORD, as follows:

MEMORIAL TRIBUTE AND PRAYERS AT THE FUNERAL OF SENATOR JOHN L. McCLELLAN

In the classical literary style of the Bible, a few days ago, Senator John L. McClellan informed the world he would not seek another term in the United States Senate, saying "There is a proper time to aspire, a time to achieve and a time to retire". Then he quoted the words of the third chapter of the Book of Ecclesiastes:

"To everything there is a season, and a time to every purpose under heaven".

Had he continued the quotation, paragraph after paragraph would amplify the opening verse. The passage continues—

"A time to be born, and a time to die; a time to plant and a time to pluck up that which is planted;

"A time to kill, and a time to heal; a time to break down, and a time to build up;

"A time to weep, and a time to laugh; a time to mourn, and a time to dance; . . .

"A time to get, and a time to lose; a time to keep, and a time to cast away;

". . . a time to keep silence, and a time to speak;

"A time to love, and a time to hate; a time of war, and a time of peace; . . .

"He hath made everything beautiful in his time: . . .

"I know that, whatsoever God doeth, it shall be for ever: . . ."

And this is the time to thank God for the life, the work and the witness of John McClellan and to offer our tribute of affection and esteem.

He came right out of the life of our common humanity to give half a century of public service to the people he loved.

Motherless at three weeks of age he had the good fortune to have a school-teacher-father, who of necessity, took the tiny boy to the one room school with him, where as a precocious four year old could read and write and do arithmetic. By six years of age he was in the fourth grade and absorbing lessons of the other grades.

Father and Son read law and by seventeen young John was admitted to the State Bar, the youngest in history and he never stopped studying law.

John McClellan was devoted to the law. But first of all he was committed to the law of God made known on Mt. Sinai and the basis of all civil law. The marks of the talented lawyer, the skillful inquisitor, the gifted prosecutor, the eloquent protagonist of law and order, was upon everything he touched. He said and he did what he believed to be right, whether popular or not. He challenged and later defied a committee chairman whose procedures and practices he regarded as unwarranted, unethical and illegal. The law he knew and practiced as a gentleman.

His name is written large in achievements for his State and Nation. His crowning memorial may yet be the Criminal Code Reform Act of 1977, which if adopted, will be the first comprehensive revision of the Federal Criminal Code in the Nation's history.

John McClellan lived by the elemental virtues—chastity—sobriety, frugality—and these qualities flowed from the center of his daily life.

He had a profound sense of duty. Once he gave you his word, no other guarantee was needed. Once he took an oath of office he was committed—totally—with all the power of his being. From that moment on there was no deviation.

He believed in work—all kinds of work—not simply as a means of livelihood, but as a way of life. He believed work was God's design for life and for him obedience to the Biblical injunction was mandatory, "man shall live by the sweat of his brow." Lavishly, unsparingly he poured out his energies of mind and body in the service of others. How he worked!!!

Though somewhat reserved, John McClellan was outgoing and genuine in his friendship. He made scores of friends—young and old, rich and poor, the high and the low. For more than thirty years in Washington I have known him. He always had time for the Chaplain in exchanges of good humor or deep discussions about some of the vexing moral ambiguities of Senate work.

The only enemies he had were criminals, or those who demeaned the country he loved.

He lifted life wherever he went. Whatever he touched was enhanced. His life was one of kindness and compassion. Like His Master he went about doing good. He loved God with his heart and mind and strength. He trusted in the finished work of Christ for the well-being of his soul.

Throughout his life he taught us in unforgettable terms how a Christian turns suffering into a testimony. From sorrow he distilled dignity and character and love.

After his second son was killed while *en route* to the reburial of another son, he exclaimed one day among friends in the Senate, "What more can one man endure!" And there was more. Another son was taken. And with Christian grace and nobility he bore the grief, building a stronger character, a deeper faith, a purer life—making the best of life's remainders.

"I walked a mile with Pleasure,
She chatted all the way
But left me none the wiser
For all she had to say.

"I walked a mile with Sorrow
And ne'er a word said she
But O the truths I learned from her
When Sorrow walked with me."

That was John McClellan's lesson to us.

In the prologue to the Gospel of St. John there is an unforgettable sentence in which the writer describes the Herald of the coming Messiah saying: "There was a man sent from God whose name was John . . ."—a total biography in one sentence.

"There was a man."—What nobler description could a person have? What greater praise? Nothing needs to be added, nothing can be taken away.

He was a "man sent by God—and his name was 'John'."

There was a man sent from God, whose name was *John McClellan*.

With thankful hearts for God's gift to us, we give him back to the tender care of the Heavenly Father.

Let us pray.

Almighty God, Father of mercies and giver of all comfort, deal graciously, we pray Thee, with those who mourn this day, that casting every care on Thee, they may know the consolation of Thy love and the healing of Thy presence, through Jesus Christ, our Lord.

Be graciously near to Norma and all those dear to John, to give them strength and wisdom for the pilgrimage ahead, through Jesus Christ, our Lord.

Our Father God, we thank Thee for all the sacred memories and hallowed recollections which cluster about this hour. We thank Thee for Thy servant John, for his manhood, his love of country, his devotion to duty, his selfless public service, his magnanimity, his compassion, his innate spirituality, his steadfastness to truth and justice, for the depth and durability of his faith, and for all that endeared him to so many.

Suffer us not miss the meaning of this hour. May a new spirit arise in us this day. Give us eyes to see and hearts to feel something of his spirit among us that we may be true as he was true, loyal as he was loyal, great enough and strong enough and good enough for our time and duties.

And now, O Father, who doest all things well, with thankful hearts that Thou hast given him to us for a season, we give Thy servant John back to Thy tender care until the shadows flee away and the brighter day dawns, when the visible and the invisible are one in Thy higher kingdom.

Through Jesus Christ, our Lord. Amen.

PANAMA CANAL

Mr. McCLURE. Mr. President, our distinguished colleague from Kansas (Senator DOLE) has played an important role in the consideration of the Panama Canal Treaties now before this body. In these past months he has issued perceptive analyses of provisions written in his usual articulate style, and proposed a number of modifications to the treaty language which would go far toward correcting these problems.

Recently, in response to an article in Forbes magazine dismissing the possibility of severe economic hardships in the event of a Panama Canal closure, Senator DOLE wrote the publication, pointing out the flaws in its argument. It is evident to many of us in this body, and certainly to the American citizens whose livelihood would be directly affected by a canal closure, that the unavailability of the canal shipping route would severely impact on our economy, and have a disastrous effect on those segments of the market most dependent on it.

I salute my distinguished friend for eloquently articulating the situation in his letter to Forbes, which he has kindly agreed to have placed in the RECORD by me for the benefit of all our colleagues.

Mr. President, I ask unanimous consent to print in the RECORD the text of Senator DOLE's letter to Forbes in response to its November 15 article, "The Canal Without Rhetoric."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., December 5, 1977.

FORBES MAGAZINE,
New York, N.Y.

DEAR EDITOR: In its November 15 article, "The Canal Without Rhetoric," *Forbes* seems to contradict itself. It asserts that "from a practical economic point of view" the U.S. "almost certainly" does not need the Panama Canal. Yet in its analysis of the impact of a canal closure, it describes several sectors of the nation for whom the consequences would be disastrous.

Admitting that certain "shifts in trade" would occur, the article comments that one-fifth of all U.S. farm exports travel through the Canal to the Far East. If the canal were closed, it adds, these grain producers "could pay the highest price" as a result of "increased competition for foreign producers."

Since the article concludes, however, that economically the Canal is "more symbol than substance," I assume that FORBES editors regard the economic chaos this would produce in our farm states as a point significant enough to mention but not important enough to worry about.

In an effort to protect the economic interests of the United States, I have proposed Amendments to the pending Canal Treaties. To protect commercial shippers from unreasonable increases in Canal tolls, I want to cut in half the proposed payments of $60 million a year to Panama from toll revenues. And to protect our short-cut route to Asian markets, I would eliminate the provision now in the Treaties that prevents the United States from constructing a new Canal in any other country if the one in Panama is ever closed. These modifications in the pending Treaties are vital to American agriculture and commerce.

The United States Department of Agriculture has provided statistics on the magnitude of our commercial use of the Canal in shipping of agricultural goods. One-fifth of all corn exports, one-fourth of soybean exports, almost half of our sorghum production and much of the hard red winter wheat from the Great Plains goes through the Canal on its way to foreign ports. Much of this grain goes to Japan, which is now the single largest country market for U.S. farm products. The total trade is worth about $8 billion, and its disruption could plainly cause financial ruin for thousands of farmers.

I sincerely believe that the best way out of the current cost-price squeeze in which so many American farmers are caught is through expanded exports. For that reason, an accessible and inexpensive Canal shipping lane is imperative to U.S. agricultural producers.

Other dislocations are cited in the article. *Forbes* admits that "the Canal . . . is the only avenue for shipping Alaskan North Slope oil to the U.S. East Coast" and that at present there is no contingency proposal for bringing the fuel to the East. The article also indicates that "without the Panama Canal the East Coast ports are sure to suffer." These words translate into hundreds or thousands of workers shifting from productive work onto public assistance, and into an increased strain on the already fragile urban economies of the East. While according to the article business in West Coast ports would increase, this is not likely to be of great comfort to the unemployed dock workers of New York or Baltimore, for whom moving would be a significant financial hardship.

Finally, the article suggests that we would be affected far less than a number of other nations, and lists Ecuador, Peru and Colombia as examples of countries who would feel a Canal closure intensely. This brings to mind that one of the reasons given in support of the Treaties is the improvement of relations with Latin America; according to this argument, ratification of the documents will help persuade Latin America to reciprocate our feeling of friendship.

The article suggests that "without the Canal, the U.S. East Coast market for Ecuadorian bananas and Colombian coffee would disappear. But there is plenty of coffee elsewhere." I suggest that this type of attitude on our part will hardly enhance U.S.-Latin American relations.

It is clear from this review that a Canal closure, or even a substantial increase in tolls, would involve far more than what *Forbes* surprisingly describes as "shifts in trade." Although some segments of the economy may benefit slightly from the situation and some will remain untouched by the change, for other sectors the closing of the Canal would signal wholesale unemployment and widespread bankruptcy. The Panama Canal may be an economic "symbol," as *Forbes* maintains, but the problems its closing would cause are substantive.

Sincerely yours,

BOB DOLE,
U.S. Senator.

WILEY A. BRANTON NAMED DEAN OF LAW SCHOOL

Mr. BUMPERS. Mr. President, I take great pleasure in noting the appointment of Wiley A. Branton, a native of Pine Bluff, Ark., as dean of the Howard University School of Law. Mr. Branton is a distinguished son of my State, having practiced law with distinction for many years in Arkansas and elsewhere. He also served under the Senator from Minnesota (Mr. HUMPHREY), while he was Vice President, as Executive Director of the President's Council on Equal Opportunity. In 1967, Mr. Branton became Executive Director of the United Planning Organization, the District of Columbia's antipoverty agency, and in 1969, he left public life for the private practice of law here in Washington.

At the time Mr. Branton's appointment as dean was announced, he was being actively considered for appointment to the Federal bench. It is a credit to him and to his spirit of public service that he has renounced this ambition and decided to devote his considerable talents and energies to legal education.

Mr. President, I know I speak for all of my fellow citizens of Arkansas in extending most cordial congratulations to Wiley Branton. His career at the bar and in public service is an enviable one, now about to enter upon a new and larger stage. I ask unanimous consent that a copy of an article from the Washington Post of Tuesday, December 6, 1977, describing Mr. Branton's new appointment, be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Attorney Wiley Branton: Howard Names New Law Dean

(By Joseph D. Whitaker)

Former civil rights lawyer Wiley A. Branton, who first gained national prominence representing blacks who attempted to integrate public schools in Little Rock, Ark., will become dean of the troubled Howard University Law School on Jan. 1.

Branton will be trying to rescue the 108-year-old law school that graduated more than half the nation's black lawyers—including Supreme Court Justice Thurgood Marshall, D.C. Mayor Walter E. Washington and Chief Judge William B. Bryant of the U.S. District Court here—and served as the legal think tank for the civil rights movement during the 1940s and 1950s.

The law school's reputation has declined sharply in recent years, however, and top black law students have gone elsewhere. The school's accreditation is now in jeopardy, its graduates have consistently performed poorly on the bar exam, and its faculty and administration have fallen to arguing over what needs to be done to restore the law school's effectiveness.

Branton, who ran both the federal Council on Equal Opportunity and Washington's local antipoverty agency before going into private law practice, will be the eighth dean of the Howard law school since 1960. But he said yesterday that he is ready for the challenge.

"At this point in my life, I felt I could be of some help to young people seeking legal careers," Branton, 54, said. "This is a job that needs to be done and I would like to do it."

As a condition for accepting the job, Branton said he asked for and received a commitment from the Howard administration to increase financial aid for students (half of whom must now work their way through school), to increase funds for the Law Review and to consider providing housing for married students.

Two months ago, Branton was one of five persons nominated for appointment to a federal judgeship, which ultimately went to Louis F. Oberdorfer. However Branton said he was a front-runner for appointment to two other vacancies on the federal branch.

"By accepting the job at Howard I have lost my chance to be a federal judge," Branton said yesterday. "But after considering all sides of the issue, I decided I could make a greater contribution to the legal profession as dean of the law school than as a judge."

The Howard University Law School was created by Congress in 1869 to provide a law school for blacks who were barred from white schools by legal segregation.

Over the years, the circumstances that give birth to a black law school have changed. At first, blacks who wanted to study law routinely went to Howard. As a result, classes often were composed of highly qualified students from high-income homes.

When schools were desegregated in the 1950s and 1960s the pool of talent from which Howard had traditionally drawn its students changed drastically.

Students who once would have gone to Howard increasingly began to enroll at such schools as Harvard, Yale and Georgetown where scholarships were plentiful and faculty and facilities more impressive.

Today, the Howard law school is composed largely of students who in many cases were not able to attend another law school for academic or financial reasons.

More than half the students at Howard work part time to pay their tuition and living expenses. The average student at Howard owes between $8,000 and $10,000 for education loans by the time he graduates.

"We do admit a lot of students—black and white—who may not have been able to get into another law school," said Charles T. Duncan, who resigned his deanship in August, but is still a professor at Howard law. "We have always had a mission to provide an opportunity for blacks to get a legal education."

"I'm not disturbed that some of our people, perhaps at the bottom of the class, do not have a competitive bar passage rate," Duncan said. "What does disturb me is when our top graduates are discriminated against simply because they graduated from Howard."

While most other law schools have standard criteria for admissions, Howard does not. Only since Duncan became dean of the school in 1974 have applicants been required to take the Law School Aptitude Test, which is used extensively at many other schools to weed out applicants.

"We've found that there's no perfect test to determine quality," said Henry Jones, a law professor and chairman of the Howard admissions committee.

"We do not base our admissions on one or two factors," he added. "The committee does not only look at academics, but we look at industry, integrity, diligence and the potential of students here," Jones said.

"Our students are not necessarily the sons and daughters of doctors, lawyers or the elite group, but we are certain that we have high-quality students here," Jones said.

Herbert O. Reid, 61, came to Howard as a law professor 31 years ago and today is the "Charles Hamilton Houston distinguished professor of law," the highest-ranking professorship at Howard. Houston was a brilliant civil rights lawyer who was dean of the law school in the 1930s.

Reid talks often about the "Houston tradition" and how the school in general is straying away from the high standards it was known for.

"When I was coming along, most young people thought that to be (teaching) at the Howard law school was the apex of a black man's legal career and could be topped only by an appointment to the U.S. Supreme Court," Reid said recently.

GOLDEN AGE RECALLED

Reid said the so-called "golden age" of the Howard law school was a relatively brief period in the 1940s and early 1950s when Marshall, Houston, Bryant, the late William Hastie researched and collaborated on civil rights cases in the halls and classrooms of Howard.

In the Houston tradition, lawyers in private practice worked with law professors and students to research and write briefs for major civil rights cases.

Many times, the cases were rehearsed in Howard law school classrooms several times before they reached the courtroom floor. Students were able to study the law, then put their knowledge to work immediately in a real court suit.

Reid said he tried to rekindle the Houston ideal earlier this year when he included students in the preparation of a friend-of-the-court brief he filed in U.S. Supreme Court on behalf of the Howard law school in the Bakke reverse discrimination case.

But Reid believes the standards of Houston have not been lost among many new members of the faculty. He points out that 20 of the 38 faculty members—many of whom graduated from Ivy League schools—were hired during the three years Duncan was dean.

"I feel threatened by a thinking and mentality that people come to Howard and feel they should be given something special because they graduated from Harvard," said Reid, who is himself a graduate of the Harvard law school.

"A lot of these younger teachers fail to realize they should be helping the tradition," Reid said.

After schools were desegregated, Reid said, Howard lost sight of its mission. "Howard thought it had a new mission to be another Harvard or Yale," said Reid. "We almost forgot about our role as a watchdog over social policy to point out inequities."

"MISSION" DESCRIBED

Reid believes the Howard law school still has a twofold mission: to train and develop a cadre of legal engineers to bring about equality for blacks through the legal process and to provide an opportunity for disadvantaged blacks to study law.

"But when you're talking about education for disadvantaged people, you're essentially talking about compensatory education and financial aid," Reid said.

Last year Phyllis Pratt, the daughter of a low-income Louisiana couple, received $1,200 in financial aid to help pay her tuition during her first year at the Howard law school.

This year Pratt, 27, expected her financial aid to be renewed. But she was told at the beginning of the school year that "funds were insufficient" and she may not get any financial assistance this year.

To pay her living expenses and her academic bills, Pratt works part-time as a research assistant at a local law firm. But while she earns enough to keep herself in school, her working has a negative effect on her academic performance.

When first-year law students at other schools were grappling with their first law courses, Pratt, in addition to the academics, was puzzling over her new part-time job as a research assistant at a local law firm.

She earned a C grade average during her first year and, like many of her classmates who also work, Pratt said she became caught up "in a kind of paranoia" about whether she would pass the bar examination at the end of law school.

Between 1970 and 1975, graduates of the Howard University Law School who took bar examinations in 40 states compiled a national average passage rate of about 61 per cent, according to the school's own study of bar results.

In the Washington area, only 25 per cent of the Howard graduates taking the bar passed, the study shows. The passage rate in District of Columbia was 45 per cent; 23 per cent passed in Maryland; and in Virginia, only 18 per cent passed the bar.

CONGRESSIONAL QUERY

At Congressional hearings on the Howard University budget in recent years, legislators have asked Howard University President James E. Cheek to explain why Howard law graduates perform so poorly on bar examinations.

Although Cheek maintained that part of the problem is "related to quality," he said it is difficult to know exactly what is responsible for the relatively low number of Howard gradautes who pass the bar.

But Howard graduates are not the only graduates having troubles with bar examinations, according to Victor Goode, associate director of the National Conference of Black Lawyers in New York.

"It is true that black law graduates in general don't seem to be faring on bar exams as their white counterparts," said Goode. He said no one so far has been able to clearly identify why black graduates of law schools as disparate as Harvard, Howard and Texas Southern seem to have problems passing the bar.

At Howard, which has traditionally produced more black lawyers than any other school in the world, there are numerous theories of why graduates of the historic institution have scored poorly on many bar examinations across the country.

According to one professor, Howard students do not score well because Howard is a "national" law school, concerned primarily with national policies and laws when state bar examinations very often dwell heavily on local, jurisdictional law.

Many blacks who have taken and failed various bar examinations nationwide have filed suits claiming that the exams are discriminatory and weighted against blacks.

In a recent discrimination suit filed against the D.C. Committee on Admissions in the D.C. Court of Appeals, a three-judge panel ruled that they found no evidence of discrimination in the D.C. bar exam.

Branton said he believes bar examinations are generally weighted against black law graduates.

"Few questions on the bar examination have any thing to do with a person's fitness to practice law," he said. "Questions very often call for one to draw on a certain kind of cultural background which many blacks do not have."

Branton said that one way to improve the school's bar passage rate would be to set higher standards of admission. "But with higher standards of admission, we may just exclude many of the people Howard is here to serve—people who have potential, but would have trouble getting into other law schools," he said.

Branton, a native of Pine Bluff, Ark., and the third black to attend the University of Arkansas Law school, made national headlines in 1957 as the chief counsel for the National Association for the Advancement of Colored People in the fight for school desegregaton in Little Rock.

In the late 1950s and early 1960s he held other legal posts in the civil rights movement. Branton was hired in 1965 by then Vice President Hubert H. Humphrey as executive director of the President's Council on Equal Opportunity.

In 1967 Branton became executive director of the United Planning Organization, the District's antipoverty agency, a position in which he frequently found himself attacked and criticized by local community leaders.

Branton left public life in 1969 and joined the prestigious black law firm of Dolphin, Branton, Stafford and Webber, which later was dissolved and Branton continued in private practice.

ANNIVERSARY OF THE ATTACK ON PEARL HARBOR

Mr. DOLE. Mr. President, today we observe the 36th anniversary of the Japanese attack on the American naval base at Pearl Harbor. That event, of course, marked the entry of the United States into the Second World War—a conflict which was to cost the lives of over 400,000 Americans, with another 700,000 wounded. It is, as always, appropriate on this day to honor all those who served this country during that war, and particularly those who made the supreme sacrifice.

A LESSON AND A LEGACY

I believe that Pearl Harbor taught this Nation a great lesson: That America cannot isolate herself from the trials and tribulations that affect the rest of the world. And Pearl Harbor left a legacy as well: This Nation, when challenged by aggression from abroad, will not retreat. For retreat in the face of adversity only invites further aggression.

The Second World War did not eliminate international aggresssion from the face of the Earth. Today, the challenges are of a different nature and from different sources, but they are there nonetheless. Threats to peace and political stability are much in evidence today on the African Continent, in the Middle East, and in the Asian and Pacific region.

What disturbes many of us today is the very real prospect that, for the first time in our Nation's history, we may recoil in the face of adversity or compromise the national interest for the sake of temporary tranquility. It is the withdrawal of U.S. forces from South Korea, the reassessment of our NATO defense strategy in Western Europe, and the apparent compromise of basic principles in Asia, Africa, and elsewhere which stir the passions of thoughtful Americans today. And it is the trend of submission on the part of our own Nation in recent months which raises legitimate questions about the fate of the free world for the future.

America was not the only nation that learned a lesson from Pearl Harbor. It has stood as a lesson to all would be antagonists during the succeeding four decades as well. Let us hope that the costly lesson will not be "unlearned" due to mistakes in strategy and policy on our part.

If the lesson and the legacy of Pearl Harbor are not to be lost to history, then it is certain that we must remain constantly aware of their relevance to the challenges we face today.

TRIBUTE TO DR. LAURENCE WOODWORTH

Mr. ROBERT C. BYRD. Mr. President, it was with sadness today that I learned of the death of Dr. Laurence Woodworth, Assistant Secretary of the Treasury for Tax Policy. Because of the many years of dedicated service of Dr. Woodworth as staff director of the Joint Committee on Taxation, I know that practically every member of this body knew him personally and held him in the highest respect and esteem. He was the Nation's taxation expert and was not only a man of great knowledge and ability, but of absolute integrity. The country has lost an outstanding citizen and public servant.

I know my colleagues would wish to join me in expressing the condolences of the Senate to Mrs. Woodworth and to the other members of his family.

THE AMERICAN STEEL INDUSTRY: A PLAN FOR BOTH JOBS AND A CLEAN ENVIRONMENT

Mr. HEINZ. Mr. President, one part of the administration's steel plan deals with helping the industry solve its pollution control problems. Unfortunately, this part of the plan appears to be the weakest. Few substantive recommendations were made, and any relevant tax incentive proposals were delayed until the presentation of the President's tax reform plan early next year.

With respect to that plan, one alternative continues to gain public support, and, in fact, the President himself has already expressed support for it. I refer to the idea of allowing companies to deduct their pollution control capital expenditures as current expenses in the year they are made, rather than require their amortization over a longer period of time.

The arguments for this proposal have been made frequently over the past year, and a number of administration officials have expressed interest in it. On December 6 Senators RANDOLPH, PERCY, DANFORTH, ALLEN, and I wrote the President reminding him of his expression of support for expensing pollution control equipment and urging him to include such a provision in his tax program. This letter may be of interest to the Senate, and I ask unanimous consent that its text be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE ON BANKING, HOUSING,
AND URBAN AFFAIRS,
Washington, D.C., December 6, 1977.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: When you met at the White House with members of the Senate and House Steel Caucuses on October 27th, you expressed support for proposals to permit same year amortization of pollution control equipment.

We are writing at this time to remind you of that commitment and to urge that this proposal be included in the tax reform plan to be sent to Congress early next year.

Rapid amortization of pollution control equipment has broader application than the steel industry, the context in which we discussed it with you, but it is particularly relevant to steel because of that industry's extensive and continuing pollution problems.

Recent data indicate that the steel industry spent $500 million in 1976 for pollution control facilities, and more importantly, that this figure will certainly increase over the next several years as stricter standards have to be met.

This investment is not "productive" in the classic sense of investment that contributes to improvements or increases in production or reduction in product costs, etc. While investment in pollution control facilities helps create cleaner factories and neighborhoods and in some cases cleaner products, it does not, in the strictest sense, contribute to the economic growth of the companies installing it. These are not investments that earn a return for the investor. On the contrary, in addition to the capital cost of installation, such facilities usually cost a considerable amount to operate and maintain, and it goes without saying that the billions invested in pollution control are not available for other job creating investments.

Our efforts to clean up industry will be more successful, more quickly accomplished, and ultimately more consistent with economic growth if we provide appropriate incentives to industry to install pollution control equipment promptly and effectively. Of course, our environmental laws mandate compliance, and compliance will occur. Since the federal government is imposing the burden, however, and all the taxpayers share in the benefits, it is appropriate that we absorb some of the cost more directly and more equitably than through higher consumer prices.

Although there have been numerous proposals that would provide some support for these expenditures, it is our view that the tax approach is the best one. As a matter of principle the government should provide for fair tax treatment of the heavy expenditures it has mandated. And, as opposed to capitalization (and treatment through depreciation or amortization), treatment as a current expense for pollution control investments would be the fairest, quickest, and most effective means of achieving that objective. The Senate energy tax bill affirms this principle in its provision allowing tax credits for a variety of energy conversion (and attendant pollution control) equipment, much of which will be installed pursuant to federal law or order.

We were pleased to hear your expressed support for this proposal in our previous discussion, and we hope to see that support manifest itself in your tax reform proposals.

H. John Heinz III,
James B. Allen,
Jennings Randolph,
John C. Danforth,
Charles H. Percy,
U.S. Senators.

"A PRAYER FOR A NEW BRIDGE" CELEBRATES THE STRENGTH OF MEN AND MOUNTAINS

Mr. RANDOLPH. Mr. President, on May 13, 1976, it was my privilege to participate in a ceremony marking the closing of the steel arch spanning the New River Gorge in Fayette County, W. Va.

As part of the program, the invocation was given by the Rev. Billy Reed Wickline of the Fayetteville United Methodist Church. His rolling words about the majesty and awe-inspiring setting of the world's longest steel arch bridge provided an almost transcendental experience for the thousands gathered for the occasion. For example:

> Thou hast arched the Heavens above us and enriched the Earth beneath us and allowed the trees of the forests to clap their hands and the hills to break forth into singing.

Perhaps there is little about a bridge to inspire the average person. But to some, as Pastor Wickline, the steel arch soaring 876 feet above the beautiful New River Canyon evokes a poetic paean to God. I felt his words so deeply that they are shared now with my colleagues and the readers of the Record.

The bridge was formally dedicated on October 22, 1977. The 3,030-foot long roadway was opened to traffic after speakers praised the marvelous engineering triumph, which created this magnificent span over the world's second oldest river, next to the Nile.

Rev. Billy Reed Wickline, raised his voice to the heavens with words that mirrored the feelings of the vast assemblage. It was a truly memorable attestation to "an altar in the sky," an affirmation of humility of God's glorious creations, the mountains and the forests surrounding this splendid manmade structure.

I ask unanimous consent that Reverend Wickline's invocation, "A Prayer for a New Bridge," be printed in the Record.

There being no objection, the prayer was ordered to be printed in the Record, as follows:

A Prayer for a New Bridge

(By Rev. Billy Reed Wickline)

O Almighty God, praise be unto Thee from the heights, for this glorious day as we consider the heavens, the works of Thy fingers and hear the sculptured mountains and everlasting hills break forth into singing, and the trees in the forest of gold, crimson and scarlet clap their hands in adoration and exultation. Open now our hearts to the joy and beauty that surrounds us and the occasion called forth in celebration.

We thank Thee, O God, for this bridge, founded upon the sheer ledges of gaunt rocks, arching the stalwart oaks, towering pines and white waters, raised above the earth that the winds may chant in her beams and trusses Thy creative skill. Standing beside her massive structure, she appears as a rainbow of promised prosperity and progress; downward from the sky above, it appears as a gigantic steel band, vicing and clamping the mountains together, embracing the people and communities as a family of one household. To view her from the earth beneath, the bridge spans the gorge like an altar in the sky; but to stand upon it is to be upon holy ground and humbly viewed as an instrument of service, a gift and tribute of God's favor and man's genius.

We bow in awe and reverence before Thee for this abounding life and invoke Thy blessings upon those who prophesied this projection; those who have labored and witnessed its construction and now all who will enjoy its convenience and service. Gracious Father, continue to pour forth Thy favor upon all whose dream is this day fulfilled and whose work has ended. We give thanks unto Thee for the artists, architects and engineers for the drafting of their dream, laying the plans, and for all laborers who readied the ledges, forged the steel, mixed the mortar, poured the foundations, welded and riveted the joints; for those who walked the girders in confidence and others who have taken the risks and suffered the abuse when schedules were interrupted; for those families who have ached in separation and loneliness. We thank Thee, Our Father, for those persons who have given their homesteads and sacrificed what to them was sacred, for this greater shrine. We remember this day those who were thrilled by its promise but have not lived to celebrate its completion. Look upon any injured in the process and comfort those left, of the life which was lost. We beseech Thy grace upon the yet unborn who shall receive this gift as an inheritance for their generation in ministry to their need.

Forbid that any among us shall be so heedless and unseeing so as to be without gratitude and thanksgiving, but guard us from viewing this accomplishment to make of it a tower of Babel; instead, let it be the travelers' temple, a symbol of the spirit of cooperation and concord where each man's labor and every man's task is the offering of his skill with dedication to fulfill his calling and the extending of his life, to bridge nature's barrier and every human rift.

Our Father, grant, we beseech Thee, an unfaltering return to our homes and reward our days with the strength to work without weariness or complaint. Equip us with thankful enthusiasm for this day and the future before us, that our spirit shall be continuous praise, through Jesus Christ our Lord. Amen.

ABORTION FUNDING STATEMENT

Mr. DOLE. Mr. President. The adversary process, institutionalized in our legal system and Government, has perhaps never been so thoroughly tested as it has during the lengthy debate over Federal funding of abortions. Today, after 6 months of debate, compromise language releasing over $60 billion in funding for human services programs has been forged. Although many have complained that this day has been too long in coming, I feel that the realization of a House-Senate consensus on the proper Federal role in preserving the sacred right to life of the unborn has been worth every minute, day, week, and month it took.

Throughout the numerous debates on the "medicaid abortion" issue, we have brought forth every conceivable factor relating to abortion and its place—or lack of it—in our society. Every Member of the House and Senate has had the opportunity to consider the issues raised. The key to success in the adversary process is compromise. Without compromise and without the recognition that one side's viewpoint may have as many valid bases as the other's, a democracy would wither in its own indecision. It was in the spirit of compromise that, last week, I lent my support to what I consider a reasonable position, one nearly identical to that adopted by voice vote in the Senate today.

In a compromise, each side loses something. Longstanding opponents of any abortion lost. The majority of my colleagues in the Senate, who have consistently advocated much weaker anti-abortion funding language, also lost. But all gained too, and that is what compromise is all about. It will no longer be possible for the Federal Government to underwrite as large number of abortions as it has in the past. At the same time, victims of rape or incest or women who might suffer serious and long term damage to their health will be able to obtain federally financed abortions.

I feel it is important to emphasize that my position on this particular bill in no way indicates any lessened sense of the sanctity of life on my part. Individuals familiar with my voting record on the abortion issue know that I respect all life—be it born or unborn. I would certainly hope that my vote will not be misinterpreted to the point that doubt is cast upon the sincerity of my feelings on this matter.

At the point, Mr. President, I ask unanimous consent that a letter sent to me by Vincent DeCoursey—executive director of the Kansas Catholic Conference—be printed in the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Kansas Catholic Conference,
Kansas City, Kans., December 2, 1977.

Senator Bob Dole,
Dirksen Senate Office Building,
Washington, D.C.

Dear Bob: Quite frankly I was astounded when I read of your vote on the Senate language proposed to be enacted as a replacement for the Hyde Amendment to the Labor-HEW Appropriations Bill. Yours has always been a strong voice in support of life for the unborn, and this switch quite frankly is hard to relate to your past history in voting pro-life.

The so-called "new" language as proposed in the Senate bill, as you unquestionably know, is totally cosmetic and did nothing to change the substance of the original language as proposed by Senator Brooke.

I am more than anxious to hear from you as to your intentions on future votes on this subject. As you unquestionably know, the movement to reverse the United States Supreme Court decision of January 1973 is gaining strength almost daily and as more and more people become aware of the facts relative to abortion the conviction grows that of necessity this country must change its position by reversing the Supreme Court's monstrous decision.

Please let me know of your intentions and, hopefully, of your continued support for life and your opposition to abortion.

Sincerely,
KANSAS CATHOLIC CONFERENCE,
VINCENT DECOURSEY,
Executive Director.

Mr. DOLE. Mr. DeCoursey, a highly-respected and effective advocate for individuals who wish to protect life, raises some valid points in his letter; and I want to assure him and others who have expressed concern about a possible shift in my position that I will continue—as I have done in the past—to safeguard the right to life and to curb the attitude that living beings may be discarded with as little thought as that given to tossing old clothes.

RECESS UNTIL 2 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess until 2 p.m. today.

There being no objection, the Senate, at 12:14, recessed until 2 p.m.; whereupon the Senate reassembled when called to order by the Presiding Officer (Mr. SASSER).

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS SUBJECT TO THE CALL OF THE CHAIR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess awaiting the call of the Chair.

There being no objection, at 2:05 p.m., the Senate took a recess, subject to the call of the Chair.

The Senate reassembled at 2:59 p.m., when called to order by the presiding officer (Mr. ROBERT C. BYRD).

RECESS UNTIL 4 P.M. TODAY

The PRESIDING OFFICER. Without objection, the Senate will stand in recess until 4 p.m. today.

At 2:59 the Senate recessed until 4 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. HATHAWAY).

RECESS UNTIL 5 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess until the hour of 5 p.m. today.

There being no objection, the Senate, at 4 p.m., recessed until 5 p.m.; whereupon the Senate reassembled when called to order by the Presiding Officer (Mr. STONE).

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL EMERGENCY WAR POWERS

Mr. ROBERT C. BYRD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 7738.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the House agree to the amendments of the Senate numbered 2, 4, 5, 6, and 7 to the bill (H.R. 7738) entitled "An Act with respect to the powers of the President in time of war or national emergency."

Resolved, That the House agree to the amendment of the Senate numbered 1 to the aforesaid bill with the following amendment:

Page 1, line 3, of the Senate engrossed amendments, strike out "supercede" and insert: *supersede*

Resolved, That the House agree to the amendment of the Senate numbered 3 to the aforesaid bill with the following amendments:

1 Page 1, line 11, of the Senate engrossed amendments, strike out "including" and insert: *such as*

2 Page 1, line 12, of the Senate engrossed amendments, strike out "solely"

3 Page 2, line 2, of the Senate engrossed amendments, strike out "authority" and insert: *ability*

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate concur in the amendments of the House to the amendments of the Senate to H.R. 7738.

The motion was agreed to.

MARK CHARLES MIEIR AND LIANE MARIA MIEIR

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on H.R. 3313.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the House agree to the amendment of the Senate to the bill (H.R. 3313) entitled "An Act for the relief of Mark Charles Mieir and Liane Maria Mieir", with the following amendment:

Line 6, of the Senate engrossed amendment, strike out "United States." and insert: United States: *Provided*, That the natural parents or brothers or sisters of the beneficiaries shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate concur in the amendment of the House to the amendment of the Senate to H.R. 3313.

The motion was agreed to.

FURTHER CONTINUING APPROPRIATIONS, 1978

Mr. MAGNUSON. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Joint Resolution 662.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the House agree to the amendment of the Senate numbered 1 to the resolution (H.J. Res. 662) entitled "Joint resolution making further continuing appropriations for the fiscal year 1978, and for other purposes."

Resolved, That the House agree to the amendment of the Senate numbered 2 to the aforesaid resolution with the following:

AMENDMENT

In lieu of the matter proposed by said amendment, insert:

Provided, That none of the funds provided for in this paragraph shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term when so determined by two physicians.

Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

The Secretary shall promptly issue regulations and establish procedures to insure that the provisions of this section are rigorously enforced.

Mr. MAGNUSON. Mr. President, before I move, reluctantly, to concur in the House amendment, I want to say that the Senator from Massachusetts and I, and many of us in the committee, have struggled a long time with this problem. We have deep respect for the views of people on the other side. As a matter of fact, Mr. President, there was no black or white on this thing. There were a lot of grays. It is just a question of how far you should go.

I think that we in the Senate, as the bottom line on this very emotional matter, looked at things with one thing in mind: What is the most humane thing to do? What will be in the best interest of a lot of people that have personal, serious problems, legitimate problems, and what can we do to help solve a situation that has been in and out of the courts, in settling the argument over whether the States should handle it or the National Government?

We have done the best we know how. There has not been any particular compromise as such. It is pretty hard to compromise emotional matters. It is pretty hard to compromise between people who believe strongly on one side and people who believe strongly on the other side. But I think there is a possibility, always, of finding what is the best way for all of us—all, not just the extremists on both sides. I think that is what the Senator from Massachusetts and I have been trying to do, the best we know how.

The House, because of legislative procedures, at times put us in embarrassing positions. I just do not know why. Everybody knew that tomorrow night, there are, literally, almost a half million people who will be looking for their Christmas paychecks. They knew that. But I discount that. I am charitable, as we tried to be charitable about this issue, to think that they felt so keenly about it that they kept voting the way they did.

We voted over and over. Last night, I said, we had voted 18 times. I want to correct the RECORD. We voted 16 times on this measure, and probably 18 on portions of it that were indirectly related to the measure.

I have said many, many times, as sort of a voice in the wilderness, that this does not belong on the HEW bill. It is legislation of the rawest nature on an appropriations—money—bill. I said that I was going to introduce, and I intend to, as soon as Congress convenes on January 19, some four or maybe five bills which will take every aspect of this problem, and have them referred to the proper committee in the Senate, so that we can have a national policy on the question of abortion. I am sure that my friend from Massachusetts joins me in that, so that we can go on with the business that we have. I hope the Parliamentarian is listening to me; I know he is.

I do not suggest what the proper committee will be, but I have an idea that it might go to two specific committees. One is the Human Resources Committee, which has promised, over and over again, to myself and the members of my subcommittee, that they would hold hearings on this matter.

This is an amazing thing. Here we are, passing on a piece of major legislation, on which neither the House nor the Senate committees heard one single witness. We have no figures, we have no facts, we have no medical testimony; we did not hear a single witness on a matter of this grave importance. It is high time that the Human Resources Committee or the Government Operations Committee consider it.

I do know one committee that might well take it on. It might belong in the Committee on Finance of the Senate, because it deals with payment of money under medicaid.

What would come out of the Finance Committee of the United States I shall leave to you. But it does not belong on an HEW appropriation bill. So I am going to introduce those bills. They are going to take up all sides and shades within the two extremes of this particular problem, and next year, when they come to the Appropriations Committee with some of these amendments, I am going to say, "Why don't you go and testify to the proper committee and have them establish some kind of national policy on this matter?"

Now, having said that, as I say reluctantly, I hope we can agree and concur in the amendment, that was sent over by the House. For the record, I understand the House voted 181 to 166 for this particular language. Over there, it has been a question, sometimes, of 10 votes one way or 20 votes the other. There has never been a very large margin back and forth on how House Members felt about this matter; whereas, in the Senate, it was always a matter of voting 2 to 1 against. So I think we have been about as generous as we can be.

I suppose that I might be criticized by some people in suggesting that we have been too generous. But we have done the best that we know how. I am hoping that maybe this matter can be sent to the proper committee of the U.S. Senate, before we start next year's appropriations process. Then, possibly, we will be on the road to finally resolving this emotional issue.

I am sure that all Senators have been torn by this matter. It is an agonizing thing. I think about it all the time. When the Senator from Massachusetts and I talk to each other, we do not even ask, "How is the weather in Boston?" or, "How is the weather in Seattle?" We say, "What is going on with respect to abortion?" We do not even ask each other, "How are you feeling?"

This has been going on and on. I hope this will be the conclusion of this and we can get on to what is the real responsibility of the Appropriations Committee and HEW.

This bill involves millions of schoolchildren, millions of people who are dependent upon medical research at NIH, millions of people under medicaid and medicare. Hundreds of thousands of people are involved in social security. All these things we had to weigh in the balance.

I must confess that I do not like this; but I do not know, at this hour, just what we can do except concur with the House. But we have come a long way from what we did with respect to last year, so far as we are concerned. I think we have made some progress in this matter. Therefore, I am going to move at the proper time that the Senate concur with the House amendment.

With the passage of this bill through September 30, I want to make it very clear to the departments and programs which this bill affects that they should every closely follow the Senate and conference reports when allocating these funds for fiscal year 1978.

This is the exact same levels of funding, and the conference report, which the House and Senate have already agreed to following our conferences.

It is the exact same bill as the regular bill—it just has a different name.

I yield to the Senator from Massachusetts.

Mr. BROOKE. Mr. President, I concur with everything that the distinguished chairman has said. I commend him for his able leadership during the many long months we have had this issue before the Appropriations Committee and before the Congress of the United States.

I also commend Terry Lierman, the majority staff director, and Gar Kaganowich, the minority staff director, and others who have worked diligently and efficiently on this important legislation.

Mr. President, I point out for the record that this is not just a continuing resolution now, as I am sure the President well understands. This is the bill itself. This is finally the Labor-HEW bill of more than $60 billion, with all the money for Health, Education, and Welfare, and money for Labor as well, and the many programs that are involved.

There will be no necessity now for Congress to act upon the bill itself, because the continuing resolution that has been passed by the House and sent to the Senate—which I hope we will pass soon—will be, in effect, the Labor-HEW appropriations bill for 1978. So we are here dealing with that appropriation itself.

Mr. President, I shall read the language, as I understand it, and I will point out certain changes that have been made. The amendment which was offered last evening by the distinguished Senator from Washington (Mr. MAGNUSON), and which the Senate adopted by a voice vote and sent to the House of Representatives, reads as follows:

> On page 2 beginning on, line 15, strike the following: "as modified by the House of Representatives on August 2, 1977"; on page 2, after line 17, insert the following:
>
> *Provided, however,* that none of the funds provided for in this paragraph shall be used to perform abortions: except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.
>
> Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.
>
> The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced.

Mr. President, the House acted upon that language this morning and rejected it. They held the bill at the desk, and there were many consultations back and forth. Finally, a proposal was made that the House would include only—and I say only—one change in the language as sent by the Senate to the House. That one change is this: The words were "when so determined by two physicians." So that section would read: "or except in those instances where severe and long-lasting physcial health damage to the mother would result if the pregnancy were carried to term, when so determined by two physicians."

It is my understanding that the debate and the vote in the House were based upon those additional words, and those additional words only. As I now read the language that came back from the House to the Senate, and which we are now acting upon, I see an additional change. I do not know whether it was due to inadvertence or whether it was deliberate. The change I refer to is contained at the end of the first phrase: "*Provided, however,* that none of the funds provided for in this paragraph shall be used to perform abortions"—and there is no colon.

Mr. President, one might wonder why I raise this question. We have been back and forth with the House on many occasions with respect to one word and now with respect to punctuation marks.

I want to make it crystal clear, and I want to make it certain for the record, as to what was intended by the Senate and, as I understand, what was intended by the House by their vote—because no other change was referred to in that debate—is that we are talking about medical procedures being abortions.

There is no doubt in my mind that medical procedures are abortions, and when that colon was placed in there and it went on after "abortions," the antecedent, of course, would have been "abortions." I do not say that even the deletion of the colon means anything. I do not know. It might have been a question of interpretation. As I said, it might have been due to inadvertence. It also might have been done deliberately. It might have been done by a clerk. I do not know why it was done or how it was done.

However, I want the record to show clearly that we are talking about abortions when we talk about medical procedures, where we are concerned with the victims of rape or incest. We are not talking about D. & C.'s or anything of those things. We are saying that where a woman has been a victim of rape or incest, and it has been reported promptly to a law enforcement agency or to a public health service, that woman is entitled to medicaid funds for an abortion. That is what "medical procedures means, whether that colon is in or out.

I think it only fair to report this to the Senate, and, by reporting it to the Senate, also reporting it to the House; because, as I say, it was not a question of debate nor was it a question upon which the Members of the House were called upon to vote.

Mr. President, I am not going to review tonight the long history to which the distinguished chairman has referred. It weighs heavily upon us all. He is absolutely right: We have been able to talk about little else than abortions with respect to this bill for a long time.

It is not only an emotional issue. To some, it is a religious issue; to others, it is a moral issue; to others, it is a political issue; to some it is all those.

I understand and I respect the differences. I understand the diversity. I understand the reasons why many of our colleagues in the Senate and in the House have felt so strongly about this issue.

But I do want to make clear what we are talking about, Mr. President, when we discuss this language that apparently will now end up as the compromise language between the Senate and the House of Representatives.

First of all, the new language is "when so determined by two physicians." I think, Mr. President, that this language has no rational connection at all with the patient's needs. I think it unduly infringes upon her physician's right to practice medicine. And I think it violates the equal protection clause of the Constitution of the United States. As an attorney and as a former attorney general of the Commonwealth of Massachusetts I do not like to predict what the Supreme Court of the United States will do, but I think the courts will declare that this is unconstitutional.

There is no justification under the equal protection clause for giving all other medicaid patients the right to have medicaid funds paid for a particular injury or illness after consulting with one physician, and requiring medicaid patients who require an abortion to consult with two physicians. That to me is unconstitutional. It is discrimination. And I think the courts will so declare it.

If they do, it would only apply to that language "when so determined by two physicians." There is no question at all about the constitutionality of the rest of the language. But there is a serious question, and I repeat, a serious question, as to the constitutionality of the new language that has been added by the House of Representatives.

Then, Mr. President, what does this new language mean? Does it mean that a woman is restricted to two physicians?

Can she only go to two physicians and consult with them before and have both of them agree that she needs an abortion, because she would have a severe and long-lasting physical health injury resulting? I think the answer is obviously clearly no. I think she can go to more physicians. I think that there must be the "reasonably necessary" test as well. She could go to three or more physicians, and I think it is equally clear that medicaid funds could be used to pay for those. I want to enter into a colloquy subsequently with my distinguished chairman on some of these points.

Then, Mr. President, no one should dictate to the woman what doctor she should see. It should be a doctor of her own choosing, not one dictated by any health service or by any law enforcement agency but by the woman herself. She should have that freedom of choice in determining what physician she wants to consult with. And medicaid unquestionably and clearly will have to pay, Mr. President, for the consultations and the accompanying examinations and tests.

But I want to make it clear also, Mr. President, that that provision "when so determined by two physicians" applies only to those "instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term" and not to any previous language contained in this abortion language.

I think that is a question that we should clarify now, because it could raise some problems with us subsequently.

Mr. President, the section pertaining to severe and long-lasting physical health damage to the mother is, of course, a new section. We did not have that under existing law. The law will be changed. It will be changed substantively and substantially as well.

And we do not have a provision covering rape and incest in the present law. We had it in the report language but not in the bill itself.

So, there are major changes now as to what poor, indigent women would be eligible for medicaid abortions. If the woman is a victim of rape or incest, she is eligible under the conditions of the reporting provision. If severe and long-lasting physical damage to the mother would result if that pregnancy were carried to term when determined by two physicians, two out of three, two out of four, two out of five—I do not know—then, of course, she would be entitled to a medicaid abortion.

So these are the two changes. There is no change so far as the life of the mother is concerned or the drugs or devices. And, of course, the only other change is that the Secretary shall promptly issue regulations and rigorously enforce them. Of course, we understand that that has always been the rule anyway, so there is no problem with that.

Mr. President, if agreeable to the distinguished chairman I wish to ask certain questions of him at this time to further clarify the language. I shall direct several questions to Mr. MAGNUSON because I believe it is vital that we make clear the legislative intent of the provisions we are acting upon, and I think this is particularly necessary since HEW has refused to give us any interpretation in advance. We asked for that interpretation but they would not give it and, of course, that is within their rights. Since they have not given us any interpretation, I think we should clarify for them what the legislative intent is.

We have been advised by the department that they are looking to us to tell them the intent of the language we are recommending, and we are to be as precise as we can, so that no doubt is left in Mr. Califano's mind as to what we intend. And we expect our intent, Mr. President, to be carried out in the regulations that the Secretary will issue, because the Secretary will issue regulations on this language. And we want to be sure that the Secretary is well-informed of the intent of Congress.

The language makes an exception for providing "medical procedures" necessary for the victims of rape or incest. As I said, it is our intention that "medical procedures necessary" not be viewed as a limitation on the length of time during which medical assistance shall be available. We fully intend "medical procedures" to include, again, abortions. So long as the rape or incest has been reported to a law enforcement agency or to a public health service, the woman is clearly eligible for a publicly funded abortion.

Am I correct about our intent, that "medical procedures" do include abortion? Is that the chairman's understanding?

Mr. MAGNUSON. That is correct. I think we should make it clear to the Secretary, Mr. Califano, that we mean that a woman who is a victim of rape or incest may have an abortion as long as she reports the incident, and he should issue regulations not necessarily timewise but regulations that will carry out that intent.

Second, I say to the Senator from Massachusetts, that I am very pleased with the part of the language that the House of Representatives sent us regarding long-term serious damage. We never had that before. But I think this is one of the most important provisions in the whole bill.

Mr. BROOKE. The health provision?

Mr. MAGNUSON. The health provision.

Mr. BROOKE. I think that is very appropriate, yes.

Mr. MAGNUSON. There is one matter which is very important that might go on for years and years; it is too bad we did not get the fetus in there, too.

Mr. BROOKE. I agree.

Mr. MAGNUSON. Because the medical profession today can tell along the way whether the child is going to be born hopelessly crippled or mentally retarded, and I am hopeful that when the legislative committee—I repeat that—the legislative committee starts to establish a national policy they will consider this, too. I see the distinguished Senator from New York here who serves on that committee. We were unable to get the House to even talk about genetic diseases of the fetus, and I understand there are some 2,000 of them listed in medical dictionaries.

Mr. BROOKE. That is correct.

Mr. MAGNUSON. When the authorizing committees get to this—which you are going to do, we have to see to it that those bills are properly referred—and the Parliamentarian nods his head and he says that is correct—that you pay attention to this because this is one of the things the Senator from Massachusetts and I have been thinking about for a long time. This is the humane bottom line of the whole bill when you get down to it.

Mr. BROOKE. Mr. President, if the Senator would yield, I wish I could be as optimistic about this matter as my distinguished chairman is.

Mr. MAGNUSON. I am not optimistic, but I caught him here and I wanted to remind him.

Mr. BROOKE. I think the legislative committee ought to be challenged. But, as I said, I am not as optimistic, because if we have a Labor-HEW appropriation bill—and we will have next year, and the Parliamentarian is also smiling about this—if they come in with that language "none of the funds shall be used in this bill except for" we are faced with the same old problem again.

I am thinking if we do not get some action on the part of the legislative committee we are going to have to conduct hearings ourselves to determine what the problems involved are.

We did not have any hearings on the question of rape or incest or the fetus or anything else.

Mr. MAGNUSON. I want to suggest to the Senator from Massachusetts that there are not many experts on this problem, but I have listened to so much of it informally on both sides that while I do not consider myself necessarily an expert in making a decision on abortion, I am sure I have heard every side of the question——

Mr. BROOKE. I am sure.

Mr. MAGNUSON (continuing). Back and forth.

Mr. BROOKE. We did not have any statistical data at all, as the chairman knows.

Mr. MAGNUSON. We did not have any of that.

Mr. BROOKE. None of that at all, which we needed very clearly.

I just want to reiterate, though the chairman did respond relative to the reporting of the rape or incest, that I want to make it clear, as clear as we can possibly make it, that when we use the language "medical procedures" we are referring to abortions; is that correct?

Mr. MAGNUSON. That is correct. I think that is what we mean; I am sure the House people understand that is what we mean. "Medical procedures" are abortion procedures.

Mr. BROOKE. And that should be distinguished——

Mr. MAGNUSON. To stop the fetus from becoming—stop from having a child being born under circumstances which some people think they should not be born.

Mr. BROOKE. I think that is even more clear when we consider the fact that the House wanted to put in the word "treatment," as the chairman will remember.

Mr. MAGNUSON. Yes, that is right.

Mr. BROOKE. When they referred to "treatment" they really were referring to a D and C because they wanted a woman to have a D and C prior to the determination of pregnancy.

Mr. MAGNUSON. Let me say this: It is our understanding that a D and C covers, if you want to use a literal interpretation of the term, abortion; would that be correct?

Mr. BROOKE. Well, the D and C, with what they were hoping at one time we would accept—which we did not accept, thank God—is that a woman could get a D and C prior to the determination of pregnancy, meaning the woman would have to get a D and C even if she did not need a D and C. But we are not talking about a D and C.

Mr. MAGNUSON. But if abortion follows that examination that is allowed.

Mr. BROOKE. What we are talking about here is a medical procedure——

Mr. MAGNUSON. Is the whole thing.

Mr. BROOKE. Is an abortion, no question about it. If she is a victim of rape or incest she is then entitled, with these other provisions, of course——

Mr. MAGNUSON. It covers abortion.

Mr. BROOKE. It covers abortion, and it is abortion.

Mr. MAGNUSON. I think that should be clear.

Mr. BROOKE. I think that should be very clear, crystal clear, for the record.

Now, Mr. President, I think this clarifies the intent of the Senate, and I think of the House as well, as to any language which may cause the Secretary some problem insofar as the promulgation of regulations is concerned.

I think all of the other language here is clear on its face. I do not see any ambiguity, as I review this language, that could cause the Secretary to want to seek further any legislative intent. We know, when we are talking about medical procedures, that we are talking about abortions.

We know, when we are talking about severe and long-lasting physical health damage, that that is something that will be determined by a physician, because he is the only one who can determine that. We are not in a position to determine what severe and long-lasting physical health damage might be. It would be different from case to case. That is a medical determination that must be made.

We know what we are talking about when we say "when so determined by two physicians." It does not restrict the woman to two physicians; she can go to more physicians. The "reasonable" test will be used.

We also know that medicaid will pay for those physicians and for those consultations and the accompanying examinations and tests.

But we also expect—I should say I also expect—that that provision will be declared unconstitutional.

We know what we are talking about when we say the reporting must be prompt and that it must be within a reasonable and humane period of time.

Having all of that clearly spelled out for the Secretary of HEW, I can see no reason why he should have any difficulty whatsoever in the promulgation and drafting of regulations that will be in keeping with the intent of this Congress and the passage of this language.

Mr. MAGNUSON. Will the Senator yield, Mr. President?

Mr. BROOKE. Yes.

Mr. MAGNUSON. Also we never had any disagreement with this part of the language wherein we say:

> Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

In other words, both Houses have overwhelmingly given their implied approval to family planning and we, in the Appropriations Committee, have always thought we have given sufficient funds for family planning. On that, I think, we are all in general agreement.

Mr. BROOKE. I think the Senator is absolutely correct. There has been no question about that at all.

The last provision provides us with no problem, and the first provision is the so-called pure Hyde language which excepts the life of the mother.

Mr. MAGNUSON. That is the best reason for an abortion that I can think of.

Mr. BROOKE. That is right, and I agree with the distinguished chairman again.

We wanted "fetus" in there, and I hope that some time we will progress to the point that "fetus" will be included because we get into the Tay-Sachs disease and others that are too horrible even to mention, that are excluded by virtue of the fact we have had to compromise this language time after time after time.

I think we have made a clear legislative record.

I would like to yield at this time, if I may, to he distinguished Senator from Pennsylvania (Mr. SCHWEIKER) who wants to speak in this matter.

Mr. MAGNUSON. I must say, before the Senator from Pennsylvania speaks, that I respect his feelings on this matter. I must say to the Senator from North Carolina and others who have been against—not necessarily against, but have been for stronger language than we have—that they have been most helpful.

I have been around this place for a long time, and I do not know how many conferences we have had on this issue. I have had more conferences on this than anything I can think of, and I can think of some pretty important ones we have had. But the Senators have been very, very helpful in helping the Senate arrive at some kind of resolution with the House, and I deeply appreciate it, and I know the Senator from Massachusetts does.

Mr. BROOKE. I certainly do. I concur.

Mr. SCHWEIKER. I thank the Senator for yielding.

Mr. President, my position is well known. I strongly support the anti-abortion language in the Labor-HEW conference report of last year. I have offered that language several times on this floor, but the Senate has rejected it, usually by a 2-to-1 margin.

I shall vote against this pending proposal because I cannot support language allowing the use of taxpayers' funds to pay for abortions as provided by this language.

However, while I disagree with the chairman and the ranking Republican members of the subcommittee, I respect their beliefs and their efforts to reach agreement with the House.

Mr. BROOKE. Mr. President, I thank the distinguished Senator from Pennsylvania for his statement. As our chairman has said, he is a very able and distinguished member of our subcommittee. He has been on a different side of this issue, but he has been fair and he has been objective. He has worked hard to resolve this question. Fully knowing how he feels about this issue, I just want to say how much I respect him, to thank him for everything he has done in an effort to uphold his position, and the fairness with which he has done that.

Mr. STENNIS. Mr. President, if the floor manager of the bill is through——

Mr. BROOKE. I have to yield to the Senator from New York.

Mr. STENNIS. I ask for the floor in my own right.

Mr. BROOKE. I yield to the Senator from New York first.

Mr. JAVITS. Is this on the same subject?

Mr. STENNIS. Yes.

Mr. JAVITS. If the Senator would like to precede me, he may go ahead.

Mr. STENNIS. The Senator may proceed.

Mr. JAVITS. Mr. President, I feel fortunate in returning from the Far East on the very day on which this matter is being finally resolved between the House and Senate. It has been a matter of deep concern to me, to all communities in New York and, I know, to the whole country.

First, we are all deeply indebted to Senators BROOKE and MAGNUSON for leading this fight and leading it successfully. I think what they have accomplished here, notwithstanding the limitation of the result, is a victory for humanity and enlightenment. They have also demonstrated that legislatures are not necessarily panicked by persistent, widespread, and powerful lobbying. This matter has certainly proved that.

Also, Mr. President, it is a victory for constitutional government and, in my judgment, of the ability of a Congress to agree.

Certainly, both Houses were deeply dug in on the subject. We have finally come to some resolution.

Second, it is a victory for social justice in our country. It is inconceivable to me, and to millions of other Americans, that women too poor to pay should be deprived of rights under the Constitution, as certified by the decision of the U.S. Supreme Court, accorded to women with means to pay.

This is the kind of discrimination which is anathema in our country.

I appreciate and respect the depth and sincerity of any American's philosphy, experience, religious and moral training that may lead him or her to conclude that abortion is wrong, and to follow it out for herself. But, I do not believe that the state should seek to impose involuntary requirements for other individuals who may have a different view. Abortion is a matter of individual conscience.

In my work in the Senate, I have diligently pursued the objective of equal access to all human services, including education and medical services and the elimination of practices which, intentionally or not, discriminate against individuals on the basis of income by depriving them of equal access—and their equal rights to public services.

Denial of Federal funds otherwise available for medical care, for "medically necessary" abortions is discrimination against the rights of millions of American women who can least afford it. Such action deprives women too poor to pay of the rights which under the Constitution and the Supreme Court decisions are accorded to women with means.

They alone are to be subjected by state action to bear children which they do not wish to bear and which no other woman with means is required to bear.

I appreciate the concern of Senator BROOKE about the constitutionality of this new language, but it may be that the court, as it can, may reject some part of this catechism, to wit, "when so determined by two physicians," but retain the substance, as the court test is whether or not the objectionable provision compromises the whole provision. That will, of course, be a question the courts will decide.

I think we are deciding something very substantive here, even if there is an adverse constitutional finding on that particular provision.

Finally, Mr. President, it is a major victory for women's rights. I am deeply sympathetic to the ERA and I voted for it here, as did many others. I am rather disappointed, deeply disappointed, that the States have not yet ratified that amendment. But the substance of women's rights is in few other instances more clearly demonstrated, and our action with respect to them more clearly required, than in this one which touches every woman in this country so intimately. A ban on Federal medical care funds for such use would have erected a legal impediment to equal protection for a class of women whom we have established by law to be entitled to look to the Federal and State Governments for their medical care.

So, Mr. President, I deeply feel that this is not only a very trying dispute between the House and the Senate which has been settled, but a milestone in our legislation and a milestone in our history on women's rights and on the fidelity of both Houses of Congress to their duty and to conscience.

I believe the country owes a great debt to Senators MAGNUSON and BROOKE for the persistence which this has called for. It would have been easy enough to say, "Well, it is only 1 year. We will try again next year." But they stuck to it and the Senate stuck with them. It is a great victory for our country today. I congratulate both Senators.

Mr. MAGNUSON. I thank the Senator.

Mr. President, I move that the Senate concur in the amendment of the House to the amendment of the Senate.

Mr. BROOKE. Mr. President, if the Senator will withhold that for a moment——

Mr. MAGNUSON. I will withhold it.

Mr. BROOKE. I want to thank the Senator from New York, as our chairman has. That was very kind and generous of the Senator, as is customary.

I also want to thank the majority and minority leadership. They have really been very, very helpful to us in this whole fight. I do not mean because they happened to vote on the side of the chairman and the side that I believed in, but because procedurally they have been fair and objective. They have helped us in many of the procedural matters, as has the very distinguished Parliamentarian of this august body.

I want the record to show that the majority leader, Mr. BYRD, the minority leader, Mr. BAKER, and our distinguished Parliamentarian have been very, very helpful during these long parliamentary problems we have had night after night, which, hopefully now, we are resolving.

Mr. MAGNUSON. Mr. President, I gladly associate myself with the remarks of the Senator from Massachusetts.

Mr. EAGLETON. Mr. President, as I have stated before, I am in sympathy with the Senate managers of the bill and respect their efforts to see that the programs operated by the Departments of Health, Education, and Welfare, and Labor do not grind to a halt; however, I wish to go on record as opposing the compromise language now before the Senate.

In my view, Federal funds should not be used to pay for abortions except in those cases where the life of the mother would be endangered if the fetus were carried to term. The language before us permitting abortions in those instances "where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term when so determined by two physicians" broadens the exception to an unacceptable level.

As I have repeatedly stated, it is my profound moral conviction, Mr. President, that life is a continuum, from first beginnings in the womb to the final gasp of the dying, and that the first function of society, the primary responsibility of government, is to protect life and to create conditions which permit each person to flourish and to reach his or her fullest potential. For this reason, I shall vote against the compromise and urge my colleagues to do likewise.

Mr. HAYAKAWA. Mr. President, as the abortion controversy continues, I would like to bring to the attention of my colleagues three letters to the editor published today (December 7) in the Washington Post. Each of the three deals with an aspect of the problem that has not been previously discussed. I believe that the information and arguments presented in these letters may be helpful to my colleagues in Congress as well as to the general public during the consideration of the issue.

There being no objection, the letters were ordered to be printed in the Record, as follows:

The lengthy deadlock between the House and Senate concerning abortion reflects our politicians' appalling ignorace of the latest scientific developments. While politicians wrangle over abortion in case of rape, medical innovations have created a quite different problem.

It is now possible to diagnose a number of serious and costly birth defects during pregnancy. Among the conditions identifiable by amniocentesis are Down's syndrome (Mongolism), spina bifida and other irreversible abnormalities requiring costly care or life-long institutionalization. According to one report, another technique will permit the discovery of some birth defects, including anencephaly—that is, a fetus without a brain. Other tests are not unlikely to be developed.

The economic costs—not to mention human suffering—involved in the artificial prolongation of grossly defective newborns are already a serious problem in today's hospitals. These new techniques offer the promise that parents could abort a defective fetus in order to have a normal, healthy child.

In their haste to prevent what some consider "sinful" abortions, however, congressmen seem to have forgotten their own previous legislation in the area of birth defects. Under the program known as EPSDT (Early Periodic Screening, Detection and Treatment), low-income families have a right to both screening and treatment for a wide range of birth defects. On the surface, it seems that EPSDT requires the federal government to pay for the care of defective newborns whose birth might for the first time be avoidable.

Obviously, it is not a question of requiring all pregnant women to undergo prenatal testing to see if their pregnancies are abnormal. But in some cases, such as Down's syndrome, if the mother is over 40, the risk is known to be very high and testing is reasonable. If a test in these circumstances reveals abnormality, it is contrary to common sense and humanity to prevent families from choosing a therapeutic abortion.

Roger D. Masters,
Fellow, Hastings Center, Professor of Government, Dartmouth College.
Hanover, N.H.

As far as I know, congressional debate on abortion never has brought out clearly what the basic issue is. Certainly, Congress has made no real effort to resolve it.

The right-to-lifers say abortion is murder.

The pro-abortionists say it is just a medical procedure of great personal worth to those undergoing it—and of vast financial value to society.

Obviously, if abortion is, indeed, murder, it should be forbidden to everyone. If it is not, then it should be available to everyone.

So, in theory at least, all Congress had to do was outlaw it across the board, as murder is outlawed, or treat it as a legitimate medical procedure and make it available in the same manner as any other such procedure.

Instead, it has decided, in effect, that abortion is murder for those who can't pay for it but an ordinary medical option for those who can pay.

Lewis Hawkins.
Bethesda.

If the poor are deprived of abortions, then what? Who will love and nurture the unwanted infant so that it will grow into a healthy human being? Not likely the mother who was ready to abort it. I recognize the position held by the right-to-life groups, but I am very troubled by their apparent lack of concern for the infant they want born to unwilling parents. Let the right-to-life people take the first step to resolve the problem by guaranteeing to adopt every single unwanted child regardless of its race, color or physical condition. Only then might they have a valid argument against abortion. There are many ways to destroy life. In many circumstances, abortion may be the kindest.

Seymour Bress.
Rockville.

Mr. LEAHY. Mr. President, passage of this joint resolution is necessary in order to provide the District of Columbia city government with the legal authority to continue to incur obligations to meet the city payroll and to continue other basic city functions. The legal authority for the city to incur obligations expired on November 30, 1977. This joint resolution is the traditional continuing appropriation resolution with which we are all familiar and it will be effective until September 30, 1978. This will be the third continuing resolution that we have passed for the District of Columbia this year.

As many of you will recall, the fiscal year 1978 budget for the District of Columbia was passed by the Senate on October 4, 1977. Since then, the House and Senate conference committee has met on October 12 and again on October 17 in an attempt to resolve our differences. Since then I have repeatedly expressed my willingness to meet again in conference at any time starting at 6 a.m. and running at late as 12 p.m. in the evening. So far the House has not been able to meet again in conference.

By passing this continuing resolution and making it effective until September 30, 1978, I do not want to give the impression that we no longer have an interest in returning to the conference table and agreeing to a budget for the city for fiscal year 1978. I would have preferred an extention to February 28, 1978, at the very latest and have agreed reluctantly with the House on their date of September 30, 1978.

The city proposal to build and operate a $110,000,000 convention center in downtown Washington is the main difference between the House and Senate and this one issue alone is preventing us from reaching an agreement with the House. I have suggested that we set this item aside and pass a fiscal year 1978 budget for the city so the city can better plan its activities for the remainder of this fiscal year. I have also suggested that the city immediately begin to develop a proposal for a convention center that would accommodate the concerns of all affected parties, especially the views of the citizens and taxpayers of the city. So far the city has made no visible progress in developing a compromise proposal and so far seems more interested in obtaining approval for this one item in exactly the form they have proposed than they are in gaining passage of the entire city budget. Not only will this approach not gain approval for the current convention center proposal, but it is no longer responsible with regard to the city government's central responsibility for the operation of the entire city.

The elected city officials understood completely the issue that has the Congress deadlocked and they know full well how to resolve the issue and gain rapid approval of the fiscal year 1978 budget for the city. I am hopeful that the city will soon see their responsibility in this broader context so that we can pass a budget for the city for fiscal year 1978.

Mr. President. I ask unanimous consent that an editorial by Joe McCaffrey of WMAL radio be printed in the Record at this point.

The editorial concerns an alternative convention center proposal made by Mr. John Hechinger. I do not know enough about this proposal or other specific alternatives to endorse them, but points made by Mr. McCaffrey are illustrative of the problems we have faced on this issue.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

John Hechinger is one of the nation's leading retailers.

He has also done more than his share as a public servant, but he is not politician. Because of that his plan to build a convention center and lease it back to the District of Columbia is drawing a cold shoulder from city officials.

Mr. Hechinger knows the first principle of retailing is to give the consumer a bargain. He followed the same line of reasoning when he offered the District of Columbia his plan for a civic center.

This, he said, will save the taxpayers from 20 million to 30 million dollars.

That was where he made his mistake. Saving the taxpayer money is not one of the popular things today. Spending the taxpayers money is the big thrust.

Had Mr. Hechinger said—this will cost from 20 to 30 million more than the civic center now under consideration at Mt. Vernon Square, then he would have won the brass ring. It would be hailed as a wonderful thing for the taxpayer.

His mistake was in offering a saving. See, government isn't like retailing. Bargains are not appreciated.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. I would like to have recognition in my own right.

Mr. MAGNUSON. Before this is finished?

Mr. STENNIS. Before it is passed.

Mr. MAGNUSON. Mr. President, I would like to get this out of the way.

Mr. President, I move that the Senate concur in the amendment of the House to the amendment of the Senate.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. Mr. President, I ask recognition for just a very few minutes. I commend the Senators who have worked on a very, very difficult subject, which was before the Appropriations Committee, for weeks and months. I think there have been over 35 rollcall votes on this matter. I especially thank the Senator from Pennsylvania, Mr. SCHWEIKER, who has worked hard and diligently for many, many days, and I thank him for wisely exercising my proxy on this abortion question.

Mr. President, may we have order in the Chamber?

The PRESIDING OFFICER. The Senate will be in order.

Mr. STENNIS. Certainly, the Senator from Pennsylvania is due a debt of gratitude by all of us who have views anywhere near or similar to his, and, I believe these views are shared by millions of Americans. I am most grateful to him for what he has done.

All Senators have worked on it, whichever side of the aisle they were on, with due diligence.

I just make one passing observation about the inadequacy of our Senate rules. I do not see how, with the volume of business we have to do each year, we can continue indefinitely with such obscure rules about amendments on appropriations bills, that contain legislation on appropriations bills. We all know about the practices here on points of order and germaneness, all too often, the membership vote on the merits of these proposed amendments rather than voting on an interpretation of the rules.

I would encourage those who specialize in this field and who are concerned with it, the leadership, too, to see if something could be done with reference to clearing up and being more specific as to our rules with reference to amendments on appropriations bills which also carry legislation. It chokes the committees; it slows down the floor consideration, and it is a millstone around our necks, really. I have observed this more and more from year to year. A lot of this type of proposals are in this bill, including the point on abortion.

Now, Mr. President, I have listened with the greatest interest here to the arguments which have been made. I do not want this subject left with the record reading like those of us who have been on the other side are more or less inhumane and indifferent to human suffering, or have a calloused viewpoint, or anything like that.

I believe, Mr. President, that on this matter of abortion, abortion at will or by choice, whatever it may be called, by and large, as it is carried on and practiced now with private funds, or public funds, or anything else, it is an attack on the family.

That is the main issue; it is an attack on the human family. That is the view, and I believe, it is the view of millions and millions of Americans tonight. This matter ought not to be passed over here without something being said with reference to that viewpoint.

Very respectfully, I believe that whatever is an attack on the human family is an attack even on our form of government, because the human family is a major institution in the bedrock and foundation of our system of self-government.

This matter has gone on and on with its variations and is taken as a joke, now, in some places. I am talking about abortion—abortion at will, not referring to the fine points and distinctions about the kind and the state, but the idea of abortion at will or by choice I believe there is already a changing sentiment, a deeper concern and more determination on the part of a many many people to bring back a better substance and better consideration of this subject as it relates to the human family.

I know the Senator from Massachusetts is a splendid fine lawyer, I do not see how we can go on with the practice of trying to read into our own language certain interpretations that we expect the courts to follow or we expect the Secretary of the Department of HEW or any Secretary to follow, I know how easy it is to do. I know I am tempted to do it; I may be guilty of it somewhat myself at times. But I do not accept the idea that a Member of this body can get up on the floor as individuals and read in interpretations. We can give facts, but we have to make our own language express what we mean and get as near thereto as we can, rather than depend, for example, upon my idea of what it may mean and trying to make what I say have the effect of law, which it really cannot have.

Mr. SCHWEIKER. Will the Senator yield?

Mr. STENNIS. Yes, I am glad to yield.

I want to make clear that I am not trying to critcize or give anyone a lecture, but I sit here as a Member and as a lawyer who has had to listen to cases in court and make rulings, and I know the seriousness of those matters. It is no fun.

Mr. SCHWEIKER. I thank the distinguished Senator from Mississippi for his kind words about my work, but in turn, I thank him for the staunch support and the close cooperation he has given me in this problem ever since it has emerged. He has been one of the stalwart supporters of our conference position, both in the committee and on the Senate floor. I thank him for it.

I think he very aptly summed up the issue as I strongly feel it, as an attack on the human family, an attack on human life. Those of us who believe this way feel very deeply that that is what the issue is. I think he very articulately and very ably expressed it and I thank him for it.

Mr. BROOKE. Mr. President, will the Senator yield?

Mr. STENNIS. If the Senator wants me to yield the floor, I shall either yield it or yield to him.

The PRESIDING OFFICER (Mr. MATSUNAGA). The Senator from Massachusetts is recognized.

Mr. BROOKE. Mr. President, I defer to no one in respect for the distinguished Senator from Mississippi (Mr. STENNIS). But my distinguished chairman (Mr. MAGNUSON) and I have been proposing amendments and negotiating with the House, as is well known, for many months. When making amendments on this floor, we know what we intend by those amendments. When we debate those amendments on the floor, we make it clear to our colleagues what we intended by those amendments. And when the Senate votes upon those amendments, obviously, the Senate adopts the intent that is contained in the amendments.

That is all I wanted to do in trying to make clear what the intent was of the proponents of most of these amendments and the negotiators with the House as to what was said between the House conferees and the Senate conferees, both in and out of conference; and also what the House did in its debate upon this same legislation and the passage of the language which was before us tonight.

I think it is always helpful to a judge and jury to have the legislative intent when that judge or that jury is trying to determine what the legislature intended by certain language. Mr. President, I tried to define what was the legislative intent of that language, as the distinguished Senator from Mississippi has said he has done time after time, on many occasions, and as I think we all have tried to do. I think it is helpful to the judicial branch of Government when the legislative branch gives it some insight into what their intent was. That is what we have tried to do here tonight.

Mr. President, I shall not belabor this

point. I just want to make clear what my position was in the colloquy that I had with my distinguished chairman.

Mr. President, if it is in order, I move to reconsider the vote that was taken by the Senate on this language.

Mr. JAVITS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. JAVITS. Mr. President, will the Senator yield for just a very brief observation?

Mr. BROOKE. Yes, I yield.

Mr. JAVITS. We have very sharp differences, and I should like to affirm not only my enormous respect but my deep affection for the Senators who have spoken on the other side of this issue. When we speak about the humanity of the issue, that is our concept of it, and those gentlemen have the deepest sincerity and deepest feelings. They are passionately defending the very same highest human emotion. I hope my colleagues will understand that.

Mr. MAGNUSON. Mr. President, now that this matter is resolved in the Senate, I noticed, if I could get his attention, the distinguished Senator from California on the floor. I must say that we were very remiss in all these discussions between the House and the Senate on the question of what "prompt" means, or whether "grave" is serious, or "serious" is grave. At no time did we call upon the expert advice of the Senator from California.

I am sorry about that, because he might have cleared up a lot of the fog for us on what the words actually mean. That is why the Senator from Massachusetts and I spent a little time at least suggesting what we think they mean.

I apologize to the Senator. We should have called upon him, not as a Senator, but as an expert.

Mr. HAYAKAWA. The distinguished Senator from Washington does me too much credit altogether. My learned colleagues in the Senate have been dealing with words for a longer time than I have been and in a more important context than I have ever done.

No one knows better how to use words for their own purposes or broaden them for their own purposes or make them vague for their own purposes. They are all better at that than I am. Maybe after I have been a Member of this body for a number of years, I shall be as adept as they are.

The PRESIDING OFFICER (Mr. MATSUNAGA). The Chair will observe that the Chair thought that perhaps the Senator from Washington thought the Senator from California was a Senator from Hawaii and therefore did not call upon him. [Laughter.]

Mr. MAGNUSON. So far as I am concerned, the Senate can now recess for a while, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUPPLEMENTAL APPROPRIATIONS, 1978—CONFERENCE REPORT

Mr. STENNIS. Mr. President, in cooperation with and in counsel with the Senator from Washington (Mr. MAGNUSON), for the Appropriations Committee and for him, I submit a report of the committee of conference on H.R. 9375 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

> The committee of conference on the disagreeing votes of the two Houses of the amendments of the Senate to the bill (H.R. 9375) making supplemental appropriations for the fiscal year ending September 30, 1978, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of December 1, 1977.)

Mr. STENNIS. Mr. President, for the information of the membership—and this is important—we have not heard of any kind of special interest in this conference report in its present form, except with respect to the B-1 bomber. That is rescission of part of the 1977 appropriation for the B-1.

Mr. President, the House adopted the conference report yesterday by a voice vote.

The conference report appeared in the CONGRESSIONAL RECORD of Thursday, December 1, 1977, and the printed report, House Report 95-829, is also available. Therefore, I shall not go into detail on all of the items that were before the Conference Committee, but I will summarize and briefly review the recommendations of the conferees on major items.

The conference agreement and subsequent House action provides a grand total of $7,799,898,000 in new budget—obligational—authority for fiscal year 1978. This is $107,526,000 less than the $7,907,424,000 in budget estimates submitted by the President and considered by the House and Senate in connection with this bill. The conference agreement is $617,296,000 more than the bill as passed by the House and $90,348,000 less than the bill as passed by the Senate. Thus, new budget authority contained in the bill is very near the totals as approved by the Senate.

Major items in the bill include: $30 million for Federal crop insurance; $30 million for watershed and flood prevention operations; $36.6 million for agricultural conservation program; $44.2 million for Environmental Protection Agency research and development; $85 million for EPA abatement control; $4.5 billion for EPA waste treatment plant grants, the largest item in the bill; $67 million for surface mining reclamation and enforcement; $273 million for the Federal Energy Administration programs, now in the Department of Energy; $383 million for strategic petroleum reserves; $124 million for assistance to refugees from Cambodia, Vietnam, and Laos; $200 million for emergency fuel assistance to the poor and elderly; $80 million for the Clinch River breeder reactor project, one of the more controversial issues in the bill and before the Congress this year; $1.4 billion for SBA loans, principally to farmers; $423 million for Defense Department programs, principally involving acceleration of the cruise missile program; and $18 million for Amtrak.

Mr. President, some of these items were in contest.

On this last item regarding Amtrak, the House recommitted the first conference report on the bill with instructions to their conferees to recede to the Senate amendment providing $18 million for the Amtrak rail pasenger system. That has been done.

Several items were reported in disagreement and are outside of the conference report. The major items in this category were the $200 million appropriation for emergency fuel assistance for the poor and elderly under the Community Services Administration and the rescission of funds previously appropriated for the production of the B-1 bomber. The House yesterday by a rollcall vote of 182 to 181 receded and concurred in the Senate amendment providing $200 million for emergency fuel assistance. On the B-1 bomber rescission, the House rejected the Senate amendment and insisted on its disagreement with the Senate.

After disposition of the conference report, this matter on the B-1 will have to be dealt with further, probably at some time to be set within the next 10 days or near thereto and agreed on by the leaders and the membership.

I repeat here: The matter about the B-1 from a parliamentary standpoint has to be dealt with as more or less outside the conference report, and any action on the report here that I will ask for will not include action tonight on the B-1. I want to make that very clear.

Mr. President, I ask unanimous consent that a comparative statement on the conference amounts and House and Senate allowances be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. BROOKE. Mr. President, I am pleased to recommend adoption of the conference report on the Labor-HEW chapter—chapter IV—of the fiscal year 1978 supplemental appropriations bill.

The Labor-HEW chapter provides $350,689,000 to take care of a few important requirements which have developed since action on the regular fiscal 1978 bill.

I am glad to report that we were able to sustain most of our amendments to the House bill. I am particularly pleased that the House has voted to accept our amendment to provide $200 million for the emergency fuel assistance program under the Community Services Administration. The conferees were unable to agree on this item, but the full House has voted to recede and concur with the Senate action. This means that $200 million will be available, at the outset of the winter, to provide the poor and near poor, including the elderly, with emergency assistance to pay fuel bills in the event of another severe winter. The funds are to be made available on a contingency basis, and will be directed only to those areas with energy emergencies. I commend my colleagues in the House for their foresight in supporting this measure.

I am glad the conferees were able to reach agreement on funding for the intercultural facilities to be built at Tufts University in Boston and at Georgetown University. Tufts' Fletcher School of Law and Diplomacy and Georgetown's School of Foreign Service are two of the Nation's oldest and finest institutions for the training of foreign service personnel. They will serve as excellent models for the testing of the intercultural center concept.

I was pleased, too, that the House agreed to the Senate's amendment to provide $124 million for the continued operation of the Indochinese refugee program. The program will begin a planned, orderly phaseout over the next 4 years.

I also was pleased that the House and Senate agreed on the need for additional staff for the Labor Department. This action will strengthen the enforcement of minimum wage and overtime laws in industries with large numbers of undocumented workers, and will improve the handling of the growing workload of trade adjustment assistance cases. And we agreed to the borrowing authority requested by the administration for mandatory default payments on guaranteed student loans.

We have limited Labor-HEW items to those with an immediate need for appropriations. I recommend them to the Senate and urge adoption of the conference report.

Mr. GLENN. Mr. President, the House recommitted the supplemental conference report by a vote of 258 to 138 and receded entirely on chapter IX—the Department of Transportation provisions. They ordered restoration of the $18 million contained in the Senate version and were silent on the remainder of the Senate language. The Senate report stated that Amtrak should continue the National Limited over the present route—through Dayton, Ohio and Richmond, Ind.—utilizing part of the $18 million for that purpose.

The full House and the House conferees had the opportunity of rejecting that language, but they did not; they remained silent.

Since the House restored the $18 million and remained silent on Senate language continuing the present route of the National, and since the only language remaining concerning the National is the Senate report, does the distinguished chairman believe that it is the intent of the Congress that the National continue to travel over its present route?

Mr. MAGNUSON. I certainly agree with the Senator's statement. In fact, I asked the Appropriations Committee staff to check with Mr. Reistrup on this matter and we have received his assurances that he intends to continue this train on its present route for the forseeable future.

NATIONAL LIMITED ROUTE TO STAY IN DAYTON

Mr. GLENN. Mr. President, as a result of congressional action on the Amtrak supplemental appropriations, the National Limited will continue to serve Dayton for the foreseeable future.

A switching of the main east-west freight line of Conrail's north of the city of Dayton lead to the decision by Amtrak to travel the same route—thus depriving Dayton of rail passenger service the Congress said the city should have. Those of us who have looked into the situation in some detail feel that the northern route would kill the train: Freight traffic of from 40 to 60 freight trains a day would effectively interdict the passenger train—destroying its now favorable schedule; plus, the shifting of routes would cause loss of riders from Dayton and Richmond. We feel the train would soon join the "hit" list of trains suffering from low ridership and high deficits.

Today the Senate approved legislation which will require the National to continue to be routed via Dayton. I am very pleased that the Congress has made clear its intent that Dayton shall continue to be served by the National. Those of us who have worked for the past 6 months to save this train for Dayton passengers feel that the effort has been worth the result. The National will continue to run on a route and a schedule which will permit introduction of new equipment and the continued increase in ridership.

Both the House and Senate have made clear that the "rail experiment" shall continue. Hopefully, the result will be to attract increased long- and short-haul passenger traffic to the rails—getting people out of their cars and into safer and more energy-efficient trains.

Mr. President, I wish to salute the people of Dayton, the Dayton Chamber of Commerce, the city government of Dayton, and the Ohio Rail Transportation Authority for their refusal to accept what many said was the inevitable. I also wish to thank my colleagues in the House who made clear that Congress remain committed to making rail service an increasingly important part of a balanced national transportation system.

Dayton is an example of what can happen when you provide decent scheduling and adequate equipment on a rail line. Dayton's train station has been named the "Station of the Year" for its facilities and services. Ridership since the change in schedules has more than tripled in Dayton.

In closing, Mr. President, I would like to point out that preserving this train now will mean that when track repairs are completed between Cincinnati and Indianapolis, the National is scheduled to run between Dayton, Cincinnati, and Indianapolis, adding millions of potential rail passengers to the route. Hopefully, the National will become one of Amtrak's most successful long-haul trains, and continue to provide transcontinental service across America.

Mr. STENNIS. Mr. President, I ask unanimous consent that a statement by the chairman of the Subcommittee on

Agriculture Appropriations, the Senator from Missouri (Mr. EAGLETON) on this conference report be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The statement ordered to be printed in the RECORD is as follows:

STATEMENT OF SENATOR EAGLETON

The conference agreement with respect to Chapter I, Agriculture, includes new budget authority of $102,745,000. This is $68.6 million above the House bill and $1,588,000 above the Senate bill. I might add that the Senate considered and took action on a number of items not considered by the House, and for which there were no budget estimates; although, there was a clear need for further appropriations.

I would like to summarize the conference agreement briefly, and outline what is funded.

First, there is an appropriation of $145,000 for executive level pay raises. Both Houses included these funds. Next, the conferees agreed to provide $2 million for the Agricultural Marketing Service's new governmentwide Food Quality Assurance Program. The Senate had provided $3.7 million, but it was believed by the conferees that the work could be accomplished with a smaller budget. The conferees agreed to consider a 1978 supplemental if this funding is not adequate.

An appropriation of $30 million is provided in the conference agreement for Subscription to Capital Stock of the Federal Crop Insurance Corporation. Last month, the Department advised the conferees that the Corporation expected to be out of funds to meet contractual obligations for claims by early December of this year. We have just recently been advised that because of a lower volume of claims, this date has been revised to the end of December. Therefore, these funds will still be needed.

For the Farmers Home Administration, the conference agreement includes $4 million for very-low income housing repair grants, to be used primarily for weatherization of homes for the elderly.

With respect to the additional authority of $100 million included only in the Senate bill for farm ownership loans, the conferees decided to defer action at this time. In lieu of additional authority, the conferees requested that a study of various loan programs be completed, paying particular attention to the farm credit situation.

The conference agreement provides $30 million for Section 216 emergency watershed and flood prevention operations. Here, the Senate had funded only the level of known applications, while the House included an additional allowance for future emergency activities. Conferees were advised that additional applications in the amount of $2.7 million had been identified subsequent to the Senate action.

Finally, the conference agreement includes $36,600,000 for the Agricultural Conservation Program, Drought and Flood Conservation Program. This was the same as the Senate amount, and will provide for cost-sharing assistance in drought areas. The conferees agreed that moneys appropriated for this program should be for reimbursement to farmers for expenditures incurred beginning on the date of the Presidential disaster declaration as authorized by law.

This completes the summary of the conference agreement on Chapter I.

Mr. STENNIS. Mr. President, with the explanation I have already made that this motion now that I make does not include the one question which we will discuss some later, I move the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the motion to adopt the conference report.

The motion was agreed to.

Mr. STENNIS. I thank the Chair.

Mr. President, continuing, I ask that the Chair lay before the Senate certain amendments in disagreement.

The PRESIDING OFFICER. The clerk will report the amendments in disagreement.

The legislative clerk read as follows:

Resolved, That the House recede from its disagreement to the amendments of the Senate numbered 2, 5, 8, 10, 15, 25, 28, 29, 31, 32, 35, 44, 48, 49 through 51 inclusive, and 53 to the aforesaid bill, and concur therein.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 1 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter inserted by said amendment, insert:

"AGRICULTURAL MARKETING SERVICE, MARKETING SERVICES

"For additional amount for the 'Agricultural Marketing Service, Marketing Services', $2,000,000.".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 7 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter stricken and inserted by said amendment, insert: table 3 of Committee Print Numbered 95–30 of the Committee on Public Works and Transportation of the House of Representatives

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 16 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: $8,374,000

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 22 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: $1,000,000

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 23 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter proposed by said amendment, insert:

FEDERAL ENERGY ADMINISTRATION, SALARIES AND EXPENSES

For an additional amount for "Salaries and expenses", $273,194,000, of wihich $253,110,000 shall become available only upon enactment of authorizing legislation as follows: (1) for conservation grants for schools and health care facilities, $200,000,000; for conservation grants for local government buildings, $25,000,000; for grants for financial assistance to utility regulatory commissions, $6,630,000; for solar heating and cooling installations in Federal buildings, $20,000,000; to remain available for obligation until September 30, 1979; and (2) for administration of grants for schools and health care facilities, local government buildings, and utility rate reform, $1,480,000; *Provided,* That of the total amount of this appropriation, not to exceed $6,000,000 shall remain available until expended for a reserve to cover any defaults from loan guarantees issued to develop underground coal mines as authorized by Public Law 94–163; *Provided further,* That the indebtedness guaranteed or committed to be guaranteed under said law shall not exceed the aggregate of $62,000,000.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 37 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed in said amendment, insert: $15,000

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 52 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter inserted by said amendment, insert:

SEC. 209. The Secretary of Transportation shall, not later than 60 days after the date of enactment of this Act, designate as a route on the National System of Interstate and Defense Highways, from mileage withdrawn from such System before the date of enactment of this Act under authority of 23 U.S.C. 103(e), and which is available for such a designation, 1.5 miles in the State of Washington for a connection with Interstate Route 5 and the City of Tacoma, Washington.

Resolved, That the House insist on its disagreement to the amendment of the Senate numbered 43 to the aforesaid bill.

Mr. STENNIS. Mr. President, those mentioned in the opening statement are included, and I repeat that these items now being presented by the Chair do not include this B–1 item, which will come up next.

So I move, Mr. President, that the Senate now concur en bloc in the amendments of the House to the amendments of the Senate numbered 1, 7, 16, 22, 23, 27, 37, and 52.

Without objection, the motion was agreed to.

Mr. STENNIS. Mr. President, that concludes those matters.

That does conclude action, as I understand the parliamentary situation, on the conference report and amendments of the House to the Senate amendments except this outside item, which was the B–1, which is a rescission amendment that was in the bill, a rescission of funds appropriated for fiscal year 1977 put in the bill by the Senate committee under the Senate rules, authority that we have had for many years under the Senate rules to rescind appropriations with equal authority that we have to make appropriations, but that is a separate matter, and there has been consideration.

The majority leader, Mr. ROBERT C. BYRD, conferred by telephone with the senior Senator from North Dakota and went over these matters, not including the B–1, which was a matter that was left to the discretion here of those of us who are managing the bill, and we have already presented them. The B–1 was definitely to go over for some future date perhaps about 10 days from now, as I have said, to be worked out by the leadership after reasonable notice.

So the action here tonight will leave the B–1 on the table, so to speak, without prejudice, to be an open question. I propose to make a motion that we reject the House's action on the B–1 money. Anyone else may make a motion to accept the House's action to not rescind that money. The issue then will be open to debate, of course.

I am emphasizing that sum because there have been some inquiries about it, and I have gone into it again even today on its merits. I am not going to argue that matter now. But I have supported the B–1 for a long time, many years. In fact, we had it before our preparedness subcommittee when I was chairman, way back. But we called on the President, whoever he might be—we passed a law in 1976, that the President would have to make a finding, a conclusion. It turned out to be Mr. Carter, and he made his recommendation, on June 30 I recall. I took the position then, not knowing what his ruling was going to be, but I said we must not use up the rest of the year now arguing it. We must move forward and see what can be done about alternatives, and we have passed some authorizations.

To bring the picture briefly in focus, we have passed some authorization bills on this subject, and then some appropriations bills on it, and they have been approved by the House of Representatives and the Senate, and they are in process now.

So, back to this rescission matter only, and it relates primarily to the bombers No. 5, 6, and 7, as I recall, some research has already been provided with fresh funds, new funds for 1979, and that research will continue. This is just a question of using the remainder of the old 1977 money. So it will be an open question for everyone.

I appreciate the courtesy accorded me here. I learned of the interest in this matter just a short time ago of the Senator from California, who is present in the Chamber, and he and I have chatted about it a little. Does the Senator wish to say something?

Mr. HAYAKAWA. No.

Mr. STENNIS. All right.

I say to the Members of the body that is all I know about the facts. Unless there are some questions with reference to the matter, I shall yield.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Washington.

Mr. MAGNUSON. I had to leave the Chamber for just a few minutes.

Mr. STENNIS. The Senator from Washington is really in charge of this bill, and I yield the floor to him. I am delighted to yield to him.

Mr. MAGNUSON. I understand in the supplemental bill that came back from the House of Representatives, which the Senator motioned to bring up, there are three items in the bill of some importance. Of the three items involved, the Senate put in $18 million on Amtrak to keep it going for a period of time until we could look at the whole system. The original House figure was zero.

The House voted to instruct their conferees to accept our figure. That would keep everything in almost status quo until about the first part of March, or the last of February. Then we will have to take another look at it when they come in with their overall plan on different routes and what they intend to do.

The other item was the $200 million which involved emergency fuel payments to people in different sections of the country.

There was a great deal of argument on how you do it, whether you guarantee a loan to winterize a home or whether you pay for fuel costs. The $200 million is for low-income people. Somebody would do it for them, and they would get paid for it.

The other item was the B–1 to which the Senator from Mississippi has been directing himself here in the Chamber.

So the Senate is in the position to accept the $18 million on the Amtrak. The House has also accepted the $200 million that we put in on the fuel assistance. The only matter now not in dispute but in controversy is that the House voted to go ahead with the B–1, and I understand that means there are two airplanes involved. Is that correct?

Mr. STENNIS. Three.

Mr. MAGNUSON. Three airplanes involved.

The Senator from Mississippi did not mention this, but the Senate committee had a rollcall vote on this matter.

Mr. STENNIS. Yes.

Mr. MAGNUSON. We voted. There were two votes, I think.

Mr. STENNIS. Yes, that is right.

Mr. MAGNUSON. Two votes to go ahead with the B–1.

Mr. STENNIS. Yes.

Mr. MAGNUSON. And this refers to them. I forget the exact figure. I shall put it in the RECORD.

Mr. STENNIS. As to these funds the Senator is correct. The vote was 21, I think, to 2.

Mr. MAGNUSON. Voted to defer the three planes.

Mr. STENNIS. Nos. 5, 6, and 7, if the Senator will yield, just so the record will show.

Mr. MAGNUSON. That is right, 5, 6, and 7.

So the Senator from Mississippi is propounding the question. What should the Senate do now that the House of Representatives has voted? I understand that he is suggesting, which I agree with, that we stick to our position because of that overwhelming vote of the people who know a little more about it, I hope, in the Appropriations Committee, having hearings back and forth, and everything else—to stick to the Senate's position that we do not accept their particular version or their conclusion on the B–1, is that correct?

Mr. STENNIS. The Senator is correct. He stated the facts correctly and it is well said.

So, Mr. President, while this is a little repetitious——

Mr. MAGNUSON. Now, I want to ask a question because everybody will be asking me and you and the Senator from California, what is your opinion and when are we going to vote on this or what we do about it? What Senate action will be taken?

Mr. STENNIS. The best prospects that I know of, and I know about the prospective planning——

Mr. MAGNUSON. I know the Senator has worked hard today to try to find out.

Mr. STENNIS. The week after next, you see. We will convene here on the 19th or the 20th. There will be time for notice, and everyone can be here, and that is what the leadership now has in mind. But that is a tentative date.

Mr. MAGNUSON. May I make one other observation?

Mr. STENNIS. Yes, I yield gladly.

Mr. MAGNUSON. Because there are some people who ask can we wait that long.

Mr. STENNIS. Yes.

Mr. MAGNUSON. If the supplemental—and I went through it with a fine tooth comb, and the Senator from Mississippi did—there is really nothing—well, everything is an urgency for people who want extra money, and I understand that, but there is really nothing Earth shaking about any urgency respecting any part of the bill except the Vietnam refugee problem. That is the only one on which there is apparently, from all the testimony we heard, some urgency. So delaying it for this period of time, other than that particular problem, I do not think is going to make a great deal of difference.

Mr. STENNIS. Yes.

Mr. MAGNUSON. I wanted to sustain the Senator from Mississippi in that request.

Mr. STENNIS. Well, that is a very valuable contribution.

Mr. MAGNUSON. Yes.

Mr. STENNIS. Mr. President, at this point—and then I will be glad to——

Mr. MAGNUSON. But there is that refugee problem in there that is of some importance.

Mr. STENNIS. There are only a few days, and I want to yield to the Senator from California now, if he wishes, but at this point in the RECORD will be a good place to state that when we do consider disposition of this B–1 matter, I will move that the Senate further insist on its amendment numbered 43—that is the amendment that relates to the rescission of the funds for the B–1—and I will request a conference with the House thereon and request that the Chair be authorized to appoint conferees on the part of the Senate.

So in that way everything here will have been disposed of.

I am glad to yield to the Senator from California. May we have it quiet so that the Senator can be heard and understood.

Mr. HAYAKAWA. Mr. President, I thank the distinguished Senator from Mississippi. I look forward to the decision and completion of our deliberations on this matter. My staff has been alerted to this discussion, and we shall take part in the discussion. I thank the Senator very much.

Mr. STENNIS. I thank the Senator very much.

So, Mr. President, the matter will be held in abeyance, as I understand the parliamentary situation.

We are not sending it back to the House because we have not finished it. There was not time for the membership to be given proper notice, travel time, and so forth. So it is being held here for that purpose.

When it is disposed of, as to the B–1 question, if it is voted to go to conference, it will go and, if not, it will not go. So, Mr. President, if there are no other questions I yield the floor.

THE B–1 BOMBER

Mr. DOLE. Mr. President, I do not intend to stand before you today to present new supporting evidence on the B–1 bomber issue. The supporting factual evidence has long been presented. My intent, Mr. President, is to remind my colleagues of the importance of the B–1 bomber, especially in light of recent reports stating the U.S. declining strategic position and limited strategic weapons.

Mr. President, the Senator from Kansas believes the United States is truly at a crossroads with respect to national defense. The factual arguments that have been made before us many times bear this out.

MAINTAINING THE TRIAD DEFENSE

As most of us realize, our Nation's deterrent strategy against attack is based upon the triad concept consisting of land-based ballistic missiles, sea-launched ballistic missiles, and manned strategic bombers. Each of these components supports and complements the others in an attempt to complicate the enemy's defense planning and reduce his ability to launch a successful strike against our country. If we diminish or eliminate any one leg of this three prong defense system, we place a greater burden on the other two and increase our vulnerability.

A WEAK TRIAD

Mr. President, we have repeatedly been warned by experts that our Minuteman missile force is becoming increasingly vulnerable to the improved Soviet first-strike capability. Some, however, will respond to this concern by arguing that we have the MX missile. However, the MX project is years away from production and will be extremely costly.

Let us take a look at our submarine-launched ballistic missile. Recently, it was reported that the delivery of the first of our Trident submarines will be delayed until 1981. It has been estimated that it is presently at a $400 million cost overrun.

Then we have the manned bomber, the B–1, whose fate will be determined by this congressional body. Far from being an outmoded weapon system, the B–1 remains a vital, reliable component of our overall defense network. Of the three components of the triad, the manned bomber remains the most flexible and controllable system. In the ever-increasing nuclear environment, these qualities are particularly important.

WHY WE NEED THE B–1 BOMBER

In the final analysis, a manned bomber is the most accurate, proven delivery system. In fact, it is the only U.S. weapon system that has actually been used under combat conditions, where it demonstrated its effectiveness and capabilities. Mr. President, the Senator from Kansas believes it is vital that the manned bomber be retained as a principle component.

B–1 AND SALT II

Mr. President, the question as to why we should revive the B–1 program can be answered very easily in light of the uncertainties surrouunding the SALT II negotiations. Mr. President, the SALT II talks are not doing very well. Everyday we read in the newspapers that the negotiations are not in favor of the United States. Why should we further jeopardize our position in the SALT talks by discontinuing the B–1 program?

Mr. President, because we simply do not know what will happen to the strategic balance of power in the coming years, the Senator from Kansas believes that we must insure, for the American people, an effective national defense—the B–1 bomber can help provide that capability.

NATIONAL DEFENSE

Mr. President, this is an issue that goes beyond simple considerations of costs or special interest—it is an issue that bears directly on national survival.

My own reasoning, and that of many of my colleageus, leads to the conclusion that our defense interests are best served by maintaining and updating our manned bomber system.

Once again, as in the past, the Senator from Kansas strongly supports the revival and maintenance of the B–1 bomber project.

ORDER OF BUSINESS

The PRESIDING OFFICER. Is there any further matter to be brought before the Senate?

Mr. HAYAKAWA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER TO HOLD H.R. 8212 AT THE DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that H.R. 8212 a private relief bill be held at the desk pending further disposition, with the understanding that the bill will be referred to the Finance Committee at the request of the chairman, inasmuch as Senator LONG is unavailable at the moment to clear the unanimous-consent request.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM TOMORROW UNTIL 11 A.M., MONDAY, DECEMBER 12, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the two leaders or their designees have been recognized under the standing order, the Senate stand in adjournment until the hour of 11 o'clock a.m., Monday, December 12, 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER PERMITTING INTRODUCTION OF BILLS AND RESOLUTIONS AND SUBMISSION OF STATEMENTS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, Senators may have between the time the Senate convenes at 1 o'clock p.m. and 5 o'clock p.m. to introduce bills and resolutions, and submit statements for the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER THAT NO BUSINESS BE TRANSACTED ON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that no business be transacted on tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PRO FORMA SESSION ON DECEMBER 12, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate meets on December 12, 1977, it be a pro forma session only, with no speeches and no business, but that it be strictly a pro forma session, which means that it would last just long enough for the Chair to convene the Senate and adjourn it.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM DECEMBER 12, 1977, UNTIL 11 A.M., THURSDAY, DECEMBER 15, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on December 12, 1977, at the conclusion of the pro forma session, the Senate stand in adjournment until the hour of 11 o'clock a.m., Thursday, December 15, 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR THE SECRETARY OF THE SENATE TO TAKE CERTAIN ACTIONS WHILE SENATE IS NOT IN SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the period from the instant date until 11 o'clock a.m., December 15, 1977, the Secretary of the Senate be authorized to receive messages from the House of Representatives and from the President of the United States.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY FOR THE VICE PRESIDENT, THE PRESIDENT OF THE SENATE PRO TEMPORE, THE ACTING PRESIDENT PRO TEMPORE, AND THE DEPUTY PRESIDENT PRO TEMPORE TO SIGN BILLS AND JOINT RESOLUTIONS WHILE THE SENATE IS NOT IN SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the period extending from the instant date until 11 o'clock a.m., Thursday, December 15, 1977, the Vice President of the United States, the President of the Senate pro tempore, the Acting President pro tempore, and the Deputy President pro tempore be authorized to sign all duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR SUBMISSION OF CONFERENCE REPORTS FOR PRINTING

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that conference reports may be submitted for printing at any time during the period extending from the close of business today until 11 a.m. on December 15, 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, this means that there will be no votes tomorrow, no transaction of business tomorrow. There will be no votes on Monday, December 12, no transaction of business whatsoever on Monday, December 12; no speeches, no introduction of bills, resolutions, petitions, or memorials, on December 12.

It means that on Thursday, December 15, business may be transacted and conference reports may be acted upon. It may very well be that the social security conference report will be ready for action at that time, the conference report on legal services may be ready for action at that time, and there may be various and sundry other conference reports that could be acted on Thursday, December 15. Quite possibly, the matter affecting the B-1 could be acted upon on Thursday, December 15.

The leadership on both sides of the aisle will attempt to inform Senators on our respective sides as to that prospect if we are able to have that information available to us in time. In any event, Senators should be prepared to be present for rollcall votes on December 15.

Mr. HAYAKAWA. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. Yes, I yield.

Mr. HAYAKAWA. It was my understanding that the B-1 bomber matter is not to be taken up until after December 19.

Mr. ROBERT C. BYRD. That was the earlier information that was given out. I think I probably am partially responsible for that information having been given out. However, I think that the record should show that it will be quite possible that we will dispose of that matter on December 15. I think our colleagues should be so informed.

Mr. HAYAKAWA. I thank the majority leader.

Mr. ROBERT C. BYRD. I thank the Senator.

AUTHORIZATION FOR COMMITTEES TO FILE REPORTS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that committees may be authorized to file reports during the hours between 1 p.m. and 5 p.m. on tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT TO 1 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in adjournment until the hour of 1 p.m. on tomorrow.

The motion was agreed to; and, at 6:55 p.m., the Senate adjourned until tomorrow, Thursday, December 8, 1977, at 1 p.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 7, 1977:

IN THE COAST GUARD

Coast Guard nominations beginning Robert F. Melsheimer, to be commander, and ending Kent H. Williams, to be commander, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on November 4, 1977.

IN THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

National Oceanic and Atmospheric Administration nominations beginning Archibald J. Patrick, to be captain, and ending Jeffrey W. Greene, to be ensign, which nominations were received by the Senate on November 21, 1977, and appeared in the CONGRESSIONAL RECORD on November 22, 1977.

HOUSE OF REPRESENTATIVES—*Wednesday, December 7, 1977*

The House met at 10 o'clock a.m.

The Chaplain, the Reverend Edward G. Latch, D.D., offered the following prayer:

By this shall all men know that you are My disciples, if you have love for one another.—John 13: 35.

Eternal Father, make us conscious of Thy presence in the duties of this day that our work done may be done as well as we can do it. When we are weak and weary, strengthen us. When we are discouraged, encourage us. When we falter, steady us. When we become anxious and troubled about many things, grant us Thy peace. When we would give way to ill will, lift us up to the high plane of good will. Thus may we live from day to day working and worshipping to make our Nation a better nation and our world a better world where people can live together humbly, peacefully, justly, and with love in every heart. Amen.

CALL OF THE HOUSE

Mr. ASHBROOK. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. FOLEY. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 766]

Addabbo
Alexander
Ambro

The SPEAKER pro tempore (Mr. KAZEN). On this rollcall 297 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 3722) entitled "An act to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 305) entitled "An act to amend the Securities Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such act to maintain accurate records, to prohibit certain bribes, and for other purposes."

GOSHEN, IND., CHAMBER OF COMMERCE TO HEAR GERALD R. FORD ON CHAMBER'S 25TH ANNIVERSARY

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BRADEMAS. Mr. Speaker, this evening a most significant event takes place in the district I am privileged to represent in Congress, and I deeply regret that the heavy legislative schedule will prevent my being on hand.

The event of which I speak is the 25th anniversary of the Goshen, Ind., Chamber of Commerce which will be marked by the visit of a distinguished guest of honor, our former colleague and the former President of the United States, the Honorable Gerald R. Ford.

During its two-score plus one years, the Goshen Chamber has been a vigorous voice for local economic development and civil responsibility and I am happy to salute its members, its past presidents, and its current executive vice president, Clarence R. Beller, on this occasion.

As one of the many Members of the House who served with Gerald Ford during the time when he was a Member of this body, I count it my good fortune to have known this outstanding American first, while in the House, as "Jerry", and then as "Mr. Vice President" and, finally, as "Mr. President."

Mr. Speaker, I think the Nation will always be grateful for the firm way in which Gerald Ford assumed the Presidency of the United States at a moment of immense travail and anguish for the American people.

He brought a much-needed sense of stability in a time of trouble and for this achievement alone we must always be thankful to him.

Mr. Speaker, I am delighted that President Ford will be in Goshen this evening to help make the anniversary celebration a most memorable one.

TAKE ACTION ON SOCIAL SECURITY BEFORE END OF YEAR

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BURKE of Massachusetts. Mr. Speaker, I take this opportunity to report to the House the action of the House conferees on social security. At the present time the social security conferees, being chaired by the distinguished gentleman from Louisiana has recessed the committee, subject to a call of the Chair.

I urge all Members of this House to contact all of the conferees to urge that action be taken before the end of this year. In 1978 it is possible that the disability fund, the D.I. funds will run out. If that happens, there will be complete chaos in this country as far as people receiving their total disability checks. It is important that the conferees complete their work and have action taken before the first of the year.

PERSONAL EXPLANATION

Mrs. FENWICK. Mr. Speaker, I take less than a minute to say that I regret very much that I was present in the Chamber at the time of the quorum call but I was involved in discussion of legislative matters with my colleagues and failed to notice the end of the time had come. I just want to register my presence.

CONFERENCE REPORT ON H.R. 9418, HEALTH PROFESSIONS EDUCATION AMENDMENTS OF 1977

Mr. ROGERS. Mr. Speaker, I call up the conference report on the bill (H.R. 9418) to amend the Public Health Service Act to require increases in the enrollment of third-year medical students as a condition to medical schools' receiving capitation grants under such act, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see Proceedings of the House of December 1, 1977.)

Mr. ROGERS (during the reading). Mr. Speaker, I ask unanimous consent to dispense with further reading of the statement.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

The SPEAKER pro tempore. The gentleman from Florida (Mr. ROGERS) is recognized for 30 minutes, and the gentleman from Kentucky (Mr. CARTER) is recognized for 30 minutes.

The Chair recognizes the gentleman from Florida.

Mr. ROGERS. Mr. Speaker, a little more than a year ago, after the adjournment of the 94th Congress, President Ford signed into law the Health Professions Educational Assistance Act of 1976, a measure which was the product of nearly 3 years of often heated debate as to the proper direction of Federal health manpower policy. The conference report to accompany H.R. 9418 addresses several issues which are outgrowths of 1 year's experience in implementing the 1976 act.

Under existing law, in order to be eligible for capitation support—a statutory amount of money per student per year—schools of medicine must reserve positions in their third year classes in each of school years 1978–79, 1979–80, and 1980–81 for an identified pool of eligible transfer students. A number of positions equal to the number of U.S. citizens who have successfully completed a 2-year special educational program in the United States or who had enrolled in foreign medical schools prior to October 12, 1976, had completed 2 years of study in such schools, and had passed part I of the National Board of Medical Examiners' examination is to be equitably apportioned among schools of medicine receiving capitaton. Schools of medicine are prohibited from applying any academic or place of residence criteria to prospective applicants from the pool.

The conference report would replace the requirement of existing law with a new requirement that schools of medicine, in order to be eligible for capitation support, increase their third-year enrollment by 5 percent in school year 1978–79. It would eliminate any overt reference to an identifiable pool of eligible students or to admission criteria, but would prohibit schools from counting non-U.S. citizens, transfer students from schools of osteopathy and dentistry and from schools of medicine which have a place for such students in the third year, and U.S. citizens who enrolled in foreign medical schools after October 12, 1976, in order to meet the required increase. Any school which chooses not to participate in the capitation program in fiscal year 1978 would be ineligible to receive capitation support in fiscal years 1979 and 1980.

The proposed legislation is intended to meet the objections of many schools of medicine that existing law infringes on their academic freedom to apply their own admissions criteria in the selection of students. By requiring an enrollment increase in the third year, it also preserves a reasonable opportunity for those individuals to whom the Congress made a commitment under the 1976 act to complete their medical education in the United States.

Mr. Speaker, during our deliberations on this highly controversial issue, it became apparent to me that we need to reexamine the concept of institutional support for schools of medicine and the validity of the requirements under the law which schools of medicine must fulfill in order to be eligible for capitation support.

The requirement with respect to U.S. foreign medical students was but one of two requirements of the 1976 legislation for medical schools that wish to receive capitation support. The second capitation quid pro quo was based on the well-established need for more physicians in the primary care specialties of family medicine, general internal medicine, and general pediatrics and fewer numbers of most subspecialists and nonprimary care specialists. Under the existing law, each medical school receiving capitation support would be required by school year 1980–81 to have at least 50 percent of its filled first year residency positions in the three primary care specialties, unless such percentage were met on a national basis.

The formula under which the percentage was to be determined was based on information hastily gathered by the Association of American Medical Colleges at the request of the Subcommittee on Health and the Environment. Under the formula which was developed, the number of students who drop out of primary care after the first year of training in order to enter a nonprimary care specialty are not to be counted as persons filling first year residency positions. Using the AAMC data and the formula, the percentage of filled first year primary care positions was calculated at 42 percent. For this reason, the House conferees in 1976 rejected as too difficult to attain a request of HEW representatives during conference that all primary care trainees who accept fellowships for subspecialty training be deducted from the number of first year primary care positions.

Information received from the Department of Health, Education, and Welfare indicates that the AAMC data although submitted in completely good faith was not accurate and that, under the existing formula, the percentage now exceeds the 1980 goal of 50 percent. It now appears that much more can be done to accomplish the goal that 50 percent of all residents be trained in—and only in—primary care.

Next year, I intend to consider legislation amending the formula by which primary care positions are determined, as well as possible alternative capitation requirements.

The conference report contains three other amendments to provisions of the 1976 act, all of which were contained in the House-passed bill.

First, it would exempt schools of dentistry which in school year 1977–78 had less than six filled first year positions in dental specialty programs from the requirement that schools of dentistry, in order to be eligible for capitation support provide assurances that 70 percent of all new dental specialty positions be in general dentistry or pedodontics. This revision is necessary if emerging schools of dentistry are to develop strong, well-rounded curriculums.

Second, it would restore the authority under the Public Health Services Act to award public health traineeships to individuals not enrolled in schools of public health. Prior to the enactment of the 1976 act, section 302 of the Public Health Service Act authorized the Secretary of Health, Education, and Welfare to make grants to schools of public health and to other public and nonprofit private institutions offering graduate or specialized training in public health for the purpose of providing traineeships to individuals receiving such training. Under the old authority, for example, preventive medicine and dentistry residency programs, nutrition and environmental health training programs, and graduate programs in health planning, hospital administration and health administration were eligible to receive such grants, whether or not they were located in schools of public health. The 1976 act provided separate authority for graduate programs in health planning, hospital administration and health administration and, inadvertently limited the authority for public health traineeships to schools of public health.

The proposed legislation would simply restore the authority to award grants to programs not in schools of public health, specify that individuals being trained in preventive medicine including maternal and child health and dentistry programs would be eligible for traineeships, and increase the authorization of appropriations for public health traineeships by $1 million in each of fiscal years 1979 and 1980.

Third, H.R. 9418 contains several minor and technical amendments to the health professions guaranteed student loan program estabilshed by the 1976 act. These amendments were requested by the Office of Education and, for the most part, are intended to conform the health professions loan program to the Higher Education Acts' guaranteed student loan program. According to the Office of Education, these amendments are necessary if the authority is to be properly implemented.

The proposed legislation would also require the Secretary of Health, Education, and Welfare to undertake study of the need to prohibit, by statute, medical, osteopathic, and nursing schools from discriminating against an applicant because of his or her views on abortion or sterlization. He is to report the results of this study to the Committee on Interstate and Foreign Commerce and the Committee on Human Resources by March 1, 1978.

It would authorize the disbursing agent of Saint Elizabeths Hospital to invest funds deposited in the U.S. Treasury on behalf of patients; and extend the period within which health systems agencies and State health planning and development agencies must meet HEW standards for full designation for an additional year.

Mr. Speaker, the conference agreement reflects a fair and thoughtful balancing of the House and Senate positions. It maintains the intent of the House-passed legislation, and it deserves the support of every Member of this body.

Mr. SATTERFIELD. Mr. Speaker, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Virginia.

Mr. SATTERFIELD. Reading the conference report, on page 11 it says,

> In the view of the managers, this enrollment increase requirement in no way impinges on the academic freedom of schools of medicine to apply their own admission criteria . . ."

I wonder if the gentleman might explain what is meant by that statement.

Mr. ROGERS. Well, I think that in other words, we are asking that they increase their enrollment a certain percentage in the third year. Their admission policies are left up to the schools.

Mr. SATTERFIELD. Will the gentleman yield further?

Mr. ROGERS. I yield.

Mr. SATTERFIELD. I invite the gentleman's attention to language on the bottom of page 10, where it says,

> The conferees do not intend the additional waiver authority to be used for schools who simply apply their normal admissions standards and find no student eligible to be counted can meet such standards.

In other words, reading those two together, it would seem to me that we are saying that if a school applies its normal admission standards and there are not enough people available to fill the quota, then the school has to lower those standards in order to meet the quota. Am I correct?

Mr. ROGERS. What we are saying there is that we do not expect them to manufacture unusual conditions to try to avoid the requirement of the law to increase 5 percent in the third year. For example, if a school attempted to apply its first year requirements to the third year class, that would, in my view, not constitute a basis for a waiver.

Mr. SATTERFIELD. If they apply their normal admission standards, I would not think that would be unusual action.

Mr. ROGERS. It depends. And, also, the normal admission might not even include a 5-percent increase.

Mr. SATTERFIELD. That is the point. In other words, you make the 5-percent quota, and if your normal admission standards are too stringent to provide that 5 percent, you must fulfill your quota by reducing your standards?

Mr. ROGERS. No. What we are saying is that we expect a group of students who qualify to be considered. They must be the normal, fair standards of the school. But we do not expect them to manufacture unusual standards or make a standard so high that they are able to say that, "We are not able to take 5 percent."

Mr. SATTERFIELD. Will the gentleman yield further?

Mr. ROGERS. I yield to the gentleman.

Mr. SATTERFIELD. I invite the gentleman's attention to the waiver provision. According to the report, it says that the Secretary may grant a waiver if he determines that the school has made a good-faith effort to meet the requirements but there are not enough students eligible to be counted.

I am a little puzzled by the meaning of that, in light of the two provisions I just read.

Mr. ROGERS. This is what we are trying to say—and I think the language is put in the statement of the managers to bear that out—that, if they make a good-faith effort in accepting the student under the 5-percent requirement, that is what is required. If there is an insufficient number of students eligible to be counted, then—and only then—would this particular provision attach. There are two additional bases for waiver: Threatened loss of accreditation and insufficient size of population in order to provide high quality clinical training.

If it is not an artificial requirement, if it is a good-faith effort and then they simply cannot get the students, then they are entitled to a waiver.

Mr. SATTERFIELD. Mr. Speaker, will the gentleman yield further?

Mr. ROGERS. I yield to the gentleman from Virginia.

Mr. SATTERFIELD. Then in reading this report, I am to conclude that a school which applies its normal admission standards that it has applied through the years would not be making a good-faith effort?

Mr. ROGERS. No. Normal admission standards might be that they do not admit students in their third year.

If they make a good-faith effort under the law, a good-faith effort but the total group eligible to be counted is not sufficient, and thus a school simply cannot get enough students, it would be entitled to the waiver.

Mr. SATTERFIELD. You emphasize the word "normally," am I to understand then that the word "normal" really does not apply to academic standards.

Mr. ROGERS. It could, because if they make an artificial academic standard in order to simply avoid the requirement they also would be blocking what we are trying to do, to get them to increase class size in the third year by 5 percent.

Mr. SATTERFIELD. Would a school, then, which applies its normal academic admission standards which it has applied through the years be exercising good faith?

Mr. ROGERS. If it is not blocking the 5 percent increase.

Mr. SATTERFIELD. In other words, the 5 percent controls, and if you cannot reach the 5 percent with your normal academic standards, you have to reduce them in order to reach the quota?

Mr. ROGERS. Not necessarily. If they make a good-faith effort but there is an insufficient pool, they are entitled to a waiver.

Mr. SATTERFIELD. I thank the gentleman.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from New York.

Mr. BIAGGI. I thank the gentleman for yielding.

Mr. Speaker, on this point, if I recall correctly, we enacted some legislation not too long ago which would impose upon the medical schools the responsibility or the obligation to admit American students who in their third year were studying in foreign schools.

I would like to ask, why at this point have we receded?

Mr. ROGERS. Mr. Speaker, the original health manpower law—the 1976 law—included the provision the gentleman described. The House passed legislation to change that, as the gentleman may recall. This change has now gone to conference, and this is the agreement that has come back.

The new requirement is that for one year the schools will agree to an additional 5 percent increase in enrollment in their third year. This was the change in the provision that the House passed. We actually passed it with the provision that they would agree to an increase for 2 years.

The Senate amendment repealed the provision. This is a compromise. It provides that they must agree to increase third year enrollment by at least 5 percent for 1 year in order to receive capitation support. That was the compromise that was worked out in the conference.

Mr. BIAGGI. To begin with, the whole legislative process in this matter has a tainted quality about it, as a result of what we have witnessed and what we have read in the press relating to the conduct of certain medical schools which refused to accept Federal funds, saying that they would refuse to accede to these equitable conditions that were created and were made necessary as a result of their own discriminatory practices, and denial of opportunity to deserving students that led to the inadequacies of medical schools in our Nation.

Let us deal with this situation. As I see the problem and if I am correct in what the gentleman is saying, the medical schools, in order to qualify for Federal funding, must make a good-faith effort.

Mr. ROGERS. For capitation.

Mr. BIAGGI. Yes. For capitation, the medical schools are obligated to make a good-faith effort to permit the acceptance of 5 percent.

Mr. ROGERS. As an increase in the third year.

Mr. BIAGGI. As an increase in admissions in the third year of those American students who are in foreign medical schools?

Mr. ROGERS. Most would be American students who have trained for 2 years in foreign medical school, that is correct.

Mr. BIAGGI. Proceeding further, the previous speaker raised a most critical point referring to the schools a "good-faith effort."

Let me suggest this: If a good-faith effort is made, there is no question that 5 percent would be obtained. I suggest that 10 percent might be obtained, that 15 percent might be obtained, or that 20 percent might be obtained, because we have countless numbers of Americans in foreign medical schools who are desirous of coming into American medical schools.

Now, the question is this: What represents good faith? What standards will be used? Will a good academic rating of the student in the foreign medical school be considered meritorious?

This is a question that leaves a very uncertain situation, at least in my mind.

Mr. ROGERS. Mr. Speaker, one of the objections that the medical schools raised about the original law was that it constituted an invasion of their academic freedom, and that in effect the Federal Government was telling them what students they must accept. Thus, all references to academic standards are removed from the original legislation. There are many qualified young Americans who had to go overseas because they could not get into American medical schools. I agree that is true, and that is why we passed the original act.

There has been great consternation among some of the medical schools because they felt the law in effect told them what students they had to admit. In the House, we tried to accommodate them by changing the requirement to an enrollment increase of 6 percent in each of which would have created about 900 slots for qualified students. We allow schools to apply their own admission criteria.

That is what we were saying in the discussion here. We say that if they make a good-faith effort and if they do not put up artificial barriers for those students to come in, then they will have made a good-faith effort, and if an insufficient number of eligible students are available such that a school could not meet the 5 percent increase, they would be entitled to a waiver.

I think that is a fair compromise, because the Senate took the position that the entire provision should be repealed.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield further on that point?

Mr. ROGERS. Yes, I yield to the gentleman from New York.

Mr. BIAGGI. Mr. Speaker, I am sure it is a fair compromise, and I respect the judgment of the gentleman from Florida, the chairman of the subcommittee, for his work and his interest in this field.

But the question in my mind is this: What standards does the gentleman contemplate for a medical school, especially in the light of their basic resistance? Can they say that, "These people do not measure up, and hence we are not obliged to take Americans back, and we will take the 5 percent from whatever source we choose?"

Mr. ROGERS. Well, that would not necessarily happen, because there are only about 130 students who are going to 2-year American schools or schools in which the third-year enrollment is less than the enrollment in the first year. So by elimination, the bulk of the positions will have to be filled by Americans who have gone overseas.

Mr. BIAGGI. Mr. Speaker, that response is critical.

So I understand what the gentleman says; and for the record, 130 students would be the most they could take; is that correct?

Mr. ROGERS. From all the available information, that number would be the most they could take.

Mr. BIAGGI. The most they could take, and they, of necessity, must be Americans from foreign medical schools; is that correct?

Mr. ROGERS. That would be my assessment.

Mr. WHITTEN. Mr. Speaker, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Mississippi.

Mr. WHITTEN. Mr. Speaker, I do not know of any more effective Member of

Congress than my colleague, the gentleman from Florida (Mr. ROGERS).

Mr. ROGERS. I have the same feeling about the gentleman from Mississippi (Mr. WHITTEN).

Mr. WHITTEN. Perhaps we can get together.

Having listened to the answers not only on this issue but on other questions here, it brings us back to something like the saccharin issue which we had here. If the gentleman will recall, Congress had to put a restriction on the Food and Drug Administration to keep them from prohibiting the use of saccharin as a food additive. Then the gentleman got busy on the subject.

Mr. ROGERS. The gentleman must remember that that is not exactly true. The Health Subcommittee already had introduced legislation on the subject. Someone from the Appropriations Subcommittee started to get involved in the legislative side of the issue which was all right with us. We did not object to that.

Mr. WHITTEN. At any rate, we got action when the Congress acted.

Mr. ROGERS. We gave the gentleman action. The Committee on Interstate and Foreign Commerce acted on the issue.

Mr. WHITTEN. After the Congress acted.

Mr. ROGERS. We had already begun to act.

Mr. WHITTEN. Now the gentleman is changing the subject.

I asked a simple question: Who will determine whether it is good faith or not?

Mr. ROGERS. The Secretary of HEW.

Mr. WHITTEN. Which leaves it in the hands of the Secretary of HEW to do whatever he pleases; is that correct?

Mr. ROGERS. No.

Mr. WHITTEN. Is it not based on his determination?

Mr. ROGERS. Not entirely.

Mr. WHITTEN. All right, what is the limitation?

Mr. ROGERS. The schools must show that they have made a good faith effort and that an insufficient number of eligible students are available.

The SPEAKER pro tempore. The Chair would ask the gentlemen to speak one at a time, please.

Mr. ROGERS. The schools have to show that they made a good faith effort.

Mr. WHITTEN. To whom do they have to show it? Who makes the determination?

Mr. ROGERS. The Secretary.

Mr. WHITTEN. So the Secretary, in the final analysis, can say, "Yes" in this case and "No" in that case; and we have no guidelines pursuant to which he must act; is that correct?

Mr. ROGERS. Who else is to determine it? Is a school to determine whether it has made a good faith effort?

Mr. WHITTEN. That is the point.

After listening to the gentleman's answers, I want to get to the crux of the matter, which goes to what my friend, the gentleman from New York (Mr. BIAGGI) was talking about.

The gentleman says that the Secretary will determine it to suit himself?

Mr. ROGERS. This has always been done, as the gentleman knows. Who else would you have making a determination as to whether an entity meets eligibility requirements for Federal funds? I would think the gentleman would want someone to make a determination where Federal funds are being expended that they are being expended in accordance with the law.

Mr. WHITTEN. I would want the record to show who makes the determination. The gentleman has finally said who does.

Mr. ROGERS. Everyone knew that. No one said the schools made the determination as to good faith.

Mr. WHITTEN. As the gentleman understands, for about 15 years we have been dealing with these matters having to do with the Department of Health, Education, and Welfare. We have learned that they frequently take unto themselves the right to decide whatever they wish to base on their own determination, of "good faith" and that is final.

Mr. ROGERS. I would agree with the gentleman if he would say that we have to continually insure that HEW does what the law says and what the intent of Congress is. We will have to make sure that they understand what "good faith" means, in case an insufficient number of students is eligible to be counted.

Mr. WHITTEN. That would at least give us some guidelines.

Mr. ROGERS. With respect to good faith, in other words, we do not expect them to use unusual policies or policies that they have not used heretofore, artificial policies, to try to bar compliance with the law. The waiver provision is very clear as to what criteria must be used in making the determination.

Mr. WHITTEN. The gentleman is saying what we do not count on their doing. Would the gentleman tell us what we do count on their doing?

Mr. ROGERS. To obey the law and admit 5 percent of the people who are qualified to be counted.

Mr. WHITTEN. What is the meaning of "good faith?"

Mr. ROGERS. Exactly that.

Mr. WHITTEN. Who will determine it?

Mr. ROGERS. Who else determines compliance with the law in spending Federal funds other than the responsible Federal agency?

Mr. WHITTEN. Is that good faith?

Mr. ROGERS. It is exactly that, good faith in carrying out the law.

Mr. WHITTEN. And the law is what?

Mr. ROGERS. The law is that they shall admit 5 percent of qualified students based on the admissions criteria of that particular school.

Mr. WHITTEN. So the "good faith" matter is just a come-on for doing as they wish.

Mr. ROGERS. Not at all. It is to let them out if they have made a good faith effort, and an insufficient number of eligible students are available such that the school is unable to comply.

Mr. McCLORY. Mr. Speaker, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Speaker, I thank the gentleman for yielding.

I am very encouraged by the provision in the conference report which would increase the number of students from foreign medical schools to be admitted during their third year, such increase to be set at 5 percent.

However, one of my constituents is having a great deal of difficulty in getting a transcript of his 2 years of foreign study. The foreign school is endeavoring to impose a requirement that he pay $2,000 for the transcript.

Is there any way by which, under this conference report or in the application of this change in the law, a student's records of study abroad can be verified without his being held up by this kind of outrageous demand from the foreign medical school?

Mr. ROGERS. I do not know that there is any way that we can insure that. We have asked the Secretary of HEW to contact the Department of State to try to see if this problem can be resolved. But I do not know whether the United States can establish policies for a medical school in a foreign country.

Mr. McCLORY. Would it not be possible for the American medical school to accept affidavits or other evidence of the studies pursued at a foreign medical school in lieu of such a transcript?

Mr. ROGERS. Certainly. I am under the impression that many of the medical schools will be looking at MCAT scores—that is, results of tests individuals took prior to applying to U.S. schools before going to foreign schools, undergraduate records, and to scores on part I of the National Board of Medical Examiners' examination. Most of the medical school representatives I have spoken with have advised me that they would be very wary of relying solely on the academic standing of a student in a foreign medical school.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from New York.

Mr. BIAGGI. It would seem to me on this point of good faith, that that phrase that was very significantly addressed by the gentleman from Mississippi (Mr. WHITTEN) represents nothing more than an escape clause. But I just cannot envision these medical schools, four of which have refused Federal funds under the old law, because they refused to submit themselves to the conditions of the law which meant that they would be required to accept American medical students from foreign medical schools, and now we come back and say they are required to take 5 percent, but we will assume that they are operating in good faith. Now, good faith was implied in the law good faith requires them to do so, if they are a medical school. Hence I assume as a medical school they have some degree of integrity, and if that is the case, then we would have to believe that they operated in good faith prior to this dispute.

The thing that concerns me, as was touched upon by the gentleman from Mississippi (Mr. WHITTEN) is that good faith in this case could be used by the medical school as an escape from the conditions of this legislation.

Mr. ROGERS. May I say to the gentleman that this determination, the issue of determination of good faith, is not a determination that is made by the schools. That was the point I was trying to make. For example, a school could apply first year standards to third year transfers. That would not constitute good faith in applying academic standards.

Mr. BIAGGI. This is a very critical area. Medical schools have been historically difficult insofar as those students who aspire to be doctors and I am not satisfied that they are above reproach and I am not satisfied that they are administering the admissions policy fairly, and possibly there has been policies of discrimination that has been built in over the years.

Let me ask you this question. Would the standard of performance by the American student in a foreign medical school be judged by his academic standards in that foreign medical school? Will the standards of performance determine whether or not that American student in a foreign medical school would be worthy of admission? Would that be the academic standards of that student in that foreign medical school, or would it be something else?

Mr. ROGERS. Normally they would require the applicant to have passed Part I of the National Boards. I assume they would also look at their academic records. It would be the judgment of that school as to whether that student would be enrolled unless the Secretary determines the school was trying to subvert the law. Of course, then that would be taken into consideration.

Mr. PEPPER. If my distinguished colleague and friend would yield, we are dealing here in this report with provisions for access of American students who go to medical schools abroad to medical schools in our own country.

Mr. ROGERS. In the third year.

Mr. PEPPER. Does my distinguished friend know how many American students are annually enrolled in medical schools abroad?

Mr. ROGERS. No one knows for sure, but it is probably around 1,500. It may be a little higher.

Mr. PEPPER. How many students are annually enrolled in medical schools in our own country?

Mr. ROGERS. About 16,000. That may increase some in the next few years.

Mr. PEPPER. The students who are enrolled in foreign medical schools do not get any aid at all in going to school; do they? They get no subsidies from the government, or anything?

Mr. ROGERS. Not from the Federal Government.

Mr. PEPPER. Is the number of students who are enrolled in our own schools at home adequate to meet the health needs of our country, regardless of these American students who are going to foreign medical schools?

Mr. ROGERS. We are increasing the output. As the gentleman knows, since we initiated health manpower legislation in 1963, medical school enrollment has doubled, or will have by 1979. I still think we need more physicians but there is some question. But I would agree, and I think the gentleman shares that feeling, that we do need more.

Mr. PEPPER. That is why I venture to ask the question, because our need is so vital for the services that doctors render to the people of our country. It is a rather precarious fact that we do not have enough institutions to turn out the necessary number in our own country, and I was wondering if we could not some way or another—if we are doubling the number now—double them again next year. May I have the assurance of my distinguished friend, who is so influential in this area, that we are taking the necessary steps to see to it that our own schools will provide enough doctors for the people of this country?

Mr. ROGERS. We are doing that. Existing manpower authority provides startup assistance for new schools. We have now about 124 medical schools in this country.

Mr. PEPPER. One other question: When will my friend anticipate that we will be turning out the necessary number of doctors in our own country?

Mr. ROGERS. I think it is difficult to say at what particular time. Many think we are producing enough now. There is a difference of opinion. Also it will depend on how we handle health care. If we move into a national health program, this may increase demand substantially. If we cut back on the number of alien foreign medical graduates coming into this country, that will also have an impact, because in some parts of this country 50 to 75 percent of the newly licensed doctors are alien foreign medical graduates.

Mr. PEPPER. Are our Federal programs adequate to encourage additional medical schools if we need them?

Mr. ROGERS. We feel the health manpower legislation is adequate to encourage the establishment of new schools and the increased production of physicians.

Mr. PEPPER. I just hope that my distinguished friend will make a report to this House from time to time on the progress we are making in this critical area.

Mr. ROGERS. I thank the gentleman for his extreme interest in this critical matter.

Mr. CARTER. Mr. Speaker, so many of these students actually come, I regret to say, from about three States and go through medical mills abroad and come back in and want to be admitted. Our schools in this country do not like to have those students thrust down their throats. They want the right to choose those who are qualified to train physicians.

By this legislation we are helping in that area. The schools are required to increase third year enrollment by 5 percent of the third or first year, whichever is less, of the American students who were in foreign medical schools prior to Octber 12, 1976. Personally I favor this agreement. It just goes through one year.

In addition to this, it does not take away the loan provisions from those schools who do not want to participate. My understanding is that 18 schools at one time did not want to participate, but now all of them I believe are going to.

Mr. Speaker, I strongly support this legislation.

I believe that the conference report on H.R. 9418 provides a reasonable resolution of the controversial provision of current health manpower law—regarding the transfer of U.S. foreign medical students.

The agreement we have reached represents a compromise between the concerns of the U.S. foreign medical students—and the objections of our medical schools regarding infringement on their academic freedom.

Essentially the compromise report requires a one-time enrollment increase program of 5 percent as a condition for medical schools to receive Federal capitation grants.

The language of the legislation does not include any requirements regarding academic standards—or part 1 of the Medical Board of Examinations.

Rather each medical school will be allowed to apply its own academic criteria in determining which students it will accept to meet the enrollment increase requirement.

Also the language of the bill provides that the transfer students may be placed in the second- or third-year class and both will be counted toward the school's quota.

In addition the conferees agreed to allow medical students to qualify for guaranteed student loans—even if their medical school decided not to participate in the enrollment increase program. Thus—even if the school decided to give up capitation support—its students could still be eligible for the health professions student loan program.

The conference report also includes a new waiver provision. It authorizes the Secretary of Health, Education, and Welfare to grant a waiver if he determines that the school has made a good faith effort to meet the enrollment increase requirement—but has been unable to do so solely because there is an insufficient number of eligible students to be counted.

Mr. Speaker, in addition to the waiver authority added during the conference the legislation also includes another waiver authority. It provides that the Secretary of Health, Education, and Welfare may grant a waiver—in whole or in part—to a medical school if he determines that compliance with the enrollment increase requirement would prevent the school from maintaining its accreditation—or if the school's clinical training would be significantly jeopardized.

I hope that the Secretary will give careful consideration to the impact of this enrollment increase on our medical schools' clinical training facilities when he reviews the applications for waivers.

Mr. Speaker, I would like to emphasize that while my own preference would have been to repeal the entire transfer program—we must also recognize that the Congress did pass a law last year which effectively raised the hopes of many U.S. students studying abroad. So I sympathize with those who argue that it is only fair to try to reach a compromise on this issue.

I believe that this conference report does provide the best compromise available—given the alternatives before us.

There are several other provisions of

the bill—regarding interest rates for student loans—dental schools' capitation requirements—National Health Service Corps scholarships—and extension of deadlines under the health planning law—but these are not controversial—and I believe they are acceptable.

Therefore, Mr. Speaker, I urge adoption of the conference report on H.R. 9418.

Mr. Speaker, I reserve the balance of my time, and I yield 5 minutes to the distinguished gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Speaker, I thank the gentleman from Kentucky for yielding.

I have asked for this time to engage the gentleman from Florida (Mr. ROGERS) in a colloquy for the record. I have spoken to the gentleman about these questions which have concerned officials at the Ohio State University. I realize that after the colloquy between the gentleman from Virginia, New York, and the gentleman from Mississippi, that some of the questions and answers will be somewhat repetitious, and I think I know the answers, although I am not sure. However, I would like to make the record, if the gentleman from Florida would respond.

As I understand it, the present provision in the law requires medical schools to accept a certain number of students out of a pool of U.S. students studying in foreign medical schools, who entered those foreign medical schools on or before October 12, 1976, who have completed 2 years of medical education abroad, and have passed part 1 of the national boards in order to receive a capitation grant. Is that correct?

Mr. ROGERS. Mr. Speaker, if the gentleman will yield, the gentleman is correct.

Mr. WYLIE. The amendment which the conference has adopted in this regard, and with which we are asking the House to agree, would remove that mandatory requirement and substitute a requirement that U.S. medical schools would be required to increase their third year classes by 5 percent for the 1978–79 school year. Is that correct?

Mr. ROGERS. That is correct.

Mr. WYLIE. This legal requirement that the students thus selected be from foreign medical schools is dropped, although it seems clear that most of these students would come from a pool of U.S. students who have studied abroad. Is that a fair analysis?

Mr. ROGERS. From information made available to me, it would appear that about one-eighth of the number will be students who have gone to U.S. schools and the remainder would be American students who are attending foreign medical schools.

Mr. WYLIE. This could involve some American students matriculating in U.S. schools, but most of them it is expected would be from the pool of American students going to foreign schools?

Mr. ROGERS. That is correct.

Mr. WYLIE. It is my further understanding that if an American medical school can prove that it has used due diligence to meet the 5-percent requirement of this conference report and there is an insufficient number of individuals eligible to be counted toward the fulfillment of these requirements, the school will not lose its capitation grant. Is my understanding on this point correct?

Mr. ROGERS. If the gentleman will yield, the gentleman is correct.

Mr. WYLIE. Would a medical school that has already accepted foreign medical school students on a voluntary basis for the 1977–78 academic year get credit for those students in meeting their 5-percent requirement? I might add the Ohio State University Medical School has already accepted American students studying abroad for the 1977–78 academic year on a voluntary basis. I think, of course, that Ohio State should be given credit for those students, but as I understand it from what you have said and reading the conference report Ohio State will not be given such credit, and will still have to meet the 5-percent requirement over and above the foreign medical school students accepted on a voluntary basis?

Mr. ROGERS. Mr. Speaker, will the gentleman yield further?

Mr. WYLIE. I am glad to yield.

Mr. ROGERS. That is true. In the conference report that provision is not included, so the answer would be no. Those students that schools have already admitted on a voluntary basis cannot be counted. Schools have, however, received capitation support for students they have voluntarily admitted.

Mr. WYLIE. The answer is the medical school has received Federal capitation money already for these students and that is the reason why they will not be included in the 5 percent requirement.

Mr. ROGERS. Yes.

Mr. WYLIE. The gentleman from Mississippi touched on this as did the gentleman from New York awhile ago. Does not that penalize the medical schools which have complied with the spirit of the law already and have accepted U.S. students studying abroad on a voluntary basis?

Mr. ROGERS. Mr. Speaker, if the gentleman will yield further, I do not think it will, because they have already received Federal funding for them.

Mr. WYLIE. And that is the basis on which the 5 percent amendment was adopted?

Mr. ROGERS. Yes.

Mr. WYLIE. What happens if a medical school does not comply with the 5-percent-enrollment increase provision in 1978; will it be penalized in any way in future years?

Mr. ROGERS. Yes; it would not be eligible for capitation for 1979 and 1980.

Mr. WYLIE. So a medical school could be penalized for an additional year beyond the one in which it did not comply with the 5 percent requirement?

Mr. ROGERS. For 2 years.

Mr. WYLIE. In other words, the mandatory 5 percent increase is for 1 year only, but a school that does not comply with the mandatory requirement could be penalized for 2 years?

Mr. ROGERS. Yes.

Mr. WYLIE. That is a fair analysis?

Mr. ROGERS. Yes.

Mr. WYLIE. Mr. Speaker, I thank the gentleman from Florida for his patience and I thank the gentleman from Kentucky for yielding me the time.

Mr. ANDERSON of California. Mr. Speaker, let me preface my brief remarks by indicating for the record that I have long been interested in higher education. I served as a regent of the University of California, and on the board of trustees of the State Colleges of California. In State government, I worked to help establish several small colleges. My record in this body shows my continued support for responsible education programs.

I rise in support of this report on H.R. 9418 as a much needed aid to the training of health professionals. However, the language on waivers for capitation grants seems ambiguous. I wish to make clear that my intent in voting for this legislation that the right of medical schools to maintain their own admission standards be upheld. If a school's admission committee cannot find and recruit enough eligible American students transferring from foreign medical institutions who meet the same requirements as the school's continuing students, they should not be forced to accept under-qualified students to meet the 5-percent quota to retain the capitation grants. The autonomy of colleges to establish their own nondiscriminatory admissions policies should not be infringed.

Mr. GIAIMO. Mr. Speaker, I am pleased to support the conference report. It represents a very fair compromise in resolving difficult and controversial problems that were identified in one of the Public Health Service Act amendments enacted last year.

Adding a new section 771(b)(3) to that act, the Congress made it a condition of a medical school's eligibility for capitation support that it agree to admit whatever number of transfer students the Secretary of Health might allocate. As part of the assurances, the school had to agree that it would not apply its own academic admissions criteria in evaluating the students.

A number of medical schools, including one in my home State, objected to this approach as an encroachment upon the historic freedom of American universities to apply their own fair and nondiscriminatory admissions criteria in deciding who should be accepted for study.

In light of these strong objections, both Houses this year set about remedying the situation. This House initially voted for percentage targets which medical schools would be asked to agree to pursue for 2 years. We also expanded the sources of potential applicants who could be counted toward the increase enrollment and, more importantly, the bill we originally passed preserved each school's ability to evaluate the applicants in accordance with its own admissions standards.

When the Senate considered a similar proposal, it initially decided to repeal the enrollment-increase program entirely so as to avoid any possible threat to academic freedom.

The conference report embodies a fair compromise which attempts to pursue the goal of opening up additional places for American students in medical schools next year, while protecting the basic principle of academic freedom. What the conference bill does is to enlist the cooperation of the Nation's medical schools in a 1-year program to increase enrollment while leaving to them the complete responsibility for deciding which applicants meet their qualifications for admissions.

The conference bill is careful to provide for a waiver of the requirement that schools seeking capitation grants provide assurances to the Secretary of Health. If a school concludes that it cannot enroll enough qualified students to increase its third-year class by 5 percent, it will be relieved of the need to give the assurances. In addition, consistent with the principle of academic freedom, no school should be penalized in any way because it is unable to reach a 5-percent expansion through the addition of students who measure up to its academic standards.

What is expected is a bona fide effort by each participating school to evaluate transfer applicants to determine whether or not they satisfy the school's admissions criteria. Under this bill, no American medical school would be faced with the choice of foregoing substantial Federal support or accepting students not considered qualified according to the school's own academic standards.

Since the conference bill offers the prospect of opening significant additional places in American medical schools while at the same time recognizing academic independence as the ultimate principle here, I am pleased to endorse the conference report and to urge its adoption.

Mr. DEVINE. Mr. Speaker, I rise in support of the conference report to accompany H.R. 9418, Health Professions Education Amendments of 1977.

My support is not based, however, on any conclusion that this legislation represents wise public policy. Rather, it merely is less onerous than existing law.

Currently, in order to be eligible for capitation grants, schools of medicine must reserve positions in each of school years 1978–79, 1979–80, and 1980–81 for an identified pool of U.S. students in foreign medical schools or special educational programs in the United States. These students would be equitably apportioned among schools of medicine receiving capitation grants. U.S. citizens who had enrolled in foreign medical schools prior to October 12, 1976, date of enactment of Public Law 94–484, had completed 2 years in such school, and had passed part I of the National Board of Medical Examiners' examination would be eligible.

This is an outrageous infringement upon the academic freedom of medical schools in that students would be assigned to schools without regard to admission standards.

Under the provisions of the conference report, a school of medicine as a condition for receipt of capitation support appropriated in fiscal years 1978, 1979, and 1980 must increase its third year enrollment only in school year 1978 by 5 percent over either the number of its full-time first-year or third-year students enrolled in school year 1977–78, whichever is lesser.

Schools of medicine could not count toward the increase transfer students who first, are aliens, second, are from U.S. schools of medicine which have a place for them in the third year, third, first enrolled in a foreign medical school after October 12, 1976, fourth, are from schools of dentistry or osteopathy, or fifth, are from unaccredited U.S. schools of medicine.

The Secretary could waive the requirements, in whole or part, if: First, a school's accreditation would be threatened, second, inadequate population size will prevent the school from providing high quality clinical training for each of its third-year students, or third, despite a good faith effort an insufficient number of students are eligible to be counted. Further, the requirement would be inapplicable to a school of medicine if in school year 1977–78 its enrollment of full-time, first-year students exceeded its full-time, third year students by 25 percent or more.

Among those classes of individuals who could be counted are those students who had enrolled in foreign medical schools prior to October 12, 1976, and those enrolled in special educational programs in the United States. Schools could count as third-year students, for purposes of the enrollment increase, transfer students enrolled in the second year who were first enrolled in foreign medical schools prior to October 12, 1976. There is no reference to passing part I of the National Board of Medical Examiners' examination.

On page 10 of the conference report in the statement of the managers, it is stated that the schools cannot use the additional waiver authority after simply applying their normal admission standards and finding "no student eligible to be counted under those standards."

On page 11, it is mentioned that this enrollment increase requirement in no way infringes on the academic freedom of schools of medicine to apply their own admissions criteria.

The question arises, then, as to what happens when the school, in good faith application of its own admissions standards, determines that it is willing to accept those students who meet them but an insufficient number can be selected on merit.

That is, the pool of students is large enough, but not after application of the school's admissions criteria. What is the extent of the school's obligation thereafter?

We know, of course, and I am sure the gentleman from Florida will agree that there is no authority for HEW to force allocation of students whether or not monies have been accepted. What recourses would be available—recollection in whole or part? If pro tanto credit is allowed, would the schools be allowed a partial capitation?

What disturbs me is that despite the assertion that the measure in no way infringes on the academic freedom of schools the conference report is silent on the results that could flow from the school exercising its academic freedom.

The decision of several schools to forego capitation support unless the conditions for receipt were altered does not raise a significant question about the utility of this funding mechanism as a vehicle for accomplishing public policy objections. Instead, it more properly raises questions about the appropriateness of the conditions of receipt as a means to accomplish the policy objectives.

Mr. PREYER. Mr. Speaker, there has been much discussion of the foreign medical student provision in this bill in absolutist terms, and with charges and implications that the Health Subcommittees of the House and the Senate were bent on trampling on academic freedom.

I think it should be emphasized that the primary intent of the Health Subcommittees and the conferees was not to intrude on academic prerogatives but to solve a very tough practical problem in the fairest way possible. A doctrinaire approach can see this as the nose of the camel under the tent, and argue that this is only the opening wedge of an assault on academic freedom.

Nothing can be further from the truth. The conferees fully appreciate the requirements of academic freedom and the problems that arise where requirements for Federal funding are imposed. We plan to reexamine the requirements of capitation funding next year in this light.

The present bill offers a pragmatic, 1-year solution for a difficult practical problem that must be answered now. It represents the democratic process working to balance and compromise irreconcilable positions. I think it is a fair and honorable solution, even though it may not satisfy absolutist positions of academic freedom.

Again, let me repeat that the Health Subcommittees are seriously concerned with questions of academic freedom and at all times stand ready to discuss these questions with the medical schools and to review our programs accordingly.

Mr. STAGGERS. Mr. Speaker, these amendments to the Health Professions Educational Assistance Act—Public Law 94–484—improve the legislation which passed Congress nearly 1 year ago. The bill requires medical schools in order to be eligible to receive capitation payments to increase their third-year class enrollment by 5 percent and limits this requirement to fiscal year 1978 only. Schools not complying with this requirement in fiscal year 1978 are ineligible to receive capitation payments in fiscal years 1979 and 1980. In addition, this legislation permits students enrolled in medical schools which elect not to comply with this requirement to participate in the health professions guaranteed student loan program.

This legislation is supported by the Association of American Medical Colleges, as well as by the individual interest groups supporting American students studying medicine abroad.

To reach the increased quota of 5 percent the medical schools may draw not only on U.S. students studying abroad, but may also enroll students studying in the United States who attend schools which offer only the first 2 years of medical study.

The academic qualifications for admission of students remain at the discretion of the medical schools involved. We have not infringed on the academic freedom of the medical schools and we have not placed the Nation's health in peril by the possibility of having inadequate students who inevitably become inadequate physicians. This program only authorizes the admission to the third year of medical school. The admitted students must perform within the requirements of the medical school for a degree as doctor of medicine. They are subject to the same standard of performance as any other medical student must meet for graduation. The medical schools are not penalized should they feel that any one of these students do not fulfill their academic requirements. In short, these students may be disciplined academically as any other medical student may be disciplined.

Mr. Speaker, because of the broad base of support for this legislation from all interested groups, we feel that this legislation makes a substantial contribution to medical education in this country, and therefore to the health care of this Nation.

GENERAL LEAVE

Mr. ROGERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on this conference report.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. ROGERS. Mr. Speaker, I have no further requests for time, and I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. MOTTL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 344, nays 0, answered "present" 1, not voting 89, as follows:

Mr. Downey with Mr. Lent.
Mr. Beilenson with Mr. McDonald.
Mr. Danielson with Mr. Quayle.
Mr. Meeds with Mr. Barnard.
Mr. Wright with Mr. Milford.
Mr. Krueger with Mr. English.
Mr. Roncalio with Mr. Diggs.
Ms. Mikulski with Mr. Dickinson.
Mr. Nichols with Mr. Dellums.
Mr. Rosenthal with Mr. Don H. Clausen.
Mr. Rostenkowski with Mr. Scheuer.
Mr. Ambro with Mr. Fuqua.
Mr. Wolff with Mr. Gibbons.
Mr. John L. Burton with Mr. Holland.
Mr. Cotter with Mr. Ichord.
Mr. Le Fante with Mr. Leggett.
Mr. Markey with Mr. Metcalfe.
Mr. Phillip Burton with Mr. Moss.
Mr. Lundine with Mr. Mathis.

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 6666, LEGAL SERVICES CORPORATION

Mr. KASTENMEIER. Mr. Speaker, I call up the conference report on the bill (H.R. 6666) to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. McKay). Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of November 30, 1977.)

Mr. KASTENMEIER (during the reading). Mr. Speaker, I ask unanimous consent that the statement be considered as read.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The SPEAKER pro tempore. The gentleman from Wisconsin (Mr. Kastenmeier) will be recognized for 30 minutes, and the gentleman from Virginia (Mr. Butler) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Wisconsin (Mr. Kastenmeier).

Mr. KASTENMEIER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, on November 30 this year I filed a conference report on this bill (H.R. 6666). Both the Congressional Record of that date and a subsequent printing of the conference report contained printer's errors. Both errors have been corrected in the official report and are not contained in the enrolled bill. An errata sheet accompanying the printed conference report will clarify those two errors to Members. I would ask to amend the permanent Congressional Record of November 30 to reflect the correction.

Mr. Speaker, the conference report is in the form of a substitute to the House bill and the Senate amendment. This report is the result of very careful consideration and discussions by the conferees of both Houses. The conferees personally met on both November 17 and 23, and the 10 conferees from the other body and the 7 House conferees agreed unanimously on the conference report.

Mr. Speaker, many of the differences between the House bill and the Senate amendment were of a minor and technical nature; and I would refer Members to the statement of the managers for an explanation or detailed comparison.

I would like, Mr. Speaker, to very briefly focus on several of the more important issues which confronted the conference and to discuss the resolution of those issues.

One of the important issues was whether the prohibition, agreed to by the House on the use of Corporation funds for litigation or proceedings on school desegregation cases should be continued. On the part of the House, not only was there a vote, June 27, on the issue which continued the present prohibition, but, also on October 20, the House conferees were instructed by a motion of the gentleman from Ohio (Mr. Wylie) to persist in the House position.

On the other hand, the Senate had, in fact, voted strongly a completely different position: that is, to delete the prohibition entirely. This was undoubtedly the most contentious issue which confronted the conferees and the one to which we devoted the most time.

The conferees of the other body submitted three or four amendments to us after we had refused to accept their position, but the House conferees declined to accept those, because in each case they involved the recipient programs in litigation or proceedings. We maintained the House position entirely on that point.

Mr. Speaker, we were mindful of the fact that in our colloquy on the House floor, the gentlewoman from Texas (Miss Jordan) had raised the question of whether the eligible clients who were parents, for example, could consult with or be advised or be given legal advice by the recipients of the Corporation. That is, in fact, the present procedure.

We did put that implied provision into the statutory language. Therefore, the House language which was agreed to is only changed by the following phrase: "Except that nothing in this paragraph shall prohibit provision of legal advice to an eligible client with respect to such client's legal rights and responsibilities." The additional language would not allow a recipient program to develop materials in preparation for an administrative or judicial proceeding, nor would it allow representation of an eligible client. It would only clarify that legal advice and referral may be given. That was all we agreed to. Therefore, the Senate did recede on that issue; the House prevailed.

Another issue which was important in conference was the support assistance provision.

The House has spoken strongly in the past 2 years to remove the restriction against corporation funding of support assistance—research, training, technical assistance, and clearinghouse functions—by grant or contract. The House has voted three times supporting repeal of the restriction:

First. H.R. 10799—March 24, 1976 (256–143);

Second. H.R. 6666—June 9, 1977—against reinserting the restriction; and

Third. H.R. 6666—June 27, 1977—against a motion to recommit the bill with instructions to reinsert (213–154).

In addition, the passage of the House bill, H.R. 6666, included removal of this restriction.

The House has clearly stated its confidence in the Legal Services Corporation by allowing it the option of funding these above-mentioned support assistance activities by grant or contract, or undertaking them directly. It is logical that the corporation should be able to choose the most effective, economical, and efficient methods of funding such activities. The only limit placed on such a choice by the House these past 2 years was that no more than 10 percent of the amounts appropriated in any fiscal year would be available for such grants or contracts under section 1006(a)(3) of the act. This was the Wiggins amendment offered in the original bill (H.R. 10799) by the gentleman from California (Mr. Wiggins). It has remained in H.R. 6666 throughout its consideration, and is part of the conference bill, section 5(c).

The above provisions remain in the conference bill, except that the Senate conferees narrowed the types of "research," which are permitted to be funded by grant or contract, by prohibiting such funding of "broad general legal or policy research unrelated to representation of eligible clients." The House resisted this prohibition on the grounds that its ambiguous language may clutter the statute and have a chilling effect on research. However, the Senate conferees prevailed, suggesting that their language was meant to be limited. The House conferees agreed to recede on the condition that the restriction on research would be given a narrow construction.

A third important conference issue was the financing of the Corporation through the authorization for appropriations. The conferees agreed to another 3-year term. Originally in the House subcommittee, when we began the markup, we provided for a 2-year rather than the minimum 3-year term which was requested by the Legal Services Corporation. The program has been operating under an original 3-year term of authorization for appropriations. The Senate had considered a 5-year term but finally agreed to the 3-year term. We think that a 3-year term at this point in time is preferable. We are already in the first year of the authorization for fiscal year 1978, so that it seemed perfectly reasonable.

In terms of the amount of authorization for the funding, we also accepted the Senate formulation. We had agreed to $217 million for the authorization for fiscal year 1978, and the House Appropriations Subcommittee under the able chairmanship of the gentleman from West Virginia (Mr. Slack) had the House appropriate $217 million for that fiscal year, but in the conference on appropriations, that amount was reduced to $205 million. The other body in its authorization legislation provided for $205 million, although their original bill (S. 1303) had authorized $225 million for fiscal year 1978. That lower amount was agreed to in the conference on H.R. 6666, since that was the amount already appropriated for fiscal year 1978, and so there was a proven record. The conferees agreed to leave the authorization level for the other 2 years open ended. The Legal Services Corporation program had been operating in the past fiscal year, 1977, under an open-ended authorization for appropriations, and under the oversight of the other body's subcommittee on this question and our own subcommittee, and certainly the Committees on Appropriations. The amounts to be provided in subsequent years will be reviewed carefully by the committees with authorization and oversight jurisdiction, and we intend to have input into the deliberations by the Appropriations Committees. In light of the present and additional directives in the Legal Services Corporation Act, as well as the Corporation's preliminary goal of minimal access, it is reasonable that an open-ended appropriation be made for fiscal years 1979 and 1980.

There were several instances in which the House prevailed. For example, they prevailed totally on the question of restrictions on legal assistance in criminal cases, including the question of whether persons charged in nontribal courts with criminal offenses of hunting, trapping, fishing, or gathering fruits of the land could be represented when the principal defense arose from treaties or Executive orders relating to native Americans. Such defendants are not covered under the House language, and that restriction continues in the conference bill.

Another issue on which the conference bill has narrowed the House-passed version of H.R. 6666 is regarding the types of legislative and administrative advocacy which the recipient programs are allowed to conduct. Current law allows such representation when necessary to the provision of legal advice and representation with respect to an eligible client's legal rights and responsibilities. The House bill had clarified that the recipients could also respond to formal requests to testify, draft, or review measures or make representations to a governmental agency, legislative body, committee, or member. The House bill had further stated that a recipient could comment or make representations on activities which directly affect the recipient program or the Legal Services Corporation. This latter provision remains intact with the clarification that such activities must be those which are pursuant to the Legal Services Corporation Act and the attending regulations. Certainly a recipient program may protect its own interests before legislative and administrative bodies, for example, on matters related to its funding, its operations, its legal status, or its very existence.

However, the conference bill deletes the House language which would have allowed recipient programs to comment on measures which directly affected the poor in general if on a subject upon which that program's board of directors had voted to take a position. The House reluctantly agreed to recede on this one point, although the Committee on the Judiciary and the House had supported this position.

Mr. Speaker, I believe that the conference report is a good product of the two Houses, and will be an important continuation of an invaluable program to assist in the delivery of justice.

Mr. DRINAN. Mr. Speaker, will the gentleman yield?

Mr. KASTENMEIER. I yield to the gentleman from Massachusettts (Mr. DRINAN).

Mr. DRINAN. Mr. Speaker, I join with my distinguished chairman (Mr. KASTENMEIER) in urging the other Members of the House to vote in favor of the conference report on the Legal Services Corporation Act amendments of 1977 and approve the bill in its final form. As with all measures reported out of conference, this bill contains both elements of the House proposal and provisions approved originally by the Senate. After a full discussion of the disagreements between the bodies, your conferees agreed to the report and bill now before us as embodying as many sections of the original House proposal as was possible to include. In some instances the Senate accepted without any change the precise House provision. In other cases, it agreed to slight or clarifying modifications.

To be sure, there were instances in which the House receded to a Senate provision, in some cases with an amendment. Your conferees, in those circumstances, sought to preserve as much of the House philosophy and intent as possible, as expressed in the original version of H.R. 6666. So that there is no doubt about the nature and scope of these modifications, let me add a few words about some of them.

First, both the House and the Senate bills would restore to the legal services program the "pre-Green amendment" authority to fund, by grant or contract, support or "backup" centers to perform research, training, technical assistance, and clearinghouse functions. The Senate bill would except from the grant or contract authority "broad general legal or policy research unrelated to representation of eligible clients." Since the Green amendment originated in the House and was specifically "repealed" by the House on two occasions, your conferees were very reluctant to agree to any exception.

The House receded, however, with the understanding that the Senate exception would be given a narrow construction. Thus to come within the exception, the particular activity in question would have to: First, be of a strictly "research" nature; second, have to involve a "broad general legal or policy" matter; and third, be "unrelated to representation of eligible clients."

The phrase "representation of eligible clients" means only that the research activity at issue be related to actual or potential clients who are eligible for legal assistance under the act. The word "representation" does not require that the support center or a recipient have a client in hand at the time the research is undertaken. Support centers must have the capacity to anticipate the legal problems of the poor if these centers are to provide the needed backup functions intended by the amendments.

In addition many legal problems of the poor are resolved out-of-court by a negotiated settlement. In some instances, it is clear that a particular difficulty is of a recurring nature, justifying indepth research by a support center even though the legal problem of a specific client has been corrected. Anticipating the imminent arrival of eligible clients with a similar problem, the support centers must have the ability to engage in such research so that these future clients will receive the best possible advice and counsel when they seek legal assistance from recipients.

Furthermore at some point most recurring difficulties are litigated. Legal services attorneys should have the research product of the support centers available for such occasions. The Senate exception, to which we agreed, would not preclude research in these and similar circumstances.

Second, both bills contained provisions which would forbid courts to appoint legal services attorneys, on a discriminatory basis, to represent indigents. Evidence at the hearings disclosed that some judges were relying exclusively on legal services program lawyers for such representation. The Senate provision is included in the conference report.

As written, it would allow appointments without compensation only when made pursuant to a "statute, rule, or practice" which is applied to all attorneys practicing in that court. This provision will prevent an undue drain on program resources. It would not, however, affect appointment of legal services lawyers if compensation is provided by the court or other non-Corporation source. Thus if legal services attorneys are singled out for appointment, they must be compensated for their services. This will preserve the fiscal integrity and priorities of the program while recognizing the professional responsibilities of all lawyers, including legal services personnel, to provide legal assistance to the poor.

The provision relating to appointment also raises a question regarding the prohibitions in the act forbidding legal services attorneys from undertaking certain kinds of litigation. Since these restrictions are defended in part by a perceived need to conserve the resources of the Corporation, they would not be offended if a court appoints a legal services attorney with compensation. If such an appointment is made without compensation, pursuant to a general rule or practice, then the legal services attorney would have to advise the court of the existing prohibition, leaving it to the judge to determine whether professional ethics and responsibilities require that the appointment be made notwithstanding the restriction.

This construction of the appointment provision would place legal services attorneys in approximately the same position as private attorneys in similar circumstances. Putting legal services and private lawyers on the same footing with regard to court appointments is, of course, the whole point of this amendment. And like the lawyer in private practice, the legal services attorney could, as she or he deemed desirable, have her or his name placed on the appointment list, which some courts maintain for such purposes.

Third, both bills contained provisions which would require recipients to establish priorities in the utilization of Federal funds for legal services. Both bills also listed particular segments of the poor which, because of their "special difficulties of access to legal services," merit particular attention in setting priorities. The House listed two groups and the Senate listed six. The Senate receded on its longer list with an amendment to require the Corporation to study, by January 1, 1979, the needs of those segments of the poor with "special difficulties." That list is, of course, not intended to be exhaustive, and if the Corporation wishes to include in its study other segments of the indigent community not named, it should feel free to do so.

Fourth, the Senate bill included a provision which would extend the notification requirements presently in the act to "principal local bar associations" whenever a legal services program is initiated (but not continued or refunded). The Senate included the word "principal" so that the Corporation would not have to notify every association of lawyers in the jurisdiction, especially in large metropolitan areas where attorney groups abound. It has the danger, however, of limiting notice to the established bar, thus excluding other groups which, while not the "principal" association, are nonetheless significant parts of the legal community. I am confident the Corporation will take account of other segments of the bar, such as minority, female, and public interest oriented associations, when providing notice of a new legal services program.

Finally, the conference report recommends one additional change which should be noted. In the provision relating to organizational assistance, the Senate receded to the House provision with an amendment which would substitute "act as an organizer" for "directly organize." The intention of the conferees is to clarify the House provision, without any substantive change. Thus the explanation of this provision set out in House Report No. 95-310 is equally and fully applicable to the provision as modified. For a fuller explication of that section, I refer my colleagues to pages 14 and 29 of that House report.

To summarize, I believe the bill as contained in the conference report is a good measure. It is a result of good faith discussion and negotiation by the conferees of both Houses. It retains the essence of the House bill, while recognizing the legitimate concerns expressed in the Senate version. I urge the Members of this House to approve it forthwith.

Mr. Speaker, I wish to commend the gentleman from Wisconsin (Mr. KASTENMEIER) and congratulate him very heartily on the excellent conference report that has emerged from the conference.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield?

Mr. KASTENMEIER. I yield to the gentleman from New York.

Mr. BIAGGI. Mr. Speaker, I also wish to commend the gentleman from Wisconsin (Mr. KASTENMEIER) upon the leadership he has given and especially his efforts to adhere to the position of the House whenever possible.

I would like to ask a question as to the fate of the language with relation to the outreach program for the elderly and for the handicapped that was in the amendment I introduced which was passed by the House on June 27.

Mr. KASTENMEIER. On that point, the Biaggi amendment, as agreed to on the House floor, the conference bill retains your language. Your provision, section 9(b) of the conference bill requires the Legal Services Corporation to insure that recipients adopt procedures for determining and implementing priorities for assistance by considering the relative needs of eligible clients, including the need for outreach, training, and support services where necessary, and including the needs of persons or groups (including elderly and handicapped individuals) who have special difficulties of access or special legal problems.

We did, however, even go further and I am sure the gentleman from New York would agree that that was desirable, in that the conferees did provide in section 13 for an eligible clients' special needs assessment study at the behest of the Senate. This study would cover some of the other people which the gentleman from New York (Mr. BIAGGI) had in mind, and would determine whether veterans, native Americans, migrants or seasonal farmworkers, persons with limited English-speaking abilities, or persons in sparsely populated areas have special difficulties of access to legal services or special legal problems which are not being met. The legal services corporation must report to Congress not later than January 1, 1979, on the extent and nature of any such problems or difficulties, and shall note and implement appropriate recommendations.

I am sure the gentleman will agree that that is a welcome addition to the bill.

Mr. BIAGGI. I want to thank the gentleman very much. I think it might be worthy to note at this point that as a result of the House action in June, the department of the aging in the city of New York has already commenced its Outreach program with relation to providing legal services for the elderly and the handicapped and already are constructing ramps, or at least removing barriers in their offices throughout the city.

Mr. KASTENMEIER. I thank the gentleman from New York for his contribution.

Mr. SANTINI. Mr. Speaker, will the gentleman yield?

Mr. KASTENMEIER. I yield to the gentleman from Nevada.

Mr. SANTINI. I thank the gentleman for yielding.

I want to commend my chairman for a superlative job in ushering this important piece of legislation through our subcommittee and through the full committee and maintaining the House position in the conference. I truly feel that the subcommittee chairman in this legislation has given life and breath to the concept of equal justice under the law. The subcommittee chairman deserves the recognition for that accomplishment.

Mr. KASTENMEIER. I thank the gentleman from Nevada (Mr. SANTINI) and would like to say that I wish to compliment him and the gentleman from Massachusetts (Mr. DRINAN), the gentleman from Virginia (Mr. BUTLER), and other members of the subcommittee, including the gentleman from California (Mr. DANIELSON), the gentleman from Pennsylvania (Mr. ERTEL), and the gentleman from Illinois (Mr. RAILSBACK). Over the last 9 months these members have spent a great deal of time and energy on this issue.

I would also like to thank Mrs. Gail Higgins Fogarty, a counsel for the subcommittee, who has worked on the legal services issue since the Corporation Board was first installed in 1975. There are also many others whose assistance I deeply appreciate.

Mr. HARRIS. Mr. Speaker, will the gentleman yield?

Mr. KASTENMEIER. I yield to the gentleman from Virginia.

Mr. HARRIS. I thank the gentleman for yielding.

I just want to take a moment to thank the chairman of the subcommittee and the conference committee for the work they have done on this legislation. It is an extremely important piece of legislation, and to have wended their way through all the obiter dictum that tends to get attached to legislation like this, I think it takes real genius and real perseverance.

Going over the conference report, I think there is probably a surplusage of words more than are needed as far as cluttering up the functions of attorneys who are legal counsel for the poor and for those who need it, but by and large I think an excellent job was done in conference. I think the chairman deserves a lot of credit for it.

Mr. KASTENMEIER. I thank the gentleman from Virginia, and I agree with him. There is a surplusage of words in the act, but some of those were necessary to assuage the concerns of some of our colleagues both in this body and in the other body. I trust that it will at least aid in some respects rather than confuse the issue.

Mr. Speaker, I reserve the remainder of my time.

Mr. BUTLER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the conference report on H.R. 6666, the Legal Services Corporation Act Amendments of 1977. This legislation originated in the House, and in fact I have directly worked on it during hearings, through committee markup, House debate, and conference action. I was a cosponsor of H.R. 6666, and will vote for the conference bill today. I would like to note that my colleague, the gentleman from Illinois (Mr. RAILSBACK), who is unable to be here today, is a strong supporter of this legislation, and we have worked on it together.

As I noted earlier to this House, I am pleased with the manner in which the Legal Services Corporation has performed in its 2 years of existence. Today we have an excellent program—a sound corporation which is charged with funding, monitoring, and assisting local programs. We have in place regulations promulgated by the Corporation after careful deliberations by the Board. We have placed restrictions on the Corporation and its recipients, and in parts of this conference bill we have removed unnecessary restrictions—for example—with respect to juvenile representation.

My own amendment, insuring that staff attorneys cannot be candidates for a partisan political election, even in their off-duty hours, has been retained by the conferees. I believe it is a reasonable restriction.

The conference bill authorizes appropriations for the Legal Services Corporation for 3 additional fiscal years at $205 million—fiscal year 1978—and such sums "as may be necessary" thereafter. Although I can understand that this agreement is a reasonable compromise, I would have preferred a shorter period with sums certain. The House had approved a 2-year authorization at $217 million—fiscal year 1978—and $275 million—fiscal year 1979. The Committee on the Judiciary had approved $238.7 million for fiscal year 1978 and $300 million for fiscal year 1979. However, I realize that the Senate conferees, who had originally supported a 5-year authorization at $225 million—fiscal year 1978—and such sums as necessary thereafter, refused to reduce the level and term of authorization further.

Mr. KASTENMEIER has indicated his intent to continue oversight of this program, as well as to give input to the Appropriations Committee in its annual deliberations on the Corporation's budget request. I, too, intend to participate in that oversight. I believe the program is a good one, but that it should be followed with interest and attention. We have monitored the board meetings and other Corporation activities and expect to continue this practice.

Before I yield to my colleagues, I would like to briefly note two issues which are contained in the conference bill: First, political activities of staff attorneys, and second, legislative and administrative advocacy. I believe that both issues show congressional concern of balancing constitutional—first amendment—rights with reasonable restrictions:

1. POLITICAL ACTIVITIES OF STAFF ATTORNEYS

The House bill (passed on 6/27) and the conference bill have the *identical* prohibitions on "staff attorneys" of the recipients.

A "staff attorney" [1] is now subject to the *same* restrictions on political activities as are individuals who are employees of the Legal Services Corporation or who are deemed "state or local employees" for purposes of chapter 15 of title 5, United States Code (the applicable provisions of the Hatch Act). Therefore, with the passage of this bill, the "staff attorneys" will now be allowed to participate in *non*-partisan political candidacies—e.g., run for the local school board.

Moreover, the House bill and the conference bill, unlike the Senate version, has an *explicit* prohibition or *partisan* political candidacies. (My floor amendment was necessitated by the passage by the House of H.R. 10—a modification of the Hatch Act which would have allowed "State and local employees" who are subject to chapter 15 of title 5 to be candidates for partisan political offices.)

2. LEGISLATIVE AND ADMINISTRATIVE ADVOCACY

The conference bill clarifies the legislative and administrative advocacy which the legal services programs ("recipients") may undertake. However, it *narrows* the activities which the recipients would have been allowed to undertake under the House-passed bill.

The conference bill (Sec. 9(c)—p. 3/4) states that, with respect to grants or contracts, the Corporation shall * * *

"(5) insure that no funds made available to recipients by the Corporation shall be used at any time, directly or indirectly, to influence the issuance, amendment, or revocation of any executive order or similar promulgation by any Federal, State, or local agency, or to undertake to influence the passage or defeat of any legislation by the Congress of the United States, or by any State or local legislative bodies, or State proposals by initiative petition, except where—

"(A) representation by an employee of a recipient for any eligible client is necessary to the provision of legal advice and representation with respect to such client's legal rights and responsibilities (which shall not be construed to permit an attorney or a recipient employee to solicit a client, in violation of professional responsibilities, for the purpose of making such representation possible); or

"(B) a governmental agency, legislative body, a committee, or a member thereof—

"(i) requests personnel of the recipient to testify, draft, or review measures or to make representations to such agency, body, committee, or member, or

"(ii) is considering a measure directly affecting the activities under this title of the recipient or the Corporation.".

The conference bill makes the following amendments in current law (§ 1007(a) (5) of the LSC Act):

a. As in the House bill, it adds "State proposals by initiative petition" to the list of legislative and executive actions which the recipients are restricted from influencing.

b. As in the House bill, it clarifies that an employee of a recipient may provide legal advice to and representation of an eligible client in an administrative or legislative proceeding, with the Senate proviso that such employee may not solicit a client in violation of professional responsibilities. (The ABA Code of Professional Responsibility is applicable to legal services programs and employees, and, although it prohibits solicitation, it does allow legal services personnel to engage in educational and outreach activities to insure that the poor are aware of their legal rights.)

c. As in the House bill, it specifies examples of the types of representations (testifying, drafting, or reviewing measures, or making representations to an agency, body, committee or member) that may be made by legal services programs in response to a request from a legislative or administrative body or member.

d. As in the House bill, it clarifies that, when no formal request is made or when so identifiable clients or client groups need legal advice or representation, that the recipient program may still make comments and representations on a measure which directly affects the activities (under this title) of the recipient or the Corporation. (Some examples of measures which could be covered by this provision are: state legislation amending the charter of a legal services program; state legislation providing funds for legal assistance for the poor through filing fees; state legislation establishing credentials standards for paralegals.)

The conference bill, however, eliminates the House language which would have authorized legislative and administrative advocacy on matters of *general* concern to poor persons, and on which the local board had voted to take a position.

Mr. Speaker, at this point I yield 5 minutes to the gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Speaker, I sincerely commend the gentleman from Wisconsin (Mr. KASTENMEIER) for his diligence and persistence in support of the House position on the school desegregation provision.

I have read the conference language and I think it is fair to say the House position has been sustained.

The Judiciary Committee had brought a bill to the floor which would amend present law and permit Legal Services Corporation lawyers to participate in forced schoolbusing litigation. I offered an amendment to restore present language in the law and prohibit the use of corporate funds in litigation involving the forced busing of schoolchildren. That amendment was adopted by this House.

When it was deleted by the other body this House voted to insist on its position. The language of this conference sustains the House position with what I regard as clarifying language. The prohibition regarding litigation will be retained in the law. The clarifying language says the prohibition does not prevent Legal Services Corporation lawyers from giving advice to eligible persons as to the state of the law and allows Legal Service Corporation lawyers to refer an eligible client to another lawyer.

The new language does not do violence to my amendment. As a matter of fact, I think it improves the law in that it clarifies a possible ambiguity. I do not think Legal Services Corporation lawyers should get involved in the very controversial arena of litigation surrounding forced busing cases. Such activity would render them less effective for several reasons which I have previously enunciated. Then, too, it would be difficult to enforce a provision which prohibited the expression of an opinion on the issue. Indeed, there is some question as to whether our legislation could reach that far.

So, to me the conference language is clarifying and makes no substantive change.

My friend, Mr. KASTENMEIER, who opposed my amendment, has demonstrated his sense of fairness, his objectivity, and statesmanship in his fight to sustain the House position and present law.

I happen to think we are right and I thank Mr. KASTENMEIER for his leadership in resolving the issue in the manner he did.

Mr. BUTLER. Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr. MCCLORY).

Mr. McCLORY. Mr. Speaker, I wish to commend the conferees for their work on the Legal Services Corporation Act Amendments of 1977.

Though I am not in wholehearted agreement with each provision, I believe substantial improvements have been made. This is especially so regarding the provision to which I objected last May which would authorize attorneys, salaried with tax dollars, to lobby anyone anywhere whether or not they were responding to a governmental request. Requiring a specific, eligible client to be directly affected, or the activities of the Corporation or a local legal services program, will aid this worthy service by protecting it from becoming embroiled in political battles which could ultimately defeat the whole endeavor.

For the same reason, I am pleased to see such inflammatory issues as school desegregation restricted and abortion litigation prohibited. It is also appropriate that Legal Services Corporation funds not be used to initiate or directly organize groups, though further protection against harassing and often unmanageable class actions—even continued prohibition of such assistance to groups—would have been preferable in my view.

Legal representation for the poor is a noble and humanitarian objective and the recent history of the Legal Services Corporation has been commendable in achieving this objective. I am sufficiently satisfied with the agreed amendments to genuinely support H.R. 6666.

---

[1] The definition under S1002(7) of P.L. 93–355 is a recipient's attorney who receives more than one-half of his annual professional income from a recipient organized solely for the provision of legal assistance to eligible clients under this title.

Mr. BUTLER. Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr. Hyde).

Mr. HYDE. Mr. Speaker, I thank the gentleman.

Would the distinguished chairman of the subcommittee permit me to address a couple questions to the gentleman?

I am troubled by the proposition in this bill that where no formal request is made or where there is no identifiable client or client group needing representation, that the recipient program may still make comments and representations, which I take it is a euphemistic way of saying lobbying, on a measure which directly affects the activities of the recipient or the corporation. Are we not using taxpayers' money to subsidize lobbying for legislation?

I can not only understand, I strongly support the idea that poor people ought to have a lawyer and ought to have good legal talent available to them when necessary, but I am troubled by providing taxpayers' funds to groups who are advocating social change or changes in legislation. Everyone ought to have that right, but I am not convinced that the taxpayers ought to pay for that advocacy.

I would like some comments from the distinguished subcommittee chairman on that proposition.

Mr. KASTENMEIER. Mr. Speaker, will the gentleman yield?

Mr. HYDE. I yield to the gentleman.

Mr. KASTENMEIER. Of course, what the House approved when it first considered the bill earlier this year goes quite a bit beyond the conference report. What the conference did was to delete the House language which would have allowed appearances and representations by employees of a recipient program on general matters directly affecting the poor whenever the local board of that program had voted to take a position on the subject, irregardless of whether eligible clients needed such legal representation or action.

The SPEAKER pro tempore. The time of the gentleman from Illinois has expired.

Mr. BUTLER. Mr. Speaker, I yield the gentleman from Illinois (Mr. Hyde) 2 additional minutes.

Mr. KASTENMEIER. Mr. Speaker, if the gentleman will yield further, the conference bill provides that the recipient programs may appear or make other representations on measures which directly affect the program itself or the Legal Services Corporation, under this act. The conference bill does not remove the authority of recipient personnel to respond to specific governmental requests, nor does it alter the ability of a recipient's employee to represent an eligible client or group of eligible clients when such representation is necessary to provide legal advice and representation with respect to such client's legal rights and responsibilities.

Mr. HYDE. Mr. Speaker, if I may ask, what about lobbying for additional funds for the program? That certainly affects the program. Would we be subsidizing members of the Corporation lobbying for additional funds for the program?

Mr. KASTENMEIER. Well, I would say yes, although that is a moot question, and both the Senate and the House agreed with the language which is in the conference report. A legal services program may protect its own interests before a legislature or other governmental unit. We would not prohibit, let us say, the Legal Services Corporation or a recipient program from appearing or from advocating something on behalf of the Corporation or the program; but the broad policy questions which the gentleman is talking about definitely are prohibited. They may not, without request, involve themselves generally in lobbying on broad policy questions unrelated to client representation. But with respect, for example, as to how a program may operate within a community, it may appear before a city council and suggest that it would be affected in a certain way.

Mr. HYDE. I can see where that might even be desirable in a situation like that. I appreciate the clarification and I will support the bill.

Mr. BUTLER. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. Kindness).

Mr. KINDNESS. Mr. Speaker, I would like to commend the conferees for their good work on this conference report, all of which, with one exception, is unnecessary. That is the financing of the Legal Services Corporation for the following 3 fiscal years. We started out with a law that had barely begun really operate. The House measure sought to change things so as to go back to the times before the Legal Services Corporation was established. The final result is that we tend in that direction, but not very far, and it is all an exercise that is quite unnecessary.

I, of course, did not support the bill as it passed the House, and I would urge that the conference report, while it has been good work, in bringing together the House and Senate versions, is much of the unnecessary type of function that goes on around here. We have barely had time for the Legal Services Corporation Act, as previously established by the Congress, to operate when we started messing around with it and changing things, and we did not change it very much. I am grateful that it was not changed more, of course.

I again commend the conferees for their work on this, and their diligence on the whole matter, but would still urge that the conference report ought to be rejected.

Mr. ASHBROOK. Mr. Speaker, I rise in strong opposition to the conference report on H.R. 6666, the Legal Services Corporation Act Amendments of 1977. This legislation would greatly expand the funding and power of the Corporation. It would remove almost all restraints on legal services attorneys and open the program to even more abuse.

I think we should clear up some misconceptions about Federal legal services. Despite what its backers may claim, this is not a program for the poor. Nor is it one to impartially seek justice. It is, however, a program of social activism which uses taxpayers funds to promote radical change outside the electoral process. This is accomplished not just through the courts, but through grass roots lobbying organizations, voter registration efforts, political publications, and lobbying of local, State, and Federal agencies.

The activities of legal services employees are often highly political in nature. Let me mention just a few of the activities they have engaged in at public expense.

Legal services employees have been tax-supported advocates of causes such as rent strikes, racial quotas in jobs and schooling, unions of the unemployed, welfare rights, and Indian land claims. They have also been public-funded promoters of homosexual demands, student protests, voting rights for prison inmates, boycotts of private businesses, and massive expansion of the food stamp program. Probusing, no-growth environmentalism, antibusiness regulation, the list goes on and on.

When the Legal Services Corporation was established as a separate entity in 1974, an attempt was made to depoliticize legal services and prevent such abuses in the future. Perhaps the most important proposal was of our former colleague Edith Green of Oregon. Her successful amendment—which I supported—was intended to prohibit backup centers from committing their resources to social change rather than the needs of individual poor clients.

As Congresswoman Green stated at the time:

> I think it is dishonest to say that we are providing legal aid to the poor when in fact we are financing lobbying for social reform that certain groups want . . . These offices have become the cutting edge for social change in this country.

Despite the adoption of the Green amendment, abuses have continued. The LSC-funded Massachusetts Law Reform Institute lobbied actively in behalf of a referendum for a graduated State income tax. I ask my colleagues, is this providing legal services to the poor? The LSC-funded Pine Tree Legal Assistance and Native American Rights Fund have been trying to force the State of Maine to give two-thirds of its land back to the Passamaquoddy and Penobscot Indian tribes. Again, I ask, is giving part of the country back to the Indians providing legal services to the poor?

Rather than working on ways to strengthen the Green amendment so as to prevent such abuses, however, the Congress is now effectively repealing it. H.R. 6666 would specifically authorize the type of activity which we earlier voted to prohibit. This is a serious mistake and I oppose it.

In addition, the law previously contained a complete prohibition on involvement in school desegregation cases. This was triggered by the Center for Law and Education in Cambridge, Mass., which had intervened on the pro-busing side in Detroit. Although earlier repealed by the House Judiciary Committee, an amendment by my colleague from Ohio (Mr. Wylie) added back strong antibusing language.

Unfortunately the language approved by the conference committee opens up a virtual pandora's box. The flat prohibition against involvement in school desegregation cases has been modified to include the following proviso:

> . . . except that nothing in this paragraph shall prohibit the provision of legal advice to an eligible client with respect to such client's legal rights and responsibilities.

If we go along with such weak language we are inviting a repetition of the probusing activities we earlier sought to prevent.

The House has also abandoned its restriction on gay rights cases. Although this body overwhelmingly adopted an amendment to prohibit legal assistance with respect to litigation involving the issue of homosexuality, the House conferees receded totally from this position.

In other areas, such as juvenile representation and military related cases, adoption of the conference report would open the legal services program to further abuses. Corporation employees would be permitted to intervene in matters previously outside their jurisdiction. Most of the restrictions we so wisely added in 1974 would be eliminated by H.R. 6666.

The Federal legal services program has been at the forefront of radical political change. With the aid of millions of taxpayers dollars legal services employees have engaged in aggressive social activism, promoting their own views of what is best for the Nation—all the while claiming to represent the poor. This highly political program should be brought to an end.

Mr. WEISS. Mr. Speaker, I was extremely pleased to learn that the House-Senate conference committee on the Legal Services Corporation Act of 1977 deleted the McDonald amendment from its version of the bill. This insidious amendment to H.R. 6666 would have prohibited the Legal Services Corporation from participating in any litigation concerning homosexuality or gay rights.

I voted against this amendment, because it denied equal treatment under the law to gay people who are, of course, as entitled to the Corporation's services as anyone else in the country. The 14th amendment to the Constitution is unequivocal about equal protection:

> No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of . . . the equal protection of the laws.

Passage of the McDonald amendment would have set a precedent for denying other groups equal protection under the law. Who knows what groups would have been next? Women, Jews, Members of Congress? This House must not single out any individual for discrimination if it is to continue to represent all of the Nation's people.

Furthermore, the McDonald amendment's vague wording extended its potential for discrimination far beyond infringements on the rights of gay people. The amendment could have easily discriminated against someone, even if a charge of homosexuality were completely without foundation, solely because the litigation involved homosexuality. This is akin to presuming guilt rather than innocence.

As a cosponsor of the Civil Rights Amendments Act of 1977—which outlaws discrimination on the basis of any kind of sexual preference—I am gratified to see that the conference committee thwarted this attack on the principle of equal rights for all.

Mrs. COLLINS of Illinois. Mr. Speaker, I rise in support of the conference report on H.R. 6666, Legal Services Corporation amendments. My support, however, is qualified and less than total. The reason is fairly simple. This conference report prohibits legal services attorneys from becoming involved in school desegregation suits on behalf of poor clients. The legal services program, although established to serve those who are not able to secure private legal counsel in their efforts to assert their rights, will not serve poor racial minorities or poor women in their efforts to either have equal access to education or fair health treatment.

It seems to me that this conference report unnecessarily restricts the work of legal services attorneys and in so doing limits the opportunities to help the poor. All the same, I must support this authorization, because without supporting it the funds necessary to run the Legal Services Corporation cannot be permitted to fully serve its clients. It is a shame that we in the Congress have restricted the work of dedicated lawyers and limited the rights of poor people who ask these attorneys for help. For these reasons, I support this legislation only in so far as it allocates money for the continuation of the Legal Services Corporation and with strong dissatisfaction with the content of the measure in the area of desegregation.

Mr. BIAGGI. Mr. Speaker, I rise in full support of the conference report to H.R. 6666, the Legal Services Corporation Act amendments. I am pleased to note that the language of my amendment which passed the House, giving a priority to the elderly and handicapped in receiving legal services, is contained in the final bill.

As crime against the elderly, both violent and "victimless" continues to rise throughout the country, so too does their need for legal services. The Legal Services Corporation was established in 1974 to provide the poor of this Nation with legal services which they previously could not afford. We are aware not only of a growing senior population, but also, of the growing number of elderly poor.

Traditionally, the greatest problem facing the elderly with respect to obtaining legal services, has been access. A survey conducted by "legal research and services for the elderly," a project of the National Council of Senior Citizens, found, in the 10 States polled, people over 65 comprised 21.7 percent of their poor population; yet, accounted for only 7.2 percent of the Legal Services Corporation caseload in those States. This graphically illustrates the problem my amendment seeks to correct.

For the handicapped, the problems are all too similar. Limited mobility severely restricts their access to legal services. Further, the handicapped community has an increasing number of economically disadvantaged who cannot afford legal services. These two factors combine to restrict participation of the handicapped in LSC programs. My amendment will provide the means for greater participation and receipt of services.

My amendment will basically set directions for local Legal Service Corporation offices in their determination of which groups to direct services. Where the needs of the elderly and handicapped are identified, LSC offices must respond with necessary services. Further, my amendment requires increased outreach services to better identify those elderly and handicapped in need of services.

As an original member of the House Select Committee on Aging, I am proud of this Congress' record on behalf of the elderly. Today we are addressing and hopefully resolving, a problem of great significance to the elderly. We are breaking down the barriers which prevent them from obtaining the legal services they so desperately need. Their vulnerability to crime is high—their accessibility to legal services is far too limited.

Discrimination of any type against any group must be eliminated. Our Constitution provides for equal protection under the law. It provides it for all—not just for some. Yet, societal barriers never imagined by the Founding Fathers have deprived the elderly and handicapped of their full rights to legal services. I am confident that my amendment will eradicate this problem. I am grateful for the leadership demonstrated by Chairman KASTENMEIER, as well as by the distinguished chairman of the House Select Committee on Aging, Mr. PEPPER. With your support, the elderly and handicapped can win a significant victory today.

Mr. BUTLER. Mr. Speaker, we have no further requests for time on this side.

Mr. KASTENMEIER. Mr. Speaker, I have no further requests for time.

GENERAL LEAVE

Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks on the conference report.

The SPEAKER (pro tempore) (Mr. McKAY). Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. KASTENMEIER. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. KASTENMEIER. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 236, nays 110, not voting 88, as follows:

On this vote:

Mr. Erlenborn for, with Mr. Crane against.

Mr. McDade for, with Mr. Frey against.

Mr. Railsback for, with Mr. Marriott against.

Mr. Sarasin for, with Mr. Sebelius against.

Mr. Young of Alaska for, with Mr. Symms against.

Mr. Rostenkowski for, with Mr. Kelly against.

Mr. Rosenthal for, with Mr. Dickinson against.

Until further notice:

Mr. Dent with Mr. Badillo.

Mr. Ambro with Mr. Evans of Georgia.

Mr. Danielson with Mr. Kasten.

Mr. English with Mr. Barnard.

Mr. Cotter with Mr. Broyhill.

Mr. Phillip Burton with Mr. Fowler.

Mr. Gammage with Mr. Ertel.

Mr. Gibbons with Mr. Beilenson.

Mr. Le Fante with Mr. Edwards of Alabama.

Mr. Dingell with Mr. Forsythe.

Mrs. Chisholm with Mr. Fithian.

Mr. Downey with Mr. Clay.

Mr. Rahall with Mr. Hall.

Mr. Ford of Michigan with Mr. Hillis.

Mr. Conyers with Mr. Holland.

Mr. Blanchard with Mr. Krueger.

Mr. Cornwell with Mr. Livingston.

Mr. Fuqua with Mr. Markey.

Mr. Diggs with Mr. Leggett.

Mr. Ford of Tennessee with Mr. Lundine.

Mr. Hawkins with Mr. Mattox.

Mr. Koch with Mr. Lent.

Mr. McCloskey with Mr. Mathis.

Mr. Meeds with Mr. Quayle.

Mr. Moss with Ms. Mikulski.

Mr. Ruppe with Mr. Quie.

Mr. Metcalfe with Mr. Patterson of California.

Mr. Russo with Mr. Quillen.

Mr. Milford with Mr. Nichols.

Mr. Scheuer with Mr. Roncalio.

Mrs. Spellman with Mr. Sawyer.

Mr. Tucker with Mr. Waxman.

Mr. Charles H. Wilson of California with Mr. Walker.

Mr. Bob Wilson with Mr. Weaver.

Mr. Wirth with Mr, Whalen.

Mr. Wolff with Mr. Wright.

Messrs. YOUNG of Texas, RISENHOOVER, BROWN of Michigan, and WALSH changed their vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

FURTHER CONTINUING APPROPRIATIONS, 1978

Mr. DODD, from the Committee on Rules, reported the following privileged resolution (H. Res. 928, Rept. No. 95–833), which was referred to the House Calendar and ordered to be printed:

H. RES. 928

Resolved, That immediately upon the adoption of this resolution the House shall proceed to consider a motion to take from the Speaker's table the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes, with the Senate amendments thereto, and concur in the Senate amendments, without any intervening motion, and at the conclusion of the debate thereon the previous question shall be considered as ordered, and the question shall be put on the motion to concur without any intervening motion.

Mr. DODD. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 928 and ask for its immediate consideration.

The SPEAKER pro tempore. The Clerk will report the resolution.

The Clerk read the resolution.

The SPEAKER pro tempore. The question is, will the House now consider House Resolution 928?

PARLIAMENTARY INQUIRY

Mr. BAUMAN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state his parliamentary inquiry.

Mr. BAUMAN. Mr. Speaker, does not the consideration of this resolution require a two-thirds vote?

The SPEAKER pro tempore. The Chair will state that that is correct.

Mr. BAUMAN. Is there no debate permitted on consideration of the question?

The SPEAKER pro tempore. The Chair will state that no debate is permitted on consideration of the question.

The question is, will the House now consider House Resolution 928?

The question was taken.

Mr. BAUMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 251, nays 86, not voting 97, as follows:

The Clerk announced the following pairs:

Mr. Dent with Mr. Ruppe.
Mr. Hall with Mr. Sebelius.
Mr. Ertel with Mr. McCloskey.
Mr. Cornwell with Mr. Frey.
Mr. Evans of Georgia with Mr. Symms.
Mr. Fithian with Mr. Kasten.
Mr. Charles H. Wilson of California with Mr. Broyhill.
Mr. Ford of Michigan with Mr. Crane.
Mr. Waxman with Mr. Edwards of Alabama.
Mr. Rahall with Mr. Marriott.
Mr. Blanchard with Mr. Walker.
Mr. Koch with Mr. Railsback.
Mr. Badillo with Mr. Sawyer.
Ms. Chisholm with Mr. Erlenborn.
Mr. Gammage with Mr. Livingston.
Mr. Ford of Tennessee with Mr. Cunningham.
Mr. Mattox with Mr. Sarasin.
Mr. Wirth with Mr. Bob Wilson.
Mr. Patterson of California with Mr. Kelly.
Mr. Russo with Mr. Quillen.
Mr. Weaver with Mr. Whalen.
Mr. Hawkins with Mr. Quie.
Mr. Tucker with Mr. Forsythe.
Mr. Conyers with Mr. Hillis.
Mr. Clay with Mr. Young of Alaska.
Mr. Downey with Mr. Lent.
Mr. Beilenson with Mr. Leggett.
Mr. Danielson with Mr. Quayle.
Mr. Meeds with Mr. Barnard.
Mr. Wright with Mr. Milford.
Mr. Krueger with Mr. English.
Mr. Roncalio with Mr. Diggs.
Ms. Mikulski with Mr. Dickinson.
Mr. Nichols with Mr. Baucus.
Mr. Rosenthal with Mr. Montgomery.
Mr. Rostenkowski with Mr. Scheuer.
Mr. Ambro with Mr. Alexander.
Mrs. Boggs with Mr. Eckhardt.
Mr. Cotter with Mr. Wiggins.
Mrs. Spellman with Mr. Lundine.
Mr. John L. Burton with Mr. Moss.
Mr. Nix with Mr. Mathis.
Mr. Markey with Mr. Holland.
Mr. Fuqua with Mr. Gibbons.
Mr. Phillip Burton with Mr. Whitten.
Mr. Mitchell of Maryland with Mr. Risenhover.
Mr. Metcalfe with Mr. Fowler.
Mr. Wolff with Mr. Le Fante.

Messrs. ANNUNZIO, BIAGGI, PRICE, HARSHA, LEDERER, MICHEL, GARY A. MYERS, RINALDO, FARY and ZEFERETTI changed their vote from "yea" to "nay."

So (two-thirds having voted in favor thereof) the House agreed to consider House Joint Resolution 662.

The result of the vote was announced as above recorded.

PERSONAL EXPLANATION

Mr. McDONALD. Mr. Speaker, on the vote on the conference report on H.R. 9418, the Public Health Services Act, I missed the vote because I was detained on official business.

Had I been present, I would have voted "no."

FURTHER CONTINUING APPROPRIATIONS, 1978

The SPEAKER pro tempore (Mr. McKAY). The gentleman from Connecticut (Mr. DODD) is recognized for 1 hour.

Mr. DODD. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois (Mr. ANDERSON), for the purpose of debate only, pending which I yield myself such time as I may consume.

Mr. Speaker, I do not intend to use all my time on this issue, on the rule itself. I would just merely explain what this resolution does. It directs the Appropriations Committee to offer a motion to concur in a Senate amendment.

I would just like to make one point here. This debate has been going on for months now. If there is one issue on which the Members of this institution have let the record show where they stand, this issue has been it. I would hope that in the remaining few minutes of today and the few days that are left before the end of this year we would try and come to agreement, come to a compromise, and resolve this issue.

We all have our differences and views on how this issue should be dealt with, but I intend to support the motion to be made by the chairman of the Appropriations Committee. I recognize that there are those who feel that the Michel amendment offered yesterday was the best. I voted for that motion. I think it was a good effort.

The fact that the word "forcible" has been deleted from that particular language, I do not think makes that much significant difference. I do not think we are going to have a situation where a person is going to be involved in a statutory rape who would not report it promptly. I think the word "promptly" protects against the situation feared by those who are concerned over the Senate's deletion of the word "forcible."

I would hope that the matter would be debated thoroughly and that we would resolve this issue.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. DODD. I yield for purposes of debate only.

Mr. VOLKMER. As a freshman Member, I would just like to understand where I am. If, in the event that this rule would be defeated, there is nothing to prohibit the Rules Committee from even today coming back with another rule, is that correct?

Mr. DODD. It could happen, but I do not see that as a strong likelihood. But, it certainly is something that could occur. As in this case, we would be required to have a two-thirds vote to bring it up.

Mr. VOLKMER. Let us assume the next day. In the event the rule is adopted—I am not going to vote for it—but in the event the rule is adopted and the motion itself is defeated, then the question is, Where do we stand from there?

Mr. DODD. I am not prepared to respond to that. I am not in a position to say exactly what the will of the House would be with regard to that particular matter. But, if the previous question still stands, there is a possibility that we could come up with another rule.

Mr. VOLKMER. Correct, and we are not quitting today, as I understand from the leadership, and all the debate that has been going on here before concerning recess, we are not going to recess because we still have the energy matter to concern ourselves with. Is that correct?

Mr. DODD. The gentleman is correct.

Mr. VOLKMER. I thank the gentleman.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself as much time as I may use.

Mr. Speaker, I concur in the explanation of this resolution that has just been given by my colleague on the Committee on Rules, the gentleman from Connecticut.

Mr. Speaker, I would observe that I would somehow hope that the 251 to 86 vote by which we have just agreed to consider this rule might be a precursor of a happier solution to the final problem that we face than we had on yesterday and on the more than 12 occasions, I believe, that we have voted on this matter in the past.

I was disappointed a moment ago to hear the gentleman from Missouri say that he was going to oppose this rule. I cannot think of any reason, particularly in view of some of the facts that were brought out in the debate yesterday by the distinguished majority leader, the leader on the other side of the aisle, about the fact that three-quarters of a million State, local and Federal employees may literally face a payless payday before Christmas, why we would want to take the obdurate and absolutely intransigent attitude that we would not consider this rule, that we would not consider this matter under an appropriate rule.

As the gentleman from Connecticut has explained, it does makes a change, it does make a compromise, a further compromise, on this issue and an opportunity for some of those Members who, regrettably, did not vote for the Michel amendment on yesterday to come back to our side and support an acceptable compromise on this very controversial issue.

So I urge every Member of this body to support the rule.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Missouri. I mentioned the gentleman's name, and I certainly will yield to the gentleman.

Mr. VOLKMER. Mr. Speaker, I would like to ask the gentleman this question: This provision, this proposal that is now before us, the rule proposing that the House adopt the Senate language, is actually more broad than what the House rejected yesterday; is that not correct?

Mr. ANDERSON of Illinois. I think the issue is not the language at this particular juncture in these proceedings. The issue is whether or not we are willing to even consider a matter and to allow the distinguished chairman of the Committee on Appripriations (Mr. Mahon) to offer a motion to concur in the Senate amendment to House Resolution 662, the continuing resolution.

Mr. VOLKMER. Without any subsequent motion being presented?

Mr. ANDERSON of Illinois. The substantive issue will be debated in the hour that will be allowed the gentleman from Texas (Mr. Mahon) when he makes the motion to concur in the Senate amendment.

Mr. VOLKMER. No preferential motion can be raised under this rule; is that correct?

Mr. ANDERSON of Illinois. The motion can be raised up or down. Members will have an opportunity to express their views on the issue when the votes are made.

Mr. VOLKMER. And nothing else?

Mr. ANDERSON of Illinois. I do not know what else the gentleman thinks he should have at this point.

Mr. VOLKMER. No other preferential motion could be presented?

Mr. ANDERSON of Illinois. No. The motion would be a motion to concur in the Senate amendment. That motion will be explained in the hour of debate that will be provided under the rules for its consideration.

Mr. VOLKMER. I thank the gentleman for his explanation.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from Maryland (Mr. Bauman).

Mr. BAUMAN. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, the reason I asked for a vote on the question of consideration was because a rule of this nature requires a two-thirds vote to be brought up on the same day it is reported out. Just about without any notice to any Members interested in this issue, including the chairman of the Subcommittee on Appropriations dealing with it under the rules, they convened this morning, at the direction, I assume, of the leadership, and reported this rule out. All the rule does is to change the order in which consideration of motions dealing with a conference report are normally handled. It says that, instead of the gentleman from Pennsylvania (Mr. Flood), if he chose, or any other Members, being able to offer a motion to concur in the Senate amendment with an amendment, which might be an acceptable compromise, that the House is forced by this rule to vote solely on the Senate language adopted yesterday. I think most of us who have stood steadfast against the compromise on this issue of right to life feel that the Senate language is totally meaningless as a compromise, and is worse than many of the others that have been voted down. And there is other language being considered which may be offered by some of the members of the Committee on Appropriations that would have the support of the gentleman from Maryland, the gentleman from Illinois (Mr. Hyde), the gentleman from Pennsylvania (Mr. Flood), and could very well possibly resolve this issue.

However, the rule before us forces us to vote first—and possibly only—depending upon the outcome of the vote on whether or not we swallow the Senate amendment wholly. I think it is unfortunate that we find ourselves in this position.

I will oppose the rule. I am not going to force it to a rollcall vote, but perhaps some other Member will. There is still a chance for a compromise here. The language could be sent back to the other body this afternoon, in light of the closeness of the vote, in light of the paydays involved, and in light of the remarks of other Members who are desirous of leaving. Approximately 40 Members have left yesterday since this House voted, and we do have to resolve this issue.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Speaker, I was trying to make a point along these lines a minute ago.

In other words, this is basically what we call a closed rule, is it not?

Mr. BAUMAN. It still allows the possibility of compromise if the motion to concur in the Senate amendments is defeated.

Mr. VOLKMER. I do not understand that to be the case.

Mr. BAUMAN. I fervently hope that will be the result. In that event, another amendment might be offered.

Mr. DODD. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken and on a division (demanded by Mr. Bauman) there were—yeas 54; nays 40.

So the resolution was agreed to.

A motion to reconsider was laid on the table.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas (Mr. Mahon).

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, pursuant to the rule just adopted, I offer a motion.

The Clerk read as follows:

Mr. Mahon moves to take from the Speaker's table the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes, with Senate amendments thereto, and concur in the Senate amendments.

The **SPEAKER** pro tempore. The Clerk will report the title of the joint resolution and the Senate amendments.

The Clerk read the title of the joint resolution.

The Clerk read the Senate amendments, as follows:

(1) Page 2, lines 15 and 16, strike out "as modified by the House of Representatives on August 2, 1977".

(2) Page 2, line 17, after "resolution" insert: "*Provided, however*, that none of the funds provided for in this paragraph shall be used to perform abortions: except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.

"Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

"The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced."

PARLIAMENTARY INQUIRIES

Mr. **BAUMAN**. Mr. Speaker, I have a parliamentary inquiry.

The **SPEAKER** pro tempore. The gentleman will state his parliamentary inquiry.

Mr. **BAUMAN**. Mr. Speaker, if the motion offered to concur in the Senate amendments is defeated, is it still not in order for a Member to be recognized to offer a motion to concur in the Senate amendments with an amendment?

The **SPEAKER** pro tempore. The Chair will inform the gentleman that it would take unanimous consent.

Mr. **BAUMAN**. Because of the rule that was adopted, that would not be in order?

The **SPEAKER** pro tempore. No, it would not.

Mr. **BAUMAN**. So, Mr. Speaker, the rule totally precludes any possibility of offering an amendment?

The **SPEAKER** pro tempore. The gentleman is correct, other than by unanimous consent or by the adoption of another rule.

Mr. **BAUMAN**. Mr. Speaker, I have a further parliamentary inquiry.

Under the normal order of procedure, which the rule has changed, such a motion would be first in order now instead of the pending motion, would it not?

The rule mentions nothing about precluding a motion to concur in the Senate amendments with an amendment. Would that not have been in order if this motion were defeated?

The **SPEAKER** pro tempore. The rule makes in order one motion to concur and nothing else. Rejection of that motion would not at that stage permit other privileged motions in the House to dispose of the Senate amendment.

Mr. **BAUMAN**. Mr. Speaker, I understand, and I thank the chair.

The **SPEAKER** pro tempore. The gentleman from Texas (Mr. MAHON) is recognized for 1 hour.

Mr. **MAHON**. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, one of my colleagues said to me a moment ago, "Why do you appear so grim? Why are you so glum?"

We have been wrestling with this abortion question for quite some time. However, I am not faced with a payless pay day or with anything of that kind, so I am not facing an emergency myself personally.

However, there are some people who are, and I have great concern about some way in which to solve this problem.

Mr. Speaker, the Members will remember Hamlet, the melancholy Dane, who in frustration and despair said on one occasion:

O! that this too too solid flesh would melt,
Thaw and resolve itself into a dew;
Or that the Everlasting had not fixed
His canon 'gainst self-slaughter!

He should not have been quite so depressed.

Mr. Speaker, I think we could use a little hope, a little human hope—hope in small letters—that we will be able to resolve this issue involving abortion. I cannot resolve it myself. I have tried diligently and ineffectively to do it.

Mr. Speaker, there is an old hymn which says, "Take your troubles to the Lord and leave them there."

I am taking my troubles to the House of Representatives, and I am leaving them there. I can still sleep well at night, and I expect to sleep well tonight.

I just want my colleagues to vote their own consciences with respect to this matter. I would not twist an arm or say an unkind word or otherwise try to pressure anyone. I say to the Members, "Just vote according to your desires as you have in the past."

Mr. Speaker, yesterday was the certifying date for the payroll for the Department of Labor. Today is the date for HEW. Tens of thousands of people are involved. For the Department of Labor people payday would be on Friday of this week, so we are running up against a deadline. Payday for the HEW people is next Tuesday.

Mr. Speaker, I ask the Members to realize that I can take it if they can take it. It is just a matter of how we can resolve this issue.

Mr. Speaker, somebody was saying to me the other day, "Did you not know that everybody in this House has voted for abortion?"

I thought for a moment, and I said, "Yes, you are right. Everybody, Mr. HYDE, and everybody else voted for abortion because they voted for the language which says that no abortion shall be permitted unless the health of the mother is in jeopardy or unless the life of the mother is in jeopardy. Therefore, everyone has voted for abortion in some form. It is a matter of the degree of abortion which we have all voted upon."

This is a very troublesome question, a very troublesome issue.

Mr. Speaker, this resolution went over to the Senate yesterday, and the Senate rejected it. However, they passed substantially what the House had rejected. This is as far as the Senate has gone in making some kind of compromise. If the House has made any substantial compromise, I am not aware of it.

Mr. Speaker, the compromise of the Senate yesterday was more substantial than had taken place in the past. Therefore, the problem is, What are we voting on today? We are voting on what we voted on yesterday, in an atmosphere in which payless paydays are more imminent.

Mr. Speaker, we are voting on the amendment we voted on yesterday without the word "force" in connection with rape. If I know anything about words, "rape" means "force," and therefore, abortion would be permitted after a rape had taken place.

In statutory rape the relationship would be illegal so the courts could very well hold that a statutory rape was forced rape. Well, that interpretation would militate against certain positions. We do not know just what the courts would decide.

But, Mr. Speaker, it would be good if we can get this matter behind us—get it behind us until when? Until next September 30. Is it not delightful to contemplate that we might dispose of this thing and not have to confront it month after month as we go campaigning next year? Would it not be good if we could extend this period until the end of the fiscal year which is September 30, 1978? If this language is approved today it is all over and we will not have to be back tomorrow for the consideration of this issue. Of course, if this is voted down—and I am not urging any Member to vote one way or another—if it is voted down, then we would have to be back tomorrow, or certainly late tonight or today in trying to work something out. I suppose that everybody has a secret formula, maybe it is not really secret, but a formula to work this out.

We have done our best with various proposals. So I would hope that we could vote on this matter and get this matter behind us and avoid the reaction that will necessarily follow if we do not enable these Federal employees to get paid on Friday of this week.

I believe it does reflect on the Congress in its ability to do its job.

The Committee on Rules has been very tolerant. The Committee on Rules provided us with a rule and we have it. In the interests of getting this matter behind us and in the realization of the fact that compromise is necessary even though people are completely and totally entitled to their own views but if they will not in any way give in a little one way or another on their own viewpoints then any kind of a compromise of course cannot ensue and cannot be worked out.

So I urge the Members to use their own best judgment. I am prepared to stay here with you. In fact, I have no plans to the contrary for the next week, otherwise certain of our people will have a payless payday.

So, let your conscience be your guide.

Mr. **BONKER**. Mr. Speaker, will the gentleman yield?

Mr. **MAHON**. I yield to the distinguished gentleman from Washington.

Mr. **BONKER**. Mr. Speaker, may I say to the gentleman from Texas (Mr.

Mahon) that I appreciate his tireless efforts to break this impasse. It just seems to me that with each vote, in view of the diminishing number of people who are here, it becomes more difficult to solve this issue, but the pressure is going to increase if we do not do something. However, I would like to have the gentleman perhaps confirm one point that I think should be made and that is does the gentleman not feel that those who voted for the Michel amendment yesterday may feel that the Senate has weakened that language by substituting "rape" for "forced rape"? But the fact is that existing section 209 of the law and both the Hyde amendment which is now in force, makes no reference to rape and the Secretary of HEW in his regulations makes no reference to forced rape.

So I think we are dealing intellectually with some phrases. But in terms of substance and consequence, we really are not that far apart. The real key word is "prompt," that any occurrence under the circumstances involved in this language be promptly reported to the authorities. To me that closes any possible loophole, and it should be acceptable to those who have been supporting the Hyde position.

Mr. MAHON. The gentleman makes a very, very significant point. Under the Senate language upon which we will vote, which was the House language that we submitted yesterday, if it is a forcible rape, it must be reported promptly. The prompt reporting is the thing that is very significant here. What we vote on today would require the prompt reporting. This, it seems to me, should be borne in mind in connection with the decision which we shall make.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding.

The gentleman from Washington and the gentleman from Texas have both placed great score on what the meaning of "prompt" is under the Senate language. I refer them to the debate in the Senate yesterday at page 38598 in which the Senator from Massachusetts (Mr. Brooke) and the Senator from Ohio (Mr. Metzenbaum) at length discussed promptitude and what it meant in this case:

> Mr. Metzenbaum. Possibly weeks and months.
>
> Mr. Brooke. It could be, yes.

Then they went on to explain in their view months could pass and still lead to prompt reporting. In other words, this is a very large loophole, and this debate in the Senate could support a complete reversal of the attitude of the House when we desired a prompt reporting of when the rape occurred. Read what the Senate said.

Mr. MAHON. Regardless of what may have been said by any Member of the other body and by any Member of this body, in plain English "prompt" means reasonably quick. It does not mean months, regardless of what anybody may have said. I do not accept everything I read in the Congressional Record. I know what the word "promptly" means, and I know that Mr. Califano, the Secretary of HEW, is a man of integrity, and he is required under the language in this proposal to promptly issue regulations to rigorously enforce the import of the resolution. So I would not be concerned about that matter.

Mr. BONKER. Will the chairman yield on this point?

Mr. MAHON. I yield to the gentleman from Washington.

Mr. BONKER. I thank the gentleman for yielding.

I wonder if the gentleman from Maryland has any idea where the word "prompt" was first introduced in this language. It was first introduced by Senator Helms, who is an archadvocate of the Hyde amendment, when it was being considered on the Senate floor last week. He had moved to amend the language to include the words "reported promptly," so that is the language that is now before this body. That does not come from the pro-abortionists; that comes from Senator Jesse Helms, whose position, I would imagine the gentleman from Maryland supports on this issue.

Mr. MAHON. If I may say, since we are talking about the word "promptly," let us read what the resolution upon which we are going to vote says:

> except where the life of the mother would be endangered if the fetus were carried to term;

That is the first exception where abortion would be permitted—

> or except for such medical procedures necessary for the victims of rape—

We leave out "forced." The language we vote on today is—

> necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service;

This is the best and the quickest way to dispose of this matter. Whether it is the wisest, it is up to us to make a determination on that issue.

Mr. CARTER. Mr. Speaker, I would ask the distinguished Dean of the House to yield to me.

Mr. MAHON. I yield to the gentleman from Kentucky.

Mr. CARTER. I regret so much that the Chairman is feeling glum today. I always like to see him convivial, congenial, and feeling good and of great spirit.

Mr. MAHON. Yes.

Mr. CARTER. To that end I say: "Be still, sad heart, and cease repining; Behind the clouds is the sun still shining. Your fate is but the common fate of all; Into every life some rain must fall. Some days must be dark and dreary."

I thank the gentleman for yielding.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield for a question?

Mr. MAHON. I yield for a question.

Mr. VOLKMER. Yesterday I believe the gentleman was present during the debate on the amendment offered by the gentleman from Illinois; is that not correct?

Mr. MAHON. What did the gentleman ask?

Mr. VOLKMER. I say yesterday during the debate on the amendment offered by the gentleman from Illinois, the gentleman was present—on the Michel amendment?

Mr. MAHON. Was the gentleman from Missouri on the floor?

Mr. VOLKMER. Yes, I was here.

Mr. MAHON. Was the gentleman from Missouri aware whether or not I was here?

Mr. VOLKMER. Yes. I believe the gentleman from Texas was here. I do not remember everybody who was on the floor, I know. I just do not remember everybody who was here.

Mr. MAHON. The chairman who was handling the bill I hope would be noticeable.

Mr. VOLKMER. The reason I asked was during the debate the gentleman from Illinois gave his opinion as to certain meanings of certain provisions of the language of that amendment. I would just like to know if the gentleman from Texas agrees with those statements.

Mr. MAHON. I have not checked the Record this morning.

Mr. VOLKMER. The gentleman was here and I am sure he paid close attention to every bit of the debate.

Mr. MAHON. But I say I have not read what appeared in the Record this morning and I would not be in a position to confirm or deny what the gentleman from Illinois has said.

Next question.

Mr. VOLKMER. I thank the gentleman.

Mr. MAHON. Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. Michel).

Mr. MICHEL. Mr. Speaker, I thank the gentleman.

Is it the chairman's intention to divide the time equally or is it just at his pleasure that he would yield?

The SPEAKER pro tempore (Mr. Stratton). The gentleman from Texas (Mr. Mahon) has consumed 17 minutes.

Mr. MICHEL. Is the chairman intending to divide the time between himself and the gentleman from Illinois or should we simply make our requests to the chairman?

Mr. MAHON. I believe under the rule I have all the time, but I would be happy to yield to the extent the gentleman desires.

Mr. MICHEL. I just want to make it clear. The gentleman has always been eminently fair. I would like to make sure the gentleman from Maryland (Mr. Bauman) and the gentleman from Illinois (Mr. Hyde) and the gentleman from Kentucky (Mr. Carter) could be heard.

Mr. MAHON. I would be happy, if the rules permitted, to yield 20 minutes or 30 minutes to the gentleman from Illinois for the purpose of controlling the debate.

Mr. MICHEL. I appreciate that very much, Mr. Speaker, so I yield 5 minutes to the gentleman from Illinois (Mr. Hyde).

Mr. MAHON. Mr. Speaker, has the Chair ruled that I can yield such time?

The SPEAKER pro tempore. The gentleman from Texas can yield the time as he sees fit. The gentleman understands the gentleman from Texas has yielded 30 minutes to the gentleman from Illinois.

Mr. MAHON. In view of the fact that 17 minutes have already elapsed, would 20 minutes be adequate?

Mr. MICHEL. Sufficient.

Mr. Speaker, I yield the first 5 of the 20 minutes to the gentleman from Illinois (Mr. HYDE).

Mr. HYDE. Mr. Speaker, yesterday I took only 2 minutes and I was low-keyed and attempted to be moderate in my approach to this subject, which was somewhat out of character, because I know that the scenario that is devoutly desired for the pro-life congressmen over here is for us to go "gently into the night" and not rage against the dying of the light.

I just do not choose to do so today because the immoderate subject of killing prenatal young does not lend itself to moderate discourse. I believe firmly that man must render an accounting not only for every idle word but also for every idle silence.

The other body has removed "forced" from the definition of rape and thus opens medicaid abortions to any woman under the age of consent, whether there has been a forced rape or rape has been consented to or whether there has been any rape whatever in the sense that force has been used or not.

The distinguished majority leader yesterday adverted to and supplied us with a list of hundreds and hundreds of very important—even vital—programs that will be halted if we do not succumb to the will of the other body and change the existing law to provide for the extermination of thousands of defenseless pre-born lives.

One of our distinguished colleagues put several statements in the Record the other day indicating there is a great ambiguity among church groups, different church groups, a lack of consensus on the part of several of them on the essential question, "When does human life begin?"

First of all, disputations among religious groups on important issues are nothing new. Wars have been fought over such matters. That is why these church groups are different.

But I say, "So what?" If you cannot tell when life begins, where do you allocate the benefit of the doubt? Do you shoot the gun through the door because you are not sure anyone is behind it?

More importantly, the commencement of human life is determined by biology, not theology.

Theology says, "Thou shalt not kill."

Biology says, "That fetus is human life."

One highly respected authoritative organization in this field is Planned Parenthood. They are on the cutting edge of the abortion controversy. It seems to me they ought to be authoritative on this basic question of when does life begin. I have here one of their pamphlets, issued by Planned Parenthood, 515 Madison Avenue, "Every Child a Wanted Child," and it is called, "Plan Your Children".

It says, "Is It An Abortion?" This was issued in 1964. "Is It An Abortion?"

"Definitely not. An abortion kills the life of a baby after it has begun. It is dangerous to your life and health. It may make you sterile so that when you want a child you cannot have it. Birth control merely postpones the beginning of life."

I always ask the Planned Parenthood people, "What medical discoveries have occurred since 1964 to reverse this position? Do you stand by the fact that abortion kills the life of a baby?" I do not get much of a response.

I do not like to stand here and be accused of being the consummate Christmas Scrooge standing between thousands of employees and their Christmas checks; but what am I supposed to do, abandon prenatal life because the Senate wants to change the existing law?

The citizens of Dachau and Buchenwald, when they visited the furnaces and ovens of the prison camps cringed and shuddered and said, "We didn't know."

The defendants at Nurenberg said, "We didn't know."

I do not think we have that excuse. We know that unborn life is human life. I am unwilling to trade it for a health condition or for any other circumstances, except to save another human life.

Mr. MICHEL. Mr. Speaker, I yield myself such time as I may consume, first of all to make inquiry of the chairman. On page 2 of the resolution, on lines 15 and 16, it says:

> As modified by the House of Representatives on August 2, 1977, has been struck in the Senate.

Now, in the House we made absolutely sure in the continuing resolution that all the other items in the conference report and the disagreeing amendments which we have reached agreement on were not to be touched by what we may or may not do on the so-called Hyde amendment.

I want to make sure that is the chairman's understanding, that notwithstanding the striking of that line in the Senate and in this resolution that we are not tampering with any of those other items in the HEW bill that have heretofore been agreed to.

Mr. MAHON. Mr. Speaker, the gentleman from Illinois has performed a service in calling this matter to the attention of the House. The gentleman from Illinois is absolutely correct. There was no intention whatever of involving ourselves in the reconsideration of other issues in the Labor-HEW appropriation bill. The only matter involved here was this amendment having to do with abortion. I would call this a technical error and the meaning is absolutely clear from this colloquy what the House and the Senate intend to do.

Mr. MICHEL. Mr. Speaker, is it the chairman's intention to acknowledge the chairman of our subcommittee, the gentleman from Pennsylvania (Mr. FLOOD), at some juncture?

Mr. MAHON. I shall yield some time to the gentleman from Pennsylvania, yes.

Mr. MICHEL. I have really only the gentleman from Maryland (Mr. BAUMAN) left for a few words.

Mr. MAHON. Mr. Speaker, I yield such time as he may consume to the distinguished chairman of the Subcommittee on Labor, Health, Education, and Welfare, the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Speaker, let me tell you just what the situation is here. There are very few Members in attendance on the floor now, and I am satisfied that even those of the very few are not clear about who pulled what rabbit out of what hat at some time during today. But, it was done.

Now, Members, when you think of the debates we have had on this bill over the past months; the deadly seriousness, the heartrending debate on both sides of the aisle and from both sides of this issue, I just have never seen anything like it. Yet, despite that, here is where you are: The Members are now faced with a take-it-or-leave-it-situation on the Senate language that we have been debating concerning Federal funds for abortion. A subject you have been worrying and debating for months. The Senate language before us is a watered-down version of the language rejected by the House just yesterday by a recorded vote—most of you were here and voted yesterday—of 170 to 200. Remember, just yesterday?

If you voted against the Michel amendment yesterday, then you vote against this Senate amendment. Do you see why? It is as plain as the nose on your face; just like night follows day.

Now, I am not going to repeat the arguments of yesterday against this Senate language. I could take an hour here in three languages. But I am sure that Members know what is happening here today. You know what is happening here today. You are being forced as Members of the House, to vote up or down on a Senate amendment.

You—with no opportunity to change a single word or even the punctuation. I find this totally unacceptable, in capital letters. I urge you to reject the Senate amendment.

Mr. MICHEL. Mr. Speaker, I yield 4 minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Once more to the well, Mr. Speaker. The gentleman from Illinois (Mr. HYDE) has stated most clearly the concern of those of us who have voted repeatedly in favor of the Hyde amendment and for human life. The Members can read my other speeches on other days in the RECORD as to why I understand it is very difficult for those who hold our position to compromise with those who hold the position that the fetus is nothing more than a bit of tissue, to be thrown away in a garbage can after being excised.

We know that there are deep-seated differences that exist and will continue to exist on legislation in years to come, whether it is national health insurance, or the appropriation bill on HEW next year.

So I have taken the trouble to ask some experts overnight to give some estimate of what the language of the other body would mean in terms of actual abortions. Understand, there are more than 1 million abortions in the United States a year, and in some States there are more children killed by abortion than are live-born. So abortion is occurring. Three hundred thousand abortions, approximately, are financed by the Federal Government, and that is what we are fighting about. The Supreme Court a few months ago upheld the Hyde amendment as a proper action of the majority of this body and of the other body to limit those 300,000 abortions to the absolutely necessary ones, when the life of the mother was in danger. The Court said that was acceptable and constitutional.

Ever since that time, the other body has been fighting to increase the loopholes and their scope so as to permit more and more abortions. So I asked an expert whether he could estimate what this language could mean. The removal alone, the estimate was given to me, of the word "forced" would mean that one-quarter to one-third of the 300,000 abortions would be permitted. So, if this language is adopted the Members are voting for at least that many deaths. With the inclusion of the broadly interpreted "prompt reporting" months after the occurrence, as the Members of the other body readily interpret it—and legislative history does play a part—we have another estimate. It could be almost unlimited, I was told, because anyone could say they had been raped. The abortion would be months after the fact, and it would be paid for by the Government. As to the mother's health exception, it would be left up to the judgment of the doctor. In my experience with the medical people who regularly perform abortions, many are running abortion clinics where much of their money comes from medicaid for performing abortions, doing this death-dealing operation, and little else.

So what the Members may be voting for is 300,000, or more, abortions financed by the Federal Government. So the Members should not deceive themselves. If they have voted 10 times for the right to life, this pending language is not going to offer them some out. I know that there were 10 or 12 Members who voted with us in the past who switched yesterday. This language offers them no excuse for such a switch. This vote is the most crucial one of all, because if this language is defeated, it will be written up in every newspaper in the country as a major defeat for the right-to-life forces who are not going to stop their activity. They believe and I believe and a majority of this body believes, at least until today, in the right to life. So that issue will be raised. Ask yourself: Do you want to be the one who makes the difference and brings defeat, after switching your vote, after voting on this so many times? Do you want to accept that responsibility? Not because it will affect your reelection, but because it will affect the lives of 300,000 American citizens, children unborn every year, I ask you to stand with us. That is the issue.

Mr. MICHEL. Mr. Speaker, I yield myself such time as I may consume to the extent it has been allotted by our distinguished chairman.

Mr. Speaker, I do not expect there to be any significant change from the vote we had yesterday. At most, those 10 or 12 that we lost yesterday on that side, those who have strongly opposed the Hyde amendment, could conceivably be persuaded to go along with the Senate position. At the same time, there might very well be six or eight here on this side who had made a switch to support my amendment, but who are not likely to support other compromise language unless the word "forced" were in it.

I obviously cannot be enthused about what the Senate has done to what I said was going to be the last effort I would make to come to any kind of an agreement. I suppose we are all subject to changing our minds from time to time.

If perchance this motion does go down today, I am going to include with my remarks some language that ought to be considered by the Members. This would, I think, in the final analysis get the endorsement of the gentleman from Illinois (Mr. HYDE), the gentleman from Maryland (Mr. BAUMAN), and other Members.

What has happened here is that this is such a symbol that, I do not care how pliable the minds of Members of this House are, they are locked in concrete. They will tell me privately, "Bob, you are right. I'm with you, I am sympathetic with your position, but I cannot extricate myself from my own position."

So I am going to read into the RECORD this following language and suggest that if this motion does go down, we ought to be given an opportunity at this language:

> None of the funds contained in this act shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term, or except where the pregnancy would substantially aggravate a pre-existing serious physical illness to the mother.
>
> This section does not prohibit payment for medical procedures necessary for the prompt treatment of the victims of rape or incest.

This language does not contain anything about reporting.

I had conversation with my friend, the gentlewoman from New York (Ms. HOLTZMAN), on the issue of privacy and reporting. The more I get to examine these matters, the more I begin to understand the problems and the issues involved.

The last 2 paragraphs of this language I am offering are exactly what we have all agreed on, including the gentleman from Illinois (Mr. HYDE), the gentleman from Maryland (Mr. BAUMAN), and other Members.

As I said, if the motion before us goes down on this next vote, this language I am suggesting will hopefully be considered. However, I think it only appropriate to make the caution that the parliamentary situation is extremely complex and may not afford us the opportunity to consider this language in a timely fashion.

The Members will note that we did not use the word, "permanent," because that has always been anathema to the other side. The language is "a preexisting serious physical illness."

This does constitute a compromise. We have made an adjustment with the other side on the rape question. This is a little different approach.

Mr. BONKER. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Washington.

Mr. BONKER. Mr. Speaker, I thank the gentleman for yielding, and I must say I appreciate what he is attempting to do in moving the Members to some action.

The House has to come to some agreement on this matter if we are to break the impasse.

As the gentleman has mentioned, this issue has polarized the House, and the leadership appears almost paralyzed. Yet, we have a responsibility to resolve this issue.

I would point out, since the gentleman is working with definitional problems pertaining to rape and incest that the present law, with the Hyde amendment, which is section 209, does not make any reference to rape or incest, and it has resulted in the following regulation put forth by Secretary Califano, and I quote:

> Treatment for rape or incest is . . . limited for these purposes to prompt treatment before the fact of pregnancy is established.

This is now the law, and there is not one Member who is supporting the Hyde amendment who has taken issue with this language. And yet, if we bring essentially the same language on this floor, it would be rejected by the Hyde supporters. If we were to incorporate the Secretary's language in this amendment and presented either by the distinguished chairman of the committee or the gentleman from Illinois (Mr. HYDE), it would probably be rejected.

We are apparently trying to deal too honestly with this issue in working out a compromise. The people on the anti-abortion side are dealing with another issue, one that has not even come before this body, and that is a constitutional amendment. That is why I think our efforts have been fruitless by trying to compromise, because the Hyde supporters simply are not going to accept any language, regardless of the form it takes, unless it is the exact kind of language they want.

However, I would ask the gentleman from Maryland (Mr. BAUMAN) or the gentleman from Illinois (Mr. HYDE) if they would accept the language that is now in the regulations, if that language were to come before this body in some legislative form?

Mr. HYDE. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. Yes, I yield to the gentleman from Illinois.

Mr. HYDE. Absolutely, Mr. Speaker, I would accept that. I have no quarrel with the regulations.

What I object to is the games that are being played with the term, "medical procedures," by the other body, because they want to use that term to mean an abortion.

Medical procedures promptly administered are not the same as an abortion because they do not even know if the woman isp regnant. They would administer estrogens, perform a D. & C., but they do not abort something that is not there. The fact of pregnancy has not been determined.

Yes, Mr. Speaker, I support that. I am

with the gentleman on that, and I agree with that language.

Mr. BONKER. Is that not exactly what we are doing by providing for prompt reporting? Is that not what Senator HELMS attempted to do on the Senate side when he amended the Senate language last week?

Mr. HYDE. Which was rejected by the Senate.

Mr. BONKER. Yes, but it was offered by the gentleman's colleague on the Senate side, that exact language, was it not?

Mr. HYDE. Prompt treatment is what interests me, and the prompt reporting was to avoid the fraud incident to someone's coming in 6 months later and saying she was raped 6 months ago by an assailant unknown. That is the problem with this, and that would be an abortion.

Mr. BONKER. Mr. Speaker, I would assume, if the gentleman from Illinois (Mr. MICHEL) will yield further, that the provision which says that the "Secretary shall promptly issue regulations and establish procedures to assure that the provisions of this section are rigorously enforced" would be sufficient to establish the guidelines that the gentleman is looking for in this language.

Mr. HYDE. Mr. Speaker, if the gentleman will yield further, it was the gentlemen in the other body who wanted to eliminate from the report the statutory language or phrases that deal with rape and incest. We have attempted to accommodate them so long as they do not include abortion after the fact of pregnancy, which is something I do not agree with, and which is not what the current regulations require.

Mr. BONKER. I think what we are attempting to do in this language and what is already in existence in the regulations is not that far apart. It has pretty much the same effect.

Ms. HOLTZMAN. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentlewoman from New York.

Ms. HOLTZMAN. Mr. Speaker, I thank the gentleman for yielding.

While I am dismayed at these efforts to restrict the constitutionally guaranteed rights of poor women to a medically safe abortion, I will not expound on the reasons again at this time.

Mr. Speaker, I would, however, like to ask the gentleman from Illinois (Mr. MICHEL) two questions about the impact of the language which he has proposed, and which has come back from the other body with a minor amendment.

First, I am concerned about the issue of privacy because the amendment imposes a reporting requirement in cases of rape and incest.

Would the gentleman from Illinois (Mr. MICHEL) tell me whether or not the Secretary of HEW would have the authority to promulgate regulations that would protect legitimate privacy interests, say, of young girls who are the victims of incest, or girls or women who are raped?

Mr. MICHEL. I would think, in keeping with the earlier conversation we had, that that would be my feeling; there would have to be some special concession for those kinds of occasions.

The SPEAKER pro tempore. The time of the gentleman from Illinois (Mr. MICHEL) has expired.

Mr. MICHEL. Mr. Speaker, is that my entire 20 minutes?

The SPEAKER pro tempore. The Chair will state that that is correct.

Mr. MAHON. Mr. Speaker, I yield 5 minutes to the distinguished gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr Speaker, I appreciate the chairman's yielding me this additional time.

Again I would say to the gentlewoman from New York (Ms. HOLTZMAN) that that would be my position, yes.

Ms. HOLTZMAN. Mr. Speaker, I thank the gentleman for that assurance.

I am also concerned about the "prompt" reporting requirement in the case of, let us say, a 10-year-old girl who is the victim of incest or a mentally retarded woman who has been raped and does not understand what has happened. Would the same reporting requirement, in terms of promptness, be imposed on someone who does not understand the nature of what has happened, as would be imposed on someone who can reasonably be held to be aware of what has taken place?

Mr. MICHEL. I just think that under the kind of situation which the gentlewoman from New York has described, there has to be special consideration given in that kind of case. The present law, as a matter of fact, gives them that special consideration.

Ms. HOLTZMAN. Mr. Speaker, I thank the gentleman.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the joint resolution now pending before the House.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. MAHON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I have pointed out, of course, that the payday for the Department of Labor is Friday of this week; and the payday for HEW, with all of its various programs, is on Tuesday of next week.

Therefore, Mr. Speaker, it is necessary that we take some steps to dispose of this matter. The joint resolution pending would dispose of the matter until September 30 of next year.

The question of abortion, of course, is an emotional one but, as I pointed out earlier, everybody when he goes home to his constituents must say, "Yes, madam," and "Yes, mister, I did vote for abortion," he has to say that, if he is asked the question, but he can modify it by saying, "But, I voted for abortion only in cases where the life of a mother might be in danger, or in certain other cases." So it is just a matter of degree.

So I would hope that we can find an approach that will insure that we will not have to wrestle with this question next January in a continuing resolution or in the Labor-HEW bill.

Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. All time has expired.

Under the rule, the previous question is ordered.

The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. MAHON. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 171, nays 178, answered "present" 1, not voting 84, as follows:

[Roll No. 770]

Mr. Metcalfe for, with Mr. Kelly against.

Mr. Moss for, with Mr. Lent against.

Mr. Patterson of California for, with Mr. Livingston against.

Mr. Rosenthal for, with Mr. Marriott against.

Mr. Scheuer for, with Mr. Quayle against.

Mr. Frenzel for, with Mr. Quie against.

Mr. Wolff for, with Mr. Quillen against.

Mr. Wright for, with Mr. Ruppe against.

Mr. Forsythe for, with Mr. Sawyer against.

Mr. Sarasin for, with Mr. Symms against.

Until further notice:

Mr. Dent with Mr. Broyhill.

Mr. Phillip Burton with Mr. Edwards of Alabama.

Mr. Andrews of North Carolina with Mr. Fuqua.

Mr. English with Mr. Gibbons.

Mr. Evans of Georgia with Mr. Hall.

Mr. Mathis with Mr. McCloskey.

Mr. Milford with Mr. Whalen.

Mr. Railsback with Mr. Roncalio.

Mr. Walker with Mr. Bob Wilson.

Mr. PATTEN changed his vote from "yea" to "nay."

Mr. FRENZEL changed his vote from "yea" to "present."

Mr. FRENZEL. Mr. Speaker, I have a live pair with the gentleman from Minnesota (Mr. QUIE), who, had he been present, would have voted "nay." I voted "yea." I withdraw my vote and vote "present."

So the motion was rejected.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF S. 1340, ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION AUTHORIZATION ACT OF 1977 AND 1978—CIVILIAN APPLICATIONS

Mr. YOUNG of Texas. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 916 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 916

Resolved, That upon the adoption of this resolution it shall be in order to consider the bill (S. 1340) to authorize appropriations to the Energy Research and Development Administration for energy research, development, demonstration, and related programs in accordance with section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, as amended, and for other purposes, in the House.

The SPEAKER. The gentleman from Texas (Mr. YOUNG) is recognized for 1 hour.

Mr. YOUNG of Texas. Mr. Speaker, I yield to the distinguished gentleman from Oregon (Mr. ULLMAN) to speak out of order.

(By unanimous consent Mr. ULLMAN was allowed to proceed out of order.)

THE LATE DR. LAURENCE WOODWORTH

Mr. ULLMAN. Mr. Speaker, I appreciate the gentleman yielding to me.

Mr. Speaker, it is with a great sense of personal loss that I announce the death of Dr. Larry Woodworth. As most Members know—and he did know many Members—he was the Director of the Joint Committee on Taxation for the past 14 years. He was on the Hill with the joint committee for more than 25 years. Since February, he has been the Assistant Secretary of the Treasury for Taxation.

There is no man that I know who has had a more profound influence on the broad scope of public policy in this country than Dr. Woodworth. In addition to his work on tax law, he was a key staff person in such major undertakings as the development of the congressional budget procedure, ERISA, and a great many other legislative matters of vital importance and far-reaching effect.

His guidance to tax writers in Congress over the decades has been enormous. In his quiet way, Larry was as much an influence in shaping the tax policy of this country as any committee chairman or Treasury Secretary or President in memory. He leaves a legacy of justice to millions of Americans.

While he avoided the limelight, others knew of his work and recognized his importance, and he was awarded such high honors as the U.S. Civil Service League Award and the Rockefeller Award (sometimes called the Nobel Prize of the civil service) as a result.

These accomplishments are great. But they are no more outstanding than his contributions as a decent, understanding human being. He gave his time and assistance generously to hundreds of Members of Congress and to others who sought his help. His sense of fairness and gift for finding shared goals among those of divergent views cannot be replaced.

He was one of the most remarkable men I have known; one of the great Americans of our time. I valued his help and, much more than that, his friendship. He has had as profound an influence on my life as anyone. I am grateful for our years together.

My love and deep sympathy go to Larry's wonderful, understanding wife Margaret and to his children and grandchildren. All of us share their loss.

A memorial service for Larry will be held on Saturday morning. Further details can be obtained from the Joint Committee on Taxation.

Mr. CONABLE. Mr. Speaker, will the gentleman yield?

Mr. ULLMAN. I will be happy to yield to the gentleman from New York.

Mr. CONABLE. Mr. Speaker, I want to join in the general feeling of sorrow at Larry's passing. He not only was a fine public servant, but he was just a first-class human being. Many of us are going to miss him, while we cherish our memories of working with him. I send my love and my profound sense of personal loss to his family.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. Mr.

Speaker, I wish to join with the distinguished chairman of the House Ways and Means Committee in expressing my profound sorrow on the death of a great and dedicated man.

Mr. JONES of Oklahoma. Mr. Speaker, the Christmas season is a time of great joy, and also a time of great loss. Such a saddening loss has befallen the country with the sudden passing of Larry Woodworth from this life into the next. Larry's knowledge and honesty will be sorely missed by those both in and out of government.

Larry Woodworth was the acknowledged expert on tax law. But far from being a mere technician, Larry had the ability to relate complex issues of taxation to social and economic policies. His long hours of work and dedication while serving on the Joint Committee on Internal Revenue Taxation are legendary, and his reputation for integrity and forthrightness has never been questioned.

Beyond all this, Larry Woodworth was a friend of mine. His patience and consideration was extended to me as a freshman member of the Ways and Means Committee no less than it was to the chairman. He was a kind and effective teacher to those of us attempting to master the complex issues of taxation.

While we sometimes disagreed on matters of tax policy, Larry's competence and perseverance will be missed both by the Congress that relied on his wisdom for so long, and by the current administration that wisely sought his services. A giant has passed from our midst, and it is our extreme loss.

Mr. PICKLE. Mr. Speaker, all of us who have worked with Larry Woodworth feel a deep sense of loss at his death. Even those who have not worked with him or who never knew him will feel the loss because he is one of those servants in government no one can truly replace.

Larry Woodworth was a warm and cooperative man. He was one of the most decent individuals in all of government. And he was good. He could give a hurried and pressured Member of Congress a quick summation of any tax issue, and the Member could accept it with the confidence that it would be accurate, fair, and objective.

He clearly carried those qualities over to the Executive branch when he joined the Carter administration earlier this year.

We shall miss him as much as anybody who has ever served in the U.S. Government.

Mr. MOFFETT. Mr. Speaker, it was with a great deal of sadness that I learned of the death today of Laurence N. Woodworth, who has been serving as this country's Assistant Secretary of the Treasury for Tax Policy.

I have only recently gotten to know him professionally, largely as a result of our mutual involvement in helping to formulate national energy policy. Dr. Woodworth has testified before our Government Operations Committee and has taken an active role in the joint House-Senate conference committee now formulating the national energy policy act.

During the past few months, he has earned my respect and my admiration—he was a true professional, a recognized expert in his field. I know from my colleagues' comments that they too recognized Dr. Woodworth as a dedicated and devoted public servant. His long career, both on Capitol Hill and for the Carter administration, attest to his great value to this Nation.

I shall miss him, Mr. Speaker. All of us will miss him.

Mr. FRENZEL. Mr. Speaker, I would like to join in this tribute to Larry Woodworth, and second the remarks of the distinguished gentlemen from Oregon (Mr. ULLMAN) and New York (Mr. CONABLE).

Larry Woodworth was, indeed, a first-class human being. But he was in addition an enormously talented man whose great abilities contributed much to the people of this country.

As the top staff person to the Joint Committee on Internal Revenue Taxation for a decade and a half, he exercised extraordinary influence on changes in the tax code. As Treasury's tax policy expert, he did the same.

He was one of those rare individuals who was trusted completely by persons on both sides of the aisle, both sides of the Capitol, and at both ends of Pennsylvania Avenue.

Larry was a real gentleman who will be sorely missed by all who worked with him and by many who knew him only by his effective work.

GENERAL LEAVE

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to extend their remarks on the life, character, and public service of the late Dr. Laurence Woodworth.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. YOUNG of Texas. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from Ohio (Mr. LATTA), pending which time I yield myself such time as I may consume.

Mr. Speaker, House Resolution 916 provides for the consideration of S. 1340 in the House. The rule provides for 1 hour of general debate on the measure and the only amendments would be those offered by the floor manager of the bill unless he yielded for the purpose of further amendments. It is the intention of the Committee on Science and Technology to strike all after the enacting clause in S. 1340 and insert an amendment in the nature of a substitute which would incorporate all of the bill, S. 1181 except for certain modifications. S. 1181 was the ERDA Authorization Act for Civilian Applications that was vetoed on November 5, 1977, by the President. The modifications that will be offered to the text of S. 1811 will account for the objections that the President indicated at the time of his veto. Specifically those modifications will eliminate the funding authorization for the Clinch River breeder reactor project and language relating to that project, as well as, striking all of title V dealing with uranium enrichment services pricing which includes the one-house veto provision. Additionally the substitute to be offered changes all references to ERDA to read the Department of Energy.

The substitute provides for the funding of operational, plant, and capital expenses for the various research and development projects in the field of energy. It further provides for a grant program to foster municipal projects to convert waste to energy, establishes an automotive research and development program, and a loan guarantee program in the area of synthetic fuel production. The substitute provides for a total authorization of $6.1 billion for these vital programs.

Mr. Speaker, it is imperative that this authorization bill be acted on so that the important research and development programs in the field of energy can go forward. Therefore, Mr. Speaker, I urge the adoption of House Resolution 916 so that we might debate and vote on this important matter.

Mr. LATTA. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the rules make it in order to take from the Speaker's table S. 1340, which authorizes appropriations to the Energy Research and Development Administration for energy research, development, demonstration, and related programs, and to consider the legislation in the House. Under this procedure there will be 1 hour of debate, and the manager of the bill will control the amendment process.

By way of explanation, S. 1340 passed the Senate on June 13 but was never referred by the House for action, since it contained only nonnuclear R. & D. authority. Later the Senate passed and forwarded to the House S. 1811, which included both nuclear and nonnuclear R. & D. programs for ERDA. Meanwhile, the House passed its own ERDA authorization language which was substituted into S. 1811. Both Houses subsequently approved the conference report, and the bill was sent to the President.

On November 5 the President vetoed S. 1811 primarily because it contained funding authority for the Clinch River breeder reactor and three legislative veto provisions.

Since the authorization for the new Department of Energy was included in S. 1811, the Committee on Science and Technology is seeking to use S. 1340 as a vehicle to reconsider the language of S. 1811 minus the provisions to which the President objects. The chairman of the Committee on Science and Technology stated before the Rules Committee that he would offer an amendment to S. 1340, once it is before the House, to incorporate the text of the vetoed bill less all funding for the Clinch River project and one legislative veto provision.

The new total authorization of $6,081,445,000 is $80 million below the vetoed measure.

Mr. Speaker, I have no further requests for time.

Mr. YOUNG of Texas. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The question was taken; and the

Speaker announced that the ayes appeared to have it.

Mr. THONE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 329, nays 18, not voting 87, as follows:

Mr. Meeds with Mr. Crane.

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION TO HAVE UNTIL MIDNIGHT DECEMBER 13, 1977, TO FILE REPORT ON H.R. 8729, AIRPORT AND AIRCRAFT NOISE REDUCTION ACT

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that the Committee on Public Works and Transportation may have until midnight Tuesday, December 13, 1977, to file a report on H.R. 8729, the Airport and Aircraft Noise Reduction Act.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

GENERAL LEAVE

Mr. TEAGUE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and include extraneous matter on the Senate bill, S. 1340, Energy Research and Development Administration Authorization Act of 1977.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION AUTHORIZATION ACT OF 1977 AND 1978—CIVILIAN APPLICATIONS

Mr. TEAGUE. Mr. Speaker, pursuant to the provisions of House Resolution 916, I call up the Senate bill (S. 1340) to authorize appropriations to the Energy Research and Development Administration for energy research, development, demonstration, and related programs in accordance with section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, as amended, and for other purposes, and ask for its immediate consideration.

The Clerk read the title of the Senate bill.

The Clerk read the Senate bill, as follows:

S. 1340

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "ERDA Authorization Act of 1978—Civilian Applications".

SEC. 2. In accordance with section 261 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2017), section 305 of the Energy Reorganization Act of 1974 (42 U.S.C. 5875), and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, as amended (42 U.S.C. 5915), there is hereby authorized to be appropriated to the Energy Research and Development Administration subject to titles I and II of this Act, the following:

TITLE I—FOR NONNUCLEAR ENERGY RESEARCH, DEVELOPMENT, DEMONSTRATION, AND RELATED ACTIVITIES

OPERATING EXPENSES

SEC. 101. For operating expenses, for the following programs, a sum equal to the total of the following amounts:

(1) Conservation research and development;

Electric energy systems and energy storage:

(a) Electric energy systems, $36,700,000.

(b) Energy storage systems, $49,900,000.

End use conservation and technologies to improve efficiency:

(a) Industrial energy conservation, $40,000,000.

(b) Buildings and community systems, $56,000,000: *Provided,* That $2,000,000 of such sums are hereby authorized for a research and development program in residential gas furnaces.

(c) Transportation energy conservation, $88,000,000, of which $2,000,000 shall be available to the Alternative Fuels Utilization Program for study of automotive utilization of alcohol fuels and blends: *Provided,* That, of those funds authorized, funds as may be necessary are hereby authorized for the Energy Research and Development Administration to conduct studies to determine the feasibility of utilizing existing distillery facilities or other types of refineries including but not limited to sugar refineries, in the implementation of programs to extend the supply of gasoline by means of a mixture of gasoline and alcohol: *Provided further,* That no more than two hundred electric vehicles may be purchased within the provisions of Public Law 94–413 utilizing funds made available in this section.

(d) Improved conversion efficiency, $78,200,000.

(e) Small grants for appropriate technology, $6,000,000.

Energy extension service:

(a) Energy extension service, $8,000,000.

(2) Fossil energy development:

Coal:

(a) Liquefaction, $107,000,000.

(b) High Btu gasification, $51,200,000.

(c) Low Btu gasification, $73,900,000: *Provided,* That the sum of $40,000,000 which represents the portion of the appropriations heretofore made in the total amount of $56,000,000 for project 76–1–a (clean boiler fuel demonstration plant (A–E) and long-lead procurement) which remains unobligated and is no longer needed is hereby authorized to be made available instead, in addition to any amounts appropriated for the purposes involved pursuant to this act for the low Btu gasification program.

(d) Advanced power systems, $25,500,000.

(e) Direct combustion, $65,200,000.

(f) Advanced research and supporting technology, $45,000,000: *Provided,* That of those funds authorized, funds as may be necessary are hereby authorized for the following purpose:

(1) The Administrator shall conduct a feasibility study of the technology and the commercial applications of the process of fine-grinding of coal and dry vegetable residues to four micron-size particles for the purpose of preparing these substances as clean burning fuels.

(2) In carrying out the feasibility study, the Administrator may provide for adequate participation by individuals, corporations and private and public research facilities, colleges and universities.

(3) A report of the findings together with recommendations for advancing the technology, if deemed appropriate by the Administrator, shall be submitted to the Congress as soon as possible but not later than January 1, 1978.

(g) Demonstration plants, $50,900,000.

(h) Magnetohydrodynamics, $80,000,000.

Petroleum and natural gas:

(a) Enhanced oil recovery, $46,100,000.

(b) Enhanced gas recovery, $30,000,000.

(c) Drilling, exploration and offshore technology, $1,600,000.

(d) Processing and utilization, $1,400,000.

Oil shale and in situ technology:

(a) Oil shale, $28,000,000.

(b) In situ coal gasification, $11,000,000: *Provided,* That, of those funds authorized for fossil energy development, and funds as may be necessary are hereby authorized for the Energy Research and Development Administration to conduct a study to determine the extent of the Nation's coal reserves, the general geographic location of such reserves and the cost of extracting said reserves.

(3) Solar energy development:

(a) Thermal applications, $107,700,000.

(b) Technology support and utilization, $12,000,000.

(c) Solar electric application, $178,900,000: *Provided,* That $7,500,000 of such sum are hereby authorized for design work for small community applications.

(d) Solar Energy Research Institute and Regional Centers. Tehre is hereby authorized from funds made available under subsections (a), (b), and (c) of this section an amount no less than $10,000,000 for the operation of the Solar Energy Research Institute and its associated regional centers.

(e) Fuels from biomass, $19,500,000; and under such rules and regulations as he may establish, the Administrator is authorized to guarantee a loan or loans for the demonstration of a 50 MW wood-fueled power generating facility.

(4) Geothermal energy development:

(a) Engineering research and development, $17,000,000.

(b) Resource exploration and assessment, $17,600,000.

(c) Hydrothermal technology applications, $32,000,000.

(d) Advanced technology applications, $23,500,000.

(e) Utilization experiments, $16,000,000.

(f) Environmental control and institutional studies, $8,100,000.

(g) Low head hydroelectric demonstration, $15,000,000.

PLANT AND CAPITAL EQUIPMENT

SEC. 102. For plant and capital equipment, including construction, acquisition, or modification of facilities, including land acquisition: and acquisition and fabrication of capital equipment not related to construction, a sum of dollars equal to the total of the following amounts:

(1) Conservation Research and Development:

Project 78–1–a, high bay addition, Los Alamos Scientific Laboratory, New Mexico, $800,000.

(2) Fossil Energy Development:

Project 78–2–a, analytical research, chemistry and coal carbonization laboratory, Pittsburgh Energy Research Center, Pennsylvania, $6,600,000.

Project 78–2–b, modifications and additions to Energy Research Centers, various locations, $3,000,000.

Project 78–2–c, low Btu fuel gas small industrial demonstration plants, sites undetermined (A–E and long-lead procurement only), $6,000,000.

Project 78–2–d, solvent refined coal demonstration plant, site undetermined (A–E and long-lead procurement only), $2,000,000.

(3) Capital Equipment Not Related to Construction:

(A) Conservation research and development $6,170,000.

(B) Fossil energy development, $5,500,000.

(C) Solar energy development, $7,900,000.

(D) Geothermal energy development, $2,500,000.

AMENDMENTS TO PRIOR YEAR ACTS

SEC. 103. (a) Public Law 94–187 is amended by:

(1) Striking from subsection 101(b)(1) project 76–1–b, high Btu synthetic pipeline gas demonstration plant, the words "(A–E and long-lead procurement)" and the figure, "$20,000,000", and striking from subsection 201(b)(1) "project 76–1–b, high Btu synthetic pipeline gas demonstration plant (A–E and long-lead procurement) $5,000,000", which authorized appropriations for this project totaling $25,000,000, and substituting therefor in subsection 101(b)(1), project 76–1–b, high Btu synthetic pipeline gas demonstration plant, the figure "$220,000,000".

(2) Striking from subsection 101(b)(1), project 76–1–c, low Btu fuel gas demonstration plant, the words "(A–E and long-lead procurement)" and the figure "$15,000,000", and striking from subsection 201(b)(1) the words and figures "project 76–1–c, low Btu fuel gas demonstration plant (A–E and long-lead procurement), $3,750,000," which authorized appropriations for this project totaling $18,750,000, and substituting therefor in subsection 101(b)(1), project 76–1–c, low Btu fuel gas demonstration plant, the figure "$150,000,000".

(3) Striking from subsection 101(b)(2), project 76–2–a, five megawatt solar thermal test facility, the figure "$5,000,000", and striking from subsection 201(b)(2) the words and figures "project 76–2–a, five megawatt solar thermal test facility, $1,250,000", which authorized appropriations for this project totaling $6,250,000, and substituting therefor in subsection 101(b)(2) the figure "$21,250,000", which is an increase of $3,000,000 over the amount authorized by Public Law 94–355, as amended.

(4) Striking from subsection 101(b)(2), project 76–2–b, ten megawatt central receiver solar thermal powerplant (A–E and long-lead procurement), the words "(A–E and long-lead procurement)" and the figure "$5,000,000", and striking from subsection 201(b)(2) the words and figures "project 76–2–b, ten megawatt central receiver solar thermal powerplant (A–E and long-lead procurement), $1,250,000" which authorized appropriations for this project totaling $6,250,000, and substituting therefor in subsection 101(b)(2), the words "Barstow, California," and the figure "$61,250,000": *Provided,* That if the solar electrical generating facility hereby supported contributes electricity to a distribution network serving the public on a commercial basis and if any Federal monetary contribution is included in the rate base for the purpose of computing return on capital investment to such utilities, that portion of the capital costs derived from Federal funds and included in the rate base shall be recovered with interest from the revenues of the solar facility.

(b) Project 77–1–d, MHD component development and integration facility, authorized by Public Law 94–373, is increased by $8,200,000 for a total authorization of $13,200,000.

TITLE II—FOR NONNUCLEAR ENVIRONMENTAL RESEARCH AND DEVELOPMENT, PROGRAM MANAGEMENT AND SUPPORT, AND RELATED PROGRAMS

OPERATING EXPENSES

SEC. 201. For operating expenses for the following programs, a sum equal to the total of the following amounts:

(1) Environmental research and development:

(a) Overview and assessment, $43,010,000.

(b) Biomedical and environmental research, $143,970,000, of which $1,000,000 shall be made available to the Water Resources Council to carry out the provisions of section 13 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5912), as amended.

(2) Life sciences research and biomedical applications, $38,113,000.

(3) Program management and support:

(a) Program direction, $257,100,000.

(b) Institutional relations, $30,179,000, including funds to reimburse the National Bureau of Standards for costs incurred in carrying out the provisions of section 14 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5913), as amended; and $1,800,000 is authorized to be appropriated pursuant to this paragraph (3) for financial awards by ERDA to independent inventors for the purpose of carrying out section 14 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5913), as amended.

(c) Supporting activities, $54,460,000.

(d) International cooperation, $5,000,000.

(4) Funds to carry out the provisions of section 11 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5910) in the amount of $500,000 for the Council on Environmental Quality.

PLANT AND CAPITAL EQUIPMENT

SEC. 202. For plant and capital equipment, including construction, acquisition, or modification of facilities, including land acquisition; and acquisition and fabrication of capital equipment not related to construction, a sum of dollars equal to the total of the following amounts:

(1) Environmental Research and Development:

Project 78–9–a, modifications and additions to biomedical and environmental research facilities, various locations, $6,000,000.

(2) Program Management and Support:

Project 78–1–b, chiller modifications for energy conservation, Bendix Plant, Kansas City, Missouri, $830,000.

Project 78–1–c, process waste heat utilization, gaseous diffusion plant, Paducah, Kentucky, $5,700,000.

Project 78–19–a, program support facility, Argonne National Laboratory, Illinois (A–E and long-lead procurement only), $5,000,000.

(3) Project 78–22, Construction Planning and Design, $10,000,000.

(4) Capital Equipment Not Related to Construction:

(A) Environmental research and development, $18,825,000.

(B) Program management and support, $5,155,000.

SEC. 203. The Administrator of the Energy Research and Development Administration, or its successor agency, is hereby authorized, to the extent and in such amounts as are provided in appropriation Acts, to enter into a cooperative arrangement with an interstate pipeline organization for participation in the construction and operation of a high Btu pipeline gas demonstration plant, utilizing the HYGAS steam-oxygen process and Illinois Basin type coal.

TITLE III—GENERAL PROVISIONS

SEC. 301. Funds appropriated pursuant to titles I and II of this Act may be used for the construction or acquisition of any facilities or major items of equipment, which may be required at locations other than installations of the Administration, for the performance of research, development and demonstration activities. Title to all such facilities and items of equipment shall remain in the United States, unless the Administrator or his designee determines in writing that the research, development and demonstration authorized by this Act shall best be implemented by permitting title or other such property interests to be in an entity other than the United States.

SEC. 302. Except as otherwise provided in this Act—

(a) no amount appropriated pursuant to this Act may be used for any program in excess of the amount actually authorized for that particular program by this Act,

(b) no amount appropriated pursuant to this Act may be used for any program which has not been presented to, or requested of, the Congress,

unless (1) a period of thirty calendar days (not including any day in which either House of Congress is not in session because of adjournment of more than three calendar days to a day certain) has passed after the receipt by the appropriate committees of the House of Representatives and the Senate of notice given by the Administrator containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of such proposed action, or (2) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 303. The Administrator is authorized to start any project set forth in title I, subsections 102 (1) and (2), and in title II, subsection 202 (1) and (2), only if the currently estimated cost of that project does not exceed by more than 25 per centum the estimated cost set forth for the project. Further, the total cost of any project undertaken under these subsections shall not exceed the estimated cost set forth for that project by more than 25 per centum unless and until additional appropriations are authorized: *Provided*, That this subsection will not apply to any project with an estimated cost less than $5,000,000.

SEC. 304. Subject to the applicable requirements and limitations of this Act, when so specified in appropriations Acts amounts appropriated for the Administration pursuant to this Act for "Operating expenses" or for "Plant and capital equipment" may be merged with any other amounts appropriated for like purposes pursuant to any other Act authorizing appropriations for the Administration.

SEC. 305. When so specified in appropriations Acts, amounts appropriated pursuant to this Act for "Operating expenses" or for "Plant and capital equipment" may remain available until expended.

SEC. 306. Amounts appropriated pursuant to this Act for activities under subsections 201(3) and 202(3) are available for use, when necessary, in connection with all Administration programs.

SEC. 307. The Administrator is authorized to perform construction design services for any Administration construction project whenever (a) such construction project has been included in a proposed authorization bill transmitted to the Congress by the Administration, and (b) the Administration determines that the project is of such urgency in order to meet the needs of national defense or protection of life and property or health and safety that construction of the project should be initiated promptly upon enactment of legislation appropriating funds for its construction.

SEC. 308. When so specified in appropriations Acts, any moneys received by the Administration may be retained and used for operating expenses (except sums received from disposal of property under the Atomic Energy Community Act of 1955 and the Strategic and Critical Materials Stockpiling Act, as amended, and fees received for tests or investigations under the Act of May 16, 1910, as amended (42 U.S.C. 2301; 50 U.S.C. 98h; 30 U.S.C. 7)), notwithstanding the provisions of section 3617 of the Revised Statutes (31 U.S.C. 484), and may remain available until expended.

SEC. 309. When so specified in appropriations Acts, transfers of sums from the "Operating expenses" appropriation may be made to other agencies of the Government for the performance of the work for which the appropriation is made, and in such cases the sums so transferred, may be merged with the appropriations to which transferred.

SEC. 310. (a) Section 7(a) of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5906) is amended—

(1) by striking out "and" after the semicolon at the end of paragraph (5),

(2) by striking out the period at the end of paragraph (6) and inserting in lieu thereof "; and", and

(3) by adding at the thereof the following new paragraph:

"(7) Federal loan guarantees and commitments thereof as provided in section 19.".

(b) The Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5901, et seq.) is further amended by adding at the end thereof the following new section:

"LOAN GUARANTEES FOR ALTERNATIVE FUEL DEMONSTRATION FACILITIES

"SEC. 19. (a) It is the purpose of this section—

"(1) to assure adequate Federal support to foster a demonstration program to produce alternative fuels from coal, oil shale, and other domestic resources;

"(2) to authorize assistance, through loan guarantees under subsection (b) for construction and startup and related costs, to demonstration facilities for the conversion of domestic coal, oil shale, biomass, and other domestic resources into alternative fuels; and

"(3) to gather information about the technological, economic, environmental, and social costs, benefits, and impacts of such demonstration facilities.

"(b)(1) Except as provided in paragraph (5) of this subsection, the Administrator is authorized, in accordance with such rules and regulations as he shall prescribe after consultation with the Secretary of the Treasury, to guarantee and to make commitments to guarantee, in such manner and subject to such conditions (not inconsistent with the provisions of this Act) as he deems appropriate, the payment of interest on, and the principal balance of, bonds, debentures, notes, and other obligations issued by, or on behalf of, any borrower for the purpose of financing the construction and startup costs of demonstration facilities for the conversion of domestic coal, oil shale, biomass, and other domestic resources into alternative fuels: *Provided*, That no loan guarantee for a full sized oil shale facility shall be provided under this section until after successful demonstration of a modular facility producing between six and ten thousand barrels per day, taking into account such considerations as water usage, environmental effects, waste disposal, labor conditions, health and safety, and the socioeconomic impacts on local communities: *Provided further*, That no loan guarantee shall be available under this subsection for the manufacture of component parts for demonstration facilities eligible for assistance under this subsection.

"(2) An applicant for any financial assistance under this section shall provide information to the Administrator in such form and with such content as the Administrator deems necessary.

"(3) Prior to issuing any guarantee under this section the Administrator shall obtain the concurrence of the Secretary of the Treasury with respect to the timing, interest rate, and substantial terms and conditions of such guarantee. The Secretary of the Treasury shall insure to the maximum extent feasible that the timing, interest rate, and substantial terms and conditions of such guarantee will have the minimum possible impact on the capital markets of the United States, taking into account other Federal direct and indirect securities activities.

"(4) The full faith and credit of the United States is pledged to the payment of all guarantees issued under this section with respect to principal and interest.

"(5)(A) The Administrator is authorized, in the case of a facility for the conversion of oil shale to alternative fuels which is determined by the Administrator pursuant to the proviso in paragraph (1)(A) of this subsection, to be constructed at a modular size, to enter into a cooperative agreement with the applicant in accordance with section 8 of this Act and the other provisions of this Act to share the estimated total design and construction costs, plus operation and maintenance costs, of such modular facility. The Federal share shall not exceed 75 per centum of such costs. All receipts for the sale of any products produced during the operation of the facility shall be used to offset the costs incurred in the operation and maintenance of the facility. The provisions of subsections (d), (e), (k), (m), (p), (s), (t), (u), (v), (w), and (x) shall apply to any such modular facility. The provisions of this section shall apply to any loan guarantee for such modular facility.

"(B) After successful demonstration of the modular facility, as determined by the Administrator, the facility is eligible for financial assistance under this section for purposes of expansion to a full sized facility and the applicant may purchase the Federal interest in the modular facility as represented by the Federal share thereof by means of (i) a cash payment to the United States, or (ii) a share of the product or sales resulting from such expanded operation, as determined by the Administrator. If expansion of such facility is determined not to be warranted by the Administrator, he may, at the option of the applicant, dispose of the modular facility to the applicant at not less than fair market value, as determined by the Administrator as of the date of the disposal, or otherwise dispose of it, in accordance with applicable provisions of law, and distribute the net proceeds thereof, after expenses of such disposal, to the applicant in proportion to the applicant's share of the costs of such facility.

"(6) To the extent possible, loan guarantees shall be issued on the basis of competitive bidding among guarantee applicants in a particular technology area.

"(c) The Administrator, with due regard for the need for competition, shall guarantee or make a commitment to guarantee any obligation under subsection (b) only if—

"(1) the Administrator is satisfied that the financial assistance applied for is necessary to encourage financial participation;

"(2) the amount guaranteed to any borrower at any time does not exceed—

"(A) an amount equal to 75 per centum of the project cost of the demonstration facility as estimated at the time the guarantee is issued, which cost shall not include amounts expended for facilities and equipment used in the extraction of a mineral other than coal or shale, and in the case of coal only to the extent that the Administrator determines that the coal is to be converted to alternative fuel; and

"(B) an amount equal to 60 per centum of that portion of the actual total project cost of any demonstration facility which exceeds the project cost of such facility as estimated at the time the loan guarantee is issued;

"(3) the Administrator has determined that there will be a continued reasonable assurance of full repayment;

"(4) the obligation is subject to the condition that it not be subordinated to any other financing;

"(5) the Administrator has determined, taking into consideration all reasonably available forms of assistance under this section and other Federal and State statutes, that the impacts resulting from the proposed demonstration facility have been fully evaluated by the borrower, the Administrator, and the Governor of the affected State, and that effective steps have been taken or will be taken in a timely manner to finance community planning and development costs resulting from such facility under this section, under other provisions of law, or by other means;

"(6) the maximum maturity of the obligation does not exceed twenty years, or 90 per centum of the projected useful economic life of the physical assets of the demonstration facility covered by the guarantee, whichever is less, as determined by the Administrator;

"(7) the Administrator has determined that, in the case of any demonstration or modular facility planned to be located on Indian lands, the appropriate Indian tribe, with the approval of the Secretary of the Interior, has given written consent to such location;

"(8) the obligation provides for the orderly and ratable retirement of the obligation and includes sinking fund provisions, installment payment provisions or other methods of payments and reserves as may be reasonably required by the Administrator. Prior to approving any repayment schedule the Administrator may consider the date on which operating revenues are anticipated to be generated by the project. To the maximum extent possible repayment or provision therefor shall be required to be made in equal payments payable at equal intervals; and

"(9) the obligation provides that the Administrator shall, after a period of not less than ten years from issuance of the obligation, taking into consideration whether the Government's needs for information to be derived from the project have been substantially met and whether the project is capable of commercial operation, determine the feasibility and advisability of terminating the Federal participation in the project. In the event that such determination is positive, the Administrator shall notify the borrower and provide the borrower with not less than two nor more than three years in which to find alternative financing. At the expiration of the designated period of time, if the borrower has been unable to secure alternative financing, the Administrator is authorized to collect from the borrower an additional fee of 1 per centum per annum on the remaining obligation to which the Federal guarantee applies.

"(d) Prior to submitting a report to Congress pursuant to subsection (m) of this section on each guarantee and cooperative agreement, the Administrator shall request from the Attorney General and the Chairman of the Federal Trade Commission written views, comments, and recommendations concerning the impact of such guarantee or commitment or agreement on competition and concentration in the production of energy and give due consideration to views, comments, and recommendations received: *Provided*, That if either official, within sixty days after receipt of such request or at any time prior to the Administrator submitting such report to Congress, recommends against making such guarantee or commitment or agreement, the proposed guarantee or commitment or agreement shall be referred to the President, and the Administrator shall not do so unless the President determines in writing that such guarantee or commitment or agreement is in the national interest.

"(e)(1) As soon as the Administrator knows the geographic location of a proposed facility for which a guarantee or a commitment to guarantee or cooperative agreement is sought under this section, he shall inform the Governor of the State, and officials of each political subdivision and Indian tribe, as appropriate, in which the facility would be located or which would be impacted by such facility. The Administrator shall not guarantee or make a commitment to guarantee or enter into a cooperative agreement under subsection (b) of this section, if the Governor of the State in which the proposed facility would be located recommends that such action not be taken, unless the Administrator finds that there is an overriding national interest in taking such action in order to achieve the purpose of this section. If the Administrator decides to guarantee or make a commitment to guarantee or enter enter into a cooperative agreement despite a Governor's recommendation not to take such action, the Administrator shall communicate, in writing, to the Governor reasons for not concurring with such recommendation. This Administrator's decision, pursuant to this subsection, shall be final unless determined upon judicial review initiated by the Governor to be unlawful by the reviewing court pursuant to 5 U.S.C. 706(2) (A) through (D). Such review shall take place in the United States court of appeals for the circuit in which the State involved is located, upon application made within ninety days from the date of such decision. The Administrator shall, by regulation, establish procedures for review of, and comment on, the proposed facility by States, local political subdivisions, and Indian tribes which may be impacted by such facility, and the general public.

"(2) The Administrator shall review and approve the plans of the applicant for the construction and operation of any demonstration and related facilities constructed or to be constructed with assistance under this section. Such plans and the actual construction shall include such monitoring and other data-gathering costs associated with such facility as are required by the comprehensive plan and program under this section. The Administrator shall determine the estimated total cost of such demonstration facility, including, but not limited to, construction costs, startup costs, costs to political subdivisions and Indian tribes by such facility, and costs of any water storage facilities needed in connection with such demonstration facility, and determine who shall pay such costs. Such determination shall not be binding upon the States, political subdivisions, or Indian tribes.

"(3) There is hereby established a panel to advise the Administrator on matters relating to the program authorized by this section, including, but not limited to, the impact of the demonstration facilities on communities and States and Indian tribes, the environmental and health and safety effects of such facilities, and the means, measures, and planning for preventing or mitigating such impacts, and other matters relating to the development of alternative fuels and other energy sources under this section. The panel shall include such Governors or their designees as shall be designated by the Chairman of the National Governors Conference, Representatives of Indian tribes, industry, environmental organizations, and the general public shall be appointed by the Administrator. The Chairman of the panel shall be selected by the Administrator. No person shall be appointed to the panel who has a financial interest in any applicant applying for assistance under this section. Members of the panel shall serve without compensation. The provisions of section 106(e) of the Energy Reorganization Act of 1974 (42 U.S.C. 5816 (e)) shall apply to the panel.

"(f) Except in accordance with reasonable terms and conditions contained in the written contract of guarantee, no guarantee issued or commitment to guarantee made under this section shall be terminated, canceled, or otherwise revoked. Such a guarantee or commitment shall be conclusive evidence that the underlying obligation is in compliance with the provisions of this section and that such obligation has been approved and is legal as to principal, interest, and other terms. Subject to the conditions of the guarantee or commitment to guarantee, such a guarantee shall be incontestable in the hands of the holder of the guaranteed obligation, except as to fraud or material misrepresentation on the part of the holder.

"(g)(1) If there is a default by the borrower, as defined in regulations promulgated by the Administrator and in the guarantee contract, the holder of the obligation shall have the right to demand payment of the unpaid amount from the Administrator. Within such period as may be specified in the guarantee or related agreements, the Administrator shall pay to the holder of the obligation the unpaid interest on, and unpaid principal of, the guaranteed obligation as to which the borrower has defaulted, unless the Administrator finds that there was no default by the borrower in the payment of interest or principal or that such default has been remedied. Nothing in this section shall be construed to preclude any forebearance by the holder of the obligation for the benefit of the borrower which may be agreed upon by the parties to the guaranteed obligation and approved by the Administrator.

"(2) If the Administrator makes a payment under paragraph (1) of this subsection, the Administrator shall be subrogated to the rights of the recipient of such payment (and such subrogation shall be expressly set forth in the guarantee or related agreements), including the authority to complete, maintain, operate, lease, or otherwise dispose of any property acquired pursuant to such guarantee or related agreements, or any other property of the borrower (of a value equal to the amount of such payment) to the extent that the guarantee applies to amounts in excess of the estimated project cost under subsection (c)(2)(B), without regard to the provisions of the Federal Property and Administrative Services Act of 1949, as amended, except section 207 of that Act (40 U.S.C. 488), or any other law, or to permit the borrower, pursuant to an agreement with the Administrator, to continue to pursue the purposes of the demonstration facility if the Administrator determines that this is in the public interest. The rights of the Administrator with respect to any property acquired pursuant to such guarantee or related agreements, shall be superior to the rights of any other person with respect to such property.

"(3) In the event of a default on any guarantee under this section, the Administrator shall notify the Attorney General, who shall take such action as may be appropriate to recover the amounts of any payments made under paragraph (1) including any payment of principal and interest under subsection (h) from such assets of the defaulting borrower as are associated with the demonstration facility, or from any other security included in the terms of the guarantee.

"(4) For purposes of this section, patents, including any inventions for which a waiver was made by the Administrator under section 9 of this Act, and technology resulting from the demonstration facility, shall be treated as project assets of such facility. The guarantee agreement shall include such detailed terms and conditions as the Administrator deems appropriate to protect the interests of the United States in the case of default and to have available all the patents and technology necessary for any person selected, including, but not limited to, the Administrator, to complete and operate the defaulting project. Furthermore, the guarantee agreement shall contain a provision specifying that patents, technology, and other proprietary rights which are necessary for the completion or operation of the demonstration facility shall be available to the United States and its designees on equitable terms, including due consideration to the amount of the United States default payments. Inventions made or conceived in the course of or under such guarantee, title to which is vested in the United States under this Act, shall not be treated as project assets of such facility for disposal purposes under this subsection, unless the Administrator determines in writing that it is in the best interest of the United States to do so.

"(h) With respect to any obligation guaranteed under this section, the Administrator is authorized to enter into a contract to pay, and to pay, holders of the obligations, for and on behalf of the borrowers, from the fund established by this section, the principal and interest payments which become due and payable on the unpaid balance of such obligation if the Administrator finds that—

"(1) the borrower is unable to meet such payments and is not in default; it is in the public interest to permit the borrower to continue to pursue the purposes of such demonstration facility; and the probable net benefits to the Federal Government in paying such principal and interest will be greater than that which would result in the event of a default;

"(2) the amount of such payment which the Administrator is authorized to pay shall be no greater than the amount of principal and interest which the borrower is obligated to pay under the loan agreement; and

"(3) the borrower agrees to reimburse the Administrator for such payment on terms and conditions, including interest, which are satisfactory to the Administrator.

"(i) Regulations required by this section shall be issued within one hundred and eighty days after enactment of this section, except as provided in subsection (t) of this section. All regulations under this section and any amendments thereto shall be issued in accordance with section 553 of title 5, of the United States Code.

"(j) The Administrator shall charge and collect fees for guarantees of obligations authorized by subsection (b)(1), in amounts which (1) are sufficient in the judgment of the Administrator to cover the applicable administrative costs, and (2) reflect the percentage of projects costs guaranteed. In no event shall the fee be less than 1 per centum per annum of the outstanding indebtedness covered by the guarantee. Nothing in this subsection shall be construed to apply to community planning and development assistance pursuant to subsection (k) of this section.

"(k)(1) In accordance with such rules and regulations as the Administrator in consultation with the Secretary of the Treasury shall prescribe, and subject to such terms and conditions as he deems appropriate, the Administrator is authorized, for the purpose of financing essential community development and planning which directly result from, or are necessitated by, one or more demonstration facilities assisted under this section to—

"(A) guarantee and make commitments to guarantee the payment of interest on, and the principal balance of, obligations for such financing issued by eligible States, political subdivisions, or Indian tribes,

"(B) guarantee and make commitments to guarantee the payment of taxes imposed on such demonstration facilities by eligible non-Federal taxing authorities which taxes are earmarked by such authorities to support the payment of interest and principal on obligations for such financing, and

"(C) require that the applicant for assistance for a demonstration facility under this section advance sums to eligible States, political subdivisions, and Indian tribes to pay for the financing of such development and planning: *Provided,* That the Senate, political subdivision, or Indian tribe agrees to provide tax abatement credits over the life of the facilities for such payments by such applicant.

"(2) Prior to issuing any guarantee under this subsection, the Administrator shall obtain the concurrence of the Secretary of the Treasury with respect to the timing, interest rate, and substantial terms and conditions of such guarantee. The Secretary of the Treasury shall insure to the maximum extent feasible that the timing, interest rate, and substantial terms and conditions of such guarantee will have the minimum possible impact on the capital markets of the United States, taking into account other Federal direct and indirect securities activities.

"(3) In the event of any default by the borrower in the payment of taxes guaranteed by the Administrator under this subsection, the Administrator shall pay out of the fund established by this section such taxes at the time or times they may fall due, and shall have by reason of such payment a claim against the borrower for all sums paid plus interest.

"(4) If after consultation with the State, political subdivision, or Indian tribe, the Administrator finds that the financial assistance programs of paragraph (1) of this subsection will not result in sufficient funds to carry out the purposes of this subsection, then the Administrator may—

"(A) make direct loans to the eligible State, political subdivisions, or Indian tribes for such purposes: *Provided,* That such loans shall be made on such reasonable terms and conditions as the Administrator shall prescribe: *Provided further.* That the Administrator may waive repayment of all or part of a loan made under this paragraph, including interest, if the State or political subdivision or Indian tribe involved demonstrates to the satisfaction of the Administrator that due to a change in circumstances there will be net adverse impacts resulting from such demonstration facility that would probably cause such State, subdivision, or tribe to default on the loan; or

"(B) require that any community development and planning costs which are associated with, or result from, such demonstration facility and which are determined by the Administrator to be appropriate for such inclusion shall be included in the total cost of the demonstration facility.

"(5) The Administrator is further authorized to make grants to State, political subdivisions, or Indian tribes for studying and planning for the potential economic, environmental, and social consequences of demonstration facilities, and for establishing related management expertise.

"(6) At any time the Administrator may, with the concurrence of the Secretary of the Treasury, redeem, in whole or in part, out of the fund established by this section, the debt obligations guaranteed or the debt obligations for which tax payments are guaranteed under this subsection.

"(7) When one or more State, political subdivisions, or Indian tribes would be eligible for assistance under this subsection, but for the fact that construction and operation of the demonstration facilities occurs outside its jurisdiction, the Administrator is authorized to provide, to the greatest extent possible, arrangements for equitable sharing of such assistance.

"(8) Such amounts as may be necessary for direct loans and grants pursuant to this subsection shall be available as provided in annual authorization Acts.

"(9) The Administrator, if appropriate, shall provide assistance in the financing of up to 100 per centum of the costs of the required community development and planning pursuant to this subsection.

"(10) In carrying out the provisions of this subsection, the Administrator shall provide that title to any facility receiving financial assistance under this subsection shall vest in the applicable State, political subdivision, or Indian tribe, as appropriate, and in the case of default by the borrower on a loan guarantee such facility shall not be considered a project asset for the purposes of subsection (g) of this section.

"(l)(1) The Administrator is directed to submit a report to the Congress within one hundred and eighty days after the enactment of this section setting forth his recommendations on the best opportunities to implement a program of Federal financial assistance with the objective of demonstrating production and conservation of energy. Such report shall be updated and submitted to Congress at least annually and shall include specific comments and recommendations by the Secretary of the Treasury on the methods and procedures set forth in subparagraph (B)(viii) of this subsection, including their adequacy, and changes necessary to satisfy the objectives stated in this subsection. This report shall include—

"(A) a study of the purchase or commitment to purchase by the Federal Government, for the use by the United States, of all or a portion of the products of any alternative fuel facilities constructed pursuant to this program as a direct or an alternate form of Federal assistance, which assistance, if recommended, shall be carried out pursuant to section 7(a)(4) of this Act; and

"(B) a comprehensive plan and program to acquire information and evaluate the environmental, economic, social, and technological impacts of the demonstration program under this section. In preparing such a comprehensive plan and program, the Administrator shall consult with the Environmental Protection Agency, the Federal Energy Administration, the Department of Housing and Urban Development, the Department of the Interior, the Department of Agriculture, and the Department of the Treasury, and shall include therein, but not be limited to, the following:

"(i) information about potential demonstration facilities proposed in the program under this section;

"(ii) any significant adverse impacts which may result from any activity included in the program;

"(iii) the extent to which it is feasible to commercialize the technologies as they affect different regions of the Nation;

"(iv) proposed regulations required to carry out the purposes of this section;

"(v) a list of Federal agencies, governmental entities, and other persons that will be consulted or utilized to implement the program;

"(vi) the methods and procedures by which the information gathered under the program will be analyzed and disseminated;

"(vii) a plan for the study and monitoring of the health effects of such facilities on workers and other persons, including, but not limited to, any carcinogenic effect of alternative fuels; and

"(viii) the methods and procedures to insure that (I) the use of the Federal assistance for demonstration facilities is kept to the minimum level necessary for the information objective of this section, (II) the impact of loan guarantees on the capital markets of the United States is minimized, taking into account other Federal direct and indirect securities activities, and any economic sectors which may be negatively impacted as a result of the reduction of capital by the placement of guaranteed loans, and (III) the granting of Federal loan guarantees under this Act does not impede movement toward improvement in the climate for attracting private capital to develop alternative fuels without continued direct Federal incentives.

"(2) The Administrator shall annually submit a detailed report to the Congress concerning—

"(A) the actions taken or not taken by the Administrator under this section during the preceding fiscal year, and including, but not be limited to (i) a discussion of the status of each demonstration facility and related facilities financed under this section, including progress made in the development of such facilities, and the expected or actual production from each such facility, including byproduct production therefrom, and the distribution of such products and byproducts, (ii) a detailed statement of the financial conditions of each such demonstration facility, (iii) data concerning the environmental, community, and health and safety impacts of each such facility and the actions taken or planned to prevent or mitigate impacts, (iv) the administrative and other costs incurred by the Administrator and other Federal agencies in carrying out this program, and (v) such other data as may be helpful in keeping Congress and the public fully and currently informed about the program authorized by this section; and

"(B) the activities of the fund referred to in subsection (n) of this section during the presiding fiscal year, including a statement of the amount and source of fees or other moneys, property, or assets deposited into the funds, all payments made, the notes or other obligations issued by the Administrator, and such other data as may be appropriate.

"(3) The annual reports required by this subsection shall be a part of the annual report required by section 15 of this Act, except that the matters required to be reported by this subsection shall be clearly set out and identified in such annual reports. Such reports and the one-hundred-and-eighty-day report required in paragraph (1) of this subsection shall be transmitted to the Speaker of the House of Representatives and the House Committee on Science and Technology and to the President of the Senate and the Committee on Energy and Natural Resources of the Senate.

"(m) Prior to issuing any guarantee or commitment to guarantee or cooperative agreement pursuant to subsection (b) of this section, the Administrator shall submit to the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate a full and complete report on the proposed demonstration facility and such guarantee, agreement, or contract. Such guarantee, commitment to guarantee, cooperative agreement, or contract shall not be finalized under the authority granted by this section prior to the expiration of ninety calendar days (not including any day on which either House of Congress is not in session because of an adjournment of more than three calendar days to a day certain) from the date on which such report is received by such committees: *Provided*, That, where the cost of a demonstration facility to be assisted with a guarantee or cooperative agreement pursuant to subsection (b) of this section exceeds $50,000,000 such guarantee or commitment to guarantee or cooperative agreement shall not be finalized unless (1) the making of such guarantee or commitment or agreement is specifically authorized by legislation hereafter enacted by the Congress or (2) both Houses pass a resolution stating in substance that the Congress favors the making of such guarantee or commitment or agreement.

"(n)(1) There is hereby created within the Treasury a separate fund (hereafter in this section called the 'fund') which shall be available to the Administrator without fiscal year limitation as a revolving fund for the purpose of carrying out the program authorized by subsection (b)(1) and subsections (g), (h), and (k) of this section.

"(2) There are hereby authorized to be appropriated to the fund for administrative expenses from time to time such amounts as may be necessary to carry out the purposes of the applicable provisions of this section, including, but not limited to, the payments of interest and principal and the payment of interest differentials and redemption of debt. All amounts received by the Administrator as interest payments or repayments of principal on loans which are guaranteed under this section, fees, and any other moneys, property, or assets derived by him from operations under this section shall be deposited in the fund.

"(3) All payments on obligations, appropriate expenses (including reimbursements to other Government accounts), and repayments pursuant to opertaions of the Administrator under this section shall be paid from the fund subject to appropriations. If at any time the Administrator determines that moneys in the fund exceed the present and reasonably foreseeable future requirements of the fund, such excess shall be transferred to the general fund of the Treasury.

"(4) If at any time the moneys available in the fund are insufficient to enable the Administrator to discharge his responsibilities as authorized by subsections (b)(1), (g), and (h) of this section, the Administrator shall issue to the Secretary of the Treasury notes or other obligations in such forms and denominations, bearing such maturities, and subject to such terms and conditions as may be prescribed by the Secretary of the Treasury. Redemption of such notes or obligations shall be made by the Administrator from appropriations or other moneys available under paragraph (2) of this subsection for loan guarantees authorized by subsection (b)(1) and subsections (g), (h), and (k) of this section. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, which shall be not less than a rate determined by taking into consideration the average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection.

"(5) The provisions of this subsection do not apply to direct loans or planning grants made under subsection (k) of this section.

"(o) For the purposes of this section, the term—

"(1) 'State' means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands, American Samoa, or any territory or possession of the United States,

"(2) 'United States' means the several States, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa, and

"(3) 'borrower' or 'applicant' shall include any individual, firm, corporation, company, partnership, association, society, trust, joint venture, joint stock company, or other non-Federal entity.

"(p)(1) An applicant seeking a guarantee or cooperative agreement under subsection (b) of this section must be a citizen or national of the United States. A corporation, partnership, firm, or association shall not be deemed to be a citizen or national of the United States unless the Administrator determines that it satisfactorily meets all the requirements of section 802 of title 46, United States Code, for determining such citizenship, except that the provisions in subsection (a) of such section 802 concerning (A) the citizenship of officers or directors of a corporation, and (B) the interest required to be owned in the case of a corporation, association, or partnership operating a vessel in the coastwise trade, shall not be applicable.

"(2) The Administrator, in consultation with the Secretary of State, may waive such requirements in the case of a corporation, partnership, firm, or association, controlling interest in which is owned by citizens of countries which are participants in the International Energy Agreement.

"(q) No part of the program authorized by this section shall be transferred to any other agency or authority, except pursuant to Act of Congress enacted after the date of enactment of this section.

"(r) Inventions made or conceived in the course of or under a guarantee authorized by this section shall be subject to the title and waiver requirement and conditions of section 9 of this Act.

"(s) Nothing in this section shall be construed as affecting the obligations of any person receiving financial assistance pursuant to this section to comply with Federal and State environmental, land use, water, and health and safety laws and regulations or to obtain applicable Federal and State permits, licenses, and certificates.

"(t) The information maintained by the Administrator under this section shall be made available to the public subject to the provision of section 552 of title 5, United States Code, and section 1905 of title 18, United States Code, and to other Government agencies in a manner that will facilitate its dissemination: *Provided*, That upon a showing satisfactory to the Administrator by any person that any information, or portion thereof obtained under this section by the Administrator directly or indirectly from such person would, if made public, divulge (1) trade secrets or (2) other proprietary information of such person, the Administrator shall not disclose such information and disclosure thereof shall be punishable under section 1905 of title 18, United States Code: *Provided further*, That the Administrator shall, upon request, provide such information to (A) any delegate of the Administrator for the purpose of carrying out this Act, and (B) the Attorney General, the Secretary of Agriculture, the Secretary of the Interior, the Federal Trade Commission, the Federal Energy Administration, the Environmental Protection Agency, the Federal Power Commission, the General Accounting Office, other Federal agencies, or heads of other Federal agencies, when necessary to carry out their duties and responsibilities under this and other statutes, but such agencies and agency heads shall not release such information to the public. This section is not authority to withhold information from Congress, or from any committee of Congress upon request of the Chairman. For the purposes of this subsection, the term 'person' shall include the borrower.

"(u) Notwithstanding any other provision of this section, the authority provided in this section to make guarantees or commitments to guarantee or enter into cooperative agreements under subsection (b)(1), to make guarantees or commitments to guarantee, or to make loans or grants, under subsection (k), to make contracts under subsection (h), and to use fees and receipts collected under subsections (b) and (j) of this section, and the authorities provided under subsection (n) of this section, shall be effective only to the extent provided, without fiscal year limitation, in appropriation Acts enacted after the date of enactments of this section.

"(v) No person in the United States shall on the grounds of race, color, religion, national origin, or sex, be excluded from participation in, be denied benefits of, or be subject to discrimination under any program or activity funded in whole or in part with assistance made available under this section: *Provided*, That Indian tribes are exempt from the operation of this subsection: *Provided further*, That such exemption shall be limited to the planting and provision of public facilities which are located on reservations and which are provided for members of the affected Indian tribes as the primary beneficiaries.

"(w) In carrying out his functions under this section, the Administrator shall provide a realistic and adequate opportunity for small business concerns to participate in the program to the optimum extent feasible consistent with the size and nature of each project.

"(x)(1)(A) Recipients of financial assistance under this section shall keep such records and other pertinent documents, as the Administrator shall prescribe by regulation, including, but not limited to, records which fully disclose the disposition of the proceeds of such assistance, the cost of any facility, the total cost of the provision of public facilities for which assistance was used and such other records as the Administrator may require to facilite an effective audit. The Administrator and the Comptroller General of the United States or their duly authorized representatives shall have access, for the purpose of audit, to such records and other pertinent documents.

"(B) Within 6 months after the date of enactment of this section and at 6-month intervals thereafter, the Comptroller General of the United States shall make an audit of recipients of financial assistance under this section. The Comptroller General may prescribe such regulations as he deems necessary to carry out this subparagraph.

"(2) All laborers and mechanics employed by contractors or subcontractors in the performance of construction work financed in whole or in part with assistance under this section shall be paid wages at rates not less than those prevailing on similar construction on the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a—276a-5). The Secretary of Labor shall have, with respect to such labor standards, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267) and section 2 of the Act of June 13, 1934, as amended (48 Stat 948; 40 U.S.C. 276 (c)).

"(y) For purposes of this section 'biomass' shall include, but is not limited to, animal and timber waste, urban and industrial waste, sewerage sludge, and oceanic and terrestrial crops.".

SEC. 311. In order to provide economic farm units to qualifying farmers whose land is economically infeasible to reclaim from damages resulting from the Teton flood of June 5, 1976, and who are unable to find suitable replacement land for their flood damaged farm, and in order to restore the economic and agricultural base of the flood damaged region, there is hereby transferred 5.955 acres of land, hereinafter described, in the State of Idaho presently under the jurisdiction of the Energy Research and Development Administration, to the Secretary of the Interior who, acting through the Bureau of Reclamation, shall make such lands available for sale to qualifying farmers according to the terms hereafter provided.

Part I. As used in this Act, the term:

(a) "Teton flood" means the flood resulting from the collapse of Teton Dam of the Lower Teton Division of the Teton Basin Federal Reclamation Project on June 5. 1976.

(b) "Energy Research and Development Administration land" means those public and acquired lands in the State of Idaho identified as sections numbered fourteen (14), twenty-three (23), twenty-four (24), twenty-five (25), and thirty-six (36), in township six (6) north, of range thirty-three (33) east of the Boise meridian; sections numbered nineteen (19), thirty (30), and thirty-one (31) in township six (6) north, of range thirty-four (34) east of the Boise meridian; and the southeast quarter, the south half of the northeast quarter, the east half of the southwest quarter and the southeast quarter of the northwest quarter, of section numbered eight (8) and the south half and the south half of the north half of section numbered nine (9) in township five (5) north, of range thirty-four (34) east of the Boise meridian, all situated in the county of Jefferson and State of Idaho, and containing 5,955 acres, more or less, which would be transferred for the purposes of this Act.

(c) "Qualifying farmer" means the resident, owner-operator of a farm who resides in the immediate locality, whose livelihood is derived from his farming operation and whose land was damaged due to the collapse of the Teton Dam on June 5, 1976, to the extent that in the opinion of the Secretary of the Interior, it is not economically feasible to reclaim such land so that it produces an income comensurate with that earned prior to the Teton flood.

(d) "Irrigable land" means farm land that is suitable for irrigated agriculture and has been certified as irrigable by the Secretary of the Interior.

Part II. For a period of not more than five years after transfer to the Bureau of Reclamation, the land heretofore described shall be available for purchase by those who, on or before October 1, 1978, are determined to be qualifying farmers pursuant to regulations issued in accordance with part V of this Act by the Secretary of the Interior.

Part III. Energy Research and Development Administration land as described in part I(b) of this Act shall be certified as irrigable by the Secretary of the Interior, and lands so certified shall be made available in a manner to be prescribed by the Secretary for purchase by qualifying farmers at its current fair market value as determined by a board of appraisers composed of a Federal appraiser, a State appraiser, and one appraiser from the disaster region: *Provided*, That irrigable land transferred to a single ownership shall not exceed 160 acres of class I land as defined by the Secretary or the equivalent thereof in other land classes as determined by the Secretary. The United States, through the Secretary, shall convey fee simple title of the Energy Research and Development Administration land to the qualifying farmer. The cost of developing the replacement land for farming shall be borne by the qualifying farmer who purchases the land.

Part IV. Any part of the Energy Research and Development Administration land remaining in the possession of the Bureau of Reclamation at the end of the five year period, except land needed for public rights-of-way, as determined by the Secretary, shall be returned to the Energy Research and Development Administration.

Part V. Within ninety days after the enactment of this Act the Secretary shall prescribe and publish in the Federal Register such rules and regulations as may be necessary and proper to carry out the provisions of this Act.

Part VI. Full recovery for the loss of all or part of flood-damaged farms shall be obtained by owners pursuant to the Teton Dam Disaster Assistance Act of 1976, Public Law 94-400, 94 Stat. 1211, and the Supplemental Appropriation Act of 1976, Public Law 94-438, 90 Stat. 1415.

Part VII. Actions taken pursuant to this Act are in response to emergency conditions and depend for their effectiveness upon their prompt completion and, therefore, are deemed not only to be major Federal actions significantly affecting the quality of the human environment for purposes of the National Environmental Policy Act of 1969 (83 Stat. 852, as amended, 42 U.S.C. 4321).

Part VIII. There is hereby authorized to be appropriated such sums as may be necessary for the purposes of administration of this Act.

AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. TEAGUE

Mr. TEAGUE. Mr. Speaker, I offer an amendment in the nature of a substitute.

The Clerk read as follows:

Amendment in the nature of a substitute offered by Mr. TEAGUE: Strike all after the enacting clause and insert the following:

"That this Act may be cited as the 'Department of Energy Act of 1978—Civilian Applications'."

SEC. 2. In accordance with section 261 of the Atomic Energy Act of 1954 (42 U.S.C. 2017), section 305 of the Energy Reorganization Act of 1974 (42 U.S.C. 5875), and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5915), there is hereby authorized to be appropriated to the Department of Energy, for energy research, development and demonstration, and related activities, the sum of $6,081,445,000.

TITLE I—ENERGY RESEARCH, DEVELOPMENT, AND DEMONSTRATION, AND RELATED ACTIVITIES

OPERATING EXPENSES

SEC. 101. For "Operating expenses", for the following programs, a sum of dollars equal to the total of the following amounts:

Fossil Energy Development

(1) Coal:

(A) Coal liquefaction, $107,000,000.

(B) High Btu gasification (coal), $51,200,000.

(C) Low Btu gasification (coal), $73,900,000.

(D) Advanced power systems, $25,500,000.

(E) Direct combustion (coal), $65,200,000.

(F) Advanced research and supporting technology, $50,000,000: *Provided*, That of those funds authorized, funds as may be necessary are hereby authorized for the following purpose: The Secretary of Energy shall conduct a feasibility study of the technology and the commercial applications of the process of fine grinding of coal and dry vegetable residues for the purpose of preparing these substances as clean burning fuels.

(G) Demonstration plants and major test facilities (coal), $60,900,000.

(H) Magnetohydrodynamics, $70,800,000: *Provided*, That at least 5 percent of the amount appropriated for magnetohydrodynamics shall be expended for closed cycle technology.

(2) Petroleum and natural gas:

(A) Enhanced oil recovery, $46,100,000.

(B) Enhanced gas recovery, $30,000,000.

(C) Drilling, exploration and offshore technology, $7,600,000.

(D) Processing and utilization, $1,400,000.

(3) Oil shale and in situ technology:

(A) Oil shale, $28,000,000.

(B) In situ coal gasification, $19,000,000.

Solar Energy Development

(4) Thermal applications, $104,700,000, including $94,400,000 for heating and cooling of buildings.

(5) Fuels from biomass, $20,500,000; and under such rules and regulations as he may establish, the Department of Energy is authorized to guarantee a loan or loans for the demonstration of a 50 MW wood-fueled power generating facility.

(6) Other Solar Energy Programs, $219,700,000, including $7,000,000 for a parallel design of a 1500 kilowatt wind energy conversion system and the production of two test units, and $203,700,000 for other solar electric applications: *Provided*, That $7,500,000 of such sum is hereby authorized for design work for small community applications.

Geothermal Energy Development

(7) Engineering research and development, $15,500,000.

(8) Resource exploration and assessment, $17,600,000.

(9) Hydrothermal technology applications, $28,000,000.

(10) Advanced technology applications, $24,300,000.

(11) Utilization experiments, $16,000,000.

(12) Environmental control and institutional studies, $8,100,000.

(13) Low head hydroelectric program, $15,000,000.

Conservation Research and Development

(14) Electric energy systems and energy storage:

(A) Electric energy systems, $36,800,000.

(B) Energy storage systems, $48,500,000.

(15) End use conservation and technologies to improve efficiency:

(A) Industrial energy conservation, $38,000,000.

(B) Buildings and community systems, $59,500,000: *Provided*, That $2,000,000 of such sum are hereby authorized for a research and development program in residential gas and oil furnaces.

(C) Transportation energy conservation, $87,000,000, of which $1,000,000 shall be available to the Alternative Fuels Utilization Program for study of automotive utilization of alcohol fuels and blends: *Provided*, That, of those funds authorized for the Alternative Fuel Utilization Program, funds as may be necessary are hereby authorized for the Department of Energy to conduct studies to determine the feasibility of utilizing existing distillery facilities or other types of refineries including but not limited to sugar refineries, in the implementation of programs to extend the supply of gasoline by means of a mixture of gasoline and alcohol.

(D) Improved conversion efficiency, $69,700,000.

(16) Energy extension service, $8,000,000.

(17) Small grants for appropriate technology, $8,000,000.

Environment and Safety Research and Development

(18) Environmental and Safety Research and Development:

(A) Overview and Assessment, $50,010,000.

(B) Environmental Research, $143,970,000.

(C) Life Sciences Research, $38,113,000.

(D) Decontamination and Decommissioning, $19,000,000.

Nuclear Research and Development

(19) Magnetic fusion, $207,900,000.

(20) Fuel cycle research and development, $363,885,000, including $20,000,000 for international spent fuel disposition, pursuant to section 107 and including $13,000,000 for research, development, assessment, evaluation, and other activities at the Barnwell Nuclear Fuels Plant related to alternative fuel cycle technologies, safeguard systems, spent fuel storage and waste management, except that none of the authorized funds may be used for operations of the plant to process spent fuel from reactors.

(21) Liquid metal fast breeder reactor, $333,300,000: *Provided*, That $5,000,000 of such sums are hereby authorized for research and development on means to reduce the ability to divert plutonium from its intended purposes and to increase the detectability of plutonium if it should be so diverted.

(22) Nuclear research and applications, $228,829,000.

(23) Light water reactor safety facilities, $24,000,000.

(24) High energy physics, nuclear physics, and basic energy sciences, $413,394,000.

(25) Nuclear materials security and safeguards, $40,106,000.

(26) Uranium enrichment, $989,185,000.

All Other Programs, $444,604,000, including—

(27) (i) Not more than $1,000,000 for the Water Resources Council to carry out the provisions of section 13 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5912);

(ii) Funds to carry out the provisions of section 11 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5910), in the amount of $500,000 for the Council on Environmental Quality; and

(iii) Program management and support:

(a) Program direction, $222,900,000.

(b) Institutional relations, $34,179,000, including funds to reimburse the National Bureau of Standards for costs incurred in carying out the provisions of section 14 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5913), as amended and including $1,800,000, is authorized to be appropriated pursuant to this paragraph (iii) for financial awards by the Department of Energy to independent inventors for the purpose of carrying out section 14 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5913) as amended.

(c) Supporting activities, $37,460,000.

(d) International cooperation, $5,000,000

Prior Year Authorizations

(28) The sum of $40,000,000 which represents the portion of the appropriations heretofore made in the total amount of $56,000,000 for project 76-1-a (clean boiler fuel demonstration plant (A-E) and long-lead procurement) which remains unobligated and is no longer needed is hereby authorized to be made available instead, in addition to any amounts appropriated for the purposes involved pursuant to this Act for the low Btu gasification program.

PLANT AND CAPITAL EQUIPMENT

SEC. 102. (a) For "Plant and capital equipment", including construction, acquisition, or modification of facilities, including land acquisition; and acquisition and fabrication of capital equipment not related to construction, a sum of dollars equal to the total of the following amounts:

(1) Conservation Research and Development:

(A) Project 78-1-a, high bay addition, Los

Alamos Scientific Laboratory, New Mexico, $800,000.

(2) Fossil Energy Development:

(A) Project 78-2-a, analytical research, chemistry and coal carbonization laboratory, Pittsburgh Energy Research Center, Pennsylvania, $6,600,000.

(B) Project 78-2-b, modifications and additions to Energy Research Centers, various locations, $3,000,000.

(C) Project 78-2-c, low Btu fuel gas small industrial demonstration plants, sites undetermined (A-E and long-lead procurement only), $6,000,000.

(D) Project 78-2-d, solvent refined coal demonstration plant, site undetermined (total estimated cost is $300,000,000, including the Federal share thereof), $30,000,000.

(3) Magnetic Fusion:

(A) Project 78-3-a, a mirror fusion test facility, Lawrence Livermore Laboratory, California, $94,200,000.

(B) Project 78-3-b, fusion materials irradiation test facility, Hanford Engineering Development Laboratory, Washington (A-E and long-lead procurement), $14,400,000.

(4) Fuel Cycle Research and Development:

(A) Project 78-3-a, a mirror fusion test tional waste terminal storage program, site undetermined (land acquisition, A-E and long-lead procurement), $10,000,000.

(B) Project 78-5-b, liquid metal fast breeder reactor integrated prototype equipment test facility, Oak Ridge National Laboratory, Oak Ridge, Tennessee (A-E and long-lead procurement only), $3,000,000.

(C) Project 78-5-c, advanced isotope separation facility, site undetermined (A-E only), $3,500,000.

(5) Liquid Metal Fast Breeder Reactor:

(A) Project 78-6-a, modifications to reactors, $8,700,000.

(B) Project 78-6-b, safeguards and security upgrading, Idaho Falls, Idaho and Chicago, Illinois, $4,935,000.

(C) Project 78-6-c, safety research experimental facility, Idaho National Engineering Laboratory, Idaho (A-E, long-lead procurement and limited construction only), $20,100,000.

(D) Project 78-6-d, experimental breeder reactor II modification, Idaho Falls, Idaho (A-E and selected long-lead procurement only), $3,100,000.

(E) Project 78-6-e, modifications to facilities, Liquid Metal Engineering Center, Santa Susanna, California (A-E only), $4,000,000.

(F) Project 78-6-j, fuels and materials examination facility, Hanford Engineering Development Laboratory, Washington, $134,800,000.

(G) Project 78-7-a, modifications to utility system 300 area, Hanford Engineering Development Laboratory, Washington, $3,600,000.

(H) Project 78-7-b, test reactor area steam distribution system upgrade, Idaho National Engineering Laboratory, Idaho, $1,100,000.

(6) Light Water Reactor Safety Facilities:

(A) Project 78-8-a, upgrade Test Area North hot shop facility, Idaho National Engineering Laboratory, Idaho, $3,400,000.

(7) Environmental Research and Development:

(A) Project 78-9-a, modifications and additions to biomedical and environmental research facilities, various locations, $6,000,000.

(8) High Energy Physics:

(A) Project 78-10-a, accelerator improvements and modifications, various locations, $4,500,000.

(B) 78-10-b, proton-proton intersecting storage accelerator facility, Brookhaven National Laboratory, $10,500,000.

(C) Project 78-11-a, master substation reliability and capacity improvements, Stanford Linear Accelerator Center, California, $1,700,000.

(9) Nuclear Physics:

(A) Project 78-12-a, accelerator and reactor improvements and modifications, various locations, $1,900,000.

(B) Project 78-12-b, high intensity uranium beams, Lawrence Berkeley Laboratory, California, $6,000,000.

(10) Basic Energy Sciences:

(A) Project 78-13-a, national synchrotron light source, Brookhaven National Laboratory, New York, $24,000,000.

(B) Project 78-13-b, combustion research facility, Sandia Laboratories, Livermore, California, $9,400,000.

(11) Uranimum Enrichment:

(A) Project 78-14-a, centrifuge facilities modifications, various locations, $30,000,000.

(B) Project 78-14-b, process control modifications, plants, various locations, $17,400,000.

(C) Project 78-15-a, water system improvements, gaseous diffusion plant, Paducah, Kentucky, $4,500,000.

(12) Program Management and Support:

(A) Project 78-1-b, chiller modifications for energy conservation, Bendix Plant, Kansas City, Missouri, $830,000.

(B) Project 78-1-c, process waste heat utilization, gaseous diffusion plant, Paducah, Kentucky, $5,700,000.

(C) Projects 78-19-a, program support facility, Argonne National Laboratory, Illinois (A-E and long-lead procurement only), $5,000,000.

(13) Project 78-21, General Plant Projects, $44,265,000.

(14) Project 78-22, Construction Planning and Design, $10,000,000.

(15) Capital Equipment Not Related to Construction:

(A) Conservation research and development, $8,670,000.

(B) Fossil energy development, $5,500,000.

(C) Solar energy development, $7,900,000.

(D) Geothermal energy development, $2,500,000.

(E) Magnetic fusion, $27,600,000.

(F) Fuel cycle research and development, $25,300,000.

(G) Liquid metal fast breeder reactor, $35,650,000.

(H) Nuclear research and applications, $18,595,000.

(I) Light water reactor safety facilities, $800,000.

(J) High energy physics, nuclear physics, and basic energy sciences, $61,300,000.

(K) Nuclear materials, security and safeguards, $2,794,000.

(L) Uranium enrichment, $19,000,000.

(M) Environmental research and development, $19,025,000.

(N) Program management and support, $4,955,000.

CHANGES TO PRIOR YEAR AUTHORIZATIONS

(b)(1) There is authorized an additional sum of $100,000,000 for the process equipment modifications, gaseous diffusion plants (project 71-1-f), authorized by section 101(b)(1) of Public Law 91-273 (for a total project authorization of $920,000,000).

(2) There is authorized an additional sum of $42,700,000 for the cascade uprating program, gaseous diffusion plants (project 74-1-g), authorized by section 101(b)(1) of Public Law 93-60 (for a total project authorization of $460,000,000).

(3) There is authorized an additional sum of $30,000,000 for the high Btu synthetic pipeline gas demonstration plant (project 76-1-b) authorized by section 101(b)(1) of Public Law 94-187 (for a total project authorization of $55,000,000).

(4) There is authorized an additional sum of $131,250,000 for the low Btu fuel gas demonstration plant (project 76-1-c) authorized by section 101(b)(1) of Public Law 94-187 (for a total project authorization of $150,000,000).

(5) There is authorized an additional sum of $41,000,000 for the ten megawatt central receiver solar thermal powerplant, Barstow, California (project 76-2-b), authorized by section 101(b)(2) of Public Law 94-187 (for a total project authorization of $47,250,000): *Provided*, That if the solar electrical generating facility hereby supported contributes electricity to a distribution network serving the public on a commercial basis and if any Federal monetary contribution is included in the rate base for the purpose of computing return on capital investment to such utilities, that portion of the capital costs derived from Federal funds and included in the rate base shall be recovered with interest from the revenues of the solar facility.

(6) There is authorized an additional sum of $24,000,000 for the Tokamak fusion test reactor, Princeton Plasma Physics Laboratory, Plainsboro, New Jersey (project 76-5-a), authorized by section 101(b)(5) of Public Law 94-187 (for a total project authorization of $238,600,000).

(7) There is authorized an additional sum of $1,750,000 for the conversion of existing steamplants to coal capability, gaseous diffusion plants and Feed Materials Production Center, Fernald, Ohio (project 76-8-e), authorized by section 101(b)(8) of Public Law 94-187 (for a total project authorization of $15,250,000).

(8) There is authorized an additional sum of $107,630,000 for the enriched uranium production facilities, gas centrifuge (project 76-8-g), authorized by section 101(b)(8) of Public Law 94-187 (for a total project authorization of $362,630,000).

(9) There is authorized an additional sum of $5,500,000 for the MHD component development and integration facility (project 77-1-d) authorized by Public Law 94-373 (for a total project authorization of $13,200,000).

(10) There is authorized an additional sum of $5,000,000 for the high performance fuel laboratory, Richland, Washington (A-E only) (project 77-4-c) (for a total project authorization of $6,500,000).

(11) There is authorized an additional sum of $23,000,000 for the fuel storage facility, Richland, Washington (project 77-4-d) (for a total project authorization of $30,000,000).

(12) There is authorized an additional $3,200,000 for the 14 Mev intense neutron source facility, Los Alamos Scientific Laboratory, New Mexico (project 76-5-b) authorized by Public Law 94-187 (for a total project authorization of $25,300,000).

SEC. 103. Public Law 93-276, as amended, is further amended by rescinding therefrom authorization for project 75-5-g, molten salt breeder reactor (preliminary planning preparatory to possible future demonstration project), $1,500,000, except for any funds heretofore obligated.

SEC. 104(a). Notwithstanding any other provision of law, jurisdiction over matters transferred to the Department of Energy from the Energy Research and Development Administration which on the effective date of such transfer were required by law, regulation, or administrative order to be made on the record after an opportunity for an agency hearing may be assigned to the Federal Energy Regulatory Commission or retained by the Secretary at his discretion.

(b) Notwithstanding any other provision of law, the Secretary of Energy shall not be required to delegate to the Administrator of the Energy Information Administration any energy research, development, and demonstration function vested in the Secretary, pursuant to the Atomic Energy Act, the Federal Nonnuclear Energy Research and Development Act, the Geothermal Research, Development and Demontrastion Act, the Electric and Hybrid Vehicle Research, Development and Demonstration Act, the Solar Heating and Cooling Demonstration Act, the Solar Energy Research, Development and Demonstration Act, and the Energy Reorganization Act. Additionally, the Secretary may utilize the capabilities of the Energy Information Administration as he deems appropriate for the conduct of such programs.

(c) As part of the Department of Energy's responsibility to keep the Congress fully and currently informed, the Secretary shall make the following reports:

(i) any proposal by the Secretary of the Department of Energy to terminate or make major changes in activities of the Government-owned and contractor-operated facilities, the national laboratories, energy research centers and the operations offices managing such laboratories, shall not be implemented until the Secretary transmits the proposal, together with all pertinent data, to the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate, and waits a period of thirty calendar days (not including any day on which either House of Congress is not in session because of an adjournment of more than three calendar days to a day certain) from the date on which such report is received by such committees; and

(ii) by January 31, 1978, the Secretary shall file a full and complete report on each such proposal which he has implemented, as described in the preceding paragraph, and any major program structure change with the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate.

SEC. 105. (a) The Secretary of Energy shall prepare and submit to the Congress within one year after the date of the enactment of this Act a study which considers the available options, including, but not limited to—

(1) Federal technical and financial aid in support of decommissioning high level waste disposal operations at the Western New York Nuclear Service Center;

(2) Federal operation of the Western New York Nuclear Service Center for the purposes of decommissioning existing facilities and disposing of existing high level wastes, including a demonstration program for the solidification of high level wastes for permanent burial;

(3) permanent Federal ownership of and responsibility for all or part of the Western New York Nuclear Service Center, and Federal receipt of the license from the present co-licensees; and

(4) use of the Western New York Nuclear Service Center for other purposes.

(b) Preparation of such study shall be in cooperation with the Nuclear Regulatory Commission and other Federal agencies, the State of New York, the industrial participants, and the public, and the Secretary of Energy shall conduct informational public hearings (in lieu of any formal administrative hearings) prior to completion of the study. The study shall recommend allocation of existing and future responsibilities among the Federal Government, the State of New York, and present industrial participants in the Western New York Nuclear Service Center.

(c) Ninety days prior to submission of the study to the Congress the Secretary of Energy shall release the proposed study for comment by interested parties, and such comments as are received shall be submitted as attachments to the final study submitted to the Congress.

(d) Nothing in this section shall be construed as intending to commit the Federal Government to any new assistance or participation in the Western New York Nuclear Service Center, nor as relieving any party of any duties or responsibilities under any law, regulation, or contract to provide for the safe storage of nuclear waste.

(e) For the purpose of carrying out the provisions of this section, there is included in subsection 101(20) of this Act authorization of appropriations in the amount of $1,000,000.

SEC. 106. (a) The Department of Energy shall conduct a study of the Barnwell Nuclear Fuel Plant located in South Carolina to determine if that facility may be utilized in support of the nonproliferation objectives of the United States.

(b) The study required under subsection (a) shall—

(1) include an evaluation of the multinational and international management options available for utilizing the Barnwell facility;

(2) include an evaluation of how Barnwell facility might be used to contribute to the INFCE, including preliminary studies on siting and design for adajacent facilities to the Barnwell Separations Plant to solidify liquid waste and mixed-oxide evolving from the chemical separations process (these preliminary efforts being consistent with similar efforts undertaken as part of the INFCE);

(3) include an evaluation of a possible role for the IAEA in utilization of Barnwell facility for international non-proliferation programs;

(4) include an evaluation of the means by which the Barnwell facility could be used in demonstration of improved safeguards equipment and proceedings;

(5) include an evaluation of how the Barnwell facility can be used to complement the U.S.-approved research and development program at the Japanese Tokai Mura Reprocessing Plant, and non-proliferation research activities to be undertaken at the British Windscale Reprocessing Plant; and

(6) include an evaluation of whether and how the Barnwell facility might be transferred to the Federal Government.

(c) In carrying out the study required under subsection (a) due consideration shall be given to the impact which the effective and efficient use of resources and the independence of resource supply can have in assuring our national security objectives.

(d) The study shall be completed and a report submitted to the Congress not later than six months after the date that funds are appropriated for carrying out the purposes of this section. In addition, the report shall include recommendations and funding requirements to implement recommended programs resulting from such study.

(e) For the purpose of carrying out the provisions of this section, there is included in subsection 101(20) of this Act an authorization of appropriations in the amount of $1,000,000.

SEC. 107. The Department of Energy is hereby authorized to undertake studies, in cooperation with other nations, on a multinational or international basis designed to determine the general feasibility of expanding capacity of existing spent fuel storage facilities; to enter into agreements, subject to the consent of the Congress (by joint or concurrent resolution or legislation hereafter enacted), with other nations or groups of nations, for providing appropriate support to increase international or multinational spent fuel storage capacity; to conduct studies on the feasibility of establishing regional storage sites; and to conduct studies on international transportation and storage systems. For the purpose of carrying out the provisions of this section, there is included in subsection 101(20) of this Act authorization of appropriations in the amount of $20,000,000: *Provided,* notwithstanding any other provision of law, that none of the funds made available to the Secretary of Energy under any other authorization or appropriation Act shall be used, directly or indirectly, for the repurchase, transportation or storage of any foreign spent nuclear fuel (including any nuclear fuel irradiated in any nuclear power reactor located outside of the United States and operated by any foreign legal entity, government or nongovernment, regardless of the legal ownership or control of the fuel or the reactor, and regardless of the origin or licensing of the fuel or the reactor, but not including fuel irradiated in a research reactor, and not including fuel irradiated in a power reactor if the President determines that (1) use of funds for repurchase, transportation or storage of such fuel is required by an emergency situation, (2) it is in the interest of the common defense and security of the United States to take such action, and (3) he notifies the Congress of the determination and action, with a detailed explanation and justification thereof, as soon as possible) unless the President formally notifies, with the report information specified herein, the Committee on Energy and Natural Resources of the Senate and the Committee on Energy and Natural Resources of the Senate and the Committee on Science and Technology of the House of Representatives of such use of funds thirty calendar days, during such time as either House of Congress is in session, before the commitment, expenditure, or obligation of such funds; and provided further, notwithstanding any other provision of law, that none of the funds appropriated pursuant to this Act or any other funds made available to the Secretary of Energy under any other authorization or appropriation Act shall be used, directly or indirectly, for the repurchase, transportation, or storage of any such foreign spent nuclear fuel for storage or other disposition, interim or permanent, in the United States, unless the use of the funds for that specific purpose has been (1) previously and expressly authorized by Congress in legislation hereafter enacted, (2) previously and expressly authorized by a concurrent resolution, or (3) the President submits a plan for such use, with the report information specified herein, 30 days during which the Congress is in continuous session, as defined in the Impoundment Control Act of 1974, prior to such use and neither House of Congress approves a resolution of disapproval of the plan prior to the expiration of the aforementioned thirty day period. If such a resolution of disapproval has been introduced, but has not been reported by the Committee on or before the twentieth day after transmission of the Presidential message, a privileged motion shall be in order in the respective body to discharge the Committee from further consideration of the resolution and to provide for its immediate consideration, using the procedures specified for consideration of an impoundment resolution in section 1017 of the Impoundment Control Act of 1974 (31 U.S.C. 1407). Any report or plan proposed under this proviso shall include information and any supporting documentation thereof relating to policy objectives, technical description and discussion, geographic information, cost data, justification and projections, legal and regulatory considerations, environmental impact information and any related bilateral or international agreements, arrangements or understandings; and provided further that nothing contained in this Section shall be construed in any Executive Branch action, administrative proceeding, regulatory proceeding, or legal proceeding as being intended to delay, modify, or reverse the Memorandum and Order of the Nuclear Regulatory Commission of June 28, 1977 for the issuance of License No. XSNM-845 to the agent-applicant for the Government of India and the subsequent export thereby licensed of the special nuclear material to be used as fuel for the Tarapur Atomic Power Station or any other Order of the Nuclear Regulatory Commission to issue a license for the export of special nuclear material and subsequent exports thereby licensed, or any consideration by the Nuclear Regulatory Commission of a license application for the export of special nuclear material.

TITLE II—GENERAL PROVISIONS

SEC. 201. Title I of the Energy Reorganization Act of 1974 is amended by adding at the end thereof the following new section:

"PROVISIONS APPLICABLE TO ANNUAL AUTHORIZATION ACTS

"SEC. 111. (a) All appropriations made to the Energy Research and Development Administration of the Administrator shall, except as otherwise provided by law, be subject to annual authorization in accordance with section 261 of the Atomic Energy Act of 1954, section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and section 305 of this Act. The provisions of this section shall apply with respect to appropriations made pursuant to the Act providing such authorization (hereinafter in this section referred to as 'annual authorization Acts').

"(b)(1) Funds appropriated pursuant to an annual authorization Act for 'Operating expenses' may be used for—

"(A) the construction or acquisition of any facilities, or major items of equipment, which may be required at locations other than installations of the Administration, for the performance of research, development, and demonstration activities, and

"(B) grants to any organization for purchase or construction of research facilities. No such funds shall be used under this subsection for the acquisition of land. Fee title to all such facilities and items of equipment shall be vested in the United States, unless the Administrator or his designee determines in writing that the research, development, and demonstration authorized by such Act would best be implemented by permitting fee title or any other property interest to be vested in an entity other than the United States; but before approving the vesting of such title or interest in such entity, the Administrator shall (i) transmit such determination, together with all pertinent data, to the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate and (ii) wait a period of thirty calendar days (not including any day in which either House of Congress is not in session because of adjournment of more than three calendar days to a day certain), unless prior to the expiration of such period each such committee has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

"(2) No funds shall be used under paragraph (1) for any facility or major item of equipment, including collateral equipment, if the estimated cost to the Federal Government exceeds $5,000,000 in the case of such a facility or $2,000,000 in the case of such an item of equipment, unless such facility or item has been previously authorized by the appropriate committees of the House of Representatives and the Senate, or the Administrator—

"(A) transmit to the appropriate committees of the House of Representatives and the Senate a report on such facility or item showing its nature, purpose, and estimated cost, and

"(B) waits a period of thirty calendar days (not including any day in which either House of Congress is not in session because of adjournment of more than three calendar days to a day certain), unless prior to the expiration of such period each such committee has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

"(c)(1) Not to exceed 1 per centum of all funds appropriated pursuant to any annual authorization Act for 'Operating expenses' may be used by the Administrator to construct, expand, or modify laboratories and other facilities, including the acquisition of land, at any location under the control of the Administrator, if the Administrator determines that (A) such action would be necessary because of changes in the national programs authorized to be funded by such Act or because of new scientific or engineering developments, and (B) deferral of such action until the enactment of the next authorization Act would be inconsistent with the policies established by Congress for the Administration.

"(2) No funds may be obligated for expenditure or expended under paragraph (1) for activities described in such paragraph unless—

"(A) a period of thirty calendar days (not including any day in which either House of Congress is not in session because of adjournment of more than three calendar days to a day certain) has passed after the Administrator has transmitted to the appropriate committees of the House of Representatives and the Senate a written report containing a full and complete statement concerning (i) the nature of the construction, expansion, or modification involved, (ii) the cost thereof, including the cost of any real estate action pertaining thereto, and (iii) the reason why such construction, expansion, or modification is necessary and in the national interest, or

"(B) each such committee before the expiration of such period has transmitted to the Administrator a written notice to the effect that such committee has no objection to the proposed section;

except that this paragraph shall not apply to any project the estimated total cost of which does not exceed $50,000.

"(d)(1) Except as otherwise provided in the authorization Act involved—

"(A) no amount appropriated pursuant to any annual authorization Act may be used for any program in excess of the amount actually authorized for that particular program by such Act, and

"(B) no amount appropriated pursuant to any annual authorization Act may be used for any program which has been presented to, or requested of the Congress, unless (i) a period of thirty calendar days (not including any day in which either House of Congress is not in session because of adjournment of more than three calendar days to a day certain) has passed after the receipt by the appropriate committee of the House of Representatives and the Senate of notice given by the Administrator containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of such proposed action, or (ii) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

"(2) Notwithstanding any other provision of this section or the authorization Act involved, the aggregate amount available for us within the categories of coal, petroleum and natural gas, oil shale, solar geothermal, nuclear energy (non-weapons), environment and safety, and conservation from sums appropriated pursuant to an annual authorization Act may not, as a result of reprogramming, be decreased by more than 10 per centum of the total of the sums appropriated pursuant to such Act for those categories.

"(e) Subject to the applicable requirements and limitations of this section and the authorization Act involved, when so specified in an appropriation Act, amounts appropriated pursuant to any annual authorization Act for 'Operating expenses' or for 'Plant and capital equipment' may be merged with any other amounts appropriated for like purposes pursuant to any other Act authorizing appropriation for the Administration: *Provided*, That no such amounts appropriated for 'plant and capital equipment' may be merged with amounts appropriated for 'operating expenses.'

"(f) When so specified in an appropriation Act, amounts appropriated pursuant to any annual authorization Act for 'Operating expenses' or for 'Plant and capital equipment' may remain available until expended.

"(g) The Administrator is authorized to perform construction design services for any administration construction project whenever (1) such construction project has been included in a proposed authorization bill transmitted to the Congress by the Administration, and (2) the Administration determines that the project is of such urgency in order to meet the needs of national defense or protection of life and property or health and safety that construction of the project should be initiated promptly upon enactment of legislation appropriating funds for its construction.

"(h) When so specified in appropriation Acts, any moneys received by the Administration may be retained and used for operating expenses, and may remain available until expended, notwithstanding the provisions of section 3617 of the Revised Statutes (31 U.S.C. 484); except that—

"(1) this subsection shall not apply with respect to sums received from disposal of property under the Atomic Energy Community Act of 1955 or the Strategic and Critical Materials Stockpiling Act, as amended, or with respect to fees received for tests or investigations under the Act of May 16, 1910, as amended (42 U.S.C. 2301; 50 U.S.C. 98h; 30 U.S.C. 7); and

"(2) revenues received by the Administration from the enrichment of uranium shall (when so specified) be related and used for the specific purpose of offsetting costs incurred by the Administration in providing uranium enrichment service activities.

"(i) When so specified in an appropriation Act, transfers of sums from the 'Operating expenses' appropriation made pursuant to an annual authorization Act may be made to other agencies of the Government for the performance of the work for which the appropriation is made, and in such cases the sums so transferred may be merged with the appropriations to which they are transferred.".

SEC. 202. (a) The Secretary of Energy is authorized to start any project set forth in section 102(a) (1) through (12) only if at the time the project is started the then currently estimated cost does not exceed by more than 25 per centum the estimated cost set forth for that project; and the total cost of any such project shall not exceed the estimated cost set forth for that project by more than 25 per centum (if such estimated cost was $5,000,000 or more) unless and until appropriations covering such excess are authorized.

(b) The Secretary of Energy is authorized to start any project under section 102(a)(13) only if the maximum currently estimated cost of such project does not exceed $750,000 and the then maximum currently estimated cost of any building included in the project does not exceed $300,000 and the total cost of all projects undertaken under such section shall not exceed the estimated cost set forth in such section by more than 10 per centum.

Sec. 203. The Secretary of Energy, in cooperation with the Secretary of State, shall report to the Committees on Science and Technology and International Relations of the House of Representatives and the Committees on Energy and Natural Resources and Foreign Relations of the Senate, within six months after the date of the enactment of this Act, on the effects of the April 20, 1977, message from the President of the United States, "Establishing for the United States a Strong and Effective Nuclear Non-Proliferation Policy", on nuclear research and development cooperative agreements. This report shall include impacts of the message and related initiatives through the promulgation, repeal, or modification of Executive orders, Presidential proclamations, treaties, other international agreements, and other pertinent documents of the President, the Executive Office of the President, the administraitve agencies, and the departments, on cooperation between the United States and any other nation in the research, development, demonstration, and commercialization of all nuclear fission and nuclear fusion technologies. After the initial report, the Administrator shall report to such Committees on each subsequent major related initiative.

Sec. 204. (a) In carrying out the programs for which funds are authorized by this Act, the Secretary of Energy shall provide a realistic and adequate opportunity for small business concerns to participate in such programs to the optimum extent feasible consistent with the size and nature of the projects and activities involved.

(b) At least once every six months, or upon request, the Secretary of Energy shall submit to the appropriate committees of the House of Representatives and the Senate a full report on the actions taken in carrying out subsection (a) during the preceding six months, including the extent to which small business concerns are participating in the programs involved and in projects and activities of various types and sizes within each such program, and indicating the steps currently being taken to assure such participation in the future.

Sec. 205. (a) Section 91 of chapter 9 of the Atomic Energy Community Act of 1955 is amended—

(1) by striking out subsection a. and inserting in lieu thereof the following:

"a. From the date of transfer of any municipal installations to a governmental or other entity at or for the community, the Administrator is authorized, for a period of ten years, to make annual assistance payments of just and reasonable sums to the State, county, or local entity having jurisdiction to collect property taxes or to the entity receiving the installation transferred hereunder: *Provided, however,* That with respect to the cities of Oak Ridge, Tennessee, and Richland, Washington, the Richland School District, the Los Alamos School Board, and the county of Los Alamos, New Mexico, the Administrator is authorized to continue to make assistance payments of just and reasonable sums after expiration of such ten-year period: *Provided further,* That the Administrator is also authorized to make payments of just and reasonable sums to Anderson County and Roane County, Tennessee. In determining the amount and recipient of such payments the Administrator shall consider—

"(1) the approximate real property taxes and assessments for local improvements which would be paid to the governmental entity upon property within the community if such property were not exempt from taxation by reason of Federal ownership;

"(2) the maintaining of municipal services at a level which will not impede the recruitment or retention of personnel essential to the Energy Research and Development Administration porgrams;

"(3) the fiscal problems peculiar to the governmental entity by reason of the construction at the community as a single-purpose national defense installation under emergency conditions;

"(4) the municipal services and other burdens imposed on the governmental or other entities at the community by the United States in its operations in the project area; and

"(5) the tax revenues and sources available to the governmental entity, its efforts and diligence in collection of taxes, assessment of property, and the efficiency of its operations."; and

(2) by striking out subsection d. and inserting in lieu thereof the following:

"d. With respect to any entity not less than six months prior to the expiration of the ten-year period referred to in subsection a. (or not less than six months prior to June 30, 1979, in the case of the cities of Oak Ridge, Tennessee, and Richland, Washington, and the Richland School District; or not less than six months prior to June 30, 1968, in the case of Anderson County and Roane County, Tennessee, and the Los Alamos School Board; and not less than six months prior to June 30, 1987, in the case of the county of Los Alamos, New Mexico), the Administrator shall present to the appropriate committees of the House of Representatives and the Senate recommendations as to the need for any further assistance payments to such entity.".

(b) Chapter 9 of such Act is further amended by striking out section 94 and inserting in lieu thereof the following:

"Sec. 94. Contracts.—The Administrator is authorized, without regard to section 3679 of the Revised Statutes, to enter into a contract with any governmental or other entity to which payments are authorized to be made pursuant to section 91, obligating the Administrator to make such entity the payments directed or authorized to be made by section 91: Provided, however, That the term of such contracts, in the case of the cities of Oak Ridge, Tennessee, and Richland, Washington, and the Richland School District, shall not extend beyond June 30, 1979; and in the case of the Los Alamos School Board shall not extend beyond June 30, 1986; and in the case of the county of Los Alamos, New Mexico, shall not extend beyond June 30, 1987.".

Sec. 206. (a) Section 6 of the Federal Nonnuclear Energy Research and Development Act of 1974 is amended by adding at the end thereof the following new subsection:

"(c) Based upon the comprehensive plan developed under subsection (a), the Administrator shall develop and transmit to the Congress, on or before September 1, 1978, a comprehensive environment and safety program to insure the full consideration and evaluation of all environmental, health, and safety impacts of each element, program, or initiative contained in the nuclear and nonnuclear energy research, development, and demonstration plans.".

(b) Section 15(a) of such Act is amended—

(1) by striking out "and" at the end of paragraph (2),

(2) by striking out the comma at the end of paragraph (3) and inserting in lieu thereof "; and", and

(3) by inserting after paragraph (3) the following new paragraph;

"(4) a detailed description of the environmental and safety research, development, and demonstration activities carried out and in progress including the procedures adopted to mitigate undesirable environmental and safety impacts,".

Sec. 207. (a) Section (7a) of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5906) is amended—

(1) by striking out "and" after the semicolon at the end of paragraph (5),

(2) by striking out the period at the end of paragraph (6) and inserting in lieu thereof "; and", and

(3) by adding at the end thereof the following new paragraph:

"(7) Federal loan guarantees and commitments thereof as provided in section 19.".

(b) The Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5901, et seq.) is further amended by adding at the end thereof the following new section:

"LOAN GUARANTEES FOR ALTERNATIVE FUEL DEMONSTRATION FACILITIES

"Sec. 19. (a) It is the purpose of this section—

"(1) to assure adequate Federal support to foster a demonstration program to produce alternative fuels from coal, oil, shale, biomass, and other domestic resources;

"(2) to authorize assistance, through loan guarantees under subsection (b) and (y) for construction and startup and related costs, to demonstration facilities for the conversion of domestic coal, oil shale, biomass, and other domestic resources into alternative fuels; and

"(3) to gather information about the technological, economic, environmental, and social costs, benefits, and impacts of such demonstration facilities.

"(b)(1) Except as provided in paragraph (5) of this subsection and subsection (y) of this section the Administrator is authorized, in accordance with such rules and regulations as he shall prescribe after consultation with the Secretary of the Treasury, to guarantee and to make commitments to guarantee, in such manner and subject to such conditions (not inconsistent with the provisions of this Act as he deems appropriate, the payment of interest on, and the principal balance of, bonds, debentures, notes, and other obligations issued by, or on behalf of, any borrower for the purpose of financing the construction and startup costs of demonstration facilities for the conversion of domestic coal, oil shale, biomass, and other domestic resources into alternative fuels: Provided, That no loan guarantee for a full sized oil shale facility shall be provided under this section until after successful demonstration of a modular facility producing between six and ten thousand barrels per day, taking into account such considerations as water usage, environmental effects, waste disposal, labor conditions, health and safety, and the socioeconomic impacts on local communities: Provided further, That no loan guarantee shall be available under this subsection for the manufacture of component parts for demonstration facilities eligible for assistance under this subsection.

"(2) An applicant for any financial assistance under this section shall provide information to the Administrator in such form and with such content as the Administrator deems necessary.

"(3) Prior to issuing any guarantee under this section the Administrator shall obtain the concurrence of the Secretary of the Treasury with respect to the timing, interest rate, and substantial terms and conditions of such guarantee. The Secretary of the Treasury shall insure to the maximum extent feasible that the timing, interest rate, and substantial terms and conditions of such guarantee will have the minimum possible impact on the capital markets of the United States, taking into account other Federal direct and indirect securities activities.

"(4) The full faith and credit of the United States is pledged to the payment of all guarantees issued under this section with respect to principal and interest.

"(5)(A) The Administrator is authorized, in the case of a facility for the conversion of oil shale to alternative fuels which is determined by the Administrator pursuant to the proviso in paragraph (1)(A) of this subsection, to be constructed at a modular size, to enter into a cooperative agreement with the applicant in accordance with section 8 of this Act and the other provisions of this Act to share the estimated total design and construction costs, plus operation and maintenance costs, of such modular facility. The Federal share shall not exceed 75 per centum of such costs. All receipts for the sale of any products produced during the operation of the facility shall be used to offset the costs incurred in the operation and maintenance of the facility. The provisions of subsections (d), (e), (k), (m), (p), (s), (t), (u), (v), (w), and (x) shall apply to any such modular facility. The provisions of this section shall apply to any loan guarantee for such modular facility.

"(B) After successful demonstration of the modular facility, as determined by the Administrator, the facility is eligible for financial assistance under this section for purposes of expansion to a full sized facility and the applicant may purchase the Federal interest in the modular facility as represented by the Federal share thereof by means of (i) a cash payment to the United States, or (ii) a share of the product or sales resulting from such expanded operation, as determined by the Administrator. If expansion of such facility is determined not to be warranted by the Administrator, he may, at the option of the applicant, dispose of the modular facility to the applicant at not less than fair market value, as determined by the Administrator as of the date of the disposal, or otherwise dispose of it, in accordance with applicable provisions of law, and distribute the net proceeds thereof, after expenses of such disposal, to the applicant in proportion to the applicant's share of the costs of such facility.

"(6) To the extent possible, loan guarantees shall be issued on the basis of competitive bidding among guarantee applicants in a particular technology area.

"(c) The Administrator, with due regard for the need for competition, shall guarantee or make a commitment to guarantee any obligation under subsection (b) or (y) only if—

"(1) the Administrator is satisfied that the financial assistance applied for is necessary to encourage financial participation;

"(2) the amount guaranteed to any borrower at any time does not exceed—

"(A) an amount equal to 75 per centum of the project cost of the demonstration facility as estimated at the time the guarantee is issued, which cost shall not include amounts expended for facilities and equipment used in the extraction of a mineral other than coal or shale, and in the case of coal only to the extent that the Administrator determines that the coal is to be converted to alternative fuel; and

"(B) an amount equal to 60 per centum of that portion of the actual total project cost of any demonstration facility which exceeds the project cost of such facility as estimated at the time the loan guarantee is issued;

"(3) the Administrator has determined that there will be a continued reasonable assurance of full repayment;

"(4) the obligation is subject to the condition that it not be subordinated to any other financing;

"(5) the Administrator has determined, taking into consideration all reasonably available forms of assistance under this section and other Federal and State statutes, that the impacts resulting from the proposed demonstration facility have been fully evaluated by the borrower, the Administrator, and the Governor of the affected State, and that effective steps have been taken or will be taken in a timely manner to finance community planning and development costs resulting from such facility under this section, under other provisions of law, or by other means;

"(6) the maximum maturity of the obligation does not exceed twenty years, or 90 per centum of the projected useful economic life of the physical assets of the demonstration facility covered by the guarantee, whichever is less, as determined by the Administrator;

"(7) the Administrator has determined that, in the case of any demonstration or modular facility planned to be located on Indian lands, the appropriate Indian tribe, with the approval of the Secretary of the Interior, has given written consent to such location;

"(8) the obligation provides for the orderly and ratable retirement of the obligation and includes sinking fund provisions, installment payment provisions or other methods of payments and reserves as may be reasonably required by the Administrator. Prior to approving any repayment schedule the Administrator may consider the date on which operating revenues are anticipated to be generated by the project. To the maximum extent possible repayment or provision therefor shall be required to be made in equal payments payable at equal intervals; and

"(9) the obligation provides that the Administrator shall, after a period of not less than ten years from issuance of the obligation, taking into consideration whether the Government's needs for information to be derived from the project have been substantially met and whether the project is capable of commercial operation, determine the feasibility and advisability of terminating the Federal participation in the project. In the event that such determination is positive, the Administrator shall notify the borrower and provide the borrower with not less than two nor more than three years in which to find alternative financing. At the expiration of the designated period of time, if the borrower has been unable to secure alternative financing, the Administrator is authorized to collect from the borrower an additional fee of 1 per centum per annum on the remaining obligation to which the Federal guarantee applies.

"(d) Prior to submitting a report to Congress pursuant to subsection (m) of this section on each guarantee and cooperative agreement, the Administrator shall request from the Attorney General and the Chairman of the Federal Trade Commission written views, comments, and recommendations concerning the impact of such guarantee or commitment or agreement on competition and concentration in the production of energy and give due consideration to views, comments, and recommendations received: *Provided*, That if either official, within sixty days after receipt of such request or at any time prior to the Administrator submitting such report to Congress, recommends against making such guarantee or commitment or agreement, the proposed guarantee or commitment or agreement shall be referred to the President, and the Administrator shall not do so unless the President determines in writing that such guarantee or commitment or agreement is in the national interest.

"(e)(1) As soon as the Administrator knows the geographic location of a proposed facility for which a guarantee or a commitment to guarantee or cooperative agreement is sought under this section, he shall inform the Governor of the State, and officials of each political subdivision and Indian tribe, as appropriate, in which the facility would be located or which would be impacted by such facility. The Administrator shall not guarantee or make a commitment to guarantee or enter into a cooperative agreement under subsection (b) or subsection (y) of this section, if the Governor of the State in which the proposed facility would be located recommends that such action not be taken, unless the Administrator finds that there is an overriding national interest in taking such action in order to achieve the purpose of this section.

If the Administrator decides to guarantee or make a commitment to guarantee or enter into a cooperative agreement despite a Governor's recommendation not to take such action, the Administrator shall communicate, in writing, to the Governor reasons for not concurring with such recommendation. This Administrator's decision, pursuant to this subsection, shall be final unless determined upon judicial review initiated by the Governor to be unlawful by the reviewing court pursuant to 5 U.S.C. 706(2) (A) through (D). Such review shall take place in the United States court of appeals for the circuit in which the State involved is located, upon application made within ninety days from the date of such decision. The Administrator shall, by regulation, establish procedures for review of, and comment on, the proposed facility by States, local political subdivisions, and Indian tribes which may be impacted by such facility, and the general public.

"(2) The Administrator shall review and approve the plans of the applicant for the construction and operation of any demonstration and related facilities constructed or to be constructed with assistance under this section. Such plans and the actual construction shall include such monitoring and other data-gathering costs associated with such facility as are required by the comprehensive plan and program under this section. The Administrator shall determine the estimated total cost of such demonstration facility, including, but not limited to, construction costs, startup costs, costs to political subdivisions and Indian tribes by such facility, and cost of any water storage facilities needed in connection with such demonstration facility, and determine who shall pay such costs. Such determination shall not be binding upon the States, political subdivisions or Indian tribes.

"(3) There is hereby established a panel to advise the Administrator on matters relating to the program authorized by this section, including, but not limited to, the impact of the demonstration facilities on communities and States and Indian tribes, the environmental and health and safety effects of such facilities, and the means, measures, and planning for preventing or mitigating such impacts, and other matters relating to the development of alternative fuels and other energy sources under this section. The panel shall include such Governors or their designees as shall be designated by the Chairman of the National Governors Conference, Representatives of Indian tribes, industry, environmental organizations and the general public shall be appointed by the Administrator. The Chairman of the panel shall be selected by the Administrator. No person shall be appointed to the panel who has a financial interest in any applicant applying for assistance under this section. Members of the panel shall serve without compensation. The provisions of section 106(e) of the Energy Reorganization Act of 1974 (42 U.S.C. 5816 (e)) shall apply to the panel.

"(f) Except in accordance with reasonable terms and conditions contained in the written contract of guarantee, no guarantee issued or commitment to guarantee made under this section shall be terminated, canceled, or otherwise revoked. Such a guarantee or commitment shall be conclusive evidence that the underlying obligation is in compliance with the provisions of this section and that such obligation has been approved and is legal as to principal, interest, and other terms. Subject to the conditions of the guarantee or commitment to guarantee, such a guarantee shall be incontestable in the hands of the holder of the guaranteed obligation, except as to fraud or material misrepresentation on the part of the holder.

"(g) (1) If there is a default by the borrower, as defined in regulations promulgated by the Administrator and in the guarantee contract, the holder of the obligation shall have the right to demand payment of the unpaid amount from the Administrator. Within such period as may be specified in the guarantee or related agreements, the Administrator shall pay to the holder of the obligation the unpaid interest on, and unpaid principal of the guaranteed obligation as to which the borrower has defaulted, unless the Administrator finds that there was no default by the borrower in the payment of interest or principal or that such default has been remedied. Nothing in this section shall be construed to preclude any forebearance by the holder of the obligation for the benefit of the borrower which may be agreed upon by the parties to the guaranteed obligation and approved by the Administrator.

"(2) If the Administrator makes a payment under pragraph (1) of this subsection, the Administrator shall be subrogated to the rights of the recipient of such payment (and such subrogation shall be expressly set forth in the guarantee or related complete, maintain, operate, lease, or otherwise dispose of any property acquired pursuant to such guarantee or related agreements, or any other property of the borrower (of a value equal to the amount of such payment) to the extent that the guarantee applies to amounts in excess of the estimated project cost under subsection (c)(2)(B), without regard to the provisions of the Federal Property and Administrative Service Act of 1949, as amended, except section 207 of that Act (40 U.S.C. 488), or any other law, or to permit the borrower, pursuant to an agreement with the Administrator, to continue to pursue the purposes of the demonstration facility if the Administrator determines that this is in the public interest. The rights of the Administrator with respect to any property acquired pursuant to such guarantee or related agreements, shall be superior to the rights of any other person with respect to such property.

"(3) In the event of a default on any guarantee under this section, the Administrator shall notify the Attorney General, who shall take such action as may be appropriate to recover the amounts of any payments made under paragraph (1) including any payment of principal and interest under subsection (h) from such assets of the defaulting borrower as are associated with the demonstration facility, or from any other security included in the terms of the guarantee.

"(4) For purposes of this section, patents, including any inventions for which a waiver was made by the Administrator under Section 9 of this Act, and technology resulting from the demonstration facility, shall be treated as project assets of such facility. The guarantee agreement shall include such detailed terms and conditions as the Administrator deems appropriate to protect the interests of the United States in the case of default and to have available all the patents and technology necessary for any person selected, including, but not limited to the Administrator, to complete and operate the defaulting project. Furthermore, the guarantee agreement shall contain a provision specifying that patents, technology, and other proprietary rights which are necessary for the completion or operation of the demonstration facility shall be available to the United States and its designees on equitable terms, including due consideration to the amount of the United States default payments. Inventions made or conceived in the course of or under such guarantee, title to which is vested in the United States under this Act, shall not be treated as project assets of such facility for disposal purposes under this subsection, unless the Administrator determines in writing that it is in the best interests of the United States to do so.

"(h) With respect to any obligation guaranteed under this section, the Administrator is authorized to enter into a contract to pay, and to pay, holders of the obligations, for and on behalf of the borrowers, from the fund established by this section, the principal and interest payments which become due and payable on the unpaid balance of such obligation if the Administrator finds that—

"(1) the borrower is unable to meet such payments and is not in default; it is in the public interest to permit the borrower to continue to pursue the purposes of such demonstration facility; and the probable net benefit to the Federal Government in paying such principal and interest will be greater than that which would result in the event of a default;

"(2) the amount of such payment which the Administrator is authorized to pay shall be no greater than the amount of principal and interest which the borrower is obligated to pay under the loan agreement; and

"(3) the borrower agrees to reimburse the Administrator for such payment on terms and conditions, including interest, which are satisfactory to the Administrator.

"(i) Regulations required by this section shall be issued within one hundred and eighty days after enactment of this section, except as provided in subsection (t) of this section. All regulations under this section and any amendments thereto shall be issued in accordance with section 553 of title 5, of the United States Code.

"(j) The Administrator shall charge and collect fees for guarantees of obligations authorized by subsection (b)(1), in amounts which (1) are sufficient in the judgment of the Administrator to cover the applicable administrative costs, and (2) reflect the percentage of projects costs guaranteed. In no event shall the fee be less than 1 per centum per annum of the outstanding indebtedness covered by the guarantee. Nothing in this subsection shall be construed to apply to community planning and development assistance pursuant to subsection (k) of this section.

"(k) (1) In accordance with such rules and regulations as the Administrator in consultation with the Secretary of the Treasury shall prescribe, and subject to such terms and conditions as he deems appropriate, the Administrator is authorized, for the purpose of financing essential community development and planning which directly result from, or are necessitated by, one or more demonstration facilities assisted under this section to—

"(A) guarantee and make commitments to guarantee the payment of interest on, and the principal balance of obligations for such financing issued by eligible States, political subdivisions, or Indian tribes,

"(B) guarantee and make commitments to guarantee the payment of taxes imposed on such demonstration facilities by eligible non-Federal taxing authorities which taxes are earmarked by such authorities to support the payment of interest and principal on obligations for such financing, and

"(C) require that the applicant for assistance for a demonstration facility under this section advance sums to eligible States, political subdivisions, and Indian tribes to pay for the financing of such development and planning: *Provided*, That the State, political subdivision, or Indian tribe agrees to provide tax abatement credits over the life of the facilities for such payments by such applicant.

"(2) Prior to issuing any guarantee under this subsection, the Administrator shall obtain the concurrence of the Secretary of the Treasury with respect to the timing, interest rate, and substantial terms and conditions of such guarantee. The Secretary of the Treasury shall insure to the maximum extent feasible that the timing, interest rate, and substantial terms and conditions of such guarantee will have the minimum possible impact on the capital markets of the United States, taking into account other Federal direct and indirect securities activities.

"(3) In the event of any default by the borrower in the payment of taxes guaranteed by the Administrator under this subsection, the Administrator shall pay out of the fund established by this section such taxes at the time or times they may fall due, and shall have by reason of such payment a claim against the borrower for all sums paid plus interest.

"(4) If after consultation with the State, political subdivision, or Indian tribe, the Administrator finds that the financial assistance programs of paragraph (1) of this subsection will not result in sufficient funds to carry out the purposes of this subsection, then the Administrator may—

"(A) make direct loans to the eligible States, political subdivisions, or Indian tribes for such purposes: Provided, That such loans shall be made on such reasonable terms and conditions as the Administrator shall prescribe: Provided further, That the Administrator may waive repayment of all or part of a loan made under this paragraph, including interest, if the State or political subdivision or Indian tribe involved demonstrates to the satisfaction of the Administrator that due to a change in circumstances there will be net adverse impacts resulting from such demonstration facility that would probably cause such State, subdivision, or tribe to default on the loan; or

"(B) require that any community development and planning costs which are associated with, or result from, such demonstration facility and which are determined by the Administrator to be appropriate for such inclusion shall be included in the total costs of the demonstration facility.

"(5) The Administrator is further authorized to make grants to States, political subdivisions, or Indian tribes for studying and planning for the potential economic, environmental, and social consequences of demonstration facilities, and for establishing related management expertise.

"(6) At any time the Administrator may, with the concurrence of the Secretary of the Treasury, redeem, in whole or in part, out of the fund established by this section, the debt obligations guaranteed or the debt obligations for which tax payments are guaranteed under this subsection.

"(7) When one or more States, political subdivisions, or Indian tribes would be eligible for assistance under this subsection, but for the fact that construction and operation of the demonstration facilities occurs outside its jurisdiction, the Administrator is authorized to provide, to the greatest extent possible, arrangements for equitable sharing of such assistance.

"(8) Such amounts as may be necessary for direct loans and grants pursuant to this subsection shall be available as provided in annual authorization Acts.

"(9) The Administrator, if appropriate, shall provide assistance in the financing of up to 100 per centum of the costs of the required community development and planning pursuant to this subsection.

"(10) In carrying out the provisions of this subsection, the Administrator shall provide that title to any facility receiving financial assistance under this subsection shall vest in the applicable State, political subdivision, or Indian tribe, as appropriate, and in the case of default by the borrower on a loan guarantee such facility shall not be considered a project asset for the purposes of subsection (g) of this section.

"(l)(1) The Administrator is directed to submit a report to the Congress within one hundred and eighty days after the enactment of this section setting forth his recommendations on the best opportunties to implement a program of Federal financial assistance with the objective of demonstrating production and conservation of energy. Such report shall be updated and submitted to Congress at least annually and shall include specific comments and recommendations by the Secretary of the Treasury on the methods and procedures set forth in subparagraph (B)(viii) of this subsection, including their adequacy, and changes necessary to satisfy the objectives stated in this subsection. This report shall include—

"(A) a study of the purchase or commitment to purchase by the Federal Government, for the use by the United States, of all or a portion of the products of any alternative fuel facilities constructed pursuant to this program as a direct or an alternate form of Federal assistance, which assistance, if recommended, shall be carried out pursuant to section 7(a)(4) of this Act; and

"(B) a comprehensive plan and program to acquire information and evaluate the environmental, economic, social, and technological impacts of the demonstration program under this section. In preparing such a comprehensive plan and program, the Administrator shall consult with the Environmental Protection Agency, the Federal Energy Administration, the Department of Housing and Urban Development, the Department of the Interior, the Department of Agriculture, and the Department of the Treasury, and shall include therein, but not be limited to, the following.

"(i) information about potential demonstration facilities proposed in the program under this section;

"(ii) any significant adverse impacts which may result from any activity included in the program;

"(iii) the extent to which it is feasible to commercialize the technologies as they affect different regions of the Nation;

"(iv) proposed regulations required to carry out the purposes of this section;

"(v) a list of Federal agencies, governmental entities, and other persons that will be consulted or utilized to implement the program;

"(vi) the methods and procedures by which the information gathered under the program will be analyzed and disseminated;

"(vii) a plan for the study and monitoring of the health effects of such facilities on workers and other persons, including, but not limited to, any carcinogenic effect of alternative fuels; and

"(viii) the methods and procedures to insure that (I) the use of the Federal assistance for demonstration facilities is kept to the minimum level necessary for the information objectives of this section, (II) the impact of loan guarantees on the capital markets of the United States is minimized, taking into account other Federal direct and indirect securities activities, and any economic sectors which may be negatively impacted as a result of the reduction of capital by the placement of guaranteed loans, and (II) the granting of Federal loan guarantees under this Act does not impede movement toward improvement in the climate for attracting private capital to develop alternative fuels without continued direct Federal incentives.

"(2) The Administrator shall annually submit a detailed report to the Congress concerning—

"(A) the actions taken or not taken by the Administrator under this section during the preceding fiscal year, and including, but not limited to (i) a discussion of the status of each demonstration facility and related facilities financed under this section, including progress made in the development of such facilities, and the expected or actual production from each such facility, including byproduct production therefrom, and the distribution of such products and byproducts, (ii) a detailed statement of the financial conditions of each such demonstration facility, (iii) data concerning the environmental, community, and health and safety impacts of each such facility and the actions taken or planned to prevent or mitigate such imports, (iv) the administrative and other costs incurred by the Administrator and other Federal agencies in carrying out this program, and (v) such other data as may be helpful in keeping Congress and the public fully and currently informed about the program authorized by this section; and

"(B) The activities of the funds referred to in subsection (n) of this section during the preceding fiscal year, including a statement of the amount and source of fees or other moneys, property, or assets deposited notes or other obligations issued by the Administrator, and such other data as may be appropriate.

"(3) The annual report required by this subsection shall be a part of the annual report required by section 15 of this Act, except that the matters required to be reported by this subsection shall be clearly set out and identified in such annual reports. Such reports and the one-hundred-and-eighty-day report required in paragraph (1) of this subsection shall be transmitted to the Speaker of the House of Representatives and the House Committee on Science and Technology and to the President of the Senate and the Committee on Energy and Natural Resources of the Senate.

"(m) Prior to issuing any guarantee or commitment to guarantee or cooperative agreement pursuant to subsection (b) or subsection (y) of this section, the Administrator shall submit to the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate a full and complete report on the proposed demonstration facility and such guarantee, agreement, or contract. Such guarantee, commitment to guarantee, cooperative agreement, or contract shall not be finalized under the authority granted by this section prior to the expiration of ninety calendar days (not including any day on which either House of Congress is not in session because of an adjournment of more than three calendar days to a day certain) from the date on which such report is received by such committees: *Provided*, That, where the cost of a demonstration facility to be assisted with a guarantee or cooperative agreement pursuant to subsection (b) or subsection (y) of this section exceeds $50,000,000 such guarantee or commitment to guarantee or cooperative agreement shall not be finalized unless (1) the making of such guarantee or commitment or agreement is specifically authorized by legislation hereafter enacted by the Congress or (2) both Houses pass a resolution stating in substance that the Congress favors the making of such guarantee or commitment or agreement.

"(n)(1) There is hereby created within the Treasury a separate fund (hereafter in this section called the 'fund') which shall be available to the Administrator without fiscal year limitation as a revolving fund for the purpose of carrying out the program authorized by subsection (b)(1) and subsections (g), (h), (k), and (y) of this section.

"(2) There are hereby authorized to be appropriated to the fund for administrative expenses from time to time such amounts as may be necessary to carry out the purposes of the applicable provisions of this section, including, but not limited to, the payments of interest and principal and the payment of interest differentials and redemption of debt. All amounts received by the Administrator as interest payments or repayments of principal on loans which are guaranteed under this section, fees, and any other moneys, property, or assets derived by him from operations under this section shall be deposited in the fund.

"(3) All payments on obligations, appropriate expenses (including reimbursements to other Government accounts), and repayments pursuant to operations of the Administrator under this section shall be paid from the fund subject to appropriations. If at any time the Administrator determines that moneys in the fund exceed the present and reasonably foreseeable future requirements of the fund, such excess shall be transferred to the general fund of the Treasury.

"(4) If at any time the moneys available in the fund are insufficient to enable the Administrator to discharge his responsibilities as authorized by subsections (b)(1), (g), (h), and (y) of this section, the Administrator shall issue to the Secretary of the Treasury notes or other obligations in such forms and denominations, bearing such maturities, and subject to such terms and conditions as may be prescribed by the Secretary of the Treasury. Redemption of such notes or obligations shall be made by the Administrator from appropriations or other moneys available under paragraph (2) of this subsection for loan guarantees authorized by subsection (b)(1) and subsections (g), (h), (k), and (y) of this section. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, which shall be not less than a rate determined by taking into consideration the average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection.

"(5) The provisions of this subsection do not apply to direct loans or planning grants made under subsection (k) of this section.

"(o) For the purposes of this section, the term—

"(1) 'State' means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin

Islands, American Samoa, any territory or possession of the United States,

"(2) 'United States' means the several States, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa,

"(3) 'borrower' or 'applicant' shall include any individual, firm, corporation, company, partnership, association, society, trust, joint venture, joint stock company, or other non-Federal entity, and

"(4) 'biomass' shall include, but is not limited to, animal and timber waste, municipal and industrial waste, sewage sludge, and oceanic and terrestrial crops.

"(p)(1) An applicant seeking a guarantee or cooperative agreement under subsection (b) or subsection (y) of this section must be a citizen or national of the United States. A corporation, partnership, firm, or association shall not be deemed to be a citizen or national of the United States unless the Administrator determines that it satisfactorily meets all the requirements of section 802 of title 46, United States Code, for determining such citizenship, except that the provisions in subsection (a) of such section 802 concerning (A) the citizenship of officers or directors of a corporation, and (B) the interest required to be owned in the case of a corporation, association, or partnership operating a vessel in the coastwise trade, shall not be applicable.

"(2) The Administrator, in consultation with the Secretary of State, may waive such requirements in the case of a corporation, partnership, firm, or association, controlling interest in which is owned by citizens of countries which are participants in the International Energy Agreement.

"(q) No part of the program authorized by this section shall be transferred to any other agency or authority, except pursuant to Act of Congress enacted after the date of enactment of this section.

"(r) Inventions made or conceived in the course of or under a guarantee authorized by this section shall be subject to the title and waiver requirements and conditions of section 9 of this Act.

"(s) Nothing in this section shall be construed as affecting the obligations of any person receiving financial assistance pursuant to this section to comply with Federal and State environmental, land use, water, and health and safety laws and regulations or to obtain applicable Federal and State permits, licenses, and certificates.

"(t) The information maintained by the Administrator under this section shall be made available to the public subject to the provision of section 552 of title 5, United States Code, and section 1905 of title 18, United States Code, and to other Government agencies in a manner that will facilitate its dissemination: *Provided*, That upon a showing satisfactory to the Administrator by any person that any information, or portion thereof obtained under this section by the Administrator directly or indirectly from such person would, if made public, divulge (1) trade secrets or (2) other proprietary information of such person, the Administrator shall not disclose such information and disclosure thereof shall be punishable under section 1905 of title 18, United States Code: *Provided further*, That the Administrator shall, upon request, provide such information to (A) any delegate of the Administrator for the purpose of carrying out this Act, and (B) the Attorney General, the Secretary of Agriculture, the Secretary of the Interior, the Federal Trade Commission, the Federal Energy Administration, the Environmental Protection Agency, the Federal Power Commission, the General Accounting Office, other Federal agencies, or heads of other Federal agencies, when necessary to carry out their duties and responsibilities under this and other statutes, but such agencies and agency heads shall not release such information to the public. This section is not authority to withhold information from Congress, or from any committee of Congress upon request of the Chairman. For the purposes of this subsection, the term 'person' shall include the borrower.

"(u) Notwithstanding any other provision of this section, the authority provided in this section to make guarantees or commitments to guarantee or enter into cooperative agreements under subsection (b)(1) or subsection (y), to make guarantees or commitments to guarantees, or to make loans or grants, under subsection (k), to make contracts under subsection (h), and to use fees and receipts collected under subsections (b), (j), and (y) of this section, and the authorities provided under subsection (n) of this section shall be effective only to the extent provided, without fiscal year limitation, in appropriation Acts enacted after the date of enactment of this section.

"(v) No person in the United States shall on the grounds of race, color, religion, national origin, or sex, be excluded from participation in, be denied benefits of, or be subjected to discrimination under any program or activity funded in whole or in part with assistance made available under this section: *Provided*, That Indian tribes are exempt from the operation of this subsection: *Provided further*, That such exemption shall be limited to the planning and provision of public facilities which are located on reservations and which are provided for members of the affected Indian tribes as the primary beneficiaries.

"(w) In carrying out his functions under this section, the Administrator shall provide a realistic and adequate opportunity for small business concerns to participate in the program to the optimum extent feasible consistent with the size and nature of each project.

"(x)(1)(A) Recipients of financial assistance under this section shall keep such records and other pertinent documents, as the Administrator shall prescribe by regulation, including, but not llimted to, records which fully disclose the disposition of the proceeds of such assistance, the cost of any facility, the total cost of the provision of public facilities for which assistance was used and such other records as the Administrator may require to facilitate an effective audit. The Administrator and the Comptroller General of the United States, or their duly authorized representatives shall have access, for the purpose of audit, to such records and other pertinent documents.

"(B) Within 6 months after the date of enactment of this section and at 6-month intervals thereafter, the Comptroller General of the United States shall make an audit of recipients of financial assistance under this section. The Comptroller General may prescribe such regulations as he deems necesary to carry out this subparagraph.

"(2) All laborers and mechanics employed by contractors or subcontractors in the performance of construction work financed in whole or in part with assistance under this section shall be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a–5). The Secretary of Labor shall have, with respect to such labor standards, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267) and section 2 of the Act of June 13, 1934, as amended (48 Stat. 948; 40 U.S.C. 276(c)).

"(y)(1) The Administrator is authorized in accordance with such rules and regulations as he shall prescribe after consultation with the Secretary of the Treasury, to guarantee and to make commitments to guarantee the payment of interest on, and the principal balance of, bonds, debentures, notes and other obligations issued by or on behalf of any borrower for the purpose of (A) financing the construction and startup costs of demonstration facilities for the conversion of municipal or industrial waste, sewage sludge, or other municipal organic wastes into synthetic fuels, and (B) financing the construction and startup costs of demonstration facilities to generate desirable forms of energy (including synthetic fuels) from municipal or industrial waste, sewage sludge, or other municipal organic waste. With respect to a guarantee or a commitment to guarantee authorized by this subsection; the following subsections of this section shall not apply: (b)(1), (b)(5), (c)(2), (c)(5), (c)(6), (c)(7), (c)(8), (c)(9), (e)(3) (j) (k), and (q).

"(2) In the case where the Administrator seeks to guarantee or to make commitments to guarantee as provided by this subsection he is authorized to incur an outstanding indebtedness which at no time shall exceed $300,000,000.

"(3) The Administrator shall apply the following provisions thereto:

"(A) With respect to any demonstration facility for the conversion of solid waste (as the term is defined in the Resources Conservation and Recovery Act (42 U.S.C. 6903), the Administrator, prior to issuing any guarantee under this section, must be in receipt of a certification from the Administrator of the Environmental Protection Agency and any appropriate State or areawide solid waste management planning agency that the proposed application for a guarantee is consistent with any applicable suggested guidelines published pursuant to section 1008(a) of the Resources Conservation and Recovery Act, and any applicable State or regional solid waste management plan.

"(B) The amount guaranteed shall not exceed 75 per centum of the total cost of the commercial demonstration facility, as determined by the Administrator: *Provided*, That the amount guaranteed may not exceed 90 per centum of the total cost of the commercial demonstration facility during the period of construction and startup.

"(C) The maximum maturity of the obligation shall not exceed thirty years, or 90 per centum of the projected useful economic life of the physical assets of the commercial demonstration facility covered by the guarantee, whichever is less, as determined by the Administrator.

"(D) The Administrator shall charge and collect fees for guarantees of obligations in amounts sufficient in the judgment of the Administrator to cover the applicable administrative costs and probable losses on guaranteed obligations, but in any event not to exceed 1 per centum per annum of the outstanding indebtedness covered by the guarantee.

"(E) No part of the program authorized by this section shall be transferred to any other agency or authority, except pursuant to Act of Congress enacted after the date of enactment of this section: *Provided*, That project agreements entered into pursuant to this section for any commercial demonstration facility for the conversion or bioconversion of solid waste (as that term is defined in the Resources Conservation and Recovery Act shall be administered in accordance with the May 7, 1976, Interagency Agreement between the Environmental Protection Agency and the Energy Research and Development Administration on the Development of Energy From Solid Wastes, and provided specifically that in accordance with this agreement (i) for those energy-related projects of mutual interest, planning will be conducted jointly by the Environmental Protection Agency and the Energy Research and Development Administration, following which project responsibility will be assigned to one agency; (ii) energy-related projects for recovery of synthetic fuels or other forms of energy from solid waste shall be the responsibility of the Energy Research and Development Administration; and (iii) the Environmental Protection Agency shall retain responsibility for the environmental, economic, and institutional aspects of solid waste projects and for assurance that such projects are consistent with any applicable suggested guidelines pursuant to section 1008 of the Resource Conservation and Recovery Act of 1976 (42 U.S.C. 6901 et seq.), as amended, and any applicable State or regional solid waste-management plan.

"(F) With respect to any obligation which is issued after the enactment of this section by, or in behalf of, any State, political subdivision, or Indian tribe and which is either guaranteed under, or supported by taxes levied by said issuer which are guaranteed under, this section, the interest paid on such obligation and received by the purchaser thereof (or the purchaser's successor in interest) shall be included in gross income for the purpose of chapter 1 of the Internal Revenue Code of 1954, as amended: *Provided*, That the Administrator shall pay to such issuer out of the fund established by this section such portion of the interest on such obligations, as determined by the Secretary of the Treasury to be appropriate after taking into account current market yields (i) on obligations of said issuer, if any, and (ii) on other obligations with similar terms and conditions the interest on which is not so included in gross income for purposes of chapter 1 of such Code, and in accordance with, such terms and conditions as the Secretary of the Treasury shall require.".

Sec. 208. (a) The Secretary of Energy shall—

(1) initiate and conduct an "application and system design study", cooperatively with appropriate Federal agencies, to determine the potential for the use of solar photovoltaic systems at specific Federal installations; and this study shall—

(A) include an analysis of those sites that are currently cost-effective for solar photovoltaic energy systems, using life-cycle costing techniques, as well as those which would be cost-effective at expected future market prices;

(B) identify potential sites and uses of solar photovoltaic energy systems at the following agencies as well as any others which the Secretary of Energy deems necessary:

(i) the Department of Defense;

(ii) the Department of Transportation (including the United States Coast Guard, the Federal Aviation Administration, and the Federal Highway Administration);

(iii) the Department of Commerce;

(iv) the Department of Agriculture; and

(v) the Department of the Interior;

(C) provide a preliminary report to Congress within nine months following the enactment of this Act;

(D) include the presentation of a detailed plan for the implementation of solar photovoltaic energy systems for power generation at specific sites in Federal government agencies to Congress within twelve months following the enactment of this Act;

(2) initiate and conduct a study of the options available to the Federal government to provide for the adequate growth of the solar photovoltaic industry and to include such possible incentives as government funding, loan guarantees, tax incentives, the operation of pilot plants or production lines and other incentives deemed worthy of consideration by the Secretary of Energy. A preliminary report shall be submitted to Congress within six months following the enactment of this Act;

(3) initiate and conduct a study involving the prospects for applications of solar photovoltaic energy systems for power generation in foreign countries, particularly lesser developed countries, and the potential for the exportation of these energy systems. This study shall involve the cooperation of the Department of State and the Department of Commerce, as well as other Federal agencies which the Secretary of Energy deems appropriate. A final report shall be submitted to the Congress, as well as a preliminary report within twelve months of the enactment of this Act; and

(4) be authorized to acquire up to an additional 4.0 megawatts (peak) of solar photovoltaic energy systems. The sum of $13,000,000 is hereby authorized to be appropriated (in addition to any other amounts authorized by this Act to be appropriated) for the fiscal year ending September 30, 1978, and for delivery in the following twelve months. Such sums shall remain available until expended. The solar photovoltaic energy systems acquired shall be available for use for power generation by Federal agencies, provided that no procurement takes place until their application on Federal sites is determined to be life cycle cost effective.

(b) For technology development, particularly for engineering design and development of the manufacturing process of solar photovoltaic energy systems (primarily for the implementation of automated processes and other cost reducing production technologies), the sum of $6,000,000 is hereby authorized by this Act to be appropriated for the fiscal year ending September 30, 1978.

Sec. 209. (a) Nothing in this title shall apply with respect to any authorization or appropriation for any military application of nuclear energy, for research and development in support of the Armed Forces, or for the common defense and security of the United States.

(b)(1) The term "military application" means any activity authorized or permitted by chapter 9 of the Atomic Energy Act of 1954, as amended (Public Law 83–703, as amended; 42 U.S.C. 2121, 2122).

(2) The term "research and development," as used in this section, is defined by section 11 *x* of the Atomic Energy Act of 1954, as amended (Public Law 83–703, as amended; 42 U.S.C. 2014).

(3) The term "common defense and security" means the common defense and security of the United States as used in the Atomic Energy Act of 1954, as amended (Public Law 83–703, as amended).

Sec. 210. (a) In order to provide economic farm units to qualifying farmers whose land is economically infeasible to reclaim from damages resulting from the Teton flood of June 5, 1976, and who are unable to find suitable replacement land for their flood damage farm, and in order to restore the economic and agricultural base of the flood damaged region, there is hereby transferred 5,955 acres of land, hereinafter described, in the State of Idaho presently under the jurisdiction of the Department of Energy, to the Secretary of the Interior who, acting through the Bureau of Reclamation, shall make such lands available for sale to qualifying farmers according to the terms hereafter provided.

(b) As used in this section, the term:

(1) "Teton flood" means the flood resulting from the collapse of Teton Dam of the Lower Teton Division of the Teton Basin Federal Reclamation Project on June 5, 1976.

(2) "Department of Energy" means those public and acquired lands in the State of Idaho identified as sections numbered fourteen (14), twenty-three (23), twenty-four (24), twenty-five (25), and thirty-six (36), in township six (6) north, or range thirty-three (33) east of the Boise meridian; sections numbered nineteen (19), thirty (30), and thirty-one (31) in township six (6) north, of range thirty-four (34) east of the Boise meridian; and the southeast quarter, the south half of the northeast quarter, the east half of the southwest quarter and the southeast quarter of the northwest quarter, of section numbered eight (8) and the south half of the north half of section numbered nine (9) in township five (5) north, of range thirty-four (34) east of the Boise meridian, all situated in the county of Jefferson and State of Idaho, and containing 5,955 acres, more or less, which would be transferred for the purposes of this Act.

(3) "Qualifying farmer" means the resident, owner-operator of a farm who resides in the immediate locality, whose livelihood is derived from his farming operation and whose land was damaged due to the collapse of the Teton Dam on June 5, 1976, to the extent that in the opinion of the Secretary of the Interior, it is not economically feasible to reclaim such land so that it produces an income commensurate with that earned prior to the Teton flood.

(4) "Irrigable land" means farm land that is suitable for irrigated agriculture and has been certified as irrigable by the Secretary of the Interior.

(c) For a period of not more than five years after transfer to the Bureau of Reclamation, the land heretofore described shall be available for purchase by those who, on or before October 1, 1978, are determined to be qualifying farmers pursuant to regulations issued in accordance with subsection (f) of this section by the Secretary of the Interior.

(d) Department of Energy lands as described in subsection (b)(2) of this section shall be certified as irrigable by the Secretary of the Interior, and lands so certified shall be made available in a manner to be prescribed by the Secretary for purchase by qualifying farmers at its current fair market value as determined by a board of appraisers composed of a Federal appraiser, a State appraiser, and one appraiser from the disaster region: *Provided*, That irrigable land transferred to a single ownership shall not exceed 160 acres of class I land as defined by the Secretary or the equivalent thereof in other land classes as determined by the Secretary. The United States, through the Secretary, shall convey fee simple title of the Department of Energy land to the qualifying farmer. The cost of developing the replacement land for farming shall be borne by the qualifying farmer who purchases the land.

(e) Any part of the Department of Energy land remaining in the possession of the Bureau of Reclamation at the end of the five year period, except land needed for public rights-of-way, as determined by the Secretary, shall be returned to the Department of Energy.

(f) Within ninety days after the enactment of this Act the Secretary shall prescribe and publish in the Federal Register such rules and regulations as may be necessary and proper to carry out the provisions of this section.

(g) Full recovery for the loss of all or part of flood-damaged farms shall be obtained by owners pursuant to the Teton Dam Disaster Assistance Act of 1976, Public Law 94–400, 90 Stat. 1211, and the Supplemental Appropriation Act of 1976, Public Law 94–438, 90 Stat. 1415.

(h) There is hereby authorized to be appropriated such sums as may be necessary for the purposes of administration of this section.

TITLE III—AUTOMOTIVE PROPULSION RESEARCH AND DEVELOPMENT

SHORT TITLE

SEC. 301. This title may be cited as the "Automotive Propulsion Research and Development Act of 1977".

FINDINGS AND PURPOSE

SEC. 302. (a) The Congress finds that—

(1) existing automobile propulsion systems, on the average, fall short of meeting the long-term goals of the Nation with respect to environmental protection, and energy conservation;

(2) advanced alternatives to existing automobile propulsion systems could, with sufficient research and development effort, meet these long-term goals, and have the potential to be mass produced at reasonable cost; and advanced automobile propulsion systems could operate with significantly less adverse environmental impact and fuel consumption than existing automobiles, while meeting all of the other requirements of Federal law;

(3) insufficient resources are being devoted to both research on and development of advanced automobile propulsion system technology;

(4) an expanded research and development effort with respect to advance automobile propulsion system technology would complement and stimulate corresponding efforts by the private sector and would encourage automobile manufacturers to consider seriously the incorporation of such advanced technology into automobiles and automobile components; and

(5) the Nation's energy and environmental problems are urgent, and therefore advanced automobile propulsion system technology should be developed, tested, demonstrated, and prepared for manufacture within the shortest practicable time.

(b) It is therefore the purpose of the Congress, in this title, to—

(1) (A) direct the Department of Energy to make contracts and grants for research and development leading to the development of advanced automobile propulsion systems within 5 years of the date of enactment of this Act, or within the shortest practicable time consistent with appropriate research and development techniques, and (B) evaluate and disseminate information with respect to advanced automobile propulsion system technology;

(2) preserve, enhance, and facilitate competition in research, development, and production with respect to existing and alternative automobile propulsion systems; and

(3) supplement, but neither supplant nor duplicate, the automotive propulsion system research and development efforts of private industry.

DEFINITIONS

SEC. 303. As used in this title, the term—

(1) "advanced automobile propulsion system" means an energy conversion system, including engine and drive train, which utilizes advanced technology and is suitable for use in an advanced automobile;

(2) "developer" means any person engaged in whole or in part in research or other efforts directed toward the development of advanced automobile technology;

(3) "fuel" means any energy source capable of propelling an automobile;

(4) "fuel economy" refers to the average distance traveled in representative driving conditions by an automobile per unit of fuel consumed, as determined by the Administrator of the Environmental Protection Agency in accordance with test procedures which shall be established by rule and shall require that fuel economy tests be conducted in conjunction with the exhaust emissions tests mandated by section 206 of the Clean Air Act (42 U.S.C. 1857f–5);

(5) "intermodal adaptability" refers to any characteristics of an automobile which enable it to be operated or carried, or which facilitate its operation or carriage, by or on an alternative mode or other system of transportation;

(6) "reliability" refers to (A) the average time and distance over which normal automobile operation can be expected without significant repair or replacement of parts, and (B) the ease of diagnosis and repair of an automobile, its systems, and parts in the event of failure during use or damage from an accident;

(7) "safety" refers to the performance of an automotive propulsion system or equipment in such a manner that the public is protected against unreasonable risk of accident and against unreasonable risk of death or bodily injury in case of accident; and

(8) "State" means any State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, or any other territory or possession of the United States.

DUTIES OF THE ADMINISTRATOR

SEC. 304. (a) The Secretary of Energy shall establish, within the Department of Energy, a program to insure the development of advanced automobile propulsion systems within 5 years after the date of enactment of this Act, or within the shortest practicable time, consistent with appropriate research and development technique. In conducting such program, the Secretary of Energy shall—

(1) establish and conduct new projects and accelerate existing projects which may contribute to the development of advanced automobile propulsion systems;

(2) give priority attention to the development of advanced propulsion systems with appropriate attention to those advanced propulsion systems which are flexible in the type of fuel used; and

(3) insure that research and development under this title supplements, but neither supplants nor duplicates, the automotive research and development efforts of private industry.

(b) The Secretary of Energy shall, in fulfilling his responsibilities under this title, make contracts and grants with any Federal agency, laboratory, university, nonprofit organization, industrial organization, public or private agency, institution, organization, corporation, partnership, or individual for research and development leading to advanced automobile propulsion systems which are likely to help meet the Nation's long-term goals with respect to fuel economy, environmental protection, and other objectives.

(c) In providing financial assistance under this title, the Secretary of Energy shall give full consideration to the capabilities of Federal laboratories, except that not more than 60 per centum of the funds appropriated pursuant to the authorization under section 312 shall be directly expended in Federal laboratories. In accordance with section 307, such laboratories shall be available for testing components and subsystems which, in the Secretary of Energy's judgment, is likely to contribute to the development of advanced automobile propulsion systems.

(d) The Secretary of Energy shall conduct evaluations, arrange for tests, and disseminate information pursuant to section 307 and submit reports required under section 310.

(e) The Department of Energy shall intensify research in key basic science areas in which the lack of knowledge limits development of advanced automobile propulsion systems.

(f)(1) The Secretary of Energy shall insure that the conduct of the program as defined in subsection (a) of this section—

(A) supplements the automotive propulsion system research and development efforts of industry;

(B) is not formulated in a manner that will supplant private industry research and development or displace or lessen industry's research and development; and

(C) avoids duplication of private research and development.

(2) To that end, the Secretary of Energy shall issue administrative regulations, within 60 days after the date of the enactment of this Act, which shall specify procedures, standards, and criteria for the timely review for compliance of each new contract, grant, Department of Energy project, or other agency project funded or to be funded under the authority of this Act. Such regulations shall require that the Secretary of Energy or his designee shall certify that each such contract, grant, or project satisfies the requirement of this subsection, and shall include in such certification a discussion of the relationship of any related or comparable industry research and development, in terms of this subsection, to the proposed research and development under the authority of this Act. The discussion shall also address related issues, such as cost sharing and patent rights.

(3) Such certifications shall be available to the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate. The provisions of chapter 5 of title 5, United States Code, shall not apply to such certifications and no court shall have any jurisdiction to review the preparation or adequacy of such certifications; but section 553 of title 5, United States Code, and section 17 of the Federal Nonnuclear Energy Research and Development Act of 1974, as amended, shall apply to public disclosure of such certifications.

(4) The Secretary of Energy also shall include in the report required by section 310 (a) of this Act a detailed discussion of how each research and development contract, grant, or project funded under the authority of this Act satisfies the requirement of this subsection.

(5) Further, the Secretary of Energy in each annual budget submission to the Congress, or amendment thereto, for the programs authorized by this Act shall describe how each identified research and development effort in such submission satisfies the requirements of this subsection.

(6) The provisions and requirements of this subsection shall not apply with respect to any contract, grant, or project which was entered into, made, or formally approved and initiated prior to the enactment of this Act, or with respect to any renewal or extension thereof.

DUTIES OF THE SECRETARY OF TRANSPORTATION

SEC. 305. The Secretary of Transportation, in furtherance of the purposes of this title, shall evaluate the extent to which the automobile industry utilizes advanced automotive technology which is or could be made available to it. The Secretary of Transportation shall submit a report to the Congress each year on the results of such evaluation including any appropriate recommendations which may encourage the utilization of advanced automobile technology by the automobile industry.

COORDINATION AND CONSULTATION

SEC. 306. (a) The Secretary of Energy shall have overall management responsibility for carrying out the program under section 304. In carrying out such program, the Secretary of Energy, consistent with such overall management responsibility—

(1) shall utilize the expertise of the Department of Transportation to the extent deemed appropriate by the Secretary of Energy; and

(2) may utilize any other Federal agency (except as provided in paragraph (1)) in accordance with subsection (c) in carrying out any activities under this title, to the extent that the Secretary of Energy determines that any such agency has capabilities which would allow such agency to contribute to the purposes of this title.

(b) The Secretary of Transportation, whenever the expertise of the Department of Transportation is utilized in accordance with subsection (a), may exercise the powers granted to the Secretary of Energy under subsection (c) and shall enter into contracts and make grants for such purpose, subject to the overall management responsibility of the Secretary of Energy.

(c) The Secretary of Energy may, in accordance with subsection (a), obtain the assistance of any department, agency, or instrumentality of the executive branch of the Federal Government upon written request, on a reimbursable basis or otherwise and with the consent of such department, agency, or instrumentality. Each such request shall identify the assistance the Secretary of Energy deems necessary to carry out any duty under this title.

(d) The Secretary of Energy shall consult with the Administrator of the Environmental Protection Agency and the Secretary of Transportation, and shall establish procedures for periodic consultation with representatives of science, industry, and such other groups as may have special expertise in the area of automobile propulsion system research, development, and technology. The Secretary of Energy may establish such advisory panels as he deems appropriate to review and make recommendations with respect to applications for funding under this title.

(e) Nothing contained in this title shall be construed to reduce in any way the responsibilities of the Secretary of Energy for automotive research, development, and demonstration under the Energy Reorganization Act of 1974 (42 U.S.C. 5801 et seq.) and the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5901 et seq.).

EVALUATION, TESTING, AND INFORMATION DISSEMINATION

SEC. 307. (a) The Secretary of Energy shall, for the purposes of performing his responsibilities under this title, consider any reasonable new or improved technology, a description of which is submitted to the Secretary of Energy in writing, which could lead or contribute to the development of advanced automobile propulsion system technology.

(b) The Administrator of the Environmental Protection Agency shall test, or cause to be tested, in a facility subject to Environmental Protection Agency supervision, each advanced automobile propulsion system in an appropriately modified production vehicle equipped with such a system developed in whole or in part with Federal financial assistance under this title, or referred to the Administrator of the Environmental Protection Agency for such purpose by the Secretary of Energy, to determine whether such vehicle complies with any exhaust emission standards or any other requirements promulgated or reasonably expected to be promulgated under any provision of the Clean Air Act (42 U.S.C. 1857 et seq.), the Noise Control Act of 1972 (42 U.S.C. 4901 et seq.), or any other provision of Federal law administered by the Administrator of the Environmental Protection Agency. In conjunction with any test for compliance with exhaust emission standards under this section, the Administrator of the Environmental Protection Agency shall also conduct tests to determine the fuel economy of such vehicle. The Administrator of the Environmental Protection Agency shall submit all test data and the results of such tests to the Secretary of Energy.

(c) The Secretary of Energy shall collect, analyze, and disseminate to developers information, data, and materials that may be relevant to the development of advanced automobile propulsion system technology.

PATENTS

SEC. 308. Section 9 of the Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5908) shall apply to any contract (including any assignment, substitution of parties, or subcontract thereunder) or grant, entered into, made, or issued by the Secretary of Energy under this title.

COMPTROLLER GENERAL AUDIT AND EXAMINATION

SEC. 309. Section 306 of the Energy Reorganization Act of 1974 (42 U.S.C. 5876) shall apply with respect to the authority of the Comptroller General to have access to and rights of examination of books, documents, papers, and records of recipients of financial assistance under this title; except that for the purposes of this title, the term "contract" (as used in section 166 of the Atomic Energy Act (42 U.S.C. 2206), insofar as it relates to such section 306) means "contract or grant."

REPORTS

SEC. 310. (a) As a separate part of the annual report submitted under section 15(a) of the Federal Nonnuclear Energy Research and Development Act of 1974 with respect to the comprehensive plan and program then in effect under section 6 (a) and (b) of such Act, the Secretary of Energy shall submit to Congress an annual report of activities under this title. Such report shall include—

(1) a current comprehensive program definition for implementing this title;

(2) an evaluation of the state of automobile propulsion system research and development in the United States;

(3) the number and amount of contracts and grants made under this title;

(4) an analysis of the progress made in developing advanced automobile propulsion system technology; and

(5) suggestions for improvements in advanced automobile propulsion system research and development, including recommendations for legislation.

(b) The Secretary of Energy shall conduct a survey of developers, lending institutions, and other appropriate persons or institutions and shall otherwise make a study for the purpose of determining whether, and under what conditions, research, development, demonstration, and commercial availability of advanced automobile propulsion system technology may be aided by the guarantee of financial obligations by the Federal Government. The Secretary of Energy shall report the results of such survey and study to the Congress within 1 year after the date of enactment of this Act. Such report shall include an examination of those stages of advanced automobile propulsion system technology research, development, demonstration, and commercialization for which financial obligation guarantees may be useful or appropriate and shall contain such legislative recommendations as may be necessary.

AMENDMENT OF THE NATIONAL AERONAUTICS AND SPACE ACT

SEC. 311. (a) Section 102 of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2451) is amended by redesignating subsection (e) as subsection (f), and by inserting immediately after subsection (d) the following new subsection:

"(e) The Congress declares that the general welfare of the United States requires that the unique competence in scientific and engineering systems of the National Aeronautics and Space Administration also be directed toward the development of advanced automobile propulsion systems. Such development shall be conducted so as to contribute to the development shall be conducted so as to contribute to the achievement of the purposes set forth in section 302(b) of the Automotive Propulsion Research and Development Act of 1977.".

(b) The subsection of section 102 of such Act redesignated as subsection (f) by subsection (a) of this section is amended by striking out "and (d)" and inserting in lieu thereof "(d), and (e)".

AUTHORIZATION FOR APPROPRIATION

SEC. 312. There is authorized to be appropriated to carry out the purposes of this title, in addition to any amounts made available for such purposes pursuant to title I of this Act, the sum of $12,500,000 for the fiscal year ending September 30, 1978.

TITLE IV—ESTABLISHMENT OF FINANCIAL SUPPORT PROGRAM FOR MUNICIPAL WASTE REPROCESSING DEMONSTRATION FACILITIES

SEC. 401. The Federal Nonnuclear Energy Research and Development Act of 1974 (42 U.S.C. 5901 et seq.), as amended by section 207 of this Act, is further amended by adding at the end thereof the following new section:

"FINANCIAL SUPPORT PROGRAM FOR MUNICIPAL WASTE REPROCESSING DEMONSTRATION FACILITIES

"SEC. 20. (a) It is the purpose of this section—

"(1) to assure adequate Federal support to foster a program to demonstrate municipal waste reprocessing for the production of fuel and energy intensive products; and

"(2) to gather information about the technological, economic, environmental, and social costs, benefits, and impacts of such demonstration facilities.

"(b)(1) The Administrator is authorized and directed, to the extent provided in appropriation Acts, to establish such a demonstration program by making grants, contracts, price supports, and cooperative agreements pursuant to this Act or any combination thereof for the establishment of municipal waste reprocessing demonstration facilities. For the purpose of this section municipal waste shall include but not be limited to municipal solid waste, sewage sludge, and other municipal organic wastes.

"(2) The aggregate amount of funds available for grants, contracts, price supports, and cooperative agreements for municipal waste reprocessing demonstration facilities shall not exceed $20,000,000 in the fiscal year ending September 30, 1978.

"(3) For purposes of this section the term 'municipal' shall include any city, town, borough, county, parish, district, or other public body created by or pursuant to State law.

"(4) Municipal waste reprocessing demonstration facilities established under this section shall be owned or operated (or both owned and operated) by the municipality and shall involve the recovery of energy or energy intensive products. Such facilities may be established by any public or private entity, by contract or otherwise, as may be determined by the local government which will own or operate (or both own and operate) such facilities and to which financial support is provided. The Federal share for any such facility to which this section applies shall not exceed 75 per centum of the cost of such facility, and not more than $40,000,000 in Federal funds under this section may be used for the construction of any one facility.

"(5) The Administrator shall promulgate such regulations as he deems necessary, pursuant to section 7(a)(4) and section 7(c)(1) and (6) of this Act, for purposes of establishing a price support program for revenue producing products of municipal waste reprocessing demonstration facilities.

"(c)(1) The Administrator shall consult with the Environmental Protection Agency to assure that the provisions of section 8004 of the Resource Conservation and Recovery Act of 1976 (Public Law 94–580) are applied in carrying out this section.

"(2) Any energy-related research, development, or demonstration project for the conversion (including bioconversion) of municipal waste carried out by the Energy Research and Development Administration pursuant to this or any other Act shall be administered in accordance with the May 7, 1976, Interagency Agreement between the Environmental Protection Agency and the Energy Research and Development Administration on the development of energy from solid wastes; and specifically, in accordance with such Agreement (A) for those energy-related projects of mutual interest, planning will be conducted jointly by the Environmental Protection Agency and the Energy Research and Development Administration, following which project responsibility will be assigned to one agency; (B) energy-related aspects of projects for recovery of fuels or energy intensive products from municipal waste as defined in this section shall be the responsibility of the Energy Research and Development Administration including energy-related economic and institutional aspects; and (C) the Environmental Protection Agency shall retain responsibility for the environmental and other economic and institutional aspects of solid waste projects and for assurance that such projects are consistent with any applicable suggested guidelines published pursuant to section 1008 of the Resource Conservation and Recovery Act of 1976 (Public Law 94–580), and any applicable State or regional waste management plan.

"(d)(1) The Administrator shall establish such guidelines as he deems necessary for purposes of obtaining pertinent information from municipalities receiving funding under this section. These guidelines shall include but not be limited to methods of assessment and evaluation of projects authorized under this section. Such assessments and evaluations shall be presented by the Administrator to the House Committee on Science and Technology and the Senate Committee on Energy and Natural Resources upon the request of either such committee.

"(2) The Administrator shall annually submit a report to the Congress concerning the actions taken or not taken by the Administrator under this section during the preceding fiscal year, and including but not limited to (A) a discussion of the status of each demonstration facility and related facilities financed under this section, including progress made in the development of such facilities, and the expected or actual production from each such facility including byproduct production therefrom, and the distribution of such products and byproducts, (B) a statement of the financial condition of each such demonstration facility, (C) data concerning the environmental, community, and health and safety impacts of each such facility and the actions taken or planned to prevent or mitigate such impacts, (D) the administrative and other costs incurred by the Administrator and other Federal agencies in carrying out this program, and (E) such other data as may be helpful in keeping Congress and the public fully and currently informed about the program authorized by this section.

"(3) The annual reports required by this subsection shall be a part of the annual report required by section 15 of this Act, except that the matters required to be reported by this subsection shall be clearly set out and identified in such annual reports. Such reports shall be transmitted to the Speaker of the House of Representatives and the House Committee on Science and Technology and to the President of the Senate and the Senate Committee on Energy and Natural Resources.

"(e) No part of the program authorized by this section shall be transferred to any other agency or authority, except pursuant to Act of Congress enacted after the date of the enactment of this section.

"(f) Nothing in this section shall be construed as abrogating any obligations of any municipality receiving financial assistance pursuant to this section to comply with Federal and State environmental, land use, water, and health and safety laws and regulations or to obtain applicable Federal and State permits, licenses, and certificates.".

TITLE V—AMENDMENTS TO THE GEOTHERMAL ENERGY RESEARCH, DEVELOPMENT, AND DEMONSTRATION ACT

Sec. 501. As used in this title—

(1) the term "Act" means the Geothermal Energy Research, Development, and Demonstration Act of 1974 (88 Stat. 1079); and

(2) the term "Administrator" means the Administrator of the Energy Research and Development Administration.

Sec. 502. Section 101(b) of the Act is amended—

(1) by striking out subparagraph (E) of paragraph (1) and inserting in lieu thereof the following:

"(E) the Assistant Administrator of the Energy Research and Development Administration for Solar, Geothermal, and Advanced Energy Systems;";

(2) by striking out the period at the end of paragraph (1) and inserting in lieu thereof a semicolon;

(3) by adding at the end of paragraph (1) the following new subparagraphs:

"(G) an Assistant Administrator of the Environmental Protection Agency;

"(H) an Assistant Secretary of Treasury; and

"(I) an Assistant Secretary of Agriculture."; and

(4) by striking out "one member of the Project" in paragraph (2) and inserting in lieu thereof "the Assistant Administrator of the Energy Research and Development Administration for Solar, Geothermal, and Advanced Energy Systems".

Sec. 503. Section 103(b)(4) of the Act is amended by inserting the phrase "or administrative regulations" after "legislation", and by inserting ", environmental and taxing" after "leasing".

Sec. 504. Section 105(e)(3) of the Act is amended by striking out the period and inserting in lieu thereof "or such assistance would not be adequate to satisfy the goals and requirements of the demonstration program under this section.".

Sec. 505. Section 201(b) of the Act is amended by striking out "or" at the end of paragraph (3), by striking out the period at the end of paragraph (4) and inserting in lieu thereof "; or ", and by adding at the end thereof the following new paragraph:

"(5) construction and operation of a new commercial, agricultural, or industrial structure or facility or modification and operation of an existing commercial, agricultural, or industrial structure or facility, when geothermal hot water or steam is to be used within or by such structure or facility, or modification thereto, for the purposes of space heating or cooling, industrial or agricultural processes, onsite generation of electricity for use other than for sale or resale in commerce, other commercial applications, or combinations of applications separately eligible under this title for loan guarantee assistance.".

Sec. 506. Section 201(b)(4) of the Act is amended by striking out "from" and inserting in lieu thereof "using".

Sec. 507. Section 201(c) of the Act is amended by adding at the end thereof the following new sentence: "In the case of a guaranty for the purposes specified in subsection (b)(5), the aggregate cost of the project shall be deemed to be that portion of the total cost of construction and operation which is directly related to the utilization of geothermal energy within the structure or facility in question, except that the aggregate cost of the project with respect to which the loan is made may be the total cost including construction and operation in cases where the facility or structure has been located near a geothermal energy resource predominantly for the purpose of utilizing geothermal energy, or as determined by the Administrator the economic viability of the project is substantially dependent upon the performance of the geothermal reservoir.".

Sec. 508. Section 201(e) of the Act is amended—

(1) by striking out "$25,000,000" and inserting in lieu thereof $100,000,000: *Provided*, That in the case of a guaranty under subsection (b)(5), the amount of the guaranty for any loan for a project shall not exceed $50,000,000";

(2) by striking out "$50,000,000" and inserting in lieu thereof "$200,000,000"; and

(3) by inserting before the period at the end thereof the following: ", unless the Administrator determines in writing that a guaranty in excess of these amounts is in the national interest. Any such determination shall be submitted to the Speaker of the House and the Committee on Science and Technology of the House of Representatives, and to the President of the Senate and the Committee on Energy and Natural Resources of the Senate, accompanied by a full and complete report on the proposed project and guaranty. The proposed guaranty or commitment to guarantee shall not be finalized under authority granted by this Act prior to the expiration of thirty calendar days (not including any date on which either House of Congress is not in session) from the date on which such report is received by the Speaker of the House and the President of the Senate: *Provided*, That such guaranty or commitment to guarantee shall not be finalized if prior to the close of such thirty-day period either House passes a resolution stating in substance that such House does not favor the making of such guaranty or commitment to guarantee."

Sec. 509. Section 201 of the Act is further amended by adding at the end thereof the following new subsections:

"(g) With respect to any guaranty which is issued after the enactment of this subsection by, or in behalf of, any State, political subdivision, or Indian tribe and which is either guaranteed under, or supported by taxes levied by said issuer which are guaranteed under this title, and for which the interest paid on such obligation and received by the purchaser thereof is included in gross income for the purposes of chapter 1 of the Internal Revenue Code of 1954, as amended, the Administrator shall pay to such issuer out of the fund established by this title such portion of the interest on such obligations, as determined by the Administrator, in consultation with the Secretary of the Treasury, to be appropriated after taking into account current market yields (1) on obligations of such issuer, if any, or (2) on other obligations with similar terms and conditions, the interest on which is not so included in gross income for purposes of chapter 1 of said Code, and in accordance with such terms and conditions as the Administrator shall require in consultation with the Secretary of the Treasury.

"(h) The full faith and credit of the United States is pledged to the payment of all guaranties issued under this title with respect to principal and interest.

"(i) The Administrator shall charge and collect fees for guaranties in amounts sufficient in his judgment to cover applicable administrative costs and probable losses on guaranteed obligations, but in any event not to exceed 1 per centum per annum of the outstanding indebtedness covered by each guaranty. Fees collected under this subsection shall be deposited in the fund established by this title.

"(j) The Secretary of the Treasury shall insure to the maximum extent feasible that the timing, interest rate, and substantial terms and conditions of any guaranty exceeding $25,000,000 will have the minimum possible impact on the capital markets of the United States, taking into account other Federal direct and indirect commercial securities activities.".

SEC. 510. Section 202 of the Act is amended to read as follows:

"DEFAULT; PAYMENT OF INTEREST

"SEC. 202. (a) If there is a default by the borrower, as defined in regulations promulgated by the Administrator and set forth in the guarantee contract, the holder of the obligation shall have the right to demand payment of the unpaid amount from the Administrator. Within such period as may be specified in the guarantee or related agreements, the Administrator shall pay to the holder of the obligation the unpaid interest on, and unpaid principal of the guaranteed obligation as to which the borrower has defaulted, unless the Administrator finds that there was no default by the borrower in the payment of interest or principal or that such default has been remedied. Nothing in this section shall be construed to preclude any forebearance by the holder of the obligation for the benefit of the borrower which may be agreed upon by the parties to the guaranteed obligation and approved by the Administrator.

"(b) If the Administrator makes a payment under subsection (a) of this subsection, the Administrator shall be subrogated to the rights of the recipient of such payment as specified in the guarantee or related agreements including, where appropriate, the authority (notwithstanding any other provision of law) to complete, maintain, operate, lease, or otherwise dispose of any property acquired pursuant to such guarantee or related agreements, or to permit the borrower, pursuant to an agreement with the Administrator, to continue to pursue the purposes of the project if the Administrator determines this to be in the public interest. The rights of the Administrator with respect to any property acquired pursuant to such guarantee or related agreements, shall be superior to the rights of any other person with respect to such property.

"(c) In the event of a default on any guarantee under this title, the Adminis-
who shall take such action as may be appro-
trator shall notify the Attorney General,
priate to recover the amounts of any payments made under subsection (a), including any payment of principal and interest under subsection (d), from such assets of the defaulting borrower as are associated with the project, or from any other security included in the terms of the guarantee.

"(d) With respect to any obligation guaranteed under this title, the Administrator is authorized to enter into a contract to pay, and to pay, holders of the obligation, for and on behalf of the borrower, from the Geothermal Resources Development Fund, the principal and interest payments which become due and payable on the unpaid balance of such obligation if the Administrator finds that—

"(1) the borrower is unable to meet such payments and is not in default; it is in the public interest to permit the borrower to continue to pursue the purposes of such project; and the probable net benefit to the Federal Government in paying such principal and interest will be greater than that which would result in the event of a default;

"(2) the amount of such payment which the Administrator is authorized to pay shall be no greater than the amount of principal and interest which the borrower is obligated to pay under the loan agreement; and

"(3) the borrower agrees to reimburse the Administrator for such payment on terms and conditions, including interest, which are satisfactory to the Administrator.".

SEC. 511. Section 204 of the Act is amended by redesignating subsection (c) as subsection (d) and inserting after subsection (b) the following new subsection (c):

"(c) If at any time the moneys available in the fund are insufficient to enable the Administrator to discharge his responsibilities under this title, he shall issue to the Secretary of the Treasury notes or other obligations in such forms and denominations bearing such maturities, and subject to such terms and conditions, as may be prescribed by the Secretary of the Treasury. This borrowing authority shall be effective only to such extent or in such amounts as are specified in appropriation Acts. Such authorizations may be without fiscal year limitations. Redemption of such notes or obligations shall be made by the Administrator from appropriations or other moneys available under this section. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, which shall not be less than a rate determined by taking into consideration the average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations. The Secretary of the Treasury shall purchase any notes or other obligations issued hereunder and for that purpose he is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under that Act are extended to include any purchase of such notes or obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated as public debt transactions of the United States.".

SEC. 512. Title II of the Act is further amended by adding at the end thereof the following new section:

"COMMUNITY IMPACT ASSISTANCE

"SEC. 205. (a) The Administrator, for any project which has a guarantee under this title of not less than $50,000,000 and which will have an intended operating life of not less than five years to satisfy the purposes under this title for which the guarantee has been made, shall endeavor to insure that, taking into consideration appropriate local community action and all reasonably available forms of assistance under this section and other Federal and State statutes, that the impacts resulting from the proposed project have been fully evaluated by the borrower, the Administrator, and the Governor of the affected State, and that effective steps have been taken or will be taken in a timely manner to finance community planning and development costs resulting from such project under this section, if applicable under other provisions of law, or by other means. When the project will be located on leased Federal lands, the Administrator shall specifically review State and local actions under section 9(a) of the Mineral Leasing Act Amendments of 1976 (Public Law 94-377) and insure that any funds made available to the State pursuant to such section 9(a) are used to finance such planning and development costs before any Federal assistance under subsection (c) of this section is considered or authorized.

"(b) The Administrator, for projects not included under subsection (a), may in his discretion consider the community impacts which may result from such projects, and may take such actions, under authority directly available to him under other statutes or in coordination with other Federal agencies or the State, as he considers necessary and appropriate to insure timely and effective planning and financing for such community impacts.

"(c)(1) In order to discharge his responsibilities under subsection (a), and in accordance with such rules and regulations as the Administrator in consultation with the Secretary of the Treasury shall prescribe, and subject to such terms and conditions as he deems appropriate, the Administrator is authorized, for the purposes of financing essential community development and planning which directly result from, or are necessitated by, a project under subsection (a), to—

"(A) guarantee and make commitments to guarantee the payment of interest on, and the principal balance of, obligations for such financing issued by eligible States, political subdivisions, or Indian tribes,

"(B) guarantee and make commitments to guarantee the payment of taxes imposed on such project by eligible non-Federal taxing authorities which taxes are earmarked by such authorities to support the payment of interest and principal on obligations for such financing, and

"(C) require that the qualified borrower receiving assistance for a project under this section advance sums to eligible States, political subdivisions, and Indian tribes to pay for the financing of such development and planning: *Provided*, That the State, political subdivision, or Indian tribe agrees to provide tax abatement credits over the life of the project for such payments by such applicant.

"(2) No guarantee or commitment to guarantee under paragraph (1) of this subsection shall exceed $1,000,000.

"(3) In the event of any default by the borrower in the payment of taxes guaranteed by the Administrator under this section, the Administrator shall pay out of the fund established by this title such taxes at the time or times they may fall due, and shall have by reason of such payment a claim against the borrower for all sums paid plus interest.

"(4) If after consultation with State, political subdivision, or Indian tribe, the Administrator finds that the financial assistance programs of paragraph (1) of this section will not result in sufficient funds to carry out the purposes of this subsection, then the Administrator may—

"(A) make direct loans to the eligible States, political subdivisions, or Indian tribes for such purposes: *Provided*, That such loans shall be made on such reasonable terms and conditions as the Administrator shall prescribe: *Provided further*, That the Administrator may waive repayment of all or part of a loan made under this paragraph, including interest, if the State or political subdivision or Indian tribe involved demonstrates to the satisfaction of the Administrator that due to a change in circumstances there will be net adverse impacts resulting from such project that would probably cause such State, subdivision, or tribe to default on the loan; or

"(B) require that any community development and planning costs which are associated with, or result from, such project, and which are determined by the Administrator to be appropriate for such inclusion, shall be included in the aggregate costs of the project.

"(5) The Administrator is further authorized to make grants to States, political subdivisions, or Indian tribes for studying and planning for the potential economic, environmental, and social consequences of projects and for establishing related management expertise.

"(6) At any time the Administrator may, in consultation with the Secretary of the Treasury, redeem, in whole or in part, out of the fund established by this section, the debt obligations guaranteed or the debt obligations for which tax payments are guaranteed under this subsection.

"(7) When one or more States, political subdivisions, or Indian tribes would be eligible for assistance under this subsection, but for the fact that construction and operation of the project occurs outside its jurisdiction, the Administrator is authorized to provide, to the greatest extent possible, arrangements for equitable sharing of such assistance.

"(8) Such amounts as may be necessary for direct loans and grants pursuant to this subsection shall be available as provided in annual authorization Acts.

"(9) The Administrator, if appropriate, shall provide assistance in the financing of up to 100 per centum of the costs of the required community development and planning pursuant to this section.

"(10) In carrying out the provisions of this section, the Administrator shall provide that title to any facility receiving financial assistance under this section shall vest in the applicable State, political subdivision, or Indian tribe, as appropriate, and in the case of default by the borrower on a loan guarantee made or committed under subsection (b) of this section, such facility shall not be considered a project asset for the purposes of section 202 of this Act.

"(11) The Administrator shall not use his authority under this subsection to provide Federal assistance unless any Federal funds transferred pursuant to section 9(a) of the Mineral Leasing Act Amendments of 1976 (Public Law 94–377) to the State from the lease of Federal land for or associated with the project have been or, with assurance, will be committed, to the maximum extent allowable under Federal statutes, to financing such essential community development or planning directly resulting from, or necessitated by, a project on leased Federal lands.".

TITLE VI—ELECTRIC AND HYBRID VEHICLE RESEARCH, DEVELOPMENT, AND DEMONSTRATION PROGRAM

SEC. 601. (a) Section 7(b)(3) of the Electric and Hybrid Vehicle Research, Development, and Demonstration Act of 1976 (15 U.S.C. 2506(b) (33 is amended by striking out ", except that rules promulgated under paragraph (1) shall be amended not later than 6 months prior to the date for contracts specified in subsection (c)(2)".

(b) Section 7(b)(4) of such Act (15 U.S.C. 2506(b)(4)) is amended to read as follows:

"(4) The Administrator shall transmit to the Speaker of the House of Representatives and the President of the Senate, and to the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate, the performance standards developed under paragraph (1) and all revised performance standards established in connection with the demonstrations specified in subsection (c)(2).".

(c) Section 7(c) of such Act (15 U.S.C. 2506(c)) is amended to read as follows:

"(c)(1) The Administrator shall, within 6 months after the date of promulgation of performance standards pursuant to subsection (b)(1), institute the first contracts for the purchase or lease of electric or hybrid vehicles which satisfy the performance standards set forth under (b)(1). The delivery of which vehicles shall be completed according to the expedited best effort of the administering agency and the selected manufacturer. To the extent practicable, vehicles purchased or leased under such contracts shall represent a cross section of the available technologies and of actual or potential vehicle use.

"(2) Thereafter, according to a planned schedule, the Administrator shall contract for the purchase or lease of additional electric or hybrid vehicles which satisfy amended performance standards and represent continuing improvements in state-of-the-art. In conducting demonstrations, the Administrator shall consider—

"(A) the need and intent of the Congress to stimulate and encourage private sector production as well as public knowledge, acceptance, and use of electric and hybrid vehicles; and

"(B) demonstration of varying degrees of which operations, management, and control for maximum wide-spread effectiveness and exposure to public use.

"(3) The demonstration period shall extend through the fiscal year 1986, with purchase or leasing continuing through the fiscal year 1984. During the demonstration period the Administrator shall demonstrate 7,500 to 10,000 electric and hybrid vehicles. No more than 400 vehicles may be procured for this purpose during fiscal year 1978. In order to allow industry time for advanced planning, the size and nature of projected electric and hybrid vehicle leasing and procurements will be made public by the administering agency. Publications under the preceding sentence (each covering a period of two years) shall be released annually starting at an appropriate time in the fiscal year 1978.

"(4) If the Administrator determines on the basis of his annual review of the program under this Act that—

"(A) at least 200 vehicles cannot be added to the project during the fiscal year 1978, or

"(B) at least 600 vehicles cannot be added to the project during the fiscal year 1979, or

"(C) at least 1,700 vehicles cannot be added to the project during the fiscal year 1980, or

"(D) at least 7,500 vehicles in the aggregate cannot be added to the project during the fiscal years 1981 through 1984,

he shall immediately forward a detailed explanation thereof to the Speaker of the House of Representatives, the President of the Senate, the Committee on Science and Technology of the House of Representatives, and the Committee on Energy and Natural Resources of the Senate.".

SEC. 602. Section 8 of the Electric and Hybrid Vehicle Research, Development, and Demonstration Act of 1976 (15 U.S.C. 2507) is amended by adding at the end thereof the following new subsections:

"(d) In addition to contracting for the purchase or lease of vehicles when conducting the demonstrations established under section 7, the Administrator may acquire or secure use of such vehicles, or have such vehicles acquired or used by others, by making agreements and utilizing various forms of Federal assistance and participation which is authorized under the Energy Reorganization Act of 1974 (Public Law 93–438) and the Federal Nonnuclear Energy Research and Development Act of 1974 (Public Law 93–577).

"(e) When contracting and otherwise using Federal funds to conduct demonstrations under this Act, the Administrator shall seek cost sharing with others to the maximum extent practical. During the first 2 years of demonstration activities the Administrator may enter into procurement or lease contracts for purposes of carrying out demonstrations under this Act without regard to the provisions of title III of the Act of March 3, 1933 (47 Stat. 1520; 41 U.S.C. 10a–10c).".

SEC. 603. (a)(1) Section 10(e) of the Electric and Hybrid Vehicle Research, Development, and Demonstration Act of 1976 (15 U.S.C. 2509(e)) is amended by adding at the end of the following new paragraph:

"(3)(A) There is established in the Treasury of the United States an Electric and Hybrid Vehicle Development Fund (hereinafter in this paragraph referred to as the 'fund'), which shall be available to the Administrator for carrying out the loan guarantee and principal and interest assistance program authorized by this Act, including the payment of administrative expenses incurred in connection therewith. Moneys in the fund not needed for current operations may, with the approval of the Secretary of the Treasury, be invested in bonds or other obligations of, or guaranteed by, the United States.

"(B) There shall be paid into the fund such part of the amounts appropriated pursuant to section 16 as the Administrator deems necessary to carry out the purposes of this Act and such amounts as may be returned to the United States pursuant to subsection (g) of this section, and the amounts in the fund shall remain available until expended, except that after the expiration of the 7-year period established by subsection (h) of this section such amounts in the fund as are not required to secure outstanding guarantee obligations shall be paid into the general fund of the Treasury.

"(C) If at any time the moneys available in the fund are insufficient to enable the Administrator to discharge his responsibilities under this section, he shall issue to the Secretary of the Treasury notes or other obligations in such forms and denominations bearing such maturities, and subject to such terms and conditions as may be prescribed by the Secretary of the Treasury. This borrowing authority shall be effective only to such extent or in such amounts as are specified in appropriation Acts. Such authority shall be without fiscal year limitation. Redemption of such notes or obligations shall be made by the Administrator from appropriations or other moneys available under this Act. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, which shall not be less than a rate determined by taking into consideration the average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations. The Secretary of the Treasury shall purchase any notes or other obligations hereunder and for that purpose he is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under that Act are extended to include any purchase of such notes or obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated as public debt transactions of the United States.

"(D) Business-type financial reports covering the operations of the fund shall be submitted to the Congress by the Administrator annually upon the completion of the appropriate accounting period.".

(2) Section 10 of such Act is further amended by adding at the end thereof the following new subsection:

"(j) The full faith and credit of the United States is pledged to the payment of all obligations incurred under this section.".

(b) Section 10(g) of such Act (15 U.S.C. 2509(g)) is amended to read as follows:

"(g) (1) With respect to any loan guaranteed pursuant to this section, the Administrator is authorized to enter into a contract to pay, and to pay, the lender for and on behalf of the borrower the principal and interest charges which become due and payable on the unpaid balance of such loan if the Administrator finds—

"(A) that the borrower is unable to meet principal and interest charges, that it is in the public interest to permit the borrower to continue to pursue the purposes of the project, and that the probable net cost to the Federal Government in paying such principal will be less than that which would result in the event of a default; and

"(B) that the amount of such principal and interest charges which the Administrator is authorized to pay shall be no greater than the amount of principal and interest which the borrower is obligated to pay under the loan agreement.

"(2) In the event of any default by a qualified borrower on a guaranteed loan, the Administrator is authorized to make payment in accordance with the guarantee, and the Attorney General shall take such action as may be appropriate to recover the amounts of such payments (including any payment of principal and interest under paragraph (1)) from such assets of the defaulting borrower as are associated with the activity with respect to which the loan was made or from any other surety included in the terms of the guarantee."

(c) Section 10(h) of such Act (15 U.S.C. 2509(h)) is amended by striking out "the 5-year period" and inserting in lieu thereof "the 7-year period".

Mr. TEAGUE (during the reading). Mr. Speaker, I ask unanimous consent to dispense with further reading of the amendment in the nature of a substitute, and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The Chair recognizes the gentleman from Texas (Mr. TEAGUE) for 1 hour.

Mr. TEAGUE. Mr. Speaker, the gentleman from Texas (Mr. YOUNG) and the gentleman from Ohio (Mr. LATTA) have told us just exactly what this bill is. So far as we know, there is no controversy or no opposition. The President vetoed the previous bill because of the Clinch River project. We have taken the Clinch River project from this bill, and we are sending it back to him with the rest of the bill intact.

Mr. Speaker, I am here today only as a result of President Carter's veto action on the bill, S. 1811, which authorized appropriations for the Department of Energy Civilian Research and Development programs for the fiscal year 1978. Before I begin, Mr. Speaker, I would like to take this opportunity to thank and commend the chairman of the three subcommittees in our committee who worked so hard and diligent to bring an authorization bill to the floor.

The work of WALTER FLOWERS, chairman of the Subcommittee on Fossil and Nuclear Energy, MIKE MCCORMACK, chairman of the Subcommittee on Advanced Energy Technologies and Conservation as well as the subcommittee chairman on the Environment and Atmosphere GEORGE BROWN have set a high standard of leadership for the members of our committee and I truly feel they deserve this recognition I give them today. Let me finally thank the staff of the committee who also worked very hard in analyzing three separate budget submittals and drafted many amendments and the legislation you have before you today.

The President stated in his veto message that S. 1811 was returned because it contained funding authorizing the continuation of the Clinch River breeder reactor project and he expressed the usual executive branch disapproval of the one-House veto provisions contained in the bill. It should be noted that the conference report accompanying S. 1811 passed the House overwhelmingly by a vote of 366 to 52 on October 20, 1977. Therefore, we are taking this step today, which is really only a technical action since the Congress has already acted on this matter, to amend the Senate-passed bill, S. 1340, and incorporate all of the authorization language of the vetoed S. 1811 with the exception of the following:

This bill with its programs and new emphasis is the key to the national effort to solve our energy problems. It is the only energy bill that is before the Congress which addresses long range supply and demand issues by tapping our coal, oil shale, geothermal and nuclear resources. Therefore, we have walked the extra mile to accommodate the President by taking out of the bill any reference to the Clinch River breeder reactor project and removing one of the one-house veto provisions that the President found offensive.

Specifically, S. 1340 as amended will eliminate all funding for the Clinch River breeder reactor project—$80 million. It also eliminates section 106 language which related to the Clinch River breeder reactor project. And, finally, it strikes all of title V of S. 1811 which dealt with uranium enrichment services pricing and included a one-house veto provision. Mr. Speaker, there are no other changes in the bill. We feel strongly that the authorization process must be preserved, and that the many exciting new initiatives contained in our bill should be gotten underway now. The new total authorized to be appropriated to the Department of Energy for Civilian Research, Development and Demonstration and related activities is $6,081,445,000 which reflects the $80 million reduction below the total of S. 1811.

Mr. Speaker, let me review the Senate bill, S. 1340, for a moment. The S. 1340 bill passed the Senate in the early months of the 95th Congress and was sent to the House for action. However, the bill was never referred to committee. S. 1811 as introduced, contained only nuclear R. & D. authority for civilian programs. However, before final passage in the Senate it was expanded to incorporate the S. 1340 language, and was then forwarded to the House and referred to our committee.

The House, acting on its own, passed H.R. 6796 after being favorably reported by the Committee on Science and Technology and sequentially referred to the Committees on Armed Services and International Relations. Subsequent to the passage of H.R. 6796, S. 1811 was taken from the table, and amended by the House by incorporating the contents of H.R. 6796.

Subsequent to conference, S. 1811 was passed by both the House and the Senate.

It passed the House on October 20, 1977, by a recorded vote of 366 to 52. S. 1811 would have authorized appropriations of $6,161,435,000 for the newly created Department of Energy's civilian research and development programs for fiscal year 1978.

Mr. Speaker, the primary reason for this authorization bill is the requirement to authorize new programs and the continuation of existing programs on a year-to-year basis for the new Department of Energy research and development activities. This requirement is contained in the new Department of Energy statute, just as it is contained in the Non-Nuclear Energy Research and Development Act of 1974. The appropriation is not sufficient to carry forward the Department of Energy functions without a good deal of confusion—and, at the same time, any new initiatives will be very uncertain. There is no issue of authorization versus appropriation. I feel strongly that the Appropriation Committee role must be complemented by the authorization committee role of making careful studies of program initiatives and indeed make certain that the congressional intent is stamped clearly on agency activities. This process assures the Appropriations Committee and the Members of this body that the requested programs by a given agency are not frivilous requests.

Mr. Speaker, this bill, S. 1340, and the one it supersedes, S. 1811, is and was a good bill. It is vitally needed to get our fossil and nuclear programs, for example, and biomass programs moving. The conference was accomplished in the spirit of compromise and candor, and the bill truly reflected the many varied views and resulted in a firm and solid foundation for the newly created Department of Energy.

The major reason expressed by the Presdent in his veto message for his action on S. 1811 was the Clinch River breeder reactor project. Let me say here and now I do not agree with his reasoning. I respect his opinion, but I do not agree with it. I think he is ill-advised and I think that the breeder technology has a vital role to play in this country's energy future.

This bill contains no funding for Clinch River, but let me emphasize that the base breeder technology program is still contained in this bill. We intend to vigorously pursue not only this energy technology option, but all the aforementioned technologies which have merit. They all have their roles to play in increasing energy supply, using our own resources, and in reducing energy demand. We intend to see that they receive the necessary exposure.

This bill is not a one-issue bill, for there are a number of new initiatives which the committee has taken in this bill which are extremely vital to this Nation's future. The committee has acted in a most positive manner in the areas of fossil fuels, geothermal, solar, conservation, nuclear and other areas of major concern—not only to the committee and this body, but to the Nation.

Mr. Speaker, in addition to the specific concerns mentioned above, the bill is structured so that basic changes in the programs conducted by the Department of Energy from those changes authorized by Congress will require notification to the appropriate committees and the Congress. Our congressional oversight will be greatly improved since the committees and the Congress will be kept involved in any changes in program direction.

Mr. Speaker, in closing, let me thank you and all the Members of this body for your patience and your diligence in dealing with this most difficult and complex piece of legislation during the year.

I think the House has again displayed to the executive branch as well as to the country that it can and will act in a responsible manner when put to the test. Because of the importance we place on all the language worked out to accompany the previously vetoed S. 1811 bill, I have included the conference report in my remarks with the necessary changes we have made to accommodate the President's veto. I think it expresses the will of the committee, the will of the conferees, and the will of both bodies to act on one of the Nation's most pressing problems.

At this point in the RECORD I think it is appropriate to insert the language of the conference report that accompanied S. 1811 so that the intent of the House is clear in the passage of the revised S. 1340.

The entire conference report, 95–714, except for the statements and budgetary items from the deleted positions of the amendment follows:

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1811), Energy Research and Development Administration Authorization Act, 1978—Civilian Applications, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

EXPLANATION OF FUNDING PROVISIONS

The compromise funding provisions adopted by the conference committee regarding the civilian research and development programs is reflected in the language of the Conference report.

This statement includes the table which reflects the level of program activities contained in the bill with authorization amounts and budget outlays. The Conferees expect that the Senate Committee on Energy and Natural Resources and the House Committee on Science and Technology be kept fully and currently informed of any proposed increase in the level of funding above the amount which has been appropriated for the activities contained in the table.

U.S. ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION FISCAL YEAR 1978 CONGRESSIONAL ACTION TABLE

[In thousands]

	Fiscal year 1977 appropriation	Fiscal year 1978 House authorization	Fiscal year 1978 Senate authorization	S. 1340 authorization	Related budget outlays	Fiscal year 1978 appropriations

EXPLANATION OF SIGNIFICANT NUMBER CHANGES

Nonnuclear energy

High Btu Coal Gasification Test Facility

The conferees agreed to add $10 million in operating funds for a feasibility study for a high Btu coal gasification test facility. The House receded to the Senate and no construction funds are authorized for the facility in fiscal year 1978. The high Btu coal gasification test facility would demonstrate and evaluate several second and third generation gasification technologies in a single installation.

A GOCO (Government owned, contractor operated) arrangement is proposed as a financing mechanism that will avoid the complications and time delays of the present cost sharing arrangement in the demonstration program. The test facility program is not intended to replace the present demonstration program. It does provide an option that ERDA has agreed is attractive. Dr. White has sent a letter to the House committee which affirms the value of such a facility and supports beginning design work.

The conferees view the test facility as expanding the options for demonstrating new gasification technologies at commercial size. The inclusion of this facility into the current fossil demonstration program indicates a dissatisfaction with the Administrator's execution of section 8 of the Federal Nonnuclear Energy Research and Development Act of 1974. This section authorizes the Administrator to "identify opportunities to accelerate the commercial applications of new energy technologies and provide assistance for participation in demonstration projects." Great latitude is allowed in this section as to the kind and degree of cooperative agreements with non-Federal entities which may be entered into. The rigid fifty-fifty cost-sharing arrangement of the fossil energy demonstration program limits the flexibility granted under section 8. The introduction of the high Btu test facility and the feasibility study is intended to open up possibilities which are precluded by the present financial arrangements.

The conferees wish to emphasize, by this action, that this authorization is not intended, in any way, to stop, delay or inhibit the presently constituted demonstration program. The actual purpose of the demonstration program has always been clear and that is to insure that second generation technologies are demonstrated at selected sites to provide that information necessary to make decisions about the commercial viability of such technologies. Therefore, the feasibility study for the test facility should include a discussion about the relative merits of pursuing the construction of the test facility and its impact, if any, on the present demonstration program.

Gasifiers in Industry

Forty million dollars was reauthorized from the Clean Boiler Fuel from coal demonstration plant for the "gasifiers in industry" program. These funds were placed in operating expenses for the low Btu gasification program. This permits greater flexibility and quicker action in execution of this near-term program. The program objective is to get gasifiers operating and producing gas during the next 3 years. This will demonstrate the economic viability of low and medium Btu gas as a substitute for natural gas and also prove its environmental acceptability. State of the art gasification technologies would be used. However, modern environmental control equipment must be added to the gasifiers and the use of caking coals needs to be demonstrated.

Direct Combustion

A total of $12 million was added to the direct combustion program to further emphasize the conferees strong commitment to this program which has potential near-term impact. Two million dollars will be used for the utilization of anthracite waste in fluidized bed combusters and $6 million will be used for the component testing and integration facility for atmospheric fluidized bed combustion at Morgantown, W. Va. Four million dollars was not in dispute among the conferees and will support coal-oil slurries which are critical for the conservation of oil, the usage of coal and reduction of the retrofit problems of current oil burners. The conferees felt that this program should be enhanced by allowing larger scale tests and the initiation of commercial application.

Oil Shale and In-Situ Coal Gasification Program

The in-situ coal gasification program has made significant progress within the last fiscal year. The conference addition of $8.0 million for this work is meant to advance the Linked Vertical Well method as well as the Packed Bed method.

The conferees also direct the ERDA to prepare a management plan for oil shale R&D to include possible or likely efforts for process development units and pilot plants utilizing above-ground and in-situ processes. The above-ground efforts have not been carefully devised and there does not appear to be logical steps of mining, retorting, hydrotreating and refining. The funds for this plan are included in the conference amount.

Advanced Research and Supporting Technology

The conferees agreed to add $10 million to the advanced research and supporting technology program. This increase is intended to augment the materials and exploratory research program carried out within this program.

The long term increase in coal and oil shale used to meet the energy needs of the country will require new and environmentally sound technologies be developed. This means that fundamental knowledge of coal, coal chemistry, geology, rock mechanics and materials must be increased. According to the scientific and engineering communities ERDA's fossil energy program has not stressed this work sufficiently in the past. The increase is intended to enable them to expand these efforts.

Flash Liquefaction

The House receded from its addition for the flash liquefaction process. The conferees wish to emphasize their interest in support for the flash liquefaction but understand that there are carryover funds in the liquefaction program that can be used in support of the construction of a process development unit.

Drilling, Exploration, and Offshore Technology

With respect to increased funding for drilling technology development, the conference committee deleted $1.6 million under geothermal resource development added by the Senate, while selecting a compromise figure of $7.6 million in the fossil energy area. This latter figure is $6 million above the Senate authorization, and $3 million below the House.

The committee wishes to make clear that this action is in no way intended to indicate

Congressional direction that fossil drilling technology be emphasized at the expense of its geothermal counterpart. The Committee recognizes that great similarities exist between the developmental needs in these two areas. Common problems such as coping with high temperature and corrosive environments, and common needs for improvements in directional drilling techniques, down-hole motor capability, and drill bit design and fabrication, insure that progress in one area will be of substantial benefit to the other.

Five million dollars will be used for the development of down hole electronics, severe service elastomers and steels and improved bit designs. In addition, testing and evaluation instrumentation is to be supported by the development of telemetry systems and better down hole motors. This new technology will have near term application and is not presently under development, because the drilling industry is small and does not have the capital resources to support sophisticated R&D programs. It is clear that in the past ERDA has made a considerable effort to insure that work in these two drilling technologies has been well-coordinated in order to minimize needless duplication and overlap. The Committee directs that of the additional funds authorized in this legislation at least $1.6 million should be used to emphasize problem areas common to both fossil energy and geothermal resource development, including subterranean melting research.

The addition also includes $1 million for an evaluation of the possible applications of zirconium hydride reactors as self-contained power systems for subsea oil recovery efforts.

Solvent Refined Coal (SRC) Demonstration Plant

The conferees action for this promising technology emphasizes both the SRC solids process, which has been the subject of extensive testing, and the SRC liquids process, which produces a desirable and versatile liquid product with some solids output, but is now in the early stages of large scale testing.

In May of 1977, the SRC pilot plant in Fort Lewis, Washington was adapted to operate in the SRC II mode. The conferees feel this test can provide the data needed for a realistic assessment and design of an SRC II plant. To take advantage of this information and to do the design work the conferees have provided $10 million in operating funds for fiscal year 1978.

In the case of the solid fuel SRC process, successful work has been concluded in several important areas including pilot scale process studies on seven different coals including high sulfur coals, a successful 3000 tons combustion test, and conceptual commercial designs sponsored both by EPRI and the Southern Company.

As a consequence, the conferees have agreed that $30 million be authorized for construction of an SRC solids demonstration plant to produce solid fuels. The conferees agree that this demonstration plant be constructed at the smallest commercial size module which can efficiently demonstrate the technology. Although commercialization is the ultimate goal, government involvement and expense are to be minimized. However, once the Secretary has selected a plant size, the conferees direct that the Department report to the appropriate committees in Congress on the cost considerations involved in the decision.

Geothermal Energy

The Conference Committee recommendation to the authorization for hydrothermal technology applications is $3.1 million above the House Bill. This increase is to be used to accelerate the pace of the Raft River Thermal Loop Experiment in Idaho. The Conferees feel that this experiment should be rapidly pursued because it utilizes moderate-temperature resources, which are more abundant than the high temperature hydrothermal resources.

The Conference recommends an increase of $11.9 million over the Administration request for Advanced Technology Applications. Of this figure, $2.1 million will go for hot dry rock resources, and $9.8 million for geopressured resources. The conferees encourage the ERDA to continue subterranean melting research. The House amendment to the Senate Bill includes an authorization of $6 million for Architect/Engineering design and long-lead procurement for construction of a second 50 MWe geothermal demonstration plant; the Senate bill includes $4 million. The Conferees understand that necessary project activities can be successfully initiated within the $4 million level and they have agreed to accept this figure as provided in the Senate bill. ERDA is hereby authorized to enter into a cost-share arrangement for the design, construction and operation of the 50 MWe geothermal energy demonstration plant.

Solar Energy

The Conferees feel that the Federal Government should take a stronger role in reducing the cost of solar photovoltaic cells. To do this the authorization for the photovoltaic program is increased by $19 million above the level provided in the Senate Bill. Of this, $12.2 million will be used for the purchase of photovoltaic cells to be utilized on Federal sites where their applications are shown to be life cycle cost effective; $800,000 is earmarked for market studies; the remaining funds will be utilized for technology development, particularly related to cost reducing production technologies.

The Conference recommendation for Ocean Thermal Energy Conversion is to increase funding by $10 million over the Administration request. This is a $9.8 million reduction from the House amendment of $19.8 million to the Senate Bill. The Conferees feel that the potential of Ocean Thermal Energy Conversion is substantial for the production of energy intensive products and wish to insure that ERDA begins work on a 5 MW OTEC Tropic Ocean Grazing Pilot Plant. At the same time, the Conferees wish to emphasize the importance of the ongoing base-line program by providing additional funds for this as well.

The Conferees accepted the House amendment funding level of $41 million for the construction of a 10 MWe Central Receiver Solar Thermal Pilot Plant in Barstow, California, and recommend that ERDA put this project back on schedule with no restriction as to the procurement of heliostats.

The Conference recommendation for solar heating and cooling of buildings is $2.5 million above the House Amendment to the Senate Bill. Of this, $2 million will go for research in retrofitting existing structures to utilize solar heating and cooling systems, and the remaining $500,000 is for support of the Solar Data Centers.

NUCLEAR ENERGY

NUCLEAR RESEARCH AND APPLICATIONS

Light water reactor technology

The Conferees adopted the Senate authorization figure for the LWR technology program which included $12.4 million for standardization of designs for light water reactors which is part of the President's draft proposal to streamline the LWR licensing process, but was not included in the budget amendment.

It is the opinion of the Conferees that ERDA should seek as much private cost-sharing as possible for this program, hopefully over time as high as 40%.

Gas-cooled thermal reactors

The Conferees adopted the House figure of $31 million, which is $15 million above the Senate figure and the Administration request, for a program to develop a more proliferation-proof fuel for the gas-cooled reactor in both the High Temperature Gas Reactor (HTGR) Steam Cycle and the Advanced HTR direct cycle concepts. The HTGR can use either a low-enriched uranium (LEU) fuel cycle, or a LEU-thorium fuel cycle in which the bred U–233 is denatured with a U–238. Both of these cycles are attractive from the safeguards viewpoint because of the low enrichment of the Uranium at all points in the fuel cycle, and because the small amounts of plutonium produced (less than ⅓ as much as found in LWR spent fuel) can be discarded as waste. The Advanced HTR Program on directly gas-cooled reactors is a cooperative one with the West Germans.

Laser isotope facility

The Conferees adopted the House inclusion of $3.5 million in funding for A–E work only on a laser isotope pilot facility project 78–5–c with the site undetermined. This rapidly advancing technology promises great reduction in operating expenses and capital plant costs for uranium enrichment facilities.

SUPPORT OF NUCLEAR FUEL CYCLE

Light water reactor fuel reprocessing

The Conferees agreed on $10 million authorization to fund design work on a full-scale nuclear waste solidification facility, a waste storage facility and to conduct systems integration activity. The Senate had authorized $20 million for this work; the item did not appear in the House bill. The Conferees also adopted the Senate funding of $13 million and provisions pertaining to activities to be performed at the Barnwell Nuclear Fuels Plant and funding of $1 million and provisions with an amendment pertaining to a study on future utilization of the Barnwell Nuclear Fuels Plant. The amendment further refined the objectives of the study.

The House amendment to the Senate bill contained a proviso requiring submission to the Congress of a plan of the specific activities to be funded at the Barnwell Plant. The House receded to the Senate position. However, the Conferees indicated that they expected the Committee on Science and Technology and the Committee on Energy and Natural Resources to be informed of the nature of the activities to be undertaken at the Barnwell Nuclear Fuels Plant in conformity with the requirements of the Department of Energy Act that the Congress be kept "fully and currently informed." It was also the opinion of the Conferees that the Barnwell facility should be used in such a way so as not to limit the potential for eventual use as a reprocessing plant.

MAGNETIC FUSION

The Conferees adopted the House authorization level which was $8 million above the Senate Figure, to fund the following activities:

(1) Tokamak Confinement Systems work in neutral beam heating and impurity effects on the Oak Ridge ORMAK facility;

(2) Development and technology efforts on critical superconducting magnets and prototype development of neutral beam injectors to support the Tokamak Fusion Test Reactor (TFTR) at Princeton Plasma Physics Laboratory;

(3) Applied Plasma Physics theoretical support of Tokamak and Mirror Programs;

(4) Reactor Projects in diagnostics and test components for TFTR of at least $1 million.

The Conferees adopted the House position to include $14.4 million for project 78–3–b which is of highest priority in the Magnetic Fusion program and is a key support facility for fusion pilot plant materials selection.

The Conferees adopted the Senate position to increase the authorization for Project 46–5–b by $3.2 million for which would provide thorough materials understanding and provide tritium handling experience for scale-up to pilot-plant operation.

HIGH ENERGY PHYSICS

The House amendment includes an authorization of $10,500,000 in plant funds for the Proton-Proton Intersecting Storage accelerator facility (ISABELLE) to be located at the Brookhaven National Laboratory. This authorization provides for engineering design and preliminary construction activities. The conferees feel that ISABELLE should proceed and have agreed to accept the House authorization in full.

NUCLEAR PHYSICS

The Conferees adopted the Senate increase of $6 million to generally enhance the effectiveness of major facilities which have been underutilized chiefly because of inflation, particularly in power costs.

CONSERVATION

The House and the Senate both increased the Administration budget request for the superconducting magnetic energy storage facility. The Conferees accepted $0.1 million addition to the budget request.

The Senate and House both increased the Administration budget request for Industrial Energy Conservation by $15.0 million to accelerate cogeneration in industry, but allocated this increase differently between operating expenses and capital equipment. The Conferees agreed to accept the Administration's division of operating and capital equipment expenses.

The Conferees resolved independent increases to the Administration budget request for Buildings and Community Conservation as follows: a $2.0 million increase for research and demonstration of improved gas and oil furnace efficiency; $2.0 million to develop a program plan covering financing, development and demonstration of urban area designs based upon integrated energy use; and $2.0 million for community energy management planning demonstration. The Conferees also agreed to emphasize the importance of finding uses for hot water effluents from power plants as an extension of cogeneration project planning.

The House bill contained authorizations for Transportation Conservation in both Title I and Title III. Under Title I, the Conferees agreed to $1.0 million for the Alternative Fuels Utilization Program and, under Title III, $12.5 million for Automotive Propulsion Research and Development.

The Conferees increased the authorization above the Administration's request for Improved Conversion Efficiency by $12.5 million as follows: Thermionics, $0.2 million; Fuel Cells, $10.3 million; Methane Recovery, $2.0 million.

ENVIRONMENT AND SAFETY

Members of the conference committee agreed to accept an increase in the authorization level for Environment and Safety research and development activities of $9 million over the President's request of $252,093,000. Of this increase, $7 million is provided for overview and assessment activities for the purposes of reviewing the current status of ERDA's Environment and Safety Review Program, refining and enlarging the environmental-energy data and information effort, expanding the liquefied natural gas program, and continuing with the regional environmental energy assessments. The remaining $2 million increase is for the decommissioning and decontamination activities of which $1 million is to be used in conjunction with the study of the West Valley Nuclear Fuel Services facility and $1 million is to be used for the general environmental study of decommissioning and decontamination activities.

Since a $1 million authorization was provided in both the Waste Management Program and in the Environment and Safety Program for purposes of carrying out the West Valley study, the conference committee directs the Administrator to undertake this study with the joint cooperation and assistance of both Assistant Administrators.

The general study should consider a series of alternative institutional approaches for Federal Government and private sector management of a national decommissioning strategy and program including but not limited to: 1) investigate the feasibility of having a lead federal agency approve and monitor an overall decommissioning strategy and whether ERDA should accelerate its decommissioning programs; 2) consider the needs of the nuclear industry, which will rely in large part on the research, demonstration and experience from ERDA decommissioning efforts; 3) examine the technical alternatives for decommissioning, decontamination and disposal as well as the costs for all recommended steps and alternatives for each type of facility and waste; 4) investigate alternative methods for financing the operation, including escrow and bonding procedures, and the cost estimates should be sufficiently detailed to assist in allocating the proper amounts to be set aside in such procedures; 5) investigate the possibility of an independent waste handling corporation, financed by current fees or preposted bonding; 6) examine and make recommendations for reasonable tax accounting methods for handling decommissioning costs, such as the possibility of including "negative salvage value" in the depreciation allowance; 7) review the extent to which ERDA is meeting State mandated requirements and recommend generic criteria for environmental impact statements; and 8) make recommendations for the coordination of ERDA, NRC, and EPA in the setting and implementation of decommissioning, disposal, and decontamination standards and criteria.

PROGRAM MANAGEMENT AND SUPPORT

The funding level of $317,804,000 for operating expenses for Program Management and Support agreed to by the conferees is $16.438 million above the Administration request. (This does not include any program management and support funding for military or joint civilian-military programs which are included in other legislation.) This additional funding is for staff support ($6.6 million), governmental relations ($4.038 million), university programs ($1.0 million for university reactor fuel, $1.65 million for occupational and vocational training and curriculum development, $1.35 million for traineeships), and small grants to inventors ($1.8 million).

Explanation of selected provisions

The Conference accepted an amendment to incorporate into the bill a program of loan guarantees for financing the construction and startup costs of demonstration facilities for the conversion of municipal and industrial wastes into synthetic fuels and other desirable forms of energy. Originally, the House bill contained a section 214 which authorized a $300 million loan guarantee program for the construction and start-up of demonstration facilities to convert various forms of biomass to desirable forms of energy (including synthetic fuels).

Section 214 contained provisions which were identical or similar to provisions contained in section 210 of H.R. 6796 and section 312 of S. 1811. Sections 210 and 312 of the respective bills, which authorized a loan guarantee program for the demonstration of technologies to produce alternative fuels from coal, oil shale and other domestic resources, were identical for a provision relating to patent rights. Section 214 was deleted from the agreed upon bill and the amendment offered, and accepted, incorporated into the program authorized by section 210, the major provisions of the biomass loan guarantee bill. By this action, the Conference avoided enacting into law unnecessary and duplicative provisions which would have established two entirely separate and distinct loan guarantee programs. Also, however, those provisions of the biomass loan guarantee section which were different from section 210 and which were specifically designed to attract participation by municipalities and other public and private entities, were retained in the compromise amendment offered in Conference.

The major provisions of the amended section 214 as incorporated into section 210 are as follows:

(1) A new subsection (4) is added to section 19 of the Federal Nonnuclear Research and Development Act, as amended. The program authorized by this subsection is confined to loan guarantees for municipal and industrial waste, sewerage sludge and other municipal organic wastes.

(2) The Administrator is authorized to guarantee and to make commitments to guarantee loans, the outstanding indebtedness not to exceed $300 million at any one time.

(3) With regard to the program for municipal or industrial waste the following subsections of the loan guarantee program authorized in section 19 shall not apply (b)(1), (b)(5), (c)(2), (c)(5), (c)(6), (c)(7), (c)(8), (c)(9), (e)(3), (j), (k) and (q).

(4) Any demonstration facility for the conversion of solid waste shall, prior to issuance of such guarantee, receive a certification from the Environmental Protection Agency and any appropriate State or area-wide solid waste management planning agency that such guarantee agreement is consistent with applicable solid waste management plans and guidelines.

(5) In the case of such demonstration facilities the amount guaranteed shall not exceed 75 per centum of the total cost of the facility provided that 90 per centum of the total cost of the facility shall not be guaranteed during the period of construction and start-up.

(6) The maximum maturity on any obligation is not to exceed 30 years or 90 per centum of the projected useful life of the facilities physical assets.

(7) To cover administrative costs and probable losses or guaranteed obligations, the Secretary is to collect fees for guarantees of obligations not to exceed 1 per centum per annum of the outstanding indebtedness covered by the guarantee.

(8) No project is to be transferred to any other agency except pursuant to Act of Congress and the projects are to be administered in accordance with an interagency agreement between the Environmental Protection Agency and the Energy Research and Development Administration.

(9) With respect to any guaranteed obligation issued by a tax-exempt authority the interest which would otherwise be tax-free is made taxable provided that the Secretary shall repay to such issuer a portion of the interest on such obligations as determined by the Secretary of the Treasury.

The identical language included in section 210 of the House bill and section 312 of the Senate bill to provide authorization for the establishment of a loan guarantee program for the construction and operation of facilities to produce synthetic fuels from coal, oil shale and other domestic resources does not specifically define the word "demonstration". To insure that the intent of the Conference is clearly stated, the managers of the Conference include the explanation of this term given by Congressman Teague during floor consideration of H.R. 6796, the Fiscal Year 1978 ERDA Authorization bill.

The ERDA Authorization bill for fiscal year 1978, H.R. 6796, contains an amendment to the Non-Nuclear Energy Research and Development Act of 1974 which would provide authority to ERDA or its successor agency in the Department of Energy to use loan guarantees in the development of alternative forms of energy.

The purpose of this amendment is to give the agency new authority to set up a loan guarantee program as part of the Non-Nuclear Act.

The Congress has indicated in Section 8 of the Act the applicability and intent of the Act regarding demonstrations of full-size facilities. This section authorizes the Administrator to "enter into cooperative agreements with non-Federal entities to demonstrate the technical feasibility and economic potential of energy technologies on a prototype or full-scale basis." The Act is clear in that the intent of Congress is that commercial scale facilities qualify for assistance.

If the development of coal gasification is to proceed through the assistance of loan guarantees it is important that the agency be able to look at different demonstration projects under this legislation with respect to coal, environmental and socioeconomic impact and other geographical limiting parameters. The agency must be free to consider all of the coal gasification projects so far announced based on their contribution to the energy technology and energy inventories of this country.

This Section 210 contains no explicit language which limits the size of the facility to be demonstrated. The optimal size of a demonstration plant would vary with the technology and with the particular situation. For example, if the Administration was considering proposing a high Btu coal gasification plant demonstration, it might choose to guarantee construction of a commercial size plant, or one that is smaller than commercial size. However, if by choosing the smaller size it thereby limits the number of potential projects that could bid on the project to only one, then the success of the project would be seriously jeopardized. A better public policy and a sound energy RD&D policy would be to build a plant which would permit sufficient participants to bid for the award. The language of Section 210 does not prohibit the Administrator of ERDA from making his choice. It gives him the flexibility he needs.

The language of the bill provides that all projects which exceed $50 million will require individual review and specific approval by both Houses of Congress through separate legislation. Congress will have ample opportunity to closely review the choice of the Agency before approving or disapproving authorizing legislation. With this authorization safeguard in place, it is important now that the Agency get on with the task before it and not be restricted in the review of the type and number of projects which can help to mitigate the energy shortfall in this country.

The Senate bill contained a title on changing the basis for government charge for uranium enrichment services. The language of the title conformed to that submitted by the Administration except for an amendment. The amendment changed the procedure for the Congressional review of uranium pricing policy from a layover period of 45 days before the appropriate committees to a layover period of 60 days with a one-house disapproval resolution procedure for changes in the price charged for enrichment services. The House amendment also contained the title submitted by the Administration with amendments including a provision that the enrichment services pricing was limited to recovery of Government costs and normal and ordinary business expenses which would otherwise be incurred by a private operator.

Because of the President's objections to the one-house veto and the limiting language in this Title, it was deleted from the amendment to S. 1340.

The Conference Committee agreed to delete Section 601(3)(d) in the Senate Bill which would have specifically called for the ERDA to spend, during fiscal year 1978, at least $10 million of the solar program funding for the operation of the Solar Energy Research Institute (SERI). The deletion of this language in no way reflects any prejudice to the SERI. The conferees confirm their full support for the ERDA and urge the ERDA to move as rapidly as possible to develop the SERI consistent with a wise expenditure of the Institute's funding.

The Senate bill contained a section which required a study of the options for decommissioning or other disposition of the Western New York Nuclear Service Center, but contained a provision that the section was not to be construed to commit the Federal Government to any new assistance or participation in the Center and that nothing in the section should be construed to relieve any party of its responsibilities for the safe storage of nuclear waste. The House amendment contained a similar section which required a plan rather than a study, and the provision stating that nothing in the section should be construed to relieve any party of its responsibilities for the safe storage of nuclear waste. That Conferees adopted the Senate language. However, it is the view of the Conferees that the section does not preclude future Federal participation.

The Conferees accepted House language which requires that the revenues received by the Administration from the enrichment of uranium be used to offset the costs which are incurred in providing existing and future uranium enrichment service activities, both for operating and plant and capital expenditures.

The Senate agreed to recede to the House to delete language contained in the Senate bill to establish an employee grievance procedure for the Lawrence Livermore Laboratory. The Conferees note that recently, the University of California has agreed to a new set of guidelines for relations with employee organizations. This agreement is an important step in establishing an improved labor management policy. For this reason it was felt that the amendment was not required.

The House bill had a separate Title III relating to automotive propulsion research and development. Title III of the House bill was amended on the House floor on September 21. The amendment changed the title from the "Automotive Transport Research and Development Act" to the "Automotive Propulsion Research and Development Act", and deleted the concept of "integrated test vehicles" from the bill. The Senate bill had no comparable title.

The conferees agreed to accept Title III of the House bill with an amendment to Sec. 304(f) which requires special reports on grants and contracts entered into under the "Automotive Propulsion Research and Development Act of 1977".

The Conferees adopted the House provision which required a report focused on the impact of the President's non-proliferation policy on cooperative agreements in research and development with an amendment. The Conferees amended the provision so that the report is to be transmitted to the House International Relations and Science and Technology Committees and the Senate Foreign Relations and Energy and Natural Resources Committees.

The Conferees directed that the report should be made as consistent as possible with other required reports to the Congress on nonproliferation policy and initiatives.

The Conference passed Sec. 313 with the clear understanding that the action taken under this section is in response to emergency conditions resulting from the Teton Dam disaster and that it is not a major federal action. They further agreed that the effectiveness of the section depends on its prompt implementation and encourage the Secretary of Interior to request the Council on Environmental Quality to exempt this action from the environmental impact statement requirements of the National Environmental Policy Act of 1969.

In both the House and Senate-passed authorization bills, $15 million was provided to develop a program whereby the United States would embark upon the research, development and demonstration of low-head hydroelectric technology. A good deal of foreign technology utilizing turbines that can generate electricity under low-head, run-of-the-river conditions already exists, but further refinement of this technology is called for in order to reduce cost. Based upon these complementary rationales, the conferees have agreed to retain the $15 million authorization and to further characterize purposes for which this authorization is made.

The House, in its report on H.R. 6796, indicated that the authorization would be used to develop a research and development program. This entails research work, systems evaluation, site analysis and selection, and other economic, environmental and technical activities. The Senate bill and accompanying report contemplated a demonstration type program whereby a majority of funds would be utilized for demonstrating the feasibility of installing small scale hydroelectric generators in existing dams. It is the judgment of the conferees that the programs contemplated by both houses should be initiated in fiscal year 1978. Specifically, the conferees believe that ERDA should embark upon demonstration programs with full consideration to existing but unused facilities and to refine existing technology to help meet short-term goals for producing energy from low-head hydroelectric technology. At the same time, ERDA should initiate a research and development program and perform studies which will define the locations and resource potential of the sites where this technology might be used. It should be emphasized that there is no intention upon the part of the conferees to establish at this time a large research and development activity at the expense of an aggressive demonstration program. Instead, ERDA should establish an appropriately balanced program for accelerated introduction of low-head hydroelectric power generation.

The Senate bill contained a funding level of $75 million for the continuation of the Clinch River Breeder Reactor (CRBR) Project.

The House amendment contained $150 million for the CRBR project. Because of the President's veto of S. 1811, S. 1340 contains no reference to the CRBR.

The House bill included a proviso requiring that of the funds authorized for the Liquid Metal Fast Breeder Reactor (LMFBR) program, at least $10,400,000 shall be expended for the development and testing of steam generators and liquid metal pumps, and for advanced fuel development. The House bill also included an additional $5,000,000 in construction funds to build facilities for the testing of these steam generators.

These provisions were predicated on the availability of sufficient funds within the LMFBR program, as contained in the House bill, to assure that high priority component development and testing activities would be accomplished. Unfortunately, at the $80,000,000 level agreed upon for the CRBR by the conferees in the supplemental appropriations bill the impetus to component and advanced fuel development that would have been obtained by the provisions is no longer achievable, and the House proviso and capital funding addition are therefore withdrawn.

At the same time, the conferees believe that the LMFBR program should not lose sight of the need to maintain some focus on the development and testing of components of the type and size appropriate for an intermediate sized LMFBR plant, in the event that construction of such a plant may be warranted in the future.

The conferees recognize the possibility that the U.S. may need to rely on LMFBR technology at an earlier date than that currently projected, and that a strong technological base both in research areas, and in component development and testing is needed so that the U.S. will be in a position to utilize its LMFBR capabilities expeditiously should the need arise.

The Senate bill provided that all inventions made or conceived in the course of or under a guarantee authorized by this Act must be subject to the title and waiver requirements and conditions of section 9 of Public Law 93-577. The House amendment required the application of section 9 of Public Law 93-577 to a loan guarantee only in the case of default. The House receded to the Senate position.

The conferees reconfirm the fact that the Secretary has the full authority to grant apriori waivers of the United States' right to inventions made under a loan guarantee and to include provisions pertaining to terms and conditions under which the Federal government would recapture the rights to such inventions in case of default. The conferees expressed a strong consensus view that the Secretary should liberally use his authority to grant apriori waiver of Federal government rights to inventions made under a loan guarantee and in anticipation of a default the Secretary, in his discretion, has the authority to include provisions in the loan guarantee contract to insure that patents developed under the loan guarantee became part of the project assets and available to the United States.

It is noted that conceptual design of a demonstration plant for the HYGAS process is already underway within the demonstration plant program at ERDA. Seven and one-half million dollars is to be spent on this 20 month project through fiscal year 1978.

Demonstration plants for high Btu coal gasification processes have already been authorized, one in 1976 (Project 76-1-b), one in 1977 (Project 77-1-b). Two processes were chosen to begin conceptual design under the authorization for the first pipeline demonstration project. At the time that the second demonstration plant was authorized in fiscal year 1977, the conferees noted in their report (S. 94-1327, H.R. 94-1718): "HYGAS technology, which has been developed in an ERDA pilot plant, offers the potential for economic success as revealed in a recent independent study made for ERDA. The conferees urge ERDA to consider the selection of a process for the demonstration plant, which has both economic promise and process reliability. The conferees recognize the importance of cost-sharing aspects in any joint program but are concerned if the best technology for demonstration is not developed properly." With these objectives in mind, the conferees wish to emphasize their concern that the best technology for demonstration be developed properly.

While the cost sharing arrangements are important aspects of the demonstration programs, any rigid application of financial formulas is unadvisable, since the purpose of the program is to demonstrate second generation technology and thereby increase its chances for success in the market place.

The current contract for conceptual design of a HYGAS demonstration plant will result in three conceptual designs in competition for two demonstration projects. The fiscal year 1977 Authorization bill provided $10 million for the second demonstration plant but no appropriations were made for that plant in fiscal year 1977. Further authorization of this plant depends upon a competition where technological criteria are given equal weight with economic criteria.

The conferees are also concerned that previous proposals which developed the HYGAS process for a demonstration plant not be dismissed as a result of the ERDA-sponsored conceptual design contract. Any such previous proposals for a HYGAS demonstration should also be eligible for the competition for the second High Btu Demonstration Plant.

The Department of Energy has assured the conferees that the HYGAS process will be a candidate for the second demonstration plant in a letter from Dr. Philip White, Acting Program Administrator for Fossil Energy:

Department of Energy,
Washington, D.C., Oct. 3, 1977.

Hon. Walter Flowers,
Chairman, Subcommittee on Fossil and Nuclear Energy Research, Development and Demonstration, Committee on Science and Technology, House of Representatives.

Dear Mr. Chairman: The following is provided for your information regarding the recommendation being made by Senator Ford to seek authorization and appropriation for a third High BTU Pipeline Gas Demonstration Plant dedicated to the HYGAS Process.

Fiscal Year 1977 ERDA authorization provided for a second High BTU Pipeline Gas Demonstration Plant (Project 77-1-b). The authorization did not specify the process and no funds were subsequently appropriated for this project. This authorization could eventually be utilized for the HYGAS Demonstration Plant if funds are to be appropriated.

On July 29, 1977, ERDA using available funds from its operating budget awarded a twenty (20) month contract with PROCON, Inc. The objectives of the contract are to (1) prepare a conceptual design of a commercial size plant employing the institute or Gas Technology HYGAS Process, and (2) select a demonstration plant size and prepare detailed process design and conceptual designs with economic evaluations. Funds in the amount of $3.6 million were obligated in Fiscal Year 1977. The balance of funds ($3.9 million) are programmed for Fiscal Year 1978 and 1979. Concurrent with this contract, the HYGAS Pilot is being operated to generate the firm data base required for optimization of a demonstration plant design for the production of pipeline gas from bituminous coal. Approximately 15 months of pilot plant R&D efforts will be required to obtain the information needed to complete the process design and economic evaluations. This step must be carried out to assure that the project can be carried forward with an acceptable technical and financial risk. The study contract will culminate in Fiscal Year 1979 with the delivery of documentation in sufficient detail to proceed directly with detailed design procurement and construction of the HYGAS Demonstration Plant, if warranted.

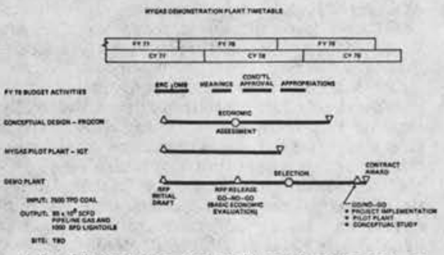
The rationale for the "if warranted" position is that a go-no-go detailed economic assessment will be made on the commercial plant design in mid-Fiscal Year 1978. If at that point a decision is made to proceed with the study, the earliest that this agency could use appropriated funds is Fiscal Year 1979. In anticipation of this decision, funds are being requested in the Fiscal Year 1979 budget for initiation of the HYGAS Demonstration Plant. A copy of the HYGAS Demonstration Plant Timetable is enclosed.

Based upon the above information, it has been concluded that authorization and appropriation for a third High BTU Pipeline Gas Demonstration Plant is not recommended at this time. Please also note that the overall agency High BTU Pipeline Gas Program consists of three (3) different processes competing for two plants to move forward to construction and operation.

Please advise if you need any additional information.

Sincerely,

Philip C. White,
Acting Program Administrator for Fossil Energy.



The House receded to the Senate and excluded language which required the Secretary of the Department of Energy to personally approve of each shipment of plutonium for national security purposes if the plutonium is not carried in an approved "safe container". The Conferees understand that such a safe container is currently under development by the Department of Energy and that it will be subject to certification shortly. The Conferees direct the Department to proceed promptly. After certification, such containers shall be used for all air transportation of plutonium as quickly as possible. Further, these casks should be able to accommodate all configurations of plutonium that might be shipped.

Yesterday, in response to my request for an opinion on the funding situation of the Clinch River project the GAO sent me its finding on the use of the money contained in the supplemental appropriations bill. The letter of Mr. Elmer Staats, the Comptroller General, is a positive and clear statement that the Clinch River project funding must be used to continue the project. At this point I would like to insert the letter in the Record:

Washington, D.C.,
December 5, 1977.

Hon. Olin E. Teague,
Chairman, Committee on Science and Technology, House of Representatives.

Dear Mr. Chairman: This replies to your letter of November 23, 1977, requesting our opinion as to the purposes for which funds contained in H.R. 9375 for the Clinch River Breeder Reactor Project might be used should the bill be enacted into law. In essence, the question is whether the President may properly use such funds to terminate the project or carry it forward on a basis different from that prescribed in the initial authorizing legislation.

The bill, making supplemental appropriations for fiscal year 1978, provides simply that:

"[of the amount appropriated] $80,000,000 shall be for the Clinch River Breeder Reactor Project."

There is no existing legislation authorizing the appropriation of any sum for the project. The project itself was authorized, however, by section 106 of P.L. 91-273, as amended by section 103(d) of P.L. 94-187. In conjunction with authorization of the project, section 106 authorized appropriations for its implementation, but only through September 30, 1976.

Section 106 specifies stringent conditions governing the manner in which funds appropriated for the Clinch River project must be used. We have previously considered the extent to which section 106 constrains the purposes for which funds appropriated to carry out the project may be used and have concluded that the provisions of the section are controlling. See our letter of June 23, 1977, to Senator Henry M. Jackson as Vice Chairman of the Joint Committee on Atomic Energy, copy enclosed, in which we conclude that by reason of the provisions of section 106, the President may not curtail or terminate the Clinch River project.

The question you pose arises as a result of the lapse of authorization for appropriations to carry out the project and is somewhat complicated by reason of the President's veto of S. 1811, the "ERDA Authorization Act of 1978—Civilian Applications." The vetoed measure would have extended the authorization of appropriations for Clinch River through fiscal year 1978 and, further, would have emphasized in express terms the congressional mandate that any funds appropriated pursuant to authorization for the project be used only in conformity with the project authorization provisions and not for its cancellation or termination.

Had the President not vetoed S. 1811, there would be no question but that the $80 million contained in H.R. 9375 would have to be construed as being in furtherance of the appropriation authorization provided and subject to the constraints set forth. Aside from extension of the authorization for appropriations, however, the vetoed measure did not in any way touch upon the operative effect of section 106, referred to above, providing the basic authority for carrying out the Clinch River project except to emphasize congressional concurrence in its legal effect as previously construed in our letter to Senator Jackson. In other words, we do not consider that the substantive provisions of S. 1811 materially affected the project authorization requirements of section 106 and, but for the appropriation authorization provisions it contained, its failure of enactment into law had no significant effect on the Clinch River project.

The issue that we come down to, then, is whether an appropriation of $80 million for "the Clinch River Breeder Reactor Project" may somehow be construed as an appropriation for some other project than the one authorized by section 106 on the sole ground that the appropriation is not preceded by an authorization therefor.

In our view, there is not the slightest justification for considering the funds contained in H.R. 9375 for "the Clinch River Breeder Reactor Project" as being unrestrained by the provisions of section 106. There is only one project that conceivably can come under that name and there is no legislation which removes the project from the constraints of section 106 relating to it. Any doubt as to identification of the project for which the $80 million is being provided is utterly dissipated by reference to legislative history throughout which there was continuing concern over the legal effect of providing the funds without prior appropriation authorization.

The fact, however, that an appropriation of funds to carry out the project will have been enacted without prior legislation authorizing the appropriation is of no consequence given the clear identification in the appropriation language of the purpose for which the funds are being provided.

Accordingly, we conclude that the Executive Branch must use the funds to be provided by H.R. 9375 pursuant to the requirements of section 106 as discussed in our letter to Senator Jackson. Failure to do so would constitute contravention of section 628 of title 31, United States Code, which provides that:

"Except as otherwise provided by law sums appropriated for the various branches of expenditure in the public service *shall be applied solely to the objects for which they are respectively made, and for no others.*" (Emphasis added.)

Should the Executive Branch, without further authority, use the funds provided in a way that does not accord with section 106 requirements we will have to consider whether the taking of formal exception to such expenditures would be appropriate.

Finally, we point out that the President's exercise of the authority granted to him by the Impoundment Control Act of 1974 is a matter wholly independent of the issues raised by using H.R. 9375 budget authority. Should rescission or deferral of all or part of the $80 million be proposed to the Congress pursuant to the Impoundment Control Act of 1974, the Congress will, at such time, have an opportunity to take whatever action it might deem appropriate in response thereto.

We hope the foregoing will be of assistance to you.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

COMPTROLLER GENERAL OF THE
UNITED STATES,
Washington, D.C., June 23, 1977.

Hon. HENRY M. JACKSON,
Vice Chairman, Joint Committee on Atomic Energy, Congress of the United States.

DEAR MR. VICE CHAIRMAN: This replies to your letter of May 26, 1977, in which you and Senator Baker asked that we review deferral number D77–58 transmitted by the President to the Congress on May 18, 1977. By this action the President proposed to defer $31.8 million in budget authority appropriated for the Clinch River Breeder Reactor Project (CRBRP). Because you believe the action taken by the President should have been proposed as a rescission rather than as a deferral of budget authority, you asked that we review this matter to see if it has been correctly classified. You also asked if any actions currently undertaken or proposed by the executive branch toward significant curtailment of the CRBRP exceed or will exceed controlling statutory authorities.

Based on the facts currently available, we conclude that the action proposed to the Congress was correctly classified—it is a deferral of budget authority. However, we will monitor the situation and will promptly report to the Congress any future actions constituting a rescission or deferral under the Impoundment Control Act of 1974.

With respect to the second question, we believe that the Administration's proposed curtailment of CRBRP objective is substantially inconsistent with that set forth in the CRBRP program criteria that were approved as required by law, by the Joint Committee on Atomic Energy (JCAE). We also believe the curtailed problem is not in accord with the statute authorizing the CRBRP. In our view, for these reasons the Energy Research and Development Administration (ERDA) lacks the legal authority to implement the President's plan.

Accordingly, expenditures of Federal funds to fully implement the revised CRBRP program would be improper unless ERDA first obtains the necessary authority to undertake such actions. Should ERDA proceed to use CRBRP funds to implement the President's proposed plan without having secured such authority, this Office will review the specific actions taken with the objective of taking formal exception to such expenditures.

There follows a detailed discussion of our findings and conclusions.

I. BACKGROUND

A. Progress to date

Before discussing the legal issues raised by your letter, it is appropriate to discuss the history and facts surrounding the project and the effects of the most recent executive branch actions on the CRBRP. In reviewing the President's actions, we met with ERDA and contractor officials both at headquarters and at the project office site.

Prior to the recent executive branch actions, the Clinch River Breeder Reactor Demonstation Plant was scheduled to be operational by early 1984 and was to be the nation's first large-scale liquid metal fast breeder reactor (LMFBR) demonstration plant with a 380 megawatt capacity. Presently, design, procurement, and component fabrication for the project are about 25 percent complete, although no site preparation or actual plant construction has yet begun. According to ERDA estimates, the project, if completed, will cost about $2 billion, $270 million of which will be constributed by industry participants. As of May 31, 1977, ERDA had spent about $254 million and industry participants a little over $99 million.

B. Origins and statutory basis of the CRBRP

The CRBRP had its origins in 1969. In that year the Atomic Energy Commission (AEC) was specifically authorized to study the ways in which an LMFBR demonstration project could be designed. Section 106 of Public Law 91–44, approved July 11, 1969, stated:

"SEC. 106: Liquid Metal Fast Breeder Reactor Demonstration Program—Project Definition Phase.—(a) The Commission is hereby authorized to conduct the Project Definition Phase of a Liquid Metal Fast Breeder Reactor Demonstration Program, under cooperative arrangements with reactor manufacturers and others, in accordance with the criteria heretofore submitted to the Joint Committee on Atomic Energy, without regard to the provisions of section 169 of the Atomic Energy Act of 1954, as amended, and authorization of appropriations therefor in the amoun of $7,000,000 is included in section 101 of this Act."

One year later the Congress went further in the area of an LMFBR demonstration project and specifically authorized the design, construction, and operation of such a reactor. Section 106 of Public Law 91–273, June 7, 1970, stated:

"SEC. 106. Liquid Metal Fast Breeder Reactor Demonstration Program—Fourth Round.—(a) *The Commission is hereby authorized to enter into a cooperative arrangement with a reactor manufacturer and others for participation in the research and development, design, construction, and operation of a Liquid Metal Fast Breeder Reactor powerplant, in accordance with the criteria heretofore submitted to the Joint Committee on Atomic Energy and referred to in section 106 of Public Law 91–44,* without regard to the provisions of section 169 of the Atomic Energy Act of 1954, as amended, and the Commission is further authorized to continue to conduct the Project Definition Phase subsequent to the aforementioned cooperative arrangement. * * *

"(b) Before the Commission enters into any arrangement or amendment thereto under the authority of subsection (a) of this section, the basis for the arrangement or amendment thereto which the Commission proposes to execute (including the name of the proposed participating party or parties with whom the arrangement is to be made, a general description of the proposed powerplant, the estimated amount of cost to be incurred by the Commission and by the participating parties, and the general features of the proposed arrangement or amendment) shall be submitted to the Joint Committee on Atomic Energy, and a period of forty-five days shall elapse while Congress is in session (in computing such forty-five days, there shall be excluded the days on which either House is not in session because of adjournment for more than three days): *Provided, however,* That the Joint Committee, after having received the basis for a proposed arrangement or amendment thereto, may by resolution in writing waive the conditions of, or all or any portion of, such forty-five day period: *Provided, further,* That such arrangement or amendment shall be entered into in accordance with the basis for the arrangement or amendment submitted as provided herein * * *." (Emphasis added.)

This basic scheme was retained in 1975 when section 106 of the 1970 act was amended by section 103(d) of Public Law 94–187, December 31, 1975:

"SEC. 106. Liquid Metal Fast Breeder Reactor Demonstration Program—Fourth Round.—(a) The *Energy Research and Development Administration (ERDA) is hereby authorized to enter into cooperative arrangements with reactor manufacturers and others for participation in the research and development, design, construction; and operation of a Liquid Metal Fast Breeder Reactor powerplant, in accordance with criteria approved by the Joint Committee on Atomic Energy,* without regard to the provisions of section 169 of the Atomic Energy Act of 1954, as amended. Appropriations are hereby authorized * * * for the aforementioned cooperative arrangements as shown in the basis for arrangements as submitted in accordance with subsection (b) hereof. * * *

"(b) *Before ERDA enters into any arrangement or amendment thereto under the authority of subsection (a) of this section, the basis for the arrangement or amendment thereto which ERDA proposes to execute (including the name of the proposed participating party or parties with which the arrangement is to be made, a general description of the proposed powerplant, the estimated amount of cost to be incurred by ERDA and by the participating parties, and the general features of the proposed arrangement or amendment) shall be submitted to the Joint Committee on Atomic Energy,* and a period of forty-five days shall elapse while Congress is in session (in computing such forty-five days, there shall be excluded the days on which either House is not in session because of adjournment for more than three days): *Provided, however,* That the Joint Committee, after having received the basis for a proposed arrangement or amendment thereto, may by resolution in writing waive the conditions of all, or any portion of, such forty-five-day period: *Provided, further,* That such arrangement or amendment shall be entered into in accordance with the basis for the arrangement or amendment submitted as provided herein: * * *" (Emphasis added.)

Pursuant to the 1975 law, ERDA proposed criteria to the JCAE for its approval. On April 29, 1976, the JCAE approved the most recently submitted criteria. Those project criteria appear at page 63 of *Modifications in the Proposed Arrangements for the Clinch River Breeder Reactor Demonstration Project.* Hearings Before the Joint Committee on Atomic Energy, 94th Cong., 2d Sess., April 14 and 29, 1976 (1976 Hearings).

C. The present CRBRP criteria and contract

As a result of the JCAE's action of April 29, 1976 (a rollcall vote), the LMFBR demonstration program at the Clinch River site is governed by criteria that call for the design, construction, and operation of an LMFBR plant. These program criteria state that the CRBRP's major objectives are to demonstrate the technology pertaining to, and the reliability safety, and economics of, LMFBR powerplants in the utility environment. Other objectives are to:

Provide for meaningful identification of areas requiring emphasis in the LMFBR research and development program;

Validate, to the extent practicable, technical and economic data and information pertinent to the total LMFBR program;

Assist in developing an adequate industrial base;

Provide for meaningful utility participation and experience in developing, acquiring, and operating LMFBR plants;

Help assure overall program success; and

Demonstrate and maintain U.S. technological leadership.

The criteria also specifically set forth design requirements and plant objectives stating, among other things, that the plant's first core is to use mixed oxide fuel consisting of uranium and plutonium and that it be designed, fabricated, constructed, tested, operated, and maintained in conformance with established engineering standards and high quality assurance practices.

Pursuant to the JCAE-approved criteria, ERDA entered into a cooperative arrangement with the Project Management Corporation (PMC), the Commonwealth Edison Company, and the Tennessee Valley Authority (TVA) on May 4, 1976. That contract recognizes the controlling statutory criteria for the LMFBR. For example, the contract states, pertinently:

A. Para. 1.1.9: "'Project' means the cooperative effort to *design, develop, construct, test and operate the LMFBR Demonstration Plant* provided for in the Principal Project Agreements." [See para 3.1] (Emphasis added.)

B. Para. 3.1: [Principal Project Agreements] " * * * TVA and ERDA will enter into an agreement *for the operation of the Demonstration Plant* * * *" (Emphasis added.)

C. Para. 4.1: "* * * ERDA shall, pursuant to this contract, manage and carry out the Project [see Para. 1.1.9, above] in an efficient, effective and timely manner consistent with the Principal Project Objectives, and shall use its best efforts to design and build the Demonstration Plant substantially in conformance with the Reference Design. * * *"

D. Recent ERDA plans and GAO evaluation

On May 19, 1977, Mr. Robert W. Fri. Acting Administrator, ERDA, sent to the JCAE notice of ERDA's plans to revise the CRBRP. Mr. Fri stated, *inter alia,* ERDA's plans for the "cancellation of construction, component construction, licensing and commercialization efforts for CRBRP, but completion of systems design;"

This letter clearly recognized that the plan proposed by the President and reflected in the May 18, 1977, deferral message would necessitate revision to the present JCAE-approved CRBRP criteria, and acknowledged that an amendment to the statutory authorization may be in order if the President's program revision is to be implemented. Mr. Fri stated:

"At the direction of the President, and in compliance with Section 106(b) of Public Law 91–273, as amended, ERDA herewith submits the enclosed amended program justification data *reflecting discontinuance of the CRBRP Project, except for completion of systems design* so as to help identify engineering problems that will have to be solved in developing alternative types of reactors. *The statutory criteria will likewise require commensurate revision.*

"Appropriate negotiations will, of course, have to be undertaken and concluded with the other Project participants, with the objective of implementing the proposed action concerning the Project, and the cooperative arrangement amended accordingly. In addition, amendatory legislation with respect to the basic enabling authorization for the CRBRP Project may be in order.

"For the prescribed statutory period during which this revised basis of arrangement is required to lie before the Joint Committee, new obligations for the Project will be kept to a minimum consistent with prudent Project management. A deferral (No. D77–58) is being reported for the $31.8 million of CRBRP Project budget authority that will not be available during this period. *Following such period ERDA will proceed with appropriate implementing actions.*" (Emphasis added.)

In an attachment to his letter, Mr. Fri discussed the existing four-party contractual agreement and those contract amendments that would have to be made in order to limit LMFBR activities to systems design efforts. Systems design (roughly 60 percent of the total design work) would, under the President's proposal, be completed. Pursuant to this proposal, ERDA has reduced its fiscal year 1978 budget request from $208.7 million to $162 million. The funds requested would be used to continue systems design activities; to terminate detailed design, licensing, procurement, and construction activities; and to settle claims, primarily those anticipated from the termination actions.

Thus far, we have found no evidence indicating that project activity has been significantly slowed down as a result of the executive branch's proposed change in program objectives. To date, we have found no procurement actions that have been delayed or cancelled and ERDA officials told us there were none. However, the project office in Tennessee, at the direction of ERDA headquarters, recently submitted a list of 10 scheduled procurements to ERDA headquarters for approval. According to an ERDA procurement official, the proposed procurement actions involve contracts by Westinghouse, the lead reactor manufacturer, with its subcontractors. The amount involved in these procurements is about $9.8 million. (Should ERDA decide to prevent award of any of the subcontracts it may develop that further questions will exist regarding such actions in light of the Impoundment Control Act of 1974, discussed below.)

We compared the proposed changes on the Clinch River LMFBR project as submitted by ERDA to the JCAE on May 19, 1977, with the existing criteria. As part of this comparison, we discussed the criteria with the General Manager of PMC (the contract party that represents the utility participants in the project) on a line-by-line basis to pinpoint the specific program changes that would result from the President's actions. Based on our examination, we confirm that ERDA's proposal of May 19, 1977, represents a notice of its intention to proceed with the CRBRP in a way that will result in a program that does not fulfill major objectives of the existing JCAE-approved statutory criteria; nor the object of the authorization itself—to operate an LMFBR demonstration plant.

We asked ERDA officials to give us their estimate of the additional costs that would be incurred assuming ERDA terminated the project, except for systems design, on or about July 26, 1977, and the Congress subsequently provided the funds to continue the project on December 1, 1977. We chose a December 1, 1977, date because it allows the Congress an opportunity to consider fully whether to go ahead with LMFBR efforts and the associated funding. Although it is uncertain when the Congress will make its decision on the project, and how quickly or completely ERDA may implement the proposed discontinuance of the program, we believe that the December date provides a good indication of the impact a project termination will have prior to Congress having an opportunity to fully consider the matter.

ERDA provided us with cost and schedule information using three assumptions:

1. Assuming the licensing process could begin where it was stopped, project costs would increase by about $346 million and plant operations would be delayed between 1 and 1½ years. To restart the project where it was terminated in the licensing process, however, probably would require legislation that would, in effect, circumvent some of the normal licensing processes.

2. Assuming the licensing process would have to begin with a new application, project costs would increase by about $546 million and plant operation would be delayed over 3 years. Neither this assumption nor the first account for the possibility that ERDA may be required by the Nuclear Regulatory Commission (NRC) to locate the plant at a different site if projected plant operation is delayed. Such a relocation appears to be a distinct possibility based on past NRC proceedings on the Clinch River Project. In fact, the Deputy Director, Division of Site Safety and Environmental Analysis, NRC, told us that if the CRBRP is delayed for 2 years or more, it would be very difficult, if not impossible, for the NRC staff, in its analysis, to conclude that it is cost beneficial to locate the demonstration reactor at the Clinch River site.

3. Assuming the plant would have to be relocated, project costs would increase by about $1.1 to $1.3 billion and plant operation would be delayed 5 to 6 years.

Although we did not have the opportunity to evaluate ERDA's estimates in detail, we believe they provide a reasonable indication of the magnitude of the costs and extent of schedule slippages that might occur if the project were terminated on July 26, 1977, and the Congress decided to restart it at a later date. By comparison, if ERDA were to delay project termination until December 1, 1977, by honoring ongoing contracts but not entering into additional contracts not essential to ongoing work, the estimated costs would be increased by about $61 million.

Based on the information set out above, it would seem that terminating the project prior to congressional deliberations could make restarting the project so costly as to outweigh its benefit. Thus, in effect, the executive branch, if it is successful in promptly implementing its present plan, may well have made a major policy decision unilaterally through administrative procedures which should have been made through the legislative process. The documentation we have examined discloses no intention on the part of the executive branch to proceed with completion of an LMFBR demonstration plant at Clinch River in the future.

II. THE IMPOUNDMENT CONTROL ACT OF 1974

Under the Impoundment Control Act of 1974 (Act), title X of Public Law 93-344, 88 Stat. 332, July 12, 1974, 31 U.S.C. 1400, *et. seq.*, there are two types of impoundments—deferrals and rescissions. The distinction between the two categories is the duration of a proposed withholding of budget authority: a deferral is a proposal to withdraw temporarily budget authority from availability for obligation; a rescission is a request to cancel, *i.e.*, rescind, previously appropriated funds—in other words, a permanent withdrawal of budget authority.

In both categories of withholdings there exists a common characteristic—impoundment. While the term "impoundment" is not defined by the Act, we have operated under the view that an impoundment is any type of executive action or inaction that effectively thwarts the obligation or expenditure of budget authority. This does not mean, however, that impoundments always exist when budget authority is not used to implement all authorized activities.

The Act is concerned with the rescission or deferral of budget authority, not the rescission or deferral of programs. Thus, a lump-sum appropriation for programs A, B, and C used to carry out only program C would not necessarily indicate the existence of impoundments regarding programs A and B. So long as all budgetary resources were used for program C, no impoundment would occur even though activities A and B remained unfunded.

Consistent with this construction of the Act, sections 1012(b) and 1013(b) of the Act, 31 U.S.C. 1402(b) and 1403(b), respectively, provide that when proposed rescissions and deferrals are rejected the impounded budget authority must be "made available for obligation." If this is not done the Comptroller General is authorized to bring suit to compel the cessation of the withholding. 31 U.S.C. 1406. In this connection, the requirements of the Act clearly are to mandate the release of withheld funds. Significantly, no mention is made in the Act with respect to the uses to which the released funds are put. The Comptroller General can only seek, and the court can only grant, an order compelling the President to release the funds. Neither the Comptroller General nor the courts are authorized under the Act to constrain the executive branch in the way the funds are to be used once released.

Concerning the CRBRP, we have determined that, except for the $31.8 million held in reserve for deferral D77-58, all funds have been made available for obligation for either incurring or liquidating obligations associated with the project. Regarding the $31.8 million proposed for deferral, these funds also are planned for use. That available funding is being and will be used is the critical determination under the Act. In this light, we must presently conclude that no evidence suggests an intention not to utilize (*i.e.*, a rescission) the $31.8 million in the future. Thus, we are satisfied that the deferral has been properly classified. However, should we later determine that the executive branch has altered its plans for the use of the $31.8 million and has decided that a portion of the funds will not be used at all, we will, at that time, take the necessary action to reclassify the impoundment to a rescission.

In addition we are monitoring the executive branch's handling of the $9.8 million involved in the award of subcontracts currently being reviewed by ERDA. If we decide that ERDA's actions regarding the use of these funds or any other CRBRP funds indicate the existence of further budgetary withholdings, we will promptly report the matter to the Congress.

III. PROPRIETY OF THE REVISED CRBRP PLANS

The President's plans to curtail substantially the scope of the LFMBR program at the Clinch River site raise a number of questions that focus upon the legislation that authorized the project. Our analysis of the statutes setting forth the LMBFR activities of AEC and later ERDA is that they authorize the AEC (ERDA) to embark only on clearly delineated lines of effort. In 1969 the effort was to define what ultimately might comprise an LMFBR demonstration project cooperative arrangement. With enactment of the 1970 and 1975 legislation. AEC (ERDA) was authorized to enter into agreements for the research and development, design, construction, and operation of such a reactor.

We conclude that ERDA's proposed expenditure of funds for the curtailed LMFBR program is an intention to expend funds for unauthorized purposes. The most recent (1975) revisions of section 106 of the CRBRP authorization, quoted above, introduced the requirement of JCAE approval of LMFBR program criteria. We believe subsection 106 (a) incorporates by reference into the statute itself the program criteria submitted to and approved by the JCAE. In our view, and we know of no other that contradicts it, the approved program criteria and the major objectives set forth therein are as much as a part of subsection 106(a) as if they were explicitly stated in the statutory language itself. Thus, the currently approved program criteria, and of course the statute itself, establish the CRBRP's ultimate objective—to successfully complete, operate, and demonstrate the usefulness of an LMFBR powerplant.

Subsection 106(b) provides for a 45-day period of waiting during which time the basis or description of a proposed amendment to the cooperative arrangement must lie before the JCAE. This delay, prior to ERDA's executing the amendment it proposes, affords the JCAE and others time to express views on the specific means by which ERDA would accomplish the statutory objective of the program. We believe the proposed amendments contemplated by subsection 106(b) are only those the execution of which lead to fulfilling this goal.

This construction of section 106 is supported both by the language of the statute and by its legislative history. Subsection (b) of section 106 provides not only that the basis or description of the amendment shall lie before the JCAE for 45 days, but also that the amended cooperative agreement ERDA is authorized to execute after the 45-day period is to be entered into "under the authority of subsection (a) of this section." Subsection (a) authorized ERDA to enter into cooperative agreements only in accordance with the statutorily approved program criteria. Those criteria, effectively a part of the statute itself, contemplate the eventual operation of an LMFBR powerplant. Therefore, ERDA's authority to initiate the running of the 45-day period after which it may proceed to implement its plans to amend the cooperative agreement, is constrained to offering to the JCAE a basis or description of amendments that are compatible with the objectives of the program criteria and of course the harmonious objective of the authorization act—operating an LMFBR demonstration plant.

Our construction of section 106 is supported as well by discussions of the JCAE. For example, during debate on the most recently submitted project criteria, the following exchange took place between Representative Moss and Mr. William Parler, Committee Counsel, JCAE:

"Representative Moss. If there is a conflict between the contract [the cooperative arrangement] provisions and the criteria, which controls?

"Mr. Parler. The criteria and the justification data which the committee [JCAE] approved.

"Representative Moss. In other words, at all times that becomes the dominant factor in interpreting any contract [for the CRBRP]? It must be consistent at all times with the criteria?

"Mr. Parler. That is my opinion, Mr. Moss yes, sir." 1976 Hearings, page 4.

Moreover, on April 29, 1976, Mr. Parler said:

"* * * If the Committee [JCAE] disapproves the criteria, ERDA cannot proceed with implementation of the modification to the contract." 1976 Hearings, page 521.

In meeting with ERDA representatives on the President's plans to revise the CRBRP objective, we discussed the agency's reading of section 106. ERDA views subsection 106 (b) as a requirement that it begin to implement its plans for proposed amendments, after the expiration of the 45-day period during which the bases for those amendments will have laid before the JCAE irrespective of whether such action supports or destroys the objective of the authorization act. And, because subsection (a) of section 106 does not provide explicit time periods for either ERDA's submitting or the JCAE's approving new program criteria, subsection (a) "defers" to subsection (b). Thus, ERDA believes that its letter of May 19, 1977, was in compliance with the statutory mechanism of subsection (b) and it will, at the end of the 45-day period that began May 19, 1977, trigger both the necessary authority and the obligation to implement its revised plans to curtail the CRBRP. ERDA officials did not disagree that ERDA presently has no authority to revise the document representing the cooperative arrangement in ways that are inconsistent with existing statutory criteria, but apparently believe ERDA may effectively implement its plans without at the same time constructively revising the cooperative arrangement, an arrangement that calls for accomplishment, not termination, of the CRBRP.

In sum, ERDA views section 106 as conferring authority to begin implementing the cancellation of portions of the CRBRP 45 days after appropriate notice to the JCAE, but also requires that before ERDA formally modifies its contractual document it obtain from the JCAE approval of ERDA's proposed new program.

The practical consequences of ERDA's construction of the law deny the JCAE oversight of the LMFBR so long as the agency does not enter into a fully executed amendment of the formal contractual document. Such construction disregards the wide-ranging and very concrete changes that must be wrought upon the operation of the approved LMFBR program before implementation of the President's plan. ERDA apparently professes to read the relevant statutory language as indicative of congressional disinterest in whether ERDA unilaterally proceeds to change the statutory objective of the program. The simplest reading of that language is to the contrary—that Congress has a strong interest in maintaining the program objective fully in accord with criteria approved by a committee of Congress. ERDA assumes, we think without a sound basis, that the actions it takes preparatory to abandoning the program it has commenced will not be tantamount to an amendment of the cooperative agreement that represents the commitment to go forward with the original program, and therefore that the actual changes, however dramatic, need not be of concern to the JCAE. This view limits the Committee's role to deciding whether to acquiesce in ERDA's subsequent recommendation to change the statutory criteria after ERDA's actions to change the statutory objective are already effectively accomplished, and appropriated funds are already obligated for the purpose of discontinuing instead of fulfilling the program objective of the statutory criteria.

We cannot agree the law was intended to so operate. Our view, as we have stated, is that before ERDA can invoke the authority of subsection (b) to implement new plans that depart in any significant way from the major program objectives of the statutorily approved criteria, it must first, under subsection (a), secure JCAE approval of new criteria. Since we believe section 106(b) contemplates amendments the thrust of which is to fulfill the major objectives of the statutory criteria, we must also conclude that, because the May 19, 1977, proposal does not so accord with the criteria, it did not trigger the 45-day mechanism of section 106(b).

Moreover, while the JCAE's authority to approve criteria is broad, the statute under which the President is acting authorizes only efforts leading to the construction and operation of a reactor. Thus, the President would be compelled to obtain amendatory legislation to section 106 to authorize only the limited and different objective of LMFBR systems design, and to repeal those parts of the statute that speak to efforts beyond such activities.

The legal effect of this conclusion is that the status of the CRBRP remains unchanged, except for the current $31.8 million deferral now before the Congress. Federal funds may not be expended to implement the President's plan of curtailing the program, without appropriate change in the authorization statute and the program criteria.

To implement the President's plan without such necessary authority would be in violation of law since such expenditures would be for purposes inconsistent with those for which the appropriations were made. In this regard, 31 U.S.C. 628 provides:

"Except as otherwise provided by law, *sums appropriated* for the various branches of expenditure in the public service *shall be applied solely to the objects for which they are respectively made, and for no others.*" (Emphasis added.)

We hope the foregoing responds to your questions. A similar letter today is being sent to Senator Baker.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE. I yield to the gentleman from Washington.

Mr. McCORMACK. I thank the gentleman for yielding.

Mr. Speaker, I rise in support of S. 1340, to authorize funding for the Department of Energy, for energy research, development, and demonstration programs. I take this opportunity to make my position clear, and I feel certain, to speak for most of those 250 Members of the House, about 60 percent of those voting, who voted in support of the Clinch River breeder project in the authorization legislation (S. 1811) which President Carter so tragically and mistakenly vetoed.

After some consideration, it was decided that no attempt should be made to override the President's veto. However, in order to save the many valuable energy programs authorized in the vetoed bill, we who have been most directly involved in solar and geothermal energy—in fossil and nuclear energy, in energy conservation, in nuclear fission and fusion research and development, in high energy physics, and in basic energy research—agreed that the action we are taking today with S. 1340, reauthorizing all programs except the Clinch River breeder program and the section on uranium enrichment, is the prudent thing to do.

While many energy programs are funded without this bill's authorization (including the Clinch River breeder project), the President's veto, nevertheless, damaged and delayed energy research, development, and demonstration in programs such as the electric vehicle program; loan guarantee programs for clean, synthetic fuels from coal, shale and municipal wastes, and from agricultural, forest and industrial wastes; the automobile propulsion research program for cleaner, more efficient cars and fuels; and a major international study on how to use the nuclear fuel reprocessing plant at Barnwell, S.C., as a demonstration facility for preventing nuclear weapons proliferation, and for handling nuclear wastes safely.

In enacting S. 1340, we are protecting these important programs, but we are not, and I repeat, Mr. Speaker, we are not abandoning the Clinch River breeder project. Our action today is not to be construed as agreement by the Congress to any slowdown in the continuing Clinch River breeder program, or in the basic LMFBR program. The CRBR project does not require authorization this year or any other year in the future. The entire Clinch River breeder project was authorized under the provisions of Public Law 91-273, the Atomic Energy Commission Authorization Act for fiscal year 1971, and according to a statement which Chairman TEAGUE has just received from the Comptroller General, the $80 million appropriated in the supplemental appropriations bill must be spent for the purpose of continuing the Clinch River breeder program whether or not S. 1340 or any other subsequent authorization or legislation is enacted.

Accordingly, we can enact this legislation, without the authorization for Clinch River, while still supporting the Clinch River breeder project, and recognizing that, under the law, the President must proceed with it.

There is another feature of this bill which is important to understand. The conference report on S. 1811 (which the President vetoed) and S. 1340 both direct that a study shall be made of the feasibility of using the nuclear fuel reprocessing plant at Barnwell, S.C., as a demonstration facility to show how, with proper international controls and advanced technologies, it will be possible to reprocess nuclear fuel, while reducing virtually to zero the potential for diversion of fissionable materials for use in nuclear weapons. This study will be carried out under this bill and is of great importance to this Nation and to the world.

Mr. Speaker, I have commented that the President's veto constituted a great tragedy for this country. Even though the President cannot kill the Clinch River project with his veto, the tragic fact is that he has sent a signal to all the world that he intends to attempt to undermind and cripple his Nation's nuclear energy programs upon which we must depend so heavily if we are to provide the energy our Nation will need to meet our requirements later in this century. It comes as no surprise that the stock market has fallen so low and that the value of the American dollar has fallen. The veto will be taken by the underdeveloped nations as a message that the United States will be using its power to preempt the oil they will need in the coming decades, and they will escalate their efforts to find alternate sources, such as nuclear energy. They will seek other friends, such as the Communist countries, who will back them in competing with us for oil and in developing independent nuclear capabilities.

Our friends in Europe will now know that they cannot trust the United States, or depend upon us for help in solving their energy problems—and they will continue to turn away from us, going nuclear with their own nuclear breeder and reprocessing programs, over which we will have no influence or control.

The President's attempts to kill our Nation's breeder studies would, in effect, saddle the next generation of Americans with a lower standard of living, depriving them of information they will need, if they are to have adequate energy during their lifetimes. Such a loss must be prevented, and thus, while S. 1340, which we are supporting today, contains no authorization for the Clinch River project, we know that work on the breeder will proceed from the funds that have been appropriated. We can support this bill today without damaging the breeder program.

Mr. FLOWERS. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE. I yield to the gentleman from Alabama.

Mr. FLOWERS. I thank the gentleman for yielding.

Mr. Speaker, I rise in support of the bill, S. 1340, the DOE Research and Development Authorization for fiscal year 1978. I urge all of my colleagues to support, this legislation as amended. The amendment of Chairman TEAGUE is similar to the bill which passed, S. 1811, earlier in this session by a vote of 366 to 52 but without the money for the Clinch River breeder reactor, the new language for that project, and the provisions for uranium enrichment pricing. These were some of the most controversial matters considered by the House, and were the principal reasons cited by the President for his veto of the bill, S. 1811.

As you will recall, the DOE Research and Development Authorization bill was brought to the floor with the authorization for the Clinch River breeder reactor and with the provisions for uranium enrichment pricing increases. The bill passed the House and the Senate and after conference was sent to the President. The President issued his first veto against this bill and S. 1811 is now in the Senate awaiting decision. Because of the many important new initiatives in this authorization bill, we in the House feel we must act. Without an authorization of these new programs, many will be in jeopardy and may not be funded. This would be a tragedy, because many of the programs in this bill are brand new and are needed by our country for our growing energy demand in the future. At the time that this bill was first considered by the House, I pointed out that this may be the only piece of legislation considered by Congress which will actually increase the supply of energy for our Nation in the future. Without this authorization, we have only the appropriation, which expresses nothing about the congressional intent for programmatic direction.

This amendment is completely neutral regarding the Clinch River breeder reactor. However, I wish to assure my colleagues that by voting for this bill, they will not be voting against the Clinch River breeder reactor. The situation will remain unchanged: without this bill, the CRBR will have an appropriation of $80 million and with this bill, the CRBR will have an appropriation of $80 million, in both cases without an authorization. The President will have to spend this $80 million for the CRBR or, if he refuses, then send a deferral or rescission to the Congress. The appropriation is worded so that the money will have to be spent for the CRBR. There is not one shred of legislative history to support the administration if it tries to spend $1 for termination of the CRBR.

In this authorization we have also struck title V or S. 1811, which would provide the authority for DOE to increase the price it charges for uranium enrichment services. However, in the President's veto message, he complained that this provision contained language which would limit the ability of DOE to recover a fair value of services and also it contained a one-house veto provision which the President did not like. The one-house veto provision would have provided the Congress with a meaningful opportunity to examine the price increases which would be proposed. Both bodies felt that these were important provisions of title V in S. 1811. Therefore, because of the controversial nature of this uranium enrichment pricing provision, we have decided to delete this from the present authorization.

As an example of the new initiatives which are extremely important to our Nation's future energy supply, I would like to discuss both the solvent refined coal demonstration plant and the loan guarantees. This bill contains money for both the solvent refined coal (SRC) solids process and for design of an SRC II liquids process. Both processes will ultimately be very important to our Nation's future energy supply if this bill passes, but we can aggressively proceed with a demonstration plant for the SRC solids process. The SRC solids process has been developed by ERDA, now DOE, since 1964. It was selected as a new demonstration plant in this authorization bill for the following reasons: First, the technology is the furthest developed second generation coal conversion process; second, the pilot plant has operated successfully in making solid fuels; third, the preliminary economic evaluations indicate that the process is competitive. It provides an attractive route for conversion of our abundant high sulfur coal reserves to an environmentally acceptable substitute for imported fuel oil. This plant could be the forerunner of many such facilities to utilize our high sulfur coal reserve and thus cut into our need to import oil.

The loan guarantee authority provided to DOE by this bill will give the Secretary the opportunity to demonstrate emerging technologies at the least possible costs to the Government. Our committee has received hundreds of pages of testimony on the insurmountable problems that companies and municipalities have faced in trying to build the first plant using a new energy technology. It was clear from our hearings that Federal assistance was needed to back up, these first few plants. Without this assistance, our economy would never assimilate these new technologies. By utilizing loan guarantees we have maximized the private contribution to the demonstration of new technologies and at the same time, allowed those technologies to be demonstrated which were sitting idly by.

The proposed amendment to section 7 of the Federal Nonnuclear Energy Research and Development Act gives the Secretary of DOE the authority to make loan guarantees to persons and municipalities wishing to demonstrate these new technologies. All loan guarantees would be issued with controls to protect the Government's interest, the local community, and the environment. However, before a plant can be built this authority to make loan guarantees must be further acted on by Congress. The only immediate impact of this amendment would be to authorize the Secretary to solicit proposals for financial assistance for demonstration of nonnuclear energy technology projects.

In addition, I wish to call to the attention of the Members that this bill also authorizes many of the new initiatives in the President's international nonproliferation fuel cycle evaluation program, which he says are vitally needed in his nonproliferation policy.

There are many other initiatives in this authorization bill, too numerous to mention, before the House at this time. Therefore, I ask that the remainder of my statement be placed in the RECORD. I urge my colleagues to speedily pass this bill, S. 1340, as amended.

NEW INITIATIVES IN FISCAL YEAR 1978 DOE RESEARCH AND DEVELOPMENT AUTHORIZATION

In addition to the initiatives mentioned above, there are a number of new initiatives which the subcommittee that I chair, the Fossil and Nuclear Energy Research, Development and Demonstration Subcommittee worked to develop. They are broken out into the areas as follows:

FOSSIL FUELS

1. The generic loan guarantee program will permit High BTU coal gasification.

2. Clean fuel from coal (SRC) demonstration plant authorization.

3. MHD program operating expenses are doubled from last year.

4. The in-situ coal gasification program is greatly accelerated to move it toward the pilot plant stage.

5. Preliminary feasibility work is included for a multitechnology coal conversion facility.

NUCLEAR

Most of the changes in the nuclear program were to accommodate the President's proliferation concerns.

1. The uranium resource assessment program for determining the extent of our uranium reserves was doubled.

2. The nuclear assessment program which evaluates the potential of alternate fuel cycles was tripled.

3. A new thorium fuel cycle program to match the President's interest in this technology is in the bill.

4. A new Alternate Concept Fuel Cycle program was added to develop an optimized LWR fuel cycle for management of spent fuel consistent with non-proliferation objectives.

5. There is money in the bill for standardization of LWRs, an integral part of President Carter's proposed licensing reform.

6. The bill contains a number of serious new waste management initiatives.

7. Waste solidification facility design funds are in the bill.

8. An International Spent Fuel Disposal program was created to complement the President's non-proliferation policy.

OTHER

1. The bill contains important funding for ISABELLE, the next step in our high energy physics program.

2. It contains aid to certain communities

under the ERDA community assistance programs.

3. It contains new emphasis on involving small business in ERDA programs.

4. A study of the West Valley waste storage problem is included.

5. The decontamination and decommissioning of old nuclear facilities program is doubled over last year.

The bill also improves Congressional oversight by requiring that basic changes in the programs from those changes that are authorized by the Congress require notification to the appropriate Committees in the Congress. In this way the Committee and the Congress are kept involved in any changes in program direction and oversight of the programs and indeed agency responsibility for the continuing or changing of programs is further underlined and its importance emphasized.

Mr. WYDLER. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE. I yield for debate only to the gentleman from New York (Mr. WYDLER).

Mr. WYDLER. Mr. Speaker, I thank the gentleman from Texas for yielding.

Mr. Speaker, I rise in support of S. 1340, Department of Energy Research and Development Authorization for fiscal year 1978. This legislation contains a variety of important initiatives which should not be delayed any longer.

S. 1340 as amended will embody all the programs which went to the President in S. 1811 except Clinch River and the change in uranium enrichment pricing. Although some of this bill's programs have already received appropriations for fiscal year 1978, many others are new or expanded.

At the outset I also want to state that despite this bill's neutrality on the Clinch River breeder reactor demonstration project, I remain firmly committed to the development of the Clinch River reactor and the breeder option.

S. 1340 does continue the strong breeder reactor base program which, absent unforeseen developments, is an essential ingredient in a healthy energy future. It continues strong development programs for each of the other mid- and long-range energy sources such as coal conversion and magnetic fusion at an orderly pace.

This bill will do a good job of balancing nuclear and nonnuclear energy research. Other fossil programs aim at improved combustion technology for coal in its solid form. They include fluidized bed technology and magneto-hydrodynamic (MHD) technology. The program also maintains our effort to develop successful techniques to extract oil from oil shale deposits and to extract gas from heretofore neglected reserves such as Devonian Shale and geopressured zones.

This year's new and expanded initiatives are spread across the energy R. & D. spectrum. In the nuclear area, our efforts to assess the extent of domestic uranium reserves and the potential of alternate fuel cycles will be expanded greatly by this legislation. Programs will be added to research the standardization of light water reactors and to optimize light water reactor fuel cycles' management of spent fuel. The bill also attacks our nuclear waste problems in a variety of ways including an extensive study of the nuclear waste problem at West Valley, N.Y., design work for a nuclear waste solidification facility, and the beginning of an international spent fuel research program.

In the nonnuclear area, there are authorizations included for several new pilot plants for the study of various solar, geothermal, and biomass technologies. Conservation initiatives include acceleration of the Federal development programs for the Stirling engine and other heat engines and a stretching out of the electric vehicle program to bring it into agreement with technological reality. The bill also takes a hard look at municipal waste as an energy source by establishing grants and loan guarantee programs to help municipalities.

I am particularly gratified that this bill finally resolves the generic loan guarantee controversy which has faced Congress for the past 3 years. These guarantees are needed immediately to enable industry to get risky first-of-a-kind coal liquefaction plants on line. We cannot afford further delay in demonstration of technologies which may enable us to substitute some of our abundant coal reserves for petroleum imports.

The bill does not permit the important energy basic research area to slip further. Of particular importance is the $10,500,000 included for engineering design work and preliminary construction activities on the Isabelle accelerator facility at Brookhaven National Laboratory. This facility is a crucial next step in our high energy physics program.

Mr. Speaker S. 1340 is obviously a bill which will have a lasting impact on our energy future. I urge that it be passed into law without further delay.

Mr. TEAGUE. Mr. Speaker, for purpose of debate only, I yield such time as he may consume to the gentleman from New York (Mr. FISH).

Mr. FISH. Mr. Speaker, I want to congratulate the chairman for bringing this bill to the floor in this manner and also to say that I agree with a great deal of what my colleague, the gentleman from New York, has said. We know of the gentleman's diligence and interest in getting energy production in the United States.

I would like to address one question the gentleman raised, however, that has to do with the issue of whether or not the Clinch River money contained in the supplemental bill will mean the program will go ahead. In my judgment, this is not the case. Public Law 95-91, August 4, 1977, created the Department of Energy. ERDA is now a part of the Department of Energy. Section 660 of Public Law 95-91 reads as follows:

> Appropriations to carry out the provisions of this Act shall be subject to annual authorization.

This language I just read is very, very clear. It is unusual to have such language in a bill of the Congress, but it was the House language adopted by the conferees. "Appropriations to carry out the provisions of this Act shall be subject to annual authorization." If that were not clear enough, we have the veto of the Clinch River authorization and by the actions of the chairman in bringing this bill before the House expressly excluding the Clinch River breeder and all its parts and references in this legislation, it seems to me we underscore the intent of Congress that appropriations for the Department of Energy shall not be effective without annual authorization. Lacking the Clinch River authorization before the House at this moment, it is my judgment that appropriations are not binding on the Department of Energy.

The legal issue is not over the power of Congress to appropriate, rather the question is whether the DOE may spend money appropriated in view of section 660 of Public Law 95-91.

Mr. Speaker, I also wish to commend the President for his conviction and to agree that there was no logical alternative but to veto the ERDA authorization bill based on sound reasoning consistent with his economic, energy, and antiproliferation policies.

Again, I must point out that the CRBR is hardly economically justifiable. A cost estimate of $2.2 billion is unthinkable when one considers that the electricity produced by the CRBR results from an 88 percent contribution from the Federal Government with the taxpayer expected to bear any future cost override.

We have established a number of times in the past that this Nation, with its uranium supply, fossil fuels and light water reactors, is not in urgent need of bringing breeder technology on line. In the meantime, the $500 million this year for breeder research can be wisely employed to determine if the particular Clinch River breeder application is indeed the most desirable.

It has also been pointed out that the design and location of the CRBR are questionable. Clinch River has been termed as "one of the worst sites ever selected for a powerplant, based on topography and rock conditions."

Last, Mr. Speaker, the decision to defer the CRBR is completely consistent with the President's proliferation policies. We can hardly hope to get Europeans to reevaluate their positions on exporting plutonium breeder reactors and the concept of a plutonium economy if we ourselves are not willing to reevaluate one questionable project. It simply cannot be born out than a pause suggested by the President is reckless or an irresponsible attitude toward our future energy needs. Rather, it is a prudent and calculated move, consistent with our foreign policy objectives, designed to prove to the Euratom nations that we are willing to take the lead in this decision of monumental consequence and provide strong international disciplines to responsibly control the spread of nuclear materials.

Mr. TEAGUE. Mr. Speaker, I yield such time as she may consume, for purposes of debate only, to the gentlewoman from Tennessee (Mrs. LLOYD).

Mrs. LLOYD of Tennessee. Mr. Speaker, am I correct that our action today in not including specific authorization for Clinch River in this bill is in no way intended to affect the vitality of the appropriation for the project? In other words, our silence in this bill is not intended to create an inference that the appropriation is without sufficient prerequisite authorization.

Mr. TEAGUE. That is correct.

Mrs. LLOYD of Tennessee. At this time I would like to state there was no Member of Congress more disappointed than I by the veto of the energy bill including the breeder program. I do not think it is a parochial issue; every Member of this body needs the breeder reactor as much as the 3d District of Tennessee. Even with the figures used by the President in evaluating our needs for energy, even with his own figures, we will need the nuclear power that only a breeder reactor can provide, if we are to meet the electrical needs of our country into the 1990's. I view with deep regret the veto of this bill. However, the many vital programs in this legislation will go forward and we will continue working for the breeder reactor and, in accepting this vital legislation we need to pass today, we in no way renounce our support for the Clinch River facility.

Mr. TEAGUE. Mr. Speaker, for purposes of debate only, I yield such time as he may consume to the gentleman from California (Mr. GOLDWATER).

Mr. GOLDWATER. Mr. Speaker, I rise reluctantly in support of this bill to fund the National Energy Agency. I say reluctantly because again I agree with most of my colleagues in the committee that the President's veto of the Clinch River program was ill-advised. I strongly believe it is going to be quite detrimental in the future as far as our search for alternate fuel supplies to fossil fuel, and oil and gas. I am also concerned for the international aspects of this situation and for the growth of nuclear energy for peaceful uses and as a source of energy. Up to this point, the United States has been in the forefront of guiding and directing international policies that pertain to nuclear energy; but recently with the advent of the new administration, we are seeing the United States increasingly losing its influence upon the direction nuclear energy will take as an energy source.

The old axiom, "If you don't play the game you can't make the rules" is certainly alive, especially as it pertains to energy sources such as the breeder reactor. Other nations are going ahead with this program. The United States, with the President's veto, is slipping farther and farther behind.

Hopefully, we all share the concern expressed by the President over various problems of the breeder reactor, but those are solvable. They are problems that can be solved because they are basically technical problems. There are very few technical problems that the United States has not been able to find answers to, but we have got to be willing to tackle those problems.

So, here again we are taking ourselves out of the picture as far as trying to find solutions to the problems that may be created by the breeder reactor. In so doing, we are leaving those solutions to other nations, and thus the direction of the high standards of safety, and new technology to other nations. I think this is going to bode very poorly for the world in general as it pertains to the peaceful use of nuclear energy.

So, Mr. Speaker, I again reluctantly support this proposal before us today. Hopefully, we will be able to, in some way, find a way clear in which we can pursue the breeder reactor in the demonstration phase it is now in.

Mr. Speaker, I rise in support of S. 1340 as an absolute necessity toward continuing with the Nation's urgent energy research and development programs. In doing so, I feel compelled to note the irony in our being here today during this period of so-called energy crisis and having to pass an energy authorization bill for the second time. We are in this unfortunate situation, as all of us know, because the President has vetoed the first authorization bill for the Energy Research and Development Administration that was sent to him after considerable deliberation by the Congress.

This veto was shortsighted and ill-advised for several reasons. First, it came at the worst possible time: when Congress was considering the national energy plan, which supposedly solves a problem which Mr. Carter has said must be addressed with the moral equivalent of war. The failure to proceed with the energy development programs included in the vetoed bill can only be seen as a retreat. This is hardly an auspicious first step toward demonstrating the President's commitment to energy.

Also disappointing, especially in view of Congress' current activities in grappling with the energy program, is the fact that the bill Mr. Carter vetoed represents a significant attempt by Congress to compromise with him on the pace of nuclear energy development. By now rejecting this compromise, the President has taken a "my way or no way" attitude, with the Nation's energy programs suffering as a result.

Among the more subtle aspects of this situation is the fact that just several days after this veto, the President appeared on national television to encourage public support for his energy plan. At that time he highlighted and took credit for the estabilshment of the new Department of Energy, but conveniently neglected to mention that he had just vetoed the first authorization bill for that Department. This kind of logic is not my idea of playing straight with the public.

With regard to the merits of the energy authorization originally reported out by the Science and Technology Committee, and of the second authorization bill before us today, I would like to point out that this committee has a history of developing balanced, well thought out energy legislation. I doubt that I need remind most of my colleagues of the Solar Heating and Cooling Demonstration Act of 1974, which initiated the program to demonstrate the technical and economic feasibility of using solar energy for heating and cooling; the Geothermal Energy Research and Development Act, which provided major impetus and incentives for accelerated development of geothermal energy; the Solar Energy Research, Development and Demonstration Act of 1974, which established many of the major activities now underway on solar research; and the Electric and Hybrid Vehicle Research, Development and Demonstration Act of 1976, which focused effort on the development and acceptance of vehicles that can rely on alternatives to petroleum fuels.

These and other legislative actions reflect credit on the unbiased nature of this committee in pursuing all promising energy concepts. Now that the subject of nuclear research, development, and demonstration has been added to our jurisdiction, we have given the same careful scrutiny to nuclear projects that we have previously given to nonnuclear energy activities, and the bill we reported out reflected that approach.

The fact that we are bringing an energy authorization bill to the floor again, despite the poor treatment it received in its original form by the Executive, is in no small way due to the courage and foresight of our chairman, Congressman OLIN TEAGUE, and of our ranking minority member, Congressman JOHN WYDLER. Both of these gentlemen recognized the urgent need to maintain the momentum of our ongoing energy development activities, and to establish a sound congressional mandate for initiating newly authorized energy projects. In particular, I would note that the legislation now before us includes new energy programs such as the construction of a new geothermal energy demonstration plant, Federal purchases of solar photovoltaic energy systems, loan guarantee authority for synthetic fuel plants and for the conversion of municipal wastes to energy, accelerated development of more efficient automobile propulsion systems, and other activities. We need to get on with these projects, and that is why I support the bill now under consideration.

Mr. Speaker, S. 1340 is one of the most far-reaching pieces of legislation that the House will consider this year. The American public seems to be aware, at last, that we are facing an energy crisis. It is now up to this Congress to provide the leadership that has been lacking in obtaining solutions to that crisis. The Department of Energy authorization bill is an important step in that solution. I urge my colleagues to approve it.

Mr. TEAGUE. Mr. Speaker, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. GARY A. MYERS), for debate only.

(Mr. GARY A. MYERS asked and was given permission to revise and extend his remarks.)

Mr. GARY A. MYERS. Mr. Speaker, I rise to oppose the dropping of the Clinch River breeder reactor for the fiscal year

1978 Department of Energy Research and Development—civilian applications legislation. We worked hard for the passage of S. 1811. We examined every facet of the breeder reactor technology and politics and by a solid majority in the Science and Technology Committee and on the floor of both Houses we came to the twin conclusions that we have no realistic alternative to a major breeder reactor development program and that the Clinch River demonstration plant is the next logical step in the development of this technology.

What has changed since we last voted overwelmingly in favor of Clinch River on October 20? I know of no major energy breakthrough or discovery. The only intervening event between then and now is President Carter's unwillingness to acknowledge either the massive evidence which has developed against his position or the unwillingness of any of the world's civilian nuclear powers to buy his logic.

The prevailing view in light of the GAO letter to Chairman TEAGUE December 5, 1977, concerning H.R. 9375 now appears to be that Clinch River is permanently authorized; that the project can be continued by means of annual appropriations in the absence of annual authorizations. Even so, in my opinion, it is a mistake not to work to override this unfortunate veto.

If an override succeeded, we could put an end to this energy tangent for all time and permit the Science and Technology Committee Energy Subcommittees to focus full time on advancing energy research and development. If we failed to override the veto of a bill whose conference report passed the House by a 366 to 52 margin, we would still leave the present course of action available to us to salvage the committee's new initiatives.

We also should stop to consider the precedent we are setting by giving the Appropriations Committee a mechanism for continuing on an annual basis, major projects that have previously been authorized. Today we have a situation where the authorizing and appropriating committees are in agreement on the necessity of the project, but it is easy to think of situations where this might not be the case. The decision not to take the President on directly does have a price.

Therefore, I feel compelled to vote against S. 1340.

Mr. BROWN of California. Mr. Speaker, the authorization for the CRBR project as originally enacted included general criteria for the project previously submitted by the Atomic Energy Commission for the project to the Joint Committee on Atomic Energy. Those criteria set forth the general types of assistance the agencies were prepared to offer to industry in order to motivate industrial participation and funding in the advancement of this technology. It necessarily was general and anticipated flexibility in working out the ultimate arrangements for the project. Those criteria included a provision allowing revisions to be issued from time to time as the agency saw fit in order to accommodate such changing circumstances.

In addition, in enacting the authorization for the project, we in the Congress built a further mechanism into the authorizing statute—section 106(b))—allowing amendments to whatever arrangements were ultimately worked out with the industry. This was intended to accommodate changes in technology or new developments as they might occur during the course of the project without the requirement for formal congressional enactment of new legislation. This mechanism permitted Congress, through its Joint Committee on Atomic Energy, to maintain oversight of the project and at the same time permit flexible reaction capability to project changes, as might be necessary over the life of the project.

This mechanism for maintaining flexibility, while at the same time providing for appropriate congressional oversight over power reactor demonstration projects, has been used over the years in similar situations. It was recently used effectively in the CRBR project to accommodate major changes in the orientation and responsibility for carrying out the project, including a complete reorientation of the lead responsibility for the project from the industry participants to the Government.

It is apparent from this background that the Congress recognized that it could not foresee precisely the future course of a research and development process involving a technology such as Clinch River breeder reactor, and provided the statutory mechanism which would enable the project to keep pace with developments as they occurred without the necessity of requiring legislation each time. Thus the provisions and intent of the authorization legislation dating back to 1971 for the CRBR project clearly authorize but do not compel the executive branch to complete every stage of the project, and recognize the very real possibility of changes over a long period of time by providing the means through which those changes—including changes which limit the scope of the CRBR project—could be accomplished in a timely manner without formal legislative action.

The bill before us, S. 1340, is silent on the Clinch River breeder reactor project because that was the reason President Carter vetoed the previous authorization bill, S. 1811. It is completely inconsistent and contradictory of the Congress to first say the authorization for the Clinch River reactor project is needed in order to proceed with this project, and then after the authorization is vetoed to say that the authorization in previous years is sufficient to continue the project today. We can all understand the need to put a good face on a political defeat, but we should not allow the legislative history to be distorted beyond the factual situation.

We are in an ambiguous situation, where a project has been authorized in fairly general terms, and then further, more specific authorization is vetoed, but no additional authorization language is adopted. I prefer to see us deauthorize, or terminate the Clinch River breeder reactor project. This would be the most proper course of action to follow, unless the Congress were to change its mind and override the President's veto. However, the Clinch River project can die as easily by the Congress being silent. Favorable action on S. 1340, which I favor, will accomplish the termination of the Clinch River breeder reactor project while allowing the Congress the opportunity to avoid voting on this issue. This appears to be a reasonable compromise solution to our dilemma.

Mr. FUQUA. Mr. Speaker, I rise to support this most important bill, S. 1340, which authorizes appropriations for the newly created Department of Energy for fiscal year 1978.

I want to again commend the work of the chairman of the full committee, the Honorable OLIN E. TEAGUE of Texas and the subcommittee chairman, the Honorable WALTER FLOWER: of Alabama; the Honorable MIKE McCORMACK of Washington; and the Honorable GEORGE BROWN of California. These men gave many, many hours to this authorization and provided the leadership which brings a most comprehensive bill to the floor and addresses the vital needs of the energy problem today.

Mr. Speaker, I have the honor of chairing the Subcommittee on Space Science Applications, and we are helping where we can in the space activities in supporting our energy needs. Let me cite a few.

First. This is the first bill that authorizes the solar satellite power project. Although the money is modest, it is a beginning. I think we will all see great things from this effort.

Second. The bill authorizes an ocean thermal energy conversion tropic ocean grazing pilot plant which may provide an economic method of producing ammonia and thus release the fertilizer industry from its dependence on natural gas.

Third. A space spinoff in the photovoltaic or solar cell area is contained in the bill which has the potential for clean efficient electrical generation on earth by 1986 at a cost of 50 cents per kilowatt. I would like to publicly commend the work of the NASA people in this area, especially the Jet Propulsion Laboratory in Pasadena, Calif., which is leading the effort in the flat plate area.

Fourth. The wind energy conversion program is being managed by another NASA space center, Lewis Research Center in Cleveland, Ohio. They have the only operating machine looking at this potential energy conversion system.

Fifth. Also contained in the bill is work in solar heating and cooling. This bill firmly supports this program, which has a large scale application in my home State of Florida, by authorizing approximately $100 million.

The committee, and I know the Congress, will continue its efforts in these areas.

Mr. Speaker, in closing—as you can tell by words—I am enthused about this bill because of the technology thrusts it contains. I think we are on the threshold of many research and development breakthroughs and I urge the support of all the Members of this great body.

Thank you for your support.

Mr. BINGHAM. Mr. Speaker, I am pleased to see that the Science and Technology Committee has acceded to the President's position and has deleted any authorization for continuation of the Clinch River project from this measure. This decision quite obviously represents the sound assessment of the chairman of the Science Committee that he does not have the votes necessary to override the President's veto. The fact that this veto has thus in effect been sustained is an important factor when we consider the legislative history surrounding the appropriation of funds for the Clinch River project. As I stated during the debate over the supplemental appropriation, it is my considered opinion that in the absence of any authorizing legislation, the President is free to expend the $80 million appropriated "for the Clinch River breeder reactor project" as he sees fit. The Clinch River project's proponents' strategy of trying to continue the project by appropriating without authorizing does violence not only to the congressional budget process, but to the Constitution and its express veto powers, as well. So once again, I would urge the President to exercise the option he has to use this $80 million to terminate the Clinch River project.

I am pleased also that the committee has decided to address the President's concerns relating to proposed increases in the price DOE may charge domestic and foreign customers for enrichment services, by deleting these provisions from the legislation altogether. These increases might well have hurt our antiproliferation efforts by needlessly introducing an element of uncertainty into the minds of foreign customers who share our antiproliferation goals and who must rely upon us for fuel services.

I remain deeply concerned about one provision of this legislation, however. This is section 107 of the bill, which unnecessarily limits the flexibility of the executive branch in negotiating antiproliferation accords and agreements for nuclear commerce with foreign nations. Section 107 would introduce another layer of uncertainty into international nuclear commerce by providing for one-house vetos of any executive branch arrangements for the return of foreign nations' spent nuclear fuel to this country for safeguarding. This section was not in the original House bill, but rather was added in the Senate, accepted in conference by House conferees, and now has been added to the bill we are acting upon today.

Section 107 has not been the subject of hearings before House committees or subcommittees, nor has it been the subject of discussion in any House committee reports. It was not discussed on the House floor during consideration of the previous ERDA authorization bill, nor was it addressed by the Science and Technology Committee when they returned to the House on two separate occasions with conference reports on the ERDA bill. Under the procedure followed in the handling of the ERDA bill on the floor today—where the bill was not first referred to the Committee of the Whole House on the State of the Union, as is normal for important legislation in order that amendments can be considered under the 5-minute rule—there is no possibility for the consideration of amendments. In other words, although the resolution from the Rules Committee is not called a "closed rule," the effect is the same.

So the provision we are being asked to pass on today has not been the subject of any House committee consideration nor has it been subject to any House debate. I am deeply concerned that the House should be called upon to act in such a precipitate manner, the more so because section 107 is in direct conflict with the concerns expressed by President Carter in his veto mesage of November 5, wherein he stated that this provision "would impede our nonproliferation goals by imposing limitations on the ability of the United States to provide for storage of spent fuel from foreign reactors in those instances where such an action would serve those goals."

The issue here is not whether or not "the United States is to become the world's nuclear dumping ground." I am not aware of anyone within the administration, or the Congress for that matter, who is suggesting that we pursue such a course. What the President's antiproliferation policies do seek to provide however, is the flexibility to retrieve the sensitive U.S. source spent nuclear fuel from volatile stiuations where it might potentially be misused. We are especially concerned that several nations store U.S. source spent fuel in unsafeguarded facilities.

By providing for a one-House veto over any arrangements which the executive branch might make for safe disposition of this spent fuel, the proponents of section 107 are compromising from the outset the certainty that accords for safe storage of foreign spent fuel will be swiftly implemented. This provision may prove especially destructive to U.S. efforts to guarantee return of spent fuel to the United States where the most politically attractive alternative available to a foreign customer might seem to be to have the spent fuel reprocessed, thereby giving rise to increased international commerce in plutonium, a nuclear weapons grade material.

This amendment, which puts in doubt the reliability of the United States as a supplier of nuclear fuel services to nations which share our antiproliferation policies, has been pushed—surprisingly—by Members of the other body who are frequently in sympathy with nuclear industry interests, and who are quick to uphold the necessity of our "reliable supplier" position in other instances. It is most ironic that this same amendment has been endorsed by those of an opposite viewpoint, who believe that the answer to the proliferation crisis is nuclear isolationism and that the United States should place a moratorium on all nuclear exports. As one who does not share either view, I find it most unfortunate that this provision, which will serve only to reduce the reliability of the United States as a supplier of nuclear fuel services, is being railroaded through the House in this fashion.

Mr. TEAGUE. Mr. Speaker, I move the previous question on the amendment in the nature of a substitute.

The previous question was ordered.

The SPEAKER. The question is on the amendment in the nature of a substitute offered by the gentleman from Texas (Mr. TEAGUE).

The amendment in the nature of a substitute was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

AMENDMENT OFFERED BY MR. TEAGUE

Mr. TEAGUE. Mr. Speaker, I offer an amendment to the title.

The Clerk read as follows:

Title amendment offered by Mr. TEAGUE: Amend the title so as to read: To authorize appropriations to the Department of Energy, for energy research, development, and demonstration, and related programs in accordance with section 261 of the Atomic Energy Act of 1954, as amended, section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and for other purposes.

The title amendment was agreed to.

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 3722, AUTHORIZING APPROPRIATIONS FOR THE SECURITIES AND EXCHANGE COMMISSION FOR FISCAL YEAR 1978

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the conference report on the bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that the statement of the managers be read in lieu of the report.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of December 6, 1977.)

Mr. STAGGERS (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, will the gentleman explain to the House what he is doing?

Mr. STAGGERS. Mr. Speaker, if the gentleman will yield, the conference report on H.R. 3722 provides for an authorization for the Securities and Exchange Commission of $63,750,000. The conferees recognize that the Commission can effectively discharge its responsibilities under the Federal securities laws only if its presently overburdened staff is modestly increased and only if it is provided sufficient funds to acquire additional space to relieve overcrowded conditions in its headquarters building. Accordingly, the conferees believe that the Commission's budget authorization request for fiscal 1978 is necessary and fully justified.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, can the gentleman assure us that it is not much different from the House version?

Mr. STAGGERS. It is less than the House version was when it passed here. It is just a simple authorization, and the conference report has already been passed by the Senate.

Mr. ROUSSELOT. Less money?

Mr. STAGGERS. Less money, that is correct.

Mr. ROUSSELOT. Mr. Speaker, I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The SPEAKER. The gentleman from West Virginia (Mr. STAGGERS) is recognized for 30 minutes.

Mr. STAGGERS. Mr. Speaker, I have no requests for time on this side of the House.

The SPEAKER. The gentleman from Ohio (Mr. DEVINE) is recognized for 30 minutes.

Mr. DEVINE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I concur in the remarks of the gentleman from West Virginia. This is a reduction of a little over $3 million from the bill previously passed by the House. It is a savings. I would urge the House to adopt the conference report.

Mr. STAGGERS. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER. The question is on the conference report.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. STAGGERS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 348, nays 2, not voting 84, as follows:

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

FOREIGN CORRUPT PRACTICES ACT OF 1977

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the conference report on the Senate bill (S. 305) to amend the Securities and Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such act to maintain accurate records, to prohibit certain bribes, and for other purposes.

The Clerk read the title of the Senate bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, would the distinguished chairman of the committee explain what this conference is all about?

Mr. STAGGERS. I will be happy to, if the gentleman will yield.

Mr. ROUSSELOT. I will be happy to yield.

Mr. STAGGERS. There is no added cost, no authorization whatsoever.

Mr. ROUSSELOT. And it is not substantially changed from the version that left the House?

Mr. STAGGERS. No; we took part of the Senate bill, and they took part of our bill. It is substantially the same as it was when it passed here.

Mr. ROUSSELOT. Will the gentleman explain briefly the changes that the Senate suggested.

Mr. STAGGERS. The Senate added a provision which would have required U.S. corporations which file with the SEC to keep accurate books and records, and so forth, and we accepted that. We made two minor changes that had to go with it, that had to satisfy the accountants. There was some question about some of the things that they were perturbed about. We removed those and the section that had to do with that. Then we took section 2 of the Senate bill, the complete section, which expanded the disclosure requirements presently applicable to investors in equity securities, particularly as those requirements affect the disclosure of foreign investments in the United States. Those are the principal changes.

Mr. ROUSSELOT. I thank the gentleman.

Mr. STAGGERS. Mr. Speaker, the conference report on S. 305 adopts virtually all of the significant provisions of the House-passed legislation and several meritorious provisions from the Senate-passed bill.

The Senate-passed bill contained a provision, not included in the House version, which would have required U.S. corporations which file with the SEC to keep accurate books and records and to maintain internal accounting controls sufficient to provide assurances that the company's transactions are properly recorded and that its assets are accounted for.

With two relatively minor changes, the House conferees proposed to recede to the Senate and adopt this provision. It was not originally included in the House-passed bill because it was felt that this was an area better left to SEC rulemaking. However, its adoption in the conference was supported by the SEC and the accountants.

In order to enforce these accounting standards the Senate bill contained provisions, also not in the House-passed bill, making it unlawful for officers and directors of the company knowingly to falsify the company's books and records or to deceive an accountant in connection with his examination.

Again, the House bill did not contain this provision because the SEC had already proposed rules in this area.

Further, the Senate bill contained language exempting from the corporate accounting provisions activities by intelligence agencies involving national security. The House conferees suggested certain changes which would require that such activities be pursuant to the specific written directive of the head of the intelligence agency and pursuant to Presidential authority. Moreover, a summary of the matters covered by the directive would be transmitted to the congressional Intelligence Oversight Committees annually. The Senate agreed to the House-proposed changes.

The conference report adopts the House provision prohibiting corporations subject to SEC jurisdiction and other domestic concerns from making payments, promises of payment, or authorization of payment of anything of value to any foreign official, foreign political party, candidate for foreign political office, or intermediary where there is a corrupt purpose. The Senate-passed provision which define corrupt purpose was vague and contained several loopholes. The House version which provided that the corrupt purpose must be to influence any official act or decision of the recipient or to induce the recipient to use his influence to affect a Government act or decision, with the modification that the bribe must also be to retain or obtain business.

Criminal penalties of up to 5 years imprisonment and/or a fine of no more than $10,000 would be applied to individuals who violate this proscription. The Senate receded to the House's corporate penalty of up to $1,000,000 in lieu of $500,000 penalty. The House definition of domestic concern included foreign subsidiaries of U.S. companies, while the Senate definition did not. The House receded to the Senate on this provision. Although foreign subsidiaries themselves would not be reached under the conference report, U.S. companies which make bribes through foreign subsidiaries would be covered.

Violations by domestic concerns would be investigated and prosecuted by the Justice Department. Violations by companies subject to SEC jurisdiction would be investigated by the SEC, but prosecuted by the Justice Department. Since the Securities Exchange Act of 1934 provides the SEC with injunctive authority to enforce the provisions with with respect to companies which file with the SEC, the Senate receded to the House provision providing similar authority for the Justice Department to enforce this prohibition with respect to other domestic concerns.

Title II of the Senate-passed bill expanded the disclosure requirements presently applicable to investors in equity securities, particularly as those requirements affect the disclosure of foreign investments in the United States. It also implemented the SEC's legislative recommendations arising from its recent street name study, and essentially adopts rules already proposed by the SEC. The House conferees receded to the Senate on this provision, which would fill existing legislative gaps, help improve shareholder communications, and provide us with a more accurate picture of who controls U.S. corporations.

Mr. Speaker, I believe that we have a good compromise bill which includes almost all of the House-passed provisions as well as several related meritorious provisions from the Senate bill. On behalf of the House conferees, I urge the conference report's passage.

Mr. ROUSSELOT. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that the statement of the managers be read in lieu of the report.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of December 6, 1977.)

Mr. STAGGERS (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The SPEAKER pro tempore. The gentleman from West Virginia (Mr. STAGGERS) and the gentleman from Ohio (Mr. DEVINE) will be recognized for 30 minutes each.

The Chair recognizes the gentleman from West Virginia (Mr. STAGGERS).

Mr. STAGGERS. Mr. Speaker, I have no requests for time on this side.

Mr. DEVINE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as one of the conferees who worked on this legislation I would urge my colleagues to act favorably on the conference report on S. 305. The subcommittee chairman has described in detail the provisions of the conference report and I will not repeat them in detail. I would, however, like to highlight several of the more important provisions.

For example, section 102 of the conference report requires that companies subject to the jurisdiction of the Securities and Exchange Commission make and keep accurate books and records and devise internal accounting controls to guarantee that transactions are executed only with management's authorization. The House-passed bill did not contain any provisions dealing with accounting standards; the House had no position on this issue at all. The Senate on the other hand included not only section 102, but provisions which would have prohibited a company from falsifying books and records or making false statements to accountants. Although we note that the SEC has initiated a rulemaking proceeding in this area, questions have been raised as to the Commission's authority to issue such rules. I want to emphasize that the conferees took no position on this question.

Sections 103 and 104 would prohibit U.S. corporations from making payments to foreign government officials for a corrupt purpose. For example, section 103 prohibits a company subject to the jurisdiction of the SEC from using interstate commerce to make a bribe to a foreign official in order to obtain or retain business. Section 104 prohibits all other domestic concerns from making these kinds of bribes and vests enforcement responsibilities including the authority to seek injunctions, in the Department of Justice. The bill specifically excludes so-called facilitating payments made to low-level officials whose duties are primarily ministerial or clerical. The bill also recognizes the enforcement problems which are inherent in trying to extend the reach of this legislation to foreign subsidiaries of the U.S. corporations and consequently foreign subsidiaries have not been included within the ambit of the bill. Finally, I want to point out that the conference report vests enforcement responsibility in the SEC and Justice Department and the conferees did not intend to create a private right of action.

Finally, title II of the legislation would authorize the SEC to promulgate rules requiring any person who acquires more than 5 percent of the beneficial ownership of the company to inform the issuer of the securities and the SEC of that person's identity, residence, and citizenship and the number and description of shares in which that person has an interest. The conferees agreed to drop provisions in the Senate bill which would have authorized the SEC to impose requirements for reporting extensive historical ownership information and other information deemed necessary by the SEC. It is our hope that the Commission in promulgating those rules would provide for the least burdensome possible reporting requirements.

In conclusion, Mr. Speaker, I think that the conference report on S. 305 is a good compromise between the House position and the Senate position and I would urge the Members of this body to vote affirmatively so that we can send this legislation on to the President as quickly as possible.

Mr. Speaker, I have no requests for time, and reserve the balance of my time.

Mr. STAGGERS. Mr. Speaker, I yield briefly to the gentleman from Texas (Mr. ECKHARDT) and before that, I would like to compliment him and all of the members of the committee for working out the bill and the conference report with the Senate. I know the importance of the bill. I do want to compliment the gentleman and all the members of the committee and of the staff who worked on the bill.

Mr. Speaker, I yield to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Speaker, the conference report before us today is one of the more important pieces of legislation to be considered by the Congress this year. It is legislation designed to prohibit bribery by U.S. companies of officials of foreign governments and is in response to recent disclosures by a large number of American companies of having paid over $300 million in corporate funds to foreign officials. While some funds were given simply for the privilege of doing business in a particular foreign country, other funds were given for the purpose of improperly obtaining business and influencing the decisions of foreign governments. The disclosure of these payments has tarnished the reputation of American business in the international community, and has created serious repercussions for the governments of a number of foreign countries.

The legislation is supported by the administration, the Securities and Exchange Commission, the American Institute of Certified Public Accountants, and the business community in general.

Briefly, the bill would require U.S. companies subject to the jurisdiction of the SEC to make and keep books, records, and accounts which in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the issuer. In addition, the bill contains provisions requiring these companies to devise and maintain systems of internal accounting controls sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to maintain accountability for assets. These provisions should effectively prevent off-the-books slush funds and payments of bribes.

The bill agreed to by the conferees does not contain two provisions in the Senate bill that would have made it an offense "knowingly" to falsify corporate books and records, or "knowingly" to make a false or misleading statement to an auditor.

The Commission has published proposed rules for public comment, however, which would, if finally adopted, promulgate the substance of those provisions as Commission rules, but without the requirement that the conduct, to be actionable, be performed "knowingly."

In my judgment, the deleted proposals involve sensitive and specialized issues best left to the discretion of the Commission. As the Commission's enforcement program has demonstrated, these are matters as to which a hard-and-fast legislative resolution is inappropriate; these issues are, therefore, better suited to Commission rulemaking to frame the language best adapted to achieving the objectives contained in the deleted proposals. Commission rulemaking would permit the Commission to alter any rules it may adopt to accommodate changed circumstances or to deal with other difficulties not presently perceived without the necessity of seeking additional legislation.

I am aware, in this regard, that certain questions have been raised concerning the Commission's authority to promulgate the proposed rules concerning the falsification of corporate books and records and the making of false or misleading statements to an auditor. I believe these questions are without merit. The Commission's proposals, in large measure, codify existing law rather than create new obligations. One who falsifies corporate records or deceives corporate auditors, for example, very likely has engaged in a violation of the existing antifraud provisions of the Federal securities laws. After reviewing the analysis of the Commission's authority to promulgate the rules contained in the Commission release issued at the time the rules were proposed for comment, it is my view that the Commission may promulgate the rules under its existing rulemaking authority. In this regard, it is significant that Section 23(a) of the Securities Exchange Act authorizes the Commission, among other things, "to make such rules and regulations as may be necessary or appropriate to implement the provisions * * *" of the Act "or for the execution of the functions vested in the * * *" the Commission by the Act. The Commission's adoption of the proposed rules concerning these matters would, in my judgment, reflect a responsible and appropriate use by the Commission of its rulemaking authority.

The report of the House committee concerning this legislation makes clear why the House conferees could not accept the two provisions contained in the Senate bill that would have required proof that violations had occurred knowingly. That requirement that might be construed as the equivalent of a showing of scienter. The report of your committee concerning the House bill pointed out, however—pages 10–11—that "the committee intends [that] no proof of scienter be required in a Commission enforcement action brought under * * * any * * * provision of the federal securities laws." The report also stated that "the appellate courts quite properly have never required proof of scienter in any of the Commission's own enforcement proceedings." Because the Commission has taken the lead by its rulemaking proposals, and because the conferees did not intend to enmesh themselves in any fundamental change in the lack of any need for the Commission to prove scienter in its own enforcement actions, the deletion of the two provisions from the proposed legislation better leaves the matter to the discretion of the Commission.

The legislation exempts from the corporate accounting provisions activities by intelligence agencies involving national security. Such activities must be pursuant to the specific written directive of the head of the intelligence agency and pursuant to presidential authority. Moreover, annually, a summary of the matters covered by the directives would be transmitted to the congressional intelligence oversight committees.

The focal point of the legislation is the provision which would make it unlawful for any U.S. company to use the means

of interstate commerce in furtherance of an offer, payment, promise to pay, or authorization of payment of anything of value directly or indirectly to any foreign official, foreign political party, or candidate for foreign political office. The purpose of the payment must be to influence any act or decision of a foreign government official or to induce such official to use his influence to affect a government act or decision so as to assist U.S. companies in obtaining, retaining, or directing business to any person. So-called "grease" or "facilitating" payments to persons whose functions are essentially ministerial or clerical would be excluded from the bill's prohibitions.

The penalties for violations of these provisions are up to $1,000,000 for corporations and $10,000 and/or 5 years imprisonment for any officer, director, employee or shareholder acting on behalf of the corporation. It should be noted that any employee's or agent's liability is predicated upon a finding that the corporation has violated the provisions of the act.

The Justice Department would prosecute all criminal violations of the act. However, with respect to those companies which file reports with the SEC, that agency would have principal investigative authority.

Because of certain jurisdictional and diplomatic difficulties the bill does not encompass foreign subsidiaries of U.S. corporations, through which many questionable payments have been made in the past. However, the scope of the bill is sufficient to reach any U.S. company which uses its foreign subsidiary as a conduit for such payments.

Title II of the bill contains provisions which deal with disclosure of the beneficial ownership of American corporations, and would expand the disclosure requirements applicable to investors in the United States. These provisions would implement the Commission's legislative recommendations arising from its recent street name study, which was mandated by the Securities Acts Amendments of 1975.

These provisions would require persons owning, directly or indirectly, 5 percent or more of any registered security to disclose: First, their identity, residence and citizenship; and second, the number and description of shares in which such person has an interest. The principal effect of the proposal would be to remove existing exemptions for persons who acquired ownership of more than 5 percent of an issuer's securities prior to 1970 and for persons who acquire less than 2 percent of an issuer's securities in any 12-month period.

The bill also requires the Commission to report to Congress, within 30 months after enactment of the legislation, concerning the effectiveness of the beneficial ownership reporting requirements and "the desirability and feasibility of reducing or otherwise modifying" the 5 percent disclosure threshold.

Mr. Speaker, the conference report will enable us to effectively deal with the widespread and serious problem of corporate off-book slush funds and foreign bribery. I urge my colleagues to approve the conference report.

Mr. STAGGERS. Mr. Speaker, I have no further requests for time, and I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. PATTEN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore (Mr. DAN DANIEL). Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 349, nays 0, not voting 85, as follows:

Mr. Baucus with Mr. Badillo.
Mr. Beilenson with Mr. Broyhill.
Mr. John Burton with Mr. Cunningham.
Mr. Phillip Burton with Ms. Chisholm.
Mr. Horton with Mr. Quie.

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

LEGISLATIVE PROGRAM

(Mr. RHODES asked and was given permission to address the House for 1 minute.)

Mr. RHODES. Mr. Speaker, I take this time to inquire of the distinguished majority whip as to whether he can tell us who is on first base; in other words, what the further program of the House will be.

Mr. BRADEMAS. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Indiana.

Mr. BRADEMAS. Mr. Speaker, I may say to the distinguished minority leader that the next item of business will be a consideration of the rule and then, hopefully, a vote on the continuing resolution with which we have been seized during the last several days.

Then the House, assuming that we pass that, would consider tomorrow H.R. 9378, to concur in the Senate amendment on the Employee Retirement Income Security Act of 1974.

Then we would hope, by later in the afternoon today, to hear from the distinguished chairman of the Committee on Ways and Means, the gentleman from Oregon (Mr. ULLMAN), the status of the social security financing amendments and get a judgment as to whether or not we would be voting on that measure within the foreseeable future.

Mr. RHODES. Am I to gather, from the statement just made by the gentleman, that there is a possibility of a session on Friday?

Mr. BRADEMAS. If the gentleman will yield, only pro forma.

Mr. RHODES. So that if the social security conference report is not ready for consideration by tomorrow, the consideration of such report would go over until some time in the indeterminate future?

Mr. BRADEMAS. The minority leader is correct.

Mr. RHODES. Mr. Speaker, I thank the gentleman.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, it is my understanding that the next order of business, as the gentleman from Indiana (Mr. BRADEMAS) stated, is the consideration of a resolution that would require a two-thirds vote of the House to make in order the joint resolution 662. Along with the Senate amendments that will make in order language that was not available to me until 5 minutes ago,' and many other Members have not had an opportunity as yet to see it.

This amendment bears no relationship to the language read earlier by the gentleman from Illinois (Mr. MICHEL), and this to me is a complete betrayal of the position that this House has taken on numerous occasions.

Mr. Speaker, I would hope that a vote on the rule would be demanded and that it be voted down when the rollcall is taken.

Mr. RHODES. Mr. Speaker, I assume there would be debate had on the rule.

Mr. SNYDER. Mr. Speaker, will the gentleman yield so I may ask a question about the program?

Mr. RHODES. I yield to the gentleman from Kentucky.

Mr. SNYDER. Mr. Speaker, yesterday I understood the distinguished majority whip to indicate that tomorrow's session would be a pro forma session. I have checked the RECORD, and the gentleman did say that.

I believe that the gentleman has now indicated there will be votes tomorrow?

Mr. BRADEMAS. Mr. Speaker, if the gentleman from Arizona will yield, it is not impossible that there will be a vote tomorrow.

Mr. SNYDER. The gentleman announced that a piece of legislation is scheduled for tomorrow?

Mr. BRADEMAS. The gentleman is correct.

Mr. RHODES. And there is a possibility that there would be a vote on that particular motion to agree to the Senate amendments; and further, if the social security conference report is ready for consideration, there might well be a vote on the adoption of that report, as I understand it.

Is there any possibility that the gentleman from Indiana (Mr. BRADEMAS) can foresee that there might be any other votes on tomorrow?

Mr. BRADEMAS. Not that I can foresee.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, what is this great piece of legislation we have scheduled for tomorrow? Why can we not consider it today?

Mr. BRADEMAS. Mr. Speaker, if the minority leader will yield further, I am not familiar with the substance of the act. All I can say is that this is the measure which I have been advised by the Speaker will be scheduled for tomorrow.

Mr. ROUSSELOT. We do not know the subject of that legislation?

Mr. BRADEMAS. Yes, we do. Mr. Speaker, as I said earlier—and perhaps the gentleman from California (Mr. ROUSSELOT) did not hear me—I am given to understand that the Committee on Rules has not yet filed a rule with respect to the matter which I said would be programed for tomorrow, and that would be to concur in the Senate amendment on H.R. 9378, an Act to amend title IV of the Employment Retirement Income Security Act of 1974. If the Committee on Rules does file a rule, we can very well bring that up, I am advised.

Mr. LATTA. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Ohio.

Mr. LATTA. Mr. Speaker, I just wish to inform the House that the Committee on Rules just broke up, and we are going back in session to report this matter out, so there is no reason why this could not be reported and this matter acted on today.

Mr. BRADEMAS. Mr. Speaker, I thank the gentleman.

FURTHER CONTINUING APPROPRIATIONS, 1978

Mr. DODD, from the Committee on Rules, reported the following privileged resolution (H. Res. 929, Rept. No. 95-834), which was referred to the House Calendar and ordered to be printed:

H. RES. 929

Resolved, That immediately upon the adoption of this resolution it shall be in order to take from the Speaker's table the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes, together with the Senate amendments thereto, and to consider the Senate amendments in the House.

Mr. DODD. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 929 and ask for its immediate consideration.

The SPEAKER pro tempore (Mr. DAN DANIEL). The Clerk will report the resolution.

The Clerk read the resolution.

The SPEAKER pro tempore. The question is, Will the House now consider House Resolution 929?

The question was taken; and on a division (demanded by Mr. BAUMAN) there were—yeas 110, nays 31.

Mr. BAUMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 240, nays 109, not voting 85, as follows:

Mr. Wolff with Mr. Young of Alaska.

Mr. MARLENEE changed his vote from "yea" to "nay."

So (two-thirds having voted in favor thereof) the House agreed to consider House Resolution 929.

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. The gentleman from Connecticut (Mr. DODD) is recognized for 1 hour.

Mr. DODD. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA) for purposes of debate only, pending which I yield myself such time as I may consume.

Mr. Speaker, very briefly, this resolution will make in order consideration in the House of the Senate amendments to the continuing resolution. It is my hope and I know the hope of the vast majority of the people in the Chamber this afternoon that we would be able to resolve this issue once and for all.

Mr. Speaker, I have no request for time and I yield to the gentleman from Ohio (Mr. LATTA).

(Mr. LATTA asked and was given permission to revise and extend his remarks.)

Mr. LATTA. Mr. Speaker, I think the House should be informed as to the new language to be added to the abortion amendment. It provides for the addition of the words "when so determined by two physicians". This additional language has been provided, and the rule makes consideration of it in order. Mr. speaker, I am opposed to the rule as well as the joint resolution.

Mr. Speaker, I have no request for time.

Mr. DODD. Mr. Speaker, I move the previous question on the resolution.

The SPEAKER pro tempore. Without objection, the previous question is ordered.

Mr. BAUMAN. Mr. Speaker, I object. Will the gentleman from Connecticut withhold his request?

Mr. DODD. I will be glad to withhold.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. LATTA. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, could the gentleman tell us who presented this language to the Rules Committee? A great many people were under the impression that the gentleman from Illinois (Mr. MICHEL) had read the language that would be made in order during debate this afternoon and we were of the impression that the language was to be made in order by the Rules Committee. Subsequently this new language arrived on the floor, and made in order under the rule, to the great surprise of many of us.

Mr. LATTA. Mr. Speaker, I regret the gentleman's surprise. This language was presented in the Rules Committee by the chairman of the Appropriations Committee, and the gentleman from Illinois (Mr. MICHEL) was there in the Rules

Committee and agreed to the language at that time.

I will be glad to yield to the gentleman from Illinois (Mr. MICHEL) if he has any comment.

Mr. MICHEL. Mr. Speaker, I thank the gentleman for yielding.

I am sorry the gentleman from Maryland was laboring under some misapprehension that this had all been set in concrete, because I presented the language basically just as a suggestion to follow.

The events which flowed subsequent to that were such as these: When I checked with the other body, particularly, those I knew would be opposed to the kind of language I would have preferred, it became quite obvious to me that there was no way that we were going to get this thing resolved finally, even with a good House vote. We would be running up against the same kind of opposition in the Senate, and we would then be back where we were 4 months ago. So it became clear to me that such language was not a viable alternative with which to look around for a few other votes. There was one other alternative that has been proposed around here for several days and which I have reluctantly opposed, because it calls for two physicians. It means additional costs. If one doctor is fraudulent, there would be two doctors which would help protect against abuse. I was not that enthused about such additional language, but we are at that point where we are moving from feet to inches to centimeters.

If that means just a couple votes, since we were just about there, it seems to me that this is the direction the chairman of our committee preferred to move in; so you base the situation on what you can do. I am not all enthused about it. I wish the good Lord would take this cup from me at this hour, but we have to do the best we can.

Mr. LATTA. Mr. Speaker, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Well, of course, Mr. Speaker, I had what I thought was a very clear understanding, not only today, but yesterday and last night, that if and when the situation arose that after the House defeated this last Senate amendment, that certain language, the so-called Michel language, would then be acceptable.

Now I find out, like this, there was another meeting of the Committee on Rules and entirely different language was discussed; when, where or how, who, what, we have not the faintest idea. It happened just like that. Somebody must have blinked their eyes and there we were.

Now, on this thing I hold in my hand, it is not just a couple lousy votes, no, not just a couple more votes, but two more physicians instead of a couple votes.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from Illinois (Mr. HYDE).

Mr. HYDE. Mr. Speaker, I just want to briefly state there were some rumors floating around that this language that is made in order as a result of this rule is acceptable to me as well as others who have shared the same view as I have. It is not acceptable as far as I am concerned and I just wanted to dispel that rumor and set the record straight.

Mr. DODD. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. MAHON. Mr. Speaker, pursuant to the rule just adopted in the House, I move to take from the Speaker's table the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes, together with the Senate amendments thereto, and to consider the Senate amendments in the House.

The Clerk read the title of the joint resolution.

SENATE AMENDMENTS

The SPEAKER. The Clerk will report the first Senate amendment.

The Clerk read as follows:

Senate amendment No. 1: Page 2, lines 15 and 16, strike "as modified by the House of Representatives on August 2, 1977".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House concur in the amendment of the Senate numbered 1.

Mr. MAHON. Mr. Speaker, this is purely a technical amendment. It should be clear that the continuing resolution provides for the operation of the Departments of Labor and HEW at the conference rate and also that these departments operate under the provisions of the conference agreement on the Labor-HEW bill. I do not know of any other conflict on this.

The motion was agreed to.

The SPEAKER. The Clerk will report the second Senate amendment.

The Clerk read as follows: Senate amendment No. 2; page 2, line 17, after "resolution" insert: "*Provided, however,* That none of the funds provided for in this paragraph shall be used to perform abortions: except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.

"Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

"The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced.".

The SPEAKER. The Chair recognizes the gentleman from Illinois (Mr. MICHEL).

MOTION OFFERED BY MR. MICHEL

Mr. MICHEL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MICHEL moves that the House concur in the amendment of the Senate numbered 2 with an amendment, as follows: "*Provided,* That none of the funds provided for in this paragraph shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term when so determined by two physicians.

"Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

"The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced.".

The SPEAKER. The gentleman from Illinois (Mr. MICHEL) is recognized for 1 hour.

Mr. MICHEL. Mr. Speaker, I yield 30 minutes to the chairman of our committee, the gentleman from Texas (Mr. MAHON), and pending that I will proceed for just a few moments.

Let me make it very clear at the outset that this is not, obviously, that language which we were talking about earlier in the day, and which I would have preferred to have made in order as an amendment to this bill. To repeat what I said just a moment or two ago, it became quite obvious to me that such language was simply going to put us right back in that position we were in 3 or 4 months ago, rather than making a further movement to an ultimate or eventual agreement.

Now, the only difference in this language than that which the Members voted on a little earlier in the day are the words, "when so determined by two physicians."

That is the only thing that has been added. Members will remember when the amendment came over from the other body, they deleted the word "force," so in that initial Michel language we still have "promptly" reporting minus the word "force," and now adding, "when so determined by two physicians."

I think we have all heard the arguments pro and con. It is simply a question here of whether or not these additional few words will get those additional few votes to finally bring this matter to a successful conclusion.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding.

Mr. Speaker, I want to say to the gentleman that I admire his diligence in this matter, but I think the issue is a bit more than just a few words to get a few more votes. The health provision which existed in the language this morning would have required determination by one physician. Now it is going to require, at an additional cost to the Federal Government, the determination by two physicians.

Mr. MICHEL. As the gentleman heard

me say earlier, I had been reluctant to accept this earlier in the week because of that dollar figure and what was involved with two rather than one physician.

Mr. BAUMAN. If the gentleman will yield further, I have been informed by persons that I have talked with in the few minutes I have had since this language was made available that, in States where similar rules or regulations have been placed in effect, they have been used very effectively in allowing abortions. A great many doctors, particularly those whose chief practice is performing abortions, are more than willing to certify to the need. That was my concern with the one physician. Now the gentleman is requiring that two physicians make this determination. I see no difference, except an increased cost to the taxpayers, between this and what the House voted down earlier today. There is no requirement, even, for an examination. The second doctor can certify the need on a consulting fee basis and sign the authorization.

So I would hope that at this late hour we are not going to sell out on this issue simply to reach a solution that is acceptable to one or two Members of the other body.

Mr. MICHEL. We wrestled with this question of fraud, even to the extent, maybe, of this kind of language:

> Whoever knowingly and wilfully makes or causes to be made any false statement or representation of a material fact in any report made to a law enforcement agency or a public health service shall be subject to section 1909 of the Medicare-Medicaid Antifraud and Abuse Amendments of 1977 (P.L. 95-142).

The problem is that here, with the flow of events happening so quickly, I am not altogether sure that we want to impose that kind of $2,500 or $5,000 fine if it were applicable to minors.

I realize that maybe over in the other body that might be even more acceptable than two physicians. But as I said, it has been a most difficult 3 or 4 months we have gone through. Those of us who have been at every conference, at every meeting, every change of words, every dotting of the "i" and crossing of the "t," have just about had it up to here. As I indicated, I cannot be happy about not having my way, but that is the art of compromise.

Mr. HYDE. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Illinois.

Mr. HYDE. I thank the gentleman for yielding.

Mr. Speaker, I commend the gentleman from Illinois, I commend the chairman of the committee and the chairman of the subcommittee, and all who have wrestled with this problem. It is not an easy one, and everyone is trying to do what is right. The difficulty is in knowing what is right.

I just want to make one point. In California, I am informed that in 1970 the law required three physicians to certify, and this is what they had to certify: that the woman was a physical threat to herself and to the person or property of others, and under restraint or supervision.

That is a tough requirement. Three physicians had to certify to that, and they performed 100,000 abortions with that language.

There is one more point I would like to make, and then I will sit down. I never knew an abortionist who did not have a partner.

Mr. MICHEL. Mr. Speaker, the gentleman has been a very vocal and a very effective spokesman for his point of view. I respect his view and those who have been wedded to his view, but I just know that we have to have a little movement to get a final bill. I hope we will have a sufficient switch to make the difference here.

Mr. MAHON. With those cries for a vote, Mr. Speaker, I yield myself such time as I may utilize. Those cries for a vote are music to my ears.

We will be, I hope, moving very quickly on this matter. It was thought that we should not have another vote on this very difficult and disturbing issue without making some significant change in the language that was voted on earlier today, in order to make it more likely that the rules which the Secretary of Health, Education, and Welfare proposes to set forth would be free of collusion and fraud.

It was thought that the provision for two physicians would be appropriate. This suggestion did not come from me; it came from Members of the House who talked with me on several occasions.

So, Mr. Speaker, it just seems to me that this is a further concession, and I believe that some of the Members who are anxious to resolve this issue will be impressed by the fact that the provision for two physicians is to be included in the language.

I would hope that the House may accept this motion offered by the gentleman from Illinois (Mr. Michel). I heartily support the motion. It is the best we can do under the circumstances, and it seems to me that now is the hour and now is the moment to vote.

Mr. MICHEL. Mr. Speaker, I am afraid that I did neglect my friend, the gentleman from Kentucky (Mr. Carter), who had asked for time to make a statement.

Therefore, Mr. Speaker, at this time I yield such time as he may consume to the gentleman from Kentucky (Mr. Carter).

Mr. CARTER. Mr. Speaker, this morning I complimented the distinguished Dean of the House, the gentleman from Texas (Mr. Mahon), on his excellent work over a long period of time on this matter, and I also want to compliment the minority whip, the gentleman from Illinois (Mr. Michel), who has worked long and hard on this legislation.

I submit, Mr. Speaker, that this is a difficult problem. I have as a physician always opposed abortion. However, in this case, when serious physical damage can occur to a woman who is pregnant and two physicians make the statement that it would so endanger her life, I think that it is necessary and absolutely right for them to make such a decision, and I think it is right that the abortion be done to save the life of the mother or to save her from serious physical damage.

The minority whip, Mr. Michel, accepted an amendment offered by myself and the gentleman from Kansas (Mr. Skubitz) in these words, "when so determined by two physicians." This, Mr. Speaker, makes sure the abortion is necessary to prevent severe and long-lasting health damage and will also limit the chance of fraud. Again, I urge adoption of the amendment.

I agree with the motion as it has been presented today. I think it is right.

Some Members might say, "Well, you have changed your position."

I may reply and say that that is quite true. I have changed my position, and I believe that a decision of two physicians is necessary before an abortion should be performed.

This may mean it will be just a little bit more expensive at the start, but it will be less so in the end, because the delivery, if it were possible, would be more expensive than the abortion. Under this provision two physicians would attest to the fact of the absolute necessity for this action, and I feel that would diminish the possibility of fraud.

I strongly support this language as it is written, and as far as my change in position is concerned, I would again quote, as the distinguished committee chairman quoted from Hamlet this morning:

> And thus the native hue of resolution is
> sicklied o'er with the pale cast of thought.

Mr. Speaker, in this case I have changed my thinking because this language is good, and it is necessary. We should agree to this and get on with our business. It is humanitarian, and I urge that the motion be adopted. I strongly support it.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on this joint resolution, on the motion which I offered earlier, and on the motion offered by the gentleman from Illinois (Mr. Michel).

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. MICHEL. Mr. Speaker, if the chairman of the committee has no further requests for time, I move the previous question on the motion.

The previous question was ordered.

The SPEAKER. The question is on the motion offered by the gentleman from Illinois (Mr. Michel).

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. BAUMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 181, nays 167, answered "present" 1, not voting 85, as follows:

Mr. Mattox for, with Mr. Ruppe against.

Mr. Clay for, with Mr. Sawyer against.

Mr. Conyers for, with Mr. Schulze against.

Mr. Forsythe for, with Mr. Sebelius against.

Mr. Sarasin for, with Mr. Walker against.

Until further notice:

Mr. Mathis with Mr. Broyhill.

Mr. English with Mr. Duncan of Oregon.

Mr. Evans of Georgia with Mr. Frey.

Mr. Gibbons with Mr. Krueger.

Mr. Montgomery with Mr. Cleveland.

Mr. Fuqua with Mr. McCloskey.

Mr. Ertel with Mr. Milford.

Mr. Moss with Mr. Railsback.

Mr. Barnard with Mr. Symms.

Mr. Phillip Burton with Mr. Edwards of Alabama.

Mr. Dent with Mr. Young of Alaska.

Mr. Whalen with Mr. Bob Wilson.

Messrs. DAVIS and JENRETTE changed their vote from "nay" to "yea."

Mr. DUNCAN of Tennessee changed his vote from "yea" to "nay."

Mr. FRENZEL changed his vote from "yea" to "present."

Mr. FRENZEL. Mr. Speaker, I have a live pair with the gentleman from Minnesota (Mr. QUIE). If he were present he would have voted "nay." I voted "yea." I withdraw my vote and vote "present."

So the motion was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

REPORT ON RESOLUTION PROVIDING FOR AGREEING TO SENATE AMENDMENTS TO H.R. 9378, AMENDING TITLE IV OF EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974

Mr. LONG of Louisiana, from the Committee on Rules, submitted a privileged report (Report No. 95–835) on the resolution (H. Res. 930) providing for agreeing to Senate amendments to the bill (H.R. 9378) to amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for 2 years, the date on which the corporation first begins paying benefits under terminated multiemployer plans, which was referred to the House Calendar and ordered to be printed.

LEGISLATIVE PROGRAM

(Mr. O'NEILL asked and was given permission to address the House for 1 minute and to proceed out of order.)

Mr. O'NEILL. Mr. Speaker, I asked to speak out of order for 1 minute so I can give the schedule.

There will be a session tomorrow. There is a great possibility that we may have the supplemental appropriation bill back, and for that reason we must be here.

For the remainder of today we will take up the rule on ERISA.

By tomorrow we will know definitely where we are with respect to the supplemental appropriation bill and where we are concerning the social security bill, and by tomorrow we will have a definite agenda for the remainder of the year.

Mr. RHODES. Mr. Speaker, will the gentleman yield?

Mr. O'NEILL. I yield to the gentleman from Arizona.

Mr. RHODES. Mr. Speaker, when will we be coming in tomorrow?

Mr. O'NEILL. Mr. Speaker, in view of the fact that it was announced we would be coming in at 10 o'clock, we will come in at 10 o'clock tomorrow.

Mr. RHODES. I thank the Speaker.

Mr. LONG of Louisiana. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 930 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 930

Resolved, That immediately upon the adoption of this resolution the bill (H.R. 9378) to amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for two years, the date on which the corporation first begins paying benefits under terminated multiemployer plans, together with the Senate amendments thereto, is taken from the Speaker's table to the end that the Senate amendments be, and the same are hereby, agreed to.

The SPEAKER. The question is, Will the House now consider House Resolution 930?

The question was taken; and (two-thirds having voted in favor thereof) the House agreed to consider House Resolution 930.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Louisiana (Mr. LONG) for 1 hour.

Mr. LONG of Louisiana. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi (Mr. LOTT), pending which I yield myself such time as I may consume.

Mr. Speaker, this rule makes in order the consideration of H.R. 9378 and to take the bill from the Speaker's table and to agree to the Senate amendments.

The bill passed the House on October 13, 1977, on suspension. Subsequently the other body amended the bill to include a raise in the premium for single employer plans insurance from $1 to $2.60 per participant per year.

This is for Federal funds to insure these pension funds. The House version of H.R. 9378 would solve the question of insurance rates. The House did, however, address this issue through House Concurrent Resolution 369, which passed the House on November 2, 1977. In that resolution the raise had been to $2.25 rather than to the $2.60 to which I refer.

Since that time new information and computations suggest that the $2.60 figure reflects the proper rate and the House committees involved do agree with the raise to $2.60.

Ancillary to the substance to the bill and the amendment is the conflict of jurisdiction. The chairmen of the two involved committees, however, realize the emergency nature of the matter, since the fund itself may be placed in jeopardy, and have worked out an understanding which will be related through floor colloquy at the proper time.

As I stated, this action is necessary because the pension plans insured by the Federal fund will be placed in potential jeopardy unless the increase called for is agreed to. Therefore, I urge adoption of the resolution.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, once we have passed House Resolution 930, that is it. This issue will be resolved. We will have agreed to the action and we will go on to the next issue. I think we should clearly understand that.

Now, what is involved here is really a jurisdictional dispute, some jurisdictional question between the Committee on Education and Labor and the Committee on Ways and Means. It really involves two different bills, one relating to an 18-month extension of ERISA and the other dealing with the premium raise in the title IV section, I believe it is, for single employees. The Senate added an amendment to H.R. 9378 and then it went exclusively to the Committee on Education and Labor. The Committee on Education and Labor then tried to take it from the Speaker's table by unanimous consent so that we could vote on it. I understand now there is an agreement between the Members on both sides, the majority and the minority of the Committee on Education and Labor and the Committee on Ways and Means that this jurisdictional problem is not going to be in effect taken up by this issue and all parties agree with the merits of what is being done here basically. The Members of both committees have come before the House Rules Committee this afternoon in support of what is proposed under House Resolution 930.

Mr. Speaker, I believe it would be appropriate for me to yield such time as he may consume to the gentleman from Wisconsin (Mr. STEIGER), since the gentleman from Wisconsin was the Member that objected to the unanimous consent request to take it from the Speaker's table.

Mr. STEIGER. Mr. Speaker, I must admit I find myself in a difficult position. I am the last one that gets hung up by jurisdictional disputes. I do not think it makes good sense, nor is there any good public policy that comes out of it.

What we are dealing with this afternoon is something that needs to be done. I do not think there is any question but that the automatic coverage of multiemployer plans has to be postponed for 18 months, as proposed by the Committee on Education and Labor. There is a question in my mind about the annual premium rate of $2.60 proposed by the other body, compared with the $2.25 rate passed unanimously in this chamber.

Upon reflection and discussion with the Pension Benefit Guaranty Corporation and with the distinguished gentleman from Florida (Mr. GIBBONS), the chairman of the task force, the Committee on Ways and Means is at this point persuaded that the $2.60 rate is a valid rate. So the issue on which, for some reason, the Committee on Education and Labor was insistent, had to do with the report. If the Members will take a moment and simply look at the language in the resolution and look at what is being done, they will see that the report is to be submitted to the Senate Finance Committee, to the Senate Human Resources Committee, and to the House Committee on Education and Labor and that it simply excludes the Committee on Ways and Means. My question to the Committee on Education and Labor, to make sure we clarify where all of us stand, is whether or not the Committee on Ways and Means is to be excluded from the opportunity to receive this report.

Could I ask the gentleman from Kentucky (Mr. PERKINS) to respond to that question?

Mr. LOTT. Mr. Speaker, I am happy to yield to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. I thank the gentleman for yielding.

The gentleman from Louisiana was also going to yield me time, and I will take advantage of this kind offer to add additional comments.

I hope we can avoid a jurisdictional dispute here. There is no dispute over the need to extend the date for automatic coverage of multiemployer plans or over the need to increase the premium for single employer plans, although there may or may not be some question on the amount of the necessary increase. The real issue here is one of committee jurisdiction. This bill calls for the PBGC, the Pension Benefit Guarantee Corporation, to make a study of termination insurance for multiemployer plans and to report back to the Senate Human Resources Committee, to the Senate Finance Committee, and to the House Committee on Education and Labor.

The bill does not provide that the report is to be referred back to the House Ways and Means Committee. Although this procedure may be agreeable to the House Education and Labor Committee, we must point out that the Ways and Means Committee is very definitely involved in pension plan termination insurance.

There are several reasons why we are very definitely involved. First, there would not be any ERISA program or PBGC if we did not provide tax incentives when these plans qualify under the tax law.

Second, the law gives considerable responsibility to the Internal Revenue Service to enforce rules prohibiting self-dealing rules with pension plans and to enforce funding requirements for pension plans. These self-dealing and funding rules are a prerequisite for termination insurance. Without them, the PBGC would be insuring each employer's promise to contribute to his pension plan and would, in effect, be insuring against self-dealing.

In addition, the Secretary of the Treasury is a member of the PBGC's Board of Directors.

It is my understanding that H.R. 9378, which postpones the effective date for automatic coverage for multiemployer pension plans under the termination of insurance program of ERISA, was referred only to the Education and Labor Committee. It is my understanding that the chairman of the House Education and Labor Committee does not—or at least did not—agree with the proposition that termination insurance would be a shared responsibility between the Committee on Education and Labor and the Committee on Ways and Means.

I want to inquire of my distinguished colleague, the chairman of the House Education and Labor Committee (Mr. Perkins) whether he will agree that the procedures involved in enacting this bill will not serve in any way to establish a precedent that the Ways and Means Committee does not have primary or considerable jurisdiction over the PBGC program.

Mr. PERKINS. Let me say to my distinguished colleague from Texas that the question only arose after we passed H.R. 9378. Then, the Senate added the increase in the premium for termination insurance for single employer pension plans, from $1 per participant per year to $2.60 per participant per year.

So, the Senate tied the concurrent resolution in which jurisdiction was shared with the Ways and Means Committee, to H.R. 9378. There is no question in my mind, and I fully agree with my distinguished colleague Mr. Pickle that the Ways and Means Committee certainly shares jurisdiction over the substance of House Concurrent Resolution 369, the insurance premium increase for single employer pension plans.

I think there is no question about that in my mind, and we have operated on that assumption over the years. I certainly would not want to usurp or question the jurisdiction of the Committee on Ways and Means over the substance of House Concurrent Resolution 369, the insurance premiums for single employer plans. I think, myself, that we jointly share that jurisdiction. But be that as it may, the gentleman from Florida (Mr. Gibbons) is chairman of this subcommittee, and in my conversation with the gentleman from Florida (Mr. Gibbons) on a couple of occasions today I specifically stated to him that we would not undertake to thrash out or settle any jurisdictional problems in this bill, if we did proceed with it, because of the lateness of the hour. I wanted to give the distinguished gentleman from Texas my own viewpoint.

I would also like to acknowledge at this time the tremendous contributions made by two of our colleagues who are not present here at this moment. Mr. Gibbons, the chairman of the Oversight Subcommittee of the Ways and Means Committee, has greatly contributed to the cause of pension reform, in his service on the Ways and Means Committee, and prior to that, on the Education and Labor Committee.

And of course, my dear friend, John Dent, the chairman of the Labor Standards Subcommittee, who is not feeling well and is at home in Pennsylvania today, has tremendously and expertly contributed to the cause of pension reform over the years, including the termination insurance program which we are now discussing.

Mr. PICKLE. Mr. Speaker, will the gentleman yield further?

Mr. LOTT. I yield to the gentleman from Texas.

Mr. PICKLE. Mr. Speaker, for the purpose of clarification, is it true that the House passed a concurrent resolution, House Concurrent Resolution 369, which approved a single-employer premium rate of $2.25, and an additional measure, H.R. 9378, which postponed the date for automatic coverage of multiemployer plans, and that those two issues were joined over in the Senate in one bill?

Mr. PERKINS. Yes.

Mr. PICKLE. It comes back to us from the Senate with both measures merged in a single bill, H.R. 9378, which was only referred to the Committee on Education and Labor here.

Mr. PERKINS. Let me assure the gentleman from Texas that under no circumstances would we state that we had sole jurisdiction over the House concurrent resolution which was attached to the Senate bill.

Mr. PICKLE. We also agree with the gentleman that they share responsibility and that the legislation is needed.

Mr. PERKINS. Absolutely. And I agree with the gentleman on that.

Mr. PICKLE. I just want to be certain that we are not establishing precedent, that that portion of ERISA, title IV I believe, it is refers to PBGC, that the Committee on Ways and Means has a very definite responsibility, and we are not by this legislation in any way decreasing our jurisdiction.

Mr. PERKINS. I agree with the gentleman on that, and I believe we will share that jurisdiction in the future, on all resolutions which would approve proposed premium rate increases, while the Committee on Education and Labor would retain exclusive jurisdiction over the balance of title IV of ERISA.

Mr. LOTT. Mr. Speaker, first of all, is there an emergency? Does the gentleman feel that this needs to be done at this time in order to prevent a very difficult situation with these pension plans between now and the first of next year?

Mr. PICKLE. Yes, we determined it is an emergency. We need this in connection with termination insurance. I think it is a most regrettable situation we are faced with today, because the situation that we have now, on December 7, 1977, is no different, basically, than it was in July, 1977. The members of the PBGC's board of directors should have made a recommendation to this body long ago, with reference to the amount of a proper premium, and the reasons for a premium increase. They were slow in doing it. Nevertheless, we do have plans that may be going under. Because of that, we need to increase the premiums. Therefore, there is a need to pass the legislation.

Mr. LOTT. Mr. Speaker, my next question is: To the best of the gentleman's knowledge, do the employers who will have to pay this increase from $1 to $2.60 agree that this needs to be done, and are they willing to go along with it?

Mr. PICKLE. There is no question that the bill will cost employers more money, but for a typical employer with 10 employees in a pension plan the increase from $1.00 to $2.60 per participant raises the premium to $26. That means, per year, just $16 more. That would not be a problem to the average employer. Of course, for the big plans, the costs will be greater, but there is no disagreement that the premium needs to be raised.

Mr. LOTT. In view of the colloquy with the distinguished Chairman of the Committee on Education and Labor, does the gentleman support this resolution (H. Res. 930)?

Mr. PICKLE. I will reply to the gentleman that I will support it. I do not like to establish a question of jurisdiction by saying we are not establishing a precedent and then passing a bill.

I think that is a rather poor way to go about this. However, we have a situation that is of rather an emergency nature. I think the legislation needs to be passed. This may be the last opportunity we may have to do it, and I hope we will agree to this resolution.

Mr. LOTT. Mr. Speaker, we are going to do something here to establish precedents on the question of jurisdiction, but we are saying that we are not establishing a jurisdictional question.

Mr. PICKLE. That is correct.

Mr. BUCHANAN. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I yield to the gentleman from Alabama.

Mr. BUCHANAN. Mr. Speaker, I join in urging the passage of this resolution. It is particularly needed to protect the pension rights of people all over the United States, and I associate myself with the remarks of the distinguished chairman of the Committee on Education and Labor, the gentleman from Kentucky (Mr. Perkins).

Mr. LOTT. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. LONG of Louisiana. Mr. Speaker, I have no requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

SEVENTY-FIFTH ANNIVERSARY OF MANNED FLIGHT AND CENTRAL NEW YORK-LOCATED INSURANCE CO.

(Mr. HANLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HANLEY. Mr. Speaker, I would like to take a moment to share with my colleagues the story of an anniversary about to take place in my home community.

In a recent report to policy owners, John F. X. Mannion, president of Unity Mutual Life Insurance Co., observed,

> Unity Life and Aviation were born in the same year—1903. How different our world is today! In 1907, Unity's entire bill for postage, telephone and freight was $31.43. Today, we spend over $125 a day for telephone service alone.

Need we mention the progress of aviation?

The year 1978 will mark the 75th anniversary of the technological breakthrough of manned flight and of the central New York-located insurance company. Though obviously unrelated, the insurance company and aviation both grew up, in a sense, with the country. Both were born at a time when American life was still placid, when life revolved in a small circle around home and work and church, when the average family income was $1,500 per year, when the trolley was the fanciest form of transportation for most, and when saving for old age or having insurance was a luxury only for the rich.

The shatteringly profound effects of industrial technology in transportation, communications and manufacturing and scientific advances in medicine and research were just about to be felt in 1903 when the Wright Brothers got their "motorized kite" to fly at Kitty Hawk, and eight businessmen in Syracuse formed a partly fraternal-partly insurance organization "for beneficiaries in case of sickness, disability or death. Also for the purpose of providing money to insureds on attaining their expectancy in years."

Both events were to have effects far beyond their original significance. One, worldwide and now into space, the other, regional, but affecting thousands and thousands of families in the Northeastern United States.

As family income increased through industrial mechanization, Unity offered a means of saving and insurance protection to more and more wage earners in central New York through World War I and into the 1920s, evolving with the national economy, adapting its services to the changing economic circumstances of its market.

The company issued its first life insurance policy in 1923. That policy was part of a "Prosperity Club" plan which included both life insurance and a savings account, in a mutual savings bank. Within 18 months, more than 6,000 of these policies, whose average face value was $1,000, were issued. It was this plan, coupled with the expansion in 1934 into the coverage of children, which fully established Unity as an insurance company. Assets of Unity prior to the "Prosperity Club" plan were $30,000. In 1977, they total more than $59 million.

What Unity has demonstrated in reaching its 75th anniversary in such a sound financial condition is that a business founded within a given socioeconomic structure can, by adapting to a changing economy, by remaining flexible in its administrative policies and by stressing fundamental customer service, succeed in a marketplace of increasing complexity.

In 1903, the office was a $15-a-month room in an old opera house, serving essentially eight people. Unity Life today occupies gleaming new quarters in a campus-like setting overlooking the city of Syracuse. From this home office, 110 people conduct business in 15 States and the District of Columbia, where Unity Life is licensed.

As President John Mannion noted in recalling the common year of beginning for Unity Life and aviation, "How different our world is now."

GUILT BY ASSOCIATION

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DERWINSKI. Mr. Speaker, in the last week of October, I was the subject of a speculative newsstory, sources undetermined, which alleged that I had "leaked" information concerning a South Korean KCIA agent who had defected from their government service.

I have noted with interest an article in yesterday's Washington Post claiming that "the Federal grand jury that began investigating South Korean influence-buying in Congress ended its 18-month term yesterday with the unusual step of presenting a secret report." According to the Post, the 2-page report was critical of me.

However, the story goes on to report that the grand jury did not see fit to indict me for any crime, and "prosecutors told the grand jury that there was not enough evidence to support a criminal indictment of Derwinski." This comes as no surprise to me.

I have no way of knowing whether such a report was issued, but if so, I find it interesting that a grand jury, which has been spending 18 months presumably investigating alleged South Korean influence-buying in Congress—of which I have never been accused by the grand jury or anybody else to my knowledge—ends up issuing only a 2-page statement, and apparently only critical of me, and having little if anything to do with the original purpose of the investigation.

Why have I been singled out? Is it because I am a Republican and believe firmly that we should suport the Republic of Korea as the best bulwark against Communist aggression from North Korea?

Who caused the grand jury to write a report on me? And who leaked the existence of this secret report to the Washington Post, and why?

You may recall that my name first came up in a story that was leaked to the Wall Street Journal in October from "senior officials of the government." Is it possible that these same officials, overcome by frustration, have now resorted to causing a "report" to be made and its existence leaked to the press, all for the purpose of confusing the public into believing there is a Republican involved in the so-called Korean scandal?

Since it is my practice to maintain close and friendly personal ties with members of the South Korean Parliament and officials of that country, have I become a bad guy in a black hat? A few weeks ago I had a long and friendly visit with a major official of an Eastern European Communist government. Under present Washington standards, does this make me the good guy in a white hat?

Mr. Speaker, it is obvious that there is a guilt by association act being played out in Washington, and any Member who vigorously supports our alliance with South Korea is automatically suspect. While I am not aware that any Member has publicly endorsed the North Korean Government, if someone would, it would probably be called an act of statesmanship.

Now, returning to the point of my statement, I wish to advise the House that my attorney yesterday requested the court to investigate the planting of this story which may be in violation of Federal law and the secrecy rules of the grand jury. When and if there is anything I can report on this development, I will do so.

GROWTH VERSUS NO GROWTH

(Mr. REGULA asked and was given permission to address the House for 1 minute and to revise and extend his remarks).

Mr. REGULA. Mr. Speaker, I have begun speaking out on what I regard as a dangerous trend underlying our national public policy. The trend is toward ever slower economic growth; and if it continues, then we can expect to end up at no-growth, or—worse yet—minus-growth as in Sweden or Great Britain. We have embarked on this path unwittingly and in my view it is imperative that we initiate a national dialog on whether this country wishes to trade in its historic high-growth—and the benefits flowing therefrom—for slow-growth or even nongrowth.

When the question is put that way, I can think of nobody who would opt for slow-growth or no-growth. But it is not that simple. We seem to be failing to perceive how well intentioned discrete public policies—each one aimed at a meritorious social goal—is exacting an economic price in ever slower growth. What we are doing in sum, when one views of the totality of our efforts, is putting an ever greater burden on the diminishing growth part of our economy to pay for the swelling non-growth part of our economy.

You say that I am an alarmist? You say that we are too ingenious and energetic a Nation to commit the kind of economic folly that Great Britain or Sweden did? You say that Americans are too sensible to demand social benefits beyond their ability to pay for them? Well, I ask you to look at the recent explosion of Federal regulations, most of them now aimed at social goals like cleaner air, cleaner water, less noise, greater job safety, greater product safety, and so on.

These regulations have very worthy social goals—which I support as do my constituents—but they are not costless; and we pay those costs in slower economic growth, fewer jobs, and diminishing capital investment. For example, EPA's regulations alone, and this is according to their own estimates, will cost the economy an additional $40 billion per year by 1984.

What concerns me is not EPA's regulations per se, but the exponential rate of growth of all regulations. When we endorse an incremental form of Government action, we are looking at the particular, and thinking it deserving—which it probably is, but we are not looking at the sum and asking the price. Look at the sum. The Federal Government is imposing on our society more than 10,000 new regulations each year, and many of these regulations flow from the infant regulatory agencies that we have created in just the 1970's. Just think, agencies like EPA, and OSHA, and the Consumer Product Safety Commission are only babies in point of time but they already are household words. The recent action by OSHA in eliminating 1,100 nitpicking regulations is a ray of hope in an otherwise dismal landscape.

What we need as an implicit guide to national policy—a commonsense common denominator if you please—is a pragmatic awareness that the price of achieving a discrete social goal through Government action is reckoned in slower economic growth. Such an awareness does not mean that we should not do things which we decide that we want, but it does mean that if we do one thing, then we have diminished our capability to do something else. We should be aware of that. Great Britain and Sweden—all socially homogeneous countries with great human talents and strong democratic traditions—failed to develop that awareness and as a result drained their economic prosperity. I do not want that to happen here.

PEARL HARBOR 1977

(Mr. SCHULZE asked and was given permission to address the House for 1 minute and to revise and extend his remarks).

Mr. SCHULZE. Mr. Speaker, I would like to ask my colleagues to pause for a moment today to reflect on the significance of this date. December 7 is not only a date which will live in infamy, but a date during which each American who was alive at that time can remember exactly what he or she was doing when the news of Pearl Harbor was flashed across the airwaves.

That attack was the inception of a struggle in which many of the Members of this Chamber and the citizens which we represent committed their lives and resources. The reasons for making such a commitment were clear to all. The United States had been attacked; our social and economic system had to be sustained.

I submit that 36 years later the United States has yet again fallen under attack. As in 1941, our social and economic system must be maintained. It is my hope that the Members of this body are willing to commit their efforts and a small part of their resources to repulse the assault from abroad.

The attack of which I speak is, of course, economic. The source is the same today as it was on December 7, 1941. One has only to consider the trade figures for the preceding month to realize how extensively our defenses have been breached. In the month of November, this Nation imported $3 billion more than we exported. In large part these were; Japanese televisions, Japanese automobiles, Japanese watches and most of all, Japanese steel.

The interrelationships of international trade are complex, but the impact of Japanese steel products on our country is simple and clear. Americans are losing their jobs.

It is a characteristic of Japanese industry that once an employee is hired, he or she will generally not be let go in slack periods. There are no layoffs in Japan. One of the results of this fact is that there is overproduction, particularly in the manufacture of steel and steel products.

This excess is commonly sent to the United States for sale. The idea is not necessarily to make a profit, for frequently this steel is sold below the cost of production. It is sold at a loss because the Japanese believe it is more important to keep their factories and employees working. They can do this because their factories are, at present, more efficient than our own and our import laws permit it.

It is in response to this new and equally destructive attack that we Americans must defend ourselves. We must close the door to steel which is dumped on our shores and simultaneously give our domestic steel producers time to modernize and regain their competitive position.

The alternatives are potentially as devastating as they were in 1941. Thousands of steel workers are already unemployed. Others will follow. The balance-of-payments problem and the inflation which it fuels will persist and grow worse. The casualties of this action will be those unemployed and perhaps those who failed to take the necessary defensive measures. The social and political ramifications of this trend are incalculable and threaten our economy and standard of living.

It is for these reasons that I ask the Members of this body to respond as immediately and forcefully to foreign economic assault in 1977 as we did to foreign military attack in 1941.

U.S. INTELLIGENCE ACTIVITIES ARE INDISPENSABLE TO OUR FREEDOM

The SPEAKER pro tempore (Mr. DAN DANIEL). Under a previous order of the House, the gentleman from Arizona (Mr. RUDD) is recognized for 60 minutes.

Mr. RUDD. Mr. Speaker, for the past 4 years our Nation's intelligence agencies—particularly the Central Intelligence Agency—have been buffeted by a concerted attack against their activities.

We have all witnessed the unreasonable media attacks, the tell-it-all books by former CIA agents who have joined the other side and the congressional inquiries into alleged abuses of power.

Some of the criticism of official intelligence gathering activities has come from well-meaning but naive people who have recoiled at clandestine intelligence operations because they apparently do not recognize or accept the idea that the free world is still involved in a 24-hour-a-day war against Communist expansionism and subversion, in all its guises, throughout the world.

However, the main thrust of the attack against our intelligence community itself has been launched by ideological opponents of U.S. foreign policy over the years—particularly commitment to oppose and wherever possible to stop Communist expansionism.

These critics are mainly from the intellectual community, the media, the arts, and from the political world.

Some of them are ideological allies and supporters of Communist expansionism, who realize that an important victory for their leftist cause would be the decimation and ultimate destruction of U.S. intelligence activities—brought on by a piecemeal chipping away at the credibility, and security of intelligence gathering operations and the morale of the entire intelligence community.

Obviously, any ill-considered action by the President, administration official, Congress, or anyone else that contributes to this attack against our intelligence activities contributes to the overall strategy of our leftist ideological enemies.

Mr. Speaker, I would include in this category of ill-considered actions President Carter's decision last June to abolish the Foreign Intelligence Advisory Review Board, which provided the President with a wide range of top-level counsel on intelligence activities and problems, as well as acting as a important watchdog over intelligence operations.

I would include the administration's decision to bring charges against former CIA Director Richard Helms, for his proper refusal to give Congress secret information about covert intelligence activities in a foreign country—as well as U.S. District Judge Barrington Parker's intemperate and injudicious statements to Helms at the time of his trial.

I would also include Admiral Stanfield Turner's recent sweeping purge of at least eight top CIA station chiefs around the world—a highly questionable action that it is reported could result in the elimination of 1,000 of the CIA's important covert intelligence branch.

Mr. Speaker, through the great wisdom of President Harry Truman, then NATO Commander Dwight D. Eisenhower, and the Congress in 1947, all covert U.S. intelligence operations were entrusted to a Central Intelligence Service.

This Intelligence Service—now the CIA—was excluded from policymaking for the very good reason that it could then avoid, to the greatest extent possible, the bending of facts obtained through intelligence to suit a particular prejudice.

The world expansionist objectives of the Soviet Union, Communist China, and other Communist nations have not changed since the CIA was established to supplement the overt intelligence collection work of the State and Defense Departments.

Behind the iron and bamboo curtains still lie vast areas cut off and secreted from the rest of the world, where major military, technical, industrial, and nuclear installations exist, comprising the backbone of Communist power and threat against the free world.

These secret denied areas of the world are the major targets of CIA activities. It is from these areas that Communist plans and operations are spawned to implement Soviet and Communist Chinese warmaking intentions, as well as their supposedly "peaceful" political intentions.

The Soviet Union has raised the art of espionage to an unprecedented height, while developing the collateral techniques of subversion and deception into a formidable political instrument of attack. These are the techniques used by Soviet satellite regimes—such as Castro's Cuba—throughout Latin America and against the United States.

These grand scale operations, in support of overall Soviet policies of subversion and takeover go on in times of so-called thaw and under the guise of coexistence with the same determination and vigor as in times of acute crisis.

Our intelligence operations have a major share of the task of neutralizing such hostile activities which present a common danger to us and to our allies.

Obviously the CIA's highly specialized and successful covert intelligence operations are essential to penetrate the security barriers of the Communist bloc. Our intelligence service must also maintain a constant watch in every part of the world, regardless of what is occupying the attention of diplomats and military people at any certain time since our vital national interests and those of our allies are subject to attack at any place in the world.

Several decades ago, no one would have predicted the events in Korea, Cuba, Southeast Asia, and Africa, where Communist insurgents have maintained an unremitting juggernaut to impose their will and their power upon peoples throughout the world.

Yet all these places have assumed grave importance to the United States and in our foreign policy.

It is impossible to predict where the next danger spot may develop. And it is the duty of our intelligence community to remain constantly alert, collect data, and to forewarn of such dangers wherever they may crop up.

Our allies depend upon a strong and effective U.S. intelligence effort and leadership in this area in order to recognize and counter threats to our individual and collective security.

All of us who are realists recognize that we are not "at peace," and can never be at peace with Communist regimes that have declared war on our people's freedoms and our system of government.

These Communist regimes constitute a closed, conspiratorial, police-dominated bloc of nations. As a major hostile force alined against the non-Communist world, these regimes ultimately depend upon the destruction of our own ability to be forewarned of their subversive activities or of their surprise attacks anywhere in the world, at the time and place of their choosing.

Mr. Speaker, I believe that it is time for individual Members of Congress and for the Congress itself to reaffirm our support for a strong and effective Central Intelligence Service.

As the most immediate elected representatives of the people at the Federal level, Congress must take the lead to stop the destructive chipping away at the security, and credibility of our Nation's intelligence activities, and the morale of our intelligence community.

This means that Congress must take steps to vigilantly reaffirm the vital need for and positive worth of all types of intelligence gathering operations by our Central Intelligence Service.

We must work to improve and responsibly prevent abuses of power by the Central Intelligence Agency and other intelligence agencies of the Federal Government.

We must work to discredit the ideologically motivated and masochistic attacks against the CIA and other intelligence operations by zealous extremists of the left and self-serving critics whose motives are not the improvement of our national security.

We must oversee intelligence activities and safeguard information about intelligence operations and data with the highest possible degree of security and confidentiality. Every effort must be made by Congress and individual Members of Congress to crack down against dangerous and sometimes purposeful leaks of highly sensitive intelligence information—both from the executive branch of Government as well as from our own committees or carelessness of Members of Congress and their staffs.

We must recognize the limits of Congress in reviewing and overseeing intelligence operations. Our job is to insure against abuses of power and to guarantee the integrity and confidentiality of all intelligence operations and information that come to our attention—not to second-guess our professional intelligence operatives over every action taken in the performance of their war-time functions, for they are always acting under the rules of war.

And we must work with responsible elements of the professional news media to find appropriate legislative means within our constitutional framework to prevent the unnecessary publication of intelligence information that is valuable to our enemies, and to deal more effectively with leaks from the executive branch of government.

Mr. Speaker, my purpose in taking this special order today is to start a frank, responsible, and worthwhile dialog on this subject of supporting and improving our Central Intelligence Service—and to challenge those in our society who are hell-bent on the destruction of any meaningful U.S. intelligence operation.

I believe that most Americans still share the view of former CIA Director Allen Dulles, who declared in 1963 when the CIA was unfairly under attack following the political mistakes of the Bay of Pigs operation:

> It is not our intelligence organization which threatens our liberties. The danger is rather that we will not be adequately informed of the perils which face us. If we have more Cubas, if non-Communist countries which are today in jeopardy are further weakened, then we could well be isolated and our liberties, too, could be in jeopardy.
>
> The military threat in the nuclear missile age is well understood, and we are rightly spending billions to counter it. We must similarly deal with all aspects of the invisible war, Khrushchev's wars of liberation, the subversive threats orchestrated by the Soviet Communist Party with all its ramifications and fronts, supported by espionage. The last thing we can afford to do today is to put our intelligence in chains. Its protective and informative role is indispensible in an era of unique and continuing danger.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mr. STEERS) is recognized for 5 minutes.

Mr. STEERS. Mr. Speaker, yesterday, December 6, 1977, I was unavoidably detained and was, therefore, unable to vote on the preferential motion offered by Congressman ADDABBO that the House recede and concur in the Senate amendment No. 29 to H.R. 9375. This motion would have continued the program of last year that had the Federal Government provide assistance to those who are adversely affected by increasing utility costs due to a severe winter.

Had I been present, I would have voted in favor of the preferential motion.

LACKAWANNA COUNTY CONSERVATION DISTRICT RECEIVES "TOP NATIONAL AWARD" OF KEEP AMERICA BEAUTIFUL ORGANIZATION

The SPEAKER pro tempore. Under a previous order of the House the gentleman from Pennsylvania (Mr. McDADE) is recognized for 5 minutes.

Mr. McDADE. Mr. Speaker, I would like to bring to the attention of my colleagues a singular accolade that has been bestowed on the Lackawanna County Conservation District in my congressional district in Pennsylvania.

They have received the top national award of the Keep America Beautiful Organization, Inc. (KAB) for the second successive year. Besides this, their entry has been enrolled in the KAB President's Society, the most prestigious honor of the organization. Only 12 States have ever received this commendation since its inception in 1973 and this is a first for the State of Pennsylvania. To be eligible for this honor a group must have received a first place national award during the past 3 years. Competition nationally for this honor was very keen.

Most of the work performed under the successful project was done by the youth of seven local schools under the guidance of the district's youth activities committee cochairmen, Sister M. Laurence of Marywood and George Shepuk, district director, and the project coordinator, Sylvester Kazmerski. Other conservation district officials to be named for their efforts are: Kenneth Seamans, William Lange, Norman Miller, Ray Harris, Glenn Miller, Edward J. Zipay, and Dolores Matthews.

Over 52,000 evergreens, flowering shrubs, and plants had been planted in open spaces throughout the county as well as the planting of 1,700 petunias in sidewalk containers in downtown Scranton.

I am very proud to represent a district where concern for the physical appearance of an area is a united effort. I believe it is a credit to the Keep America Beautiful organization and the local organizers but more importantly to the youth who have placed the Lackawanna County Conservation District in an environmental Hall of Fame through their voluntary efforts.

GUARANTEES FOR HANDICAPPED PARKING RIGHTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. PURSELL) is recognized for 5 minutes.

Mr. PURSELL. Mr. Speaker, earlier this year, the Committee on Science and Technology, of which I am a member, published a report made to the committee by the Panel on Research Programs

To Aid the Handicapped. One of the major findings of the panel was that there is very little being done to evaluate the service or equipment needs of the handicapped. Furthermore, it was found that the economic investment in research and development for the handicapped is too miniscule to cope with the scope of potential benefits and needs.

The findings of this panel may surprise the average citizen, who has experienced a growing awareness of problems encountered by the handicapped in recent years. While it is evident that our scientific and technological resources are not being utilized to their full potential in this area, I think the real tragedy is that many of us fall far short of what we can do personally to help handicapped persons enjoy fuller, more complete lives.

One very simple way in which we can all participate personally is by helping to make ambulation a little easier for the handicapped. Many units of Government have taken action toward this goal, such as providing convenient, reserved parking spaces for the handicapped. Unfortunately, handicapped parking privileges are often abused by nonhandicapped people. This abuse is unfortunate and sad, but there are constructive methods we can use to insure the rights of the handicapped.

My own State of Michigan has recently enacted a law which makes it a misdemeanor for nonhandicapped persons to park in those spaces reserved for the handicapped on public and private property. The Michigan secretary of state's office has indicated that handicapped persons in Michigan are participating in this new law as the number of applications for the necessary identification for handicapper's vehicles has risen dramatically. In my own district, law enforcement officials have publicly stated that they intend to enforce this law fully. I applaud Michigan's efforts in this regard.

My interest in the problems of the handicapped, coupled with the success of the new Michigan law, has led me to develop legislation of a similar nature at the Federal level. Today then, I am introducing a bill, based on the Michigan law, which instructs each State to establish a system of identification of motor vehicles used by handicapped individuals, and penalties for improper use of parking spaces reserved for handicapped persons. Each State which does not already have such a law would be required to enact one, based on Federal guidelines, within 2 years of enactment of my bill. This bill does not mandate that a State provide parking spaces for the handicapped—it simply insures that those spaces which are provided are protected by law, whether on private or public property.

This is a small way of making the lives of handicapped persons fuller and more complete. However, it is a way in which everyone can participate and that is very important. Our awareness of the problems of the handicapped needs to grow and this is certainly one seed to help make it grow.

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Tennessee (Mr. DUNCAN) is recognized for 5 minutes.

Mr. DUNCAN of Tennessee. Mr. Speaker, yesterday, Tuesday, December 6, 1977, I was present and recorded as answering the quorum call No. 760 at the opening of the House. A short time thereafter, on rollcall No. 761, the CONGRESSIONAL RECORD indicates that I was among those not voting. I did not leave the Chamber during this entire time, was present and voted "yea" with my electronic card. For some reason the electronic system did not receive or record my vote. This issue passed by a vote of 357 to 0, however, I include this statement as part of the record of proceeding of the House of Representatives.

As a matter of information, on rollcall No. 762, I was properly recorded present and voting.

MEDICAL EXPENSE TAX CREDIT ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. MARTIN) is recognized for 5 minutes.

Mr. MARTIN. Mr. Speaker, I am today introducing the Medical Expense Tax Credit Act. This bill, similar to the one that I introduced in the last Congress, is a catastrophic health care program operating through the Tax Code. If enacted, it will insure that no American family, or individual, should be financially wiped out by medical expenses.

The Medical Expense Tax Credit Act—or, acronymically speaking, METCA—provides a refundable tax credit of 85 percent of medical expenses which exceed 15 percent of one's modified adjusted gross income, and a 100-percent credit when out-of-pocket expenses exceed 25 percent of AGI, as modified. By way of explanation because I am tossing in a new concept, the modification to adjusted gross income is the addition of the untaxed half of capital gains and of otherwise tax free State and local bond interest and the subtraction of personal exemptions.

We have all heard the horror stories about medically induced financial disasters put forward as justifications for $50 and $100 billion womb-to-tomb health care, and comprehensive national health insurance programs. All these horror stories revolve around typical wage earner families being wiped out by $10,000 and $20,000 medical bills. METCA would take care of those situations by guaranteeing that a family of four with income of $10,000 could not possibly be stuck with more than $1,750 in bills in a year for any combination of doctors, hospitals, psychiatrists, health insurance premiums, chiropractors, or dentists. The cost is shockingly low: $3.7 billion.

This bill contains no provision for a new bureaucracy to provide new guidelines and new regulations. The basic principle is that an expense which today, under the Internal Revenue Code, is deductible, would, tomorrow under METCA, be an expense eligible for the METCA credit. Neither does the bill provide any new cost containment provisions. It relies on the most effective of all possible inducements to consumers' and providers' sticking to the straight and narrow: the implicit threat of an IRS audit. If we need additional cost containment under METCA, then we can add it. Frankly, if we leave METCA's policing to the IRS, I doubt we will have the need of very much legislation along the lines of what we have had to do vis-a-vis medicare and medicaid this year.

I do not presume to suggest that this latest version of METCA is the ultimate answer to America's health care needs. I do suggest, however, that it is an affordable alternative to proposals which would get the government into the management of medicine and bankrupt the Treasury in the process. It is my belief that we have an obligation to solve the problems highlighted in the stories about the horrors of unmanageable medical expenses. Usually, these horror stories involve people who fall between the cracks of existing private and public programs: the people who are uninsurable, who are between jobs (and thus between group plans), the people who could, but did not sign up for insurance they were eligible for and could afford, and some few cases of pure flukes.

METCA does leave on the shoulders of the individual a fairly significant responsibility for his own care. In and of itself, it provides no "first dollar" coverage. It does not say to the individual, "You can spend as much time in the cozy doctor's office as you want and Uncle Sam will pay for it." It says, instead "You have a responsibility to budget for medical, hospital, and dental expenses just like you have a responsibility to budget for rent and food, and the result of your failure to budget for any will be the same. But, you can be sure that you will never, under any wild circumstances, ever have to budget more than 20 or 25 percent of your income for any combination of health care costs." I believe this is a very fair bargain to offer a responsible public.

THE DEATH OF STEPHEN BIKO

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. MATTOX) is recognized for 5 minutes.

Mr. MATTOX. Mr. Speaker, on August 18 of this year a man—engaged not in crimes, but in civics—was arrested and held without charge. We are told it had something to do with pamphlets, that is, the expression of ideas. The weak and poor use pamphlets while rich and powerful people can disseminate their ideas through declarations or official acts. This man's freedom was taken away under provisions of an official act.

He was kept in confinement for 26 days, naked and chained to his cell most of the time. If giving someone the shirt off your back expresses optimum regard, then taking the shirt off another can express optimum contempt.

During his imprisonment he was denied access to anyone who might look after his interests, including, as it was, his interest in being alive.

On the final day of his life, then in a critical condition, he was subjected to a 750-mile automobile ride. At the end of it, still naked and shackled, he was placed in another cell. Given no medical attention, there he died.

The same authority which had arrested and imprisoned him, then provided for an official inquest to determine who had been responsible for his extinction. Medical people reported that his brain, that is, the main part of him used for expressing ideas, had been rendered inoperative, which then caused his life to vanish from this world altogether. "Severe brain injuries resulting in kidney failure," they said, had caused his death.

At the end of the official inquest, the magistrate ruled that the authority which had taken away this man's freedom, nevertheless, was not responsible for taking away his life, the magistrate speaking as the duly appointed officer of the, in effect, self-exonerating government.

Stephen Biko, the man who died, was a threat to the current Government of South Africa. His death is an outrage, because, rather than correct the conditions which makes that country vulnerable, the government chose to suppress the voices of conscience. The conditions which brought this death about cry out for the strongest condemnation by the international community.

"Let every man make known what kind of government would command his respect," said Thoreau, "and that will be one step toward obtaining it." The minimum requirement for a government to be respected is that it not destroy people because of their political or religious convictions. Killing those who express their convictions courageously is a weak act of barbaric paranoia, in South Africa's case, the paranoia of racism.

It is fortunate that the mechanism of martyrdom will cause us to have a closer look at the conditions of Stephen Biko's death. It can be seen more clearly than ever that if the prosperity of South African whites can only be maintained by the suppression of blacks, such prosperity is based on a total poverty of the spirit.

The first congressional representatives of the United States spoke of grievances and oppressions, the power of self-evident truths and the unalienable rights of all people. In 1776 they pledged their lives to defend those rights and appealed to the world for help.

It is easier today for us to speak of human freedom; in our country personal liberty is not so threatened, nor does the simple act of speaking in support of human dignity and universal sufferage jeopardize our safety. But now there are others who appeal to us for help. Are we listening? Do we care?

It was Martin Luther King, Jr. who said, "injustice anywhere is a threat to justice everywhere."

AMBASSADOR YOUNG'S CRITICISM OF RHODESIAN PRIME MINISTER SMITH'S INITIATIVE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri (Mr. ICHORD) is recognized for 10 minutes.

Mr. ICHORD. Mr. Speaker, for some time now I have attempted to convey to this body my concern for the situation in Rhodesia or Zimbabwe. I have expressed concern regarding the folly of U.S. policy based on biased intelligence, misinformation and ignorance and have attempted to insure that the actions of this body not have a destabilizing effect on the internal affairs of Zimbabwe.

We have had a number of opportunities to encourage an internal solution and promote stability, yet by a narrow margin we have elected the other course. Such was the case in the authorization and appropriation of funds for a South African Special Requirement Fund.

Now I personally find the epitome of ignorance displayed in Ambassador Andrew Young's public reaction to Prime Minister Ian Smith's announced willingness to hold one-man, one-vote elections in Rhodesia. Such a reaction to a peace initiative, particularly coming on the heels of the praise heaped on President Sadat, appears incredulous.

Young's criticism of the Smith initiative focuses on nonrecognition of rebel elements outside Zimbabwe and the fact that Smith, through his proposed course of action, would attempt to protect the rights of the white minority.

If our Ambassador to the U.N. is really interested in promoting world peace he certainly must recognize why externally based, Marxist supported rebels cannot be given a role in the transition process. These forces represent a minority of the Zimbabwe people and are dedicated to forcing their will on the majority by militant means. Andrew Young's statements serve only to promote and advocate open rebellion. Such a stance, with the obvious resulting bloodshed is incomprehensible. Unfortunately, I must therefore challenge Ambassador Young's motives and his qualifications.

He would have you believe that if these outside rebel groups are not included in the transition process, fighting will be intensified. While this may ultimately happen, and I pray that it does not, it would appear that the putting down of such rebel activity should be a function of the duly elected majority Government of Zimbabwe. The potential to do so certainly exists. The Karangas, a part of the Mashona, who constitute 80 percent of the black population of Zimbabwe, also constitute over 60 percent of the Rhodesian Army. Such a force would certainly be loyal to a duly elected majority ruler and dedicated to the maintenance of peace.

Ambassador Young's other criticism addresses Prime Minister Smith's efforts to protect the rights of the white minority. In this country, blacks are dedicated to protection of their rights as a minority—why then is it so surprising that Smith would have similar goals in Rhodesia. Does the color of one's skin or relative numbers change an individual's quest to protect his rights—I think not.

The whites in Zimbabwe have not merely exploited the blacks as some would have you believe, they have contributed to the advancement of the blacks in areas of business and economics, in education, in medicine, etc. The state of Zimbabwe today is a result of white leadership and the joint labor of both blacks and whites together. The white minority of Zimbabwe has an investment in the heritage of Zimbabwe, just as the blacks in this country have an investment in America. Both investments deserve to be protected.

In conclusion, I would say that Ambassador Young's reaction to the Smith initiative is contrary to fostering peace in Zimbabwe, is contrary to our attempts to promote a transition to majority rule, is destabilizing, and advocates rebellion and will increase bloodshed both black and white. I do not believe that this body nor the American people should countenance such a position contrary to American and Zimbabwe interests on the part of our Ambassador to the United Nations.

Mr. Speaker, I insert a related article from the Columbia (Mo.) Daily Tribune entitled "Rhodesia's Smith: Joining the Peace Making Parade" be inserted in the RECORD at this point and would encourage my colleagues to join in applauding the initiatives of Prime Minister Smith as it has the efforts of President Sadat in the Middle East.

RHODESIA'S SMITH JOINING THE PEACE-MAKING PARADE

It's almost as if Rhodesian Prime Minister Ian Smith wanted to upstage Egyptian President Anwar Sadat.

Last week Sadat made a dramatic trip to Israel in search of peace, a move that hardly anyone would have predicted as late as the day before it was announced. Then, not to be outdone, Smith last Thursday offered to hold one-man, one-vote elections in Rhodesia, a turn of events that, if consummated, would surely lead his country to the black majority rule he has opposed for so long.

As in the Arab-Israeli situation, there is much that will have to happen before the millenium comes in Rhodesia. But for the country's leader to make such a move in the direction of universal adult suffrage when his white constituency is outnumbered 25 to 1 is quite an event, indeed.

Not surprisingly, our excessively loquacious ambassador to the United Nations, Andrew Young, took the occasion to condemn Smith, saying the prime minister's offer was a deceit that, if anything, would intensify the fighting. Young has a point in that the offer falls short of what the most militant black groups want, because the prime minister coupled his offer with a suggestion for protecting the white minority after a black government takes over. And, to offer another possible explanation for his outburst, Young is probably reacting in part because he is a black man commmenting on a black-white struggle.

But, in our view, Young should have acted more responsibly. As U.N. ambassador, he should have taken a more positive tone, using that context to explain (if he had to at the very moment of initial reaction) the shortcomings of the Smith plan. Instead, Young acted like a representative of the most militant guerrillas in Rhodesia—too partisan for a third-party official to act. In his job as U.N.

representative, Young should be a national official first and a black man second. It's little wonder Prime Minister Smith has been reluctant to accept Ambassador Young's peace plan. Young's manner would make it hard even if the plan might provide an element in eventual progress. Young should grow up a bit.

Smith seemed to have the same reaction as that of Sadat and Israeli Prime Minister Begin; he would just as soon handle his own peace-making efforts as have the United States mixed up in it. In a twisted-about way, perhaps the poor job the U.S. has done of getting antagonists together has worked toward peace. The embattled parties may subconsciously think they had better do something on their own before we screw things up royally for them.

The last American envoy, Henry Kissinger, was better at this sort of thing. He shuttled about, trying to solve one problem at a time, avoiding overt, simple-minded criticism of the type Young too often lets forth. It's likely that Kissinger's work has had much to do with encouraging leaders like Begin, Sadat and Smith closer to the peace table.

Despite Young's potshots from the side and the Rhodesian extremists' diatribe, Smith's dramatic announcement can only bring the nation closer to peace. The moderate black factions there have said it provides a new basis for trying to work out a deal, and they are willing to sit down right away with the government to talk about it. This turn of events should be enough to cause the guerillas and others to stop killing each other while they see what happens.

The militants have an answer for this, of course. They say Smith is only trying to buy time and that the only way to bring "justice" in Rhodesia is to intensify the fighting. This attitude offers only one avenue to governmental reform, one that is swimming in blood.

ILYA S. GINZBURG

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Minnesota (Mr. FRASER) is recognized for 10 minutes.

Mr. FRASER. Mr. Speaker, today I am participating in the project coordinated by Congressman DRINAN on behalf of Soviet Jews who have been thwarted in their attempts to leave the Soviet Union. I feel it is important to make known our concern about the Soviet Union's violation of basic liberties that are the subject of the Helsinki Agreement and the Universal Declaration of Human Rights.

I would like to bring to the attention of my colleagues the case of Ilya S. Ginzburg. Mr. Ginzburg is a 39-year-old engineer from Leningrad. Before applying for an exit visa in 1971, he worked on the design of electronic apparatus. He is now employed in a low-paying, menial job. His wife, Eleanora, immediately lost her job as a teacher upon application for an exit visa, and was never able to find another.

The Ginzburg family made the decision to emigrate to Israel in 1971. At that time, Ilya's 78-year old father and his brother were granted exit visas, but Ilya's application was denied because of the nature of his job. He was told that he would be permitted to leave Russia 5 years after leaving the secret project. These 5 years have now elapsed. During this time the Ginzburgs have been forced to subsist on the pittance Ilya makes each month. Their hope has been that the Soviet officials would keep their word in granting the exit visas.

In February 1975, Ilya's father applied through the International Red Cross to be reunited with his son. The request was sent to the Soviet Red Cross and then forwarded to OVIR, the visa office in Leningrad. In May 1975, these officials told Ilya of his father's Red Cross request. They maintained that Ilya's own visa application had been sitting too long, and since he had not reapplied himself, he was no longer considered an applicant, or, in Russian terms, a "refusenik." Simultaneously, officials sent a message to the International Red Cross that there was no Ilya Ginzburg in their files.

In October of 1976, Mr. Salman Ginzburg, Ilya's father, wrote from Israel:

> I am 83 years old now, and won't be able to wait for my son much longer. My fervent hopes for the success of your generous enterprise come with this letter.

Mr. Samuel I. Horowitz of Minnesota has provided me with the following letter from Ilya, which he obtained during a recent visit to the Soviet Union. The contents follow below:

> SEPTEMBER 16, 1977.
>
> Representative DONALD FRASER,
> *Subcommittee on International Organizations, Washington, D.C.*
>
> DEAR REPRESENTATIVE DONALD FRASER: I am a Russian Jew, one of the thousands who want to live in Israel, on my land, promised me by God with my father and brother.
>
> I haven't been working for 6 years in so called "secret work".
>
> My father, Solomon Ginsburg, 84 years old dreams to live with us. He sees his granddaughter at night in his dreams and writes us to hurry because he is old and everyday in waiting is hard for him.
>
> According (to) the International Human Rights (agreements) nobody should prevent us to reunite.
>
> Please help us to be together with my family.
>
> Sincerely yours,
> ILYA GINSBURG,
> *Parkhomenko 42, Apt. 78,*
> *Leningrad 194021 U.S.S.R.*

It is my hope that with the support of this Congress, Ilya and Eleanor Ginzburg, and many others like them, will be able to realize their basic human rights as guaranteed by the Helsinki Agreement.

THE PRODUCT LIABILITY TAX RELIEF ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LAFALCE) is recognized for 5 minutes.

Mr. LAFALCE. Mr. Speaker, as you may know, the Subcommitte on Capital, Investment and Business Opportunities, of which I am chairman, has been conducting a most extensive investigation into the problem many small businesses are experiencing in the availability and affordability of product liability insurance. In fact, because of their inability to obtain this insurance at reasonable cost, many firms are going "naked".

As a result of these problems, there is an immediate need for congressional action. While the subcommittee is in the process of preparing a report and comprehensive legislation affecting the entire area of product liability insurance, both of which I intend to have prepared when we next meet in January, it is important to get a viable interim measure before the House to alleviate these difficulties as expeditiously as possible.

Accordingly, I have introduced today the Product Liability Tax Relief Act of 1977. While this bill is conceptually similar to others in that it creates a tax deduction for self-insuring against contingent product liability claims, it is nevertheless significantly different in several important respects.

The bill permits a taxpayer to deduct cash amounts contributed to a trust, the purpose of which is to provide payment for product liability claims. The effect of this is to enable the taxpayer to self-insure against these claims with pretax dollars. The definition of product liability includes all circumstances under which there may be exposure.

As the trust is tax exempt, there is no tax liability so long as these funds are used to satisfy product liability claims (including expenses of investigation and administration of claims).

The bill contains a variety of provisions the effect of which will be to eliminate all tax avoidance potential of this new product liability trust concept. This is done by limiting contributions to those made in cash, by limiting the amount of the deduction, by providing that trust funds can revert to the taxpayer only upon the cessation of the trade or business, and by the imposition of excise taxes for tax avoidance transactions.

I urge all Members to support this much-needed measure so that it may benefit American businesses experiencing product liability problems as soon as possible.

ECONOMIC IMPACT STATEMENT FOR GOVERNMENT REGULATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Georgia (Mr. LEVITAS) is recognized for 5 minutes.

Mr. LEVITAS. Mr. Speaker, today I am introducing a bill which would amend the Administrative Procedures Act to require the preparation and development of economic impact analyses for all rules and regulations required to be published in the Federal Register. These economic impact statements would also be published in the Federal Register. They would include a detailed analysis and discussion of the impact the regulation would have on the economy.

I consider this legislation to be a vital part of the many pieces of regulatory reform legislation pending before this Congress. We have all heard many horror stories about the direct and indirect cost to the American people of Government regulations. I most recently received a copy of a letter to the President from a small businessman in Georgia regarding the economic effect Government regulations have had on his business. The letter started out with the statement, "You win! I quit!" This small businessman was driven out of business by the costs of complying with Government regulations and filling out Government reports. His 29 employees are now out of a job.

The regulatory agencies promulgate rules and regulations which have significant economic impact upon those persons and businesses required to comply, but there is no requirement for a systematic analysis of the potential direct or indirect economic effect of those rules and regulations. Regulations should only be promulgated after an analysis of whether the benefits to be derived from the proposed rule would exceed any negative economic impact.

Mr. Speaker, I am not introducing this legislation so that, if enacted, it could be passed over with a simple sentence such as, "There would be no adverse economic impact from implementing this proposed regulation." My bill requires a detailed analysis that would address the cost impact of the regulation on consumers, businesses, markets, and Federal, State, and local governments. It would deal with the estimated cost of implementing, monitoring, and enforcing the rule by the agency, the effect of the rule on employment and the fiscal effects of any predicted increase in unemployment if the analysis so indicates, the effect of the rule on competition and on supplies of important products and services, and the effect of the rule on productivity of wage earners, businesses, and Government. It would also require the alternatives that were considered by the agency to the proposed rule, to be published along with a finding as to why the alternatives were not proposed.

I notice that President Carter in his Executive order "Improving Government Regulations" published in the November 18 Federal Register, endorsed this concept of regulatory economic impact analyses. I see no reason why, then, that this legislation would not be made part of the statutory requirements for promulgating regulations. This would insure that such analyses are accomplished and available to Congress and the public. It would also insure that future administrations would not be able to change this policy.

This legislation would go far to improving the public's confidence in its Government because it would make that Government better. I urge my colleagues to support this proposal.

SOCIAL SECURITY FINANCING: TIME TO TALK GENERAL REVENUES

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 5 minutes.

Mr. REUSS. Mr. Speaker, we are faced with a desperate need to overhaul the financing of our social security system. For more than 2 years, the media have pointed out the financial difficulties facing the social security trust fund. There is no question that the system is in trouble. A sharp decline in the birth rate, steady increases in the level of benefits, and a severe recession, coupled with a slow recovery, threaten to push the trust fund deep into deficit over the next decade.

The financial health of the social security system is of immediate importance to millions of retired people and provides the retirement base for almost the entire American work force. There is not a man or woman in this Chamber who has not felt hometown concern about secure retirement income.

In meeting the future needs of the social security system the Congress could move in a number of directions. Tax rates could be increased as could the amount of income subject to the social security tax. Benefits could be readjusted. The system could be broadened to bring in more affluent workers. Or the Congress could turn to general revenues and the progressive income tax to bear part of the retirement burden.

In fact, the Congress considered moving in almost all these directions at once. The House-passed version of the social security financing bill included small increases in social security tax rates, coupled with sharp increases in the amount of income subject to the tax. The so-called "double indexing" problem was also eliminated, so that benefits would no longer rise more rapidly than the cost of living.

The Senate approach also relied largely on the traditional payroll tax. Compared to the House bill, the Senate put somewhat more weight on higher tax rates, and somewhat less emphasis on a rising tax base. The Senate did depart from an historical pattern. From the inception of the social security program, employees and employers have paid social security taxes in equal proportion. The Senate broke with that practice by proposing to put more of the new tax burden on the employer.

Mr. Speaker, I know well that the bill now in conference has not been the product of a hasty process. Demographic studies and statistical analyses preceded congressional action. But if we accept the conference report as now being written, we will be asking the country to pay a needlessly high price for retirement security.

By continuing to rely on the payroll tax, we are exacerbating an already serious unemployment problem, threatening an often anemic recovery, courting more inflation, and doing little to alleviate the inequities of a regressive tax. Worse—the obvious alternative of general revenue financing has been shunted aside, only to reappear as a backdoor salvation for expected economic difficulties. It is time we walked directly to the right solution, rather than engaging in this social policy two-step.

There are almost 7 million Americans still looking for work they cannot find. Despite that staggering figure, we have persisted in using payroll taxes to finance unemployment compensation as well as social security. Higher costs for labor discourage hiring, accelerate the adoption of laborsaving machinery, and even influence the future course of technological innovation.

Nor can we ignore the inflationary implications of higher payroll taxes. Not only will the impact of higher payroll taxes ripple through an increasingly indexed economy. Worse, the future schedule of increases will be part of the public record for all to see and incorporate in their future pricing decisions.

Dare we ignore the future course of the recovery? An expected slowing in early calendar 1978 could turn into recession by 1979 unless corrective action is taken next year. In any case, a tax increase is not indicated. With one eye on the recovery and another on the prospect of sharply rising social security taxes, the administration has already begun to talk about a $20 billion tax cut next year to keep the workingman whole and the economy running smoothly.

What is so striking about all this is that general revenues are kept hovering in the background to ameliorate the bad effects of rising payroll taxes. In a very real sense, the Senate approach has already brought general revenues into the social security system through the side door. Putting a greater burden on corporate employers, the Senate has indirectly increased business deductions, and therefore, reduced the corporate tax liability of most corporations. Social security trust funds go up and general revenues go down. It looks like general revenue financing, but apparently the indirect rise has a sweeter smell for the Senate.

The administration proposal for a 1978 tax cut is basicaly more of the same. Social security trust funds are to be increased with payroll taxes, while general revenues are to go down in order to repair some of the inequities of payroll taxes and to avoid any fiscal drag on the economy. The effect will be a general mismatch of benefits and losses. And even if this economic balancing act manages to offset some of the worst effects of the payroll tax rise, the burden that the rise places on workers and their employers will not so easily be lifted. Payroll costs will still go up, and the proinflation, antiemployment effects of that increase will still be with us.

What we should have done, and should still do, is to turn directly to general revenues to help finance the social security system. If we turn to the progressive income tax, we lessen the dependence on regressive payroll taxes, avoid inflationary pressures, encourage employment, and pose no threat to the recovery.

There are, however, two arguments raised against the use of general revenues. The first suggests that without the discipline of the payroll tax-trust fund approach, there would be no limit on the amount of general revenues allocated to retirement income. Not at all. Trust funds and special taxes are the exception, not the rule, in the Federal budget. We do not rely on a defense trust fund or space trust fund to restrain expenditures. With the advent of the Budget Control Act and a new sense of congressional power and responsibility, the Congress has never been better prepared to talk intelligently about how much money should go where.

The second argument strikes deeper and sounds a responsive chord in most of us. If we turn to general revenues, are we formally admitting that social security has become another welfare program? I have wrestled with this thought myself—but I have decided no.

What social security has become for people is their basic retirement plan.

I see it more and more as society's version of the gold watch for a lifetime of work and service. The program was never designed to get you rich, but rather to get you by. Social security payments already ignore differences in an individual's lifetime earnings. And in breaking the direct link between past earnings and retirement income, society also ignores the vagaries of bad luck, the unexpected illness, the crippling accident, as well as good fortune and health. The past generation carried other burdens, including part of the retirement costs of those that preceded them. We can and should talk about how much children and grandchildren should pay for their parents and grandparents. But to say that society will see that every elderly person has a certain minimum retirement income just does not sound like welfare to me.

Mr. Speaker, I realize that the political pressures for the proposed payroll taxes are great. And we must take some action quickly. But if, in the face of the augury of inflation and unemployment, we enact in haste a payroll tax increase, we will almost surely repent at leisure. We should postpone final action on social security until the new session. And before we consider the social security system again, I ask my colleagues to take a long and hard look at general revenue financing.

The great industrial countries of Europe have for almost a century used general revenues for this purpose. It is time that we did, too. To paraphrase the old hymn:

It was good enough for Bismarck,
  It was good for old Disraeli,
It was good for Georges Clemenceau,
  And it's good for you and me!

FIRST SESSION WRAP-UP—95TH CONGRESS

(Mr. RHODES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RHODES. Mr. Speaker, the best Christmas present the 95th Congress could give the American taxpayer is to adjourn. Unfortunately, the Democratic leadership continues to force a year-end compromise on a bad energy bill in order to save face for President Carter. This "in-again, out-again" ending is par for the course and fits right in with the inconsistent performance of the 95th Congress.

The usual end of session accounting to the public reflects the fact that, as usual, the musclebound majority in Congress is excessively long on promise and woefully short on performance. Even the length of the report filed by Democratic Whip JOHN BRADEMAS cannot disguise the onerous tax increases and questionable legislation the majority has engineered through the House.

The Democrats wax eloquent in favor of reducing unemployment and then pass a bill raising the minimum wage, despite strong evidence that it would increase unemployment among the lower bracket wage earners, blacks and young people. The Democrats speak of reducing inflation and the burden of government on the "little guy" and then pass an energy bill in the House that will cost the average family of four $2,000 in new taxes over the next 8 years.

On the other hand, we Republicans have been hard at work developing and offering positive programs in such critical areas as energy and social security that we believe will provide long-term solutions without imposing undue costs or further burdening American citizens with governmental redtape. Following my remarks is a summary of the major Republican initiatives this session.

A more detailed and cogent analysis of this session of Congress has been prepared for the Republican leadership by Congressman BILL FRENZEL, chairman of the Republican Research Committee. Our synopsis is not intended as a response to the Democrats' summary, but rather is designed to present a more balanced and objective perspective. I do not intend to repeat Congressman FRENZEL's first-rate effort here, but I would like to offer a few observations on what I believe the 95th Congress has done, particularly to the American taxpayer.

In the field of taxation, President Carter set the stage with his campaign promise that he would "never increase taxes for the working people of our country and the lower and middle income groups." Yet his legislative technicians in this Democrat-dominated House have passed social security and energy legislation that will raise the effective tax burden on all American taxpayers by more than 80 percent in the next 4 years. That would amount to an additional $1,000 in taxes each year over the next 4 years for every taxpaying family. On the basis of total tax receipts, the Democrats would increase tax revenues from $299 billion in 1976 to $590 billion in 1981—an increase of more than 97 percent in just 5 years.

At the same time, the Democrats have rejected five efforts by House Republicans to cut Federal income taxes. When the Republican leadership mounted a strong initiative in October behind legislation to cut personal income taxes by an average of 33 percent, and corporate taxes by 3 percent, it was stoutly opposed by the Democratic Chairman of the Appropriations and Ways and Means Committees. Now we are hearing noises that a tax cut may be in order—not to improve the economy, but merely to compensate for President Carter's proposed increases in "other" taxes. In other words, the Government will take with one hand and give with the other, while keeping a bit for itself, unfortunately, to pay for the effort involved.

On the economic front, the measures proposed and passed are simply going to raise costs without improving productivity. The Democrats' flip-flop economic policy continues to depress the stock market and shackle the economy, forcing it to limp along in low gear. I have already mentioned the minimum wage bill, which will not reduce unemployment one iota, but will raise costs to business and threaten many small businesses. The massive Democratic jobs stimulus program in the public sector has produced few tangible jobs and contributes to Federal spending that has driven the national debt to a new high of $700 billion. The inflationary impact of continued Federal spending is tremendous, with the result that business investment and expansion suffers, jobs are not created in the private sector and our economy remains sluggish.

President Carter promised to balance the budget by 1981. Federal spending continues at record levels and shows no signs of being controlled by either the President or Congress. If the budget is to be balanced, it could only happen by increasing taxes. Perhaps the Democrat-dominated Congress is taking the first steps along that road with the new social security and energy tax proposals.

In the field of energy, Congress remains deadlocked over a critical question: Do we accept the pessimistic notion advanced by this administration and House Democrats that there are no more energy resources to be tapped and that we must simply allocate the energy shortages? Or, as Republicans believe, do we try to solve the energy crisis by turning loose American technological know-how to explore and develop new sources of energy?

The enormous taxes sought by Mr. Carter and the House Democratic leadership will not produce 1 additional gallon of gasoline or heating fuel, and they will fall most heavily on those least able to absorb these new costs. That is one gift I think American families can do without this holiday season.

What the Democrats are doing speaks so loudly it drowns out what they are promising. The public will not be fooled and the 95th Congress will be known for what it is and for how deep it has reached into the pockets of American taxpayers.

The summary of major Republican initiatives in this session follows:

MAJOR REPUBLICAN LEGISLATIVE INITIATIVES: 1ST SESSION, 95TH CONGRESS

ENERGY POLICY

The Republicans unveiled a complete substitute for the Administration's confused National Energy Act. Whereas the Carter Plan assumes that more energy cannot be found, seeks to discourage demand and allocate shortage, the Republican plan would increase domestic production, reduce consumption, and pare down the imports of foreign oil. In offering its proposal, the GOP sought to deal with our energy crunch in a practical way by recognizing that the era of cheap energy is over. Yet, Republicans refuse to agree to the Democrats' "no growth" policy and believe that our national energy policy should foster economic growth and need not end our improving standard of living. The Republican alternative called for increased production of oil and natural gas while remaining committed to cleaning up the environment. The Republican policy broke new legislative ground by proposing that trust funds be set up (to be financed by a tax on crude oil) for: (1) mass transit, (2) development of synthetic fuels, and (3) highway maintenance.

SOCIAL SECURITY FINANCING

The GOP has proposed a 15-point program that places an ailing system on a solid financial basis for the next 75 years while eliminating many of its present inequities. The highlights of the GOP Program are: (1) decoupling the present system of over-indexing benefits; (2) eliminating the earnings limitation by Social Security recipients, and; (3) requiring no new taxes until at least 1982, and then only a modest 1¼ percent increase over the remainder of the 75 years.

TAX POLICY AND TAXPAYER RELIEF

The Republican minority introduced a sweeping array of tax measures to revitalize the American economy. At the same time, the GOP proposals would ease the burden on the individual taxpayer through: (1) a hefty across-the-board tax cut on all personal income taxes; (2) an end to the double taxation of corporate dividends, and; (3) tax reductions for small businesses.

HOUSE ETHICS REFORM

The Republican Membership demanded full public accountability for many of the more questionable practices of the House. Highlights of the GOP ethics reform proposals include: (1) institution of an auditing authority to guard against abuses; (2) full disclosure of expenditure records by House Members, and; (3) democratizing House procedures via bans on proxy voting, revamped committee jurisdictions, and a restriction on closed rules.

REVISION OF CIVIL RIGHTS LEGISLATION

The GOP addressed the crazy quilt tangle of 47-odd statutes and executive orders with a single comprehensive statute eliminating existing duplication and inconsistencies. Republicans also advocated streamlining the present onerous and complicated reporting requirements.

FOOD STAMP REFORM

During the First Session, the GOP offered comprehensive reforms of the Nation's exorbitant Food Stamp Program. The central elements of the proposal would: (1) provide a greater incentive to purchase a nutritionally adequate diet; (2) enable the government to recover excess benefits disbursed, and; (3) permit the states and localities to establish "work-fare" programs for able-bodied food stamp recipients.

ILLEGAL ALIEN CONTROL

Republicans pushed vigorously for legislation controlling the influx of illegal aliens across our borders. The GOP Program called for: (1) strengthening the border patrol; (2) mandating strict identification procedures for all prospective employees and welfare recipients, and; (3) providing increased penalties for anyone who knowingly hires an illegal alien.

The GOP can look upon its contributions in the 1st Session with a sense of satisfaction at having proposed sound solutions to some of the Nation's most pressing problems.

INDEXING THE INCOME TAX

(Mr. MOORHEAD of Pennsylvania asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, President Carter will shortly propose and Congress will consider the first change in our basic personal income tax structure since the Kennedy-Johnson tax cut enacted in 1964. There have been tax reductions since that time, but they have taken the form of changes in exemptions, credits, and the standard deduction. The tax "brackets," establishing marginal tax rates, have remained unaltered.

If we are now to have this most welcome tax reduction, including a change in the tax brackets, it seems to me that the time has come to make a major philosophical breakthrough and to start to index the personal income tax against inflation. This has major merit on several counts.

First, there is the matter of equity. At present, as we all know, most persons whose wages or other income manage to keep up with inflation still are losers in terms of real disposable income because they move into higher tax brackets. This is perhaps the most insidious of the "thefts" that inflation imposes.

Second, there is the matter of sound macroeconomic policy. Inflation exacerbates the "fiscal drag" that is already inherent in a progressive income tax. Fiscal policy becomes more restrictive whether or not we want it to because the Government's "take" from the economy rises more rapidly than income. Sometimes a restrictive fiscal policy makes sense, essentially when total demand is excessive. But we have learned to our sorrow that the economy can and does have inflation—rising prices—even when demand is far from excessive and unemployment is high. It makes no sense in these conditions to make fiscal policy more restrictive, but an unadjusted tax system does precisely that. Indexation would keep the tax system neutral in this regard, with discretionary changes still available as needed to meet conditions of excess or deficient demand.

Third, there is the matter of the Government's share. One of our deepest philosophical debates is over how large should be the share of Government spending in the total economy. I do not intend to enter that debate today. But what is beyond dispute is that in a period of persistent inflation, given a progressive personal income tax, the Government's share will inexorably rise unless something is done. Once again, indexing will prevent such an unintended and unplanned result. If we decide after full debate to raise the Government's share, it will be with our eyes open.

By way of further information, it is interesting to note that Canada has in place a successful system of indexing the personal income tax to inflation, and it is in no way the cause of the present economic difficulties of that country. As an additional tax reduction just announced by the Finance Minister reveals, indexation does not preclude discretionary changes as needed to meet the requirements of the economy or to reflect a curb on the growth of Government spending.

In Canada indexation is based upon the increase in the consumer price index over a 12-month period and covers what in our terms would be called the personal exemption and the standard deduction and also the tax brackets established in the basic law. It is a thorough indexation so that each taxpayer whose income exactly keeps pace with inflation pays the same portion of that income in Federal personal income tax as before.

I am not convinced that we need indexation as complete as that in Canada. In our system, three variables are involved: The personal exemption—which may be converted into a tax credit in the new tax reduction bill—the standard deduction, and the tax brackets. Preliminary research suggests that, on the basis of present tax law, indexation limited to the exemption and the standard deduction would accomplish most of the task of keeping taxpayers "whole" without changing the tax brackets every year.

Mr. Speaker, I am not introducing legislation at this time to accomplish indexation of the income tax because I am aware that the President's proposals will necessitate a revision of the tax structure, including a possible conversion of the exemption into a flat credit. At the appropriate time, I expect to introduce the necessary legislation, possibly to take effect only after the basic tax reductions to be proposed are fully in effect a year or two in the future. I hope that many of my colleagues will agree with me that the time has come for this fundamental change.

BOY SCOUT TROOP NO. 1283 OF BOWIE, MD.

(Mrs. SPELLMAN asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. SPELLMAN. Mr. Speaker, the attainment of the rank of Eagle Scout represents years of commitment, tenacity, and an unwavering desire on the part of a young man. A sincere and deep belief in Scouting is the propelling force which motivates and sustains his seeking this highest level of Scouting, and all aspirants deserve our sincerest respect and recognition for striving for those high principles and goals.

The long, and arduous road to the pinnacle is never traveled alone, and certainly that is true in Scouting programs. Parents, teachers, friends, and Scout leaders all impart wisdom, offer encouragement, and extend helping hands. Without such support, the road would be longer and far more difficult to traverse.

For the first time in the history of Scouting in Prince George's County, Md., five Scouts in one troop successfully and concurrently completed the requirements for the Eagle Scout badge. The awards were conferred in Bowie, their home town, during the Court of Honor, sponsored by Boy Scout Troop No. 1283, Cresthill Baptist Church. I am exceedingly proud of the unique accomplishments of these Scouts and their leaders, and thus, am anxious to have you, my colleagues, share with me in recognizing them.

David Allen, who was born in Cheverly, Maryland, on July 21, 1962, is now a resident of Bowie. He attended Meadowbrook Elementary, serving on the student council before entering Samuel Ogle Junior High. While at Samuel Ogle, David excelled in track, setting two records—one in the mile relay and the other in the 880 yard run. He also pursued an interest in music which he continues this year at Bowie Senior High, where he is a member of the marching band. David played baseball and basketball for the Boys Club, making the all star team in 1974, and last year played on their 140 pounds football team, being named runner-up for most valuable player. He is an active participant in his church group, and entered senior Scouting by joining the Cresthill Baptist Church Troop No. 1283. David's background, interest and hard work have resulted in his progress up the Scouting ladder to the Eagle rank.

Michael H. Atkinson, a resident of Bowie, Md., was born June 23, 1963, in Boulder, Colo. He first entered Scouting as a third grader at Chapel Forge Elementary School, and joined Troop No. 1283 in 1974, progressing up the ranks to Eagle Scout, and is presently in Leadership Corps. His Eagle project was recognized in a city proclamation personally presented by the mayor of Bowie. He has earned 10 skill awards and 26 merit badges. Mike, a young man of many talents, is an avid sportsman. He has earned the mile swim, completed the Washington-Lee Trail, the Presidential Trail and the Gettysburg Trail, is an outstanding soccer player in the Bowie Soccer Association, and an accomplished rifleman. Mike was selected to attend the Science and Technology Center at Eleanor Roosevelt Senior High School, where he is an honors student. Reaching the rank of Eagle Scout is yet another achievement for this talented young man.

Richard Michael Brandon, Jr., was born in Washington, D.C., on April 27, 1961, and became a resident of Bowie in 1969. At the age of 8, he joined the Cub Scouts, and at 11 became a member of Boy Scout Troop No. 1283, working his way through the ranks to Eagle. Mike is an avid camper and partook in the Canadian Adventure in 1975 and a recent Western Trip. In junior high school, Mike became interested in collecting stamps and coins, and enjoys these hobbies today. He plays clarinet in the Bowie High School Marching Band, and is now in his junior year. He is interested in the sciences, in particular astronomy and electronics, and hopes to make his career in one of these fields. His father, the troop's dynamic leader, has, I know, inspired and encouraged Mike to seek the highest rank of Scouting.

Jonathan C. Burbee was born in Exeter, N.H., on May 8, 1963, and became a resident of Bowie in 1971. He attended Meadowbrook Elementary and is currently a student at Samuel Ogle Junior High School. In 1972, Jon entered Cub Scouts, progressing on to Boy Scout Troop No. 1283 in 1974. He has earned 40 merit badges, completing his requirements for Eagle in July of this year. He is a member of the Order of the Arrow. At Samuel Ogle Junior High, Jon is an honor roll student and a member of the drama club. He is a confirmed member of St. James Episcopal Church and is president of the youth group.

Jon's plans include a college education, with a major in architecture or engineering. To be sure, the honor of reaching the Eagle rank is an outstanding accomplishment for the Scout. In this case, I know the strength of the family and the guidance and love of the parents have provided a strong far-reaching positive influence. Clark and Sally Burbee, and Muffie, too, are just that kind of family, and I salute them for their commitment to community and to their Jon.

Lavid Latzko was born in Mount Holly, N.J., on July 2, 1963, and first came to Maryland when he was 1 month old. He started in Scouting with newly formed Cub Scout Troop No. 1701 of Chapel Forge in 1971, and in 1974 joined Scout Troop No. 1283. His formal education progressed from kindergarten, through Chapel Forge Elementary and Samuel Ogle Junior High School, where he was an honor student. At present, David is in the ninth grade at the Science and Technology Center of Eleanor Roosevelt Senior High School, a superior institution where admission is mostly limited to students passing tough competitive entrance examinations. He is a member of the Diplomacy Club, is active in sports, including baseball, basketball, soccer, and tennis, and is an avid beer can and stamp collector. The discipline which enabled David to become an Eagle Scout will greatly enhance his likelihood of achieving the medical career he has chosen for himself.

Mr. Speaker, these few words inadequately express the months and years of disciplined efforts our five Eagle Scouts expended to reach their goal. They suffered discouragement, but were uplifted by those who cared; they experienced disappointment, but returned to try again. Through reassurances and support, they survived anxiety and distress, and ultimately triumphed because of determination and inner strength. I know my colleagues join me in recognizing these fine examples of American youth and send them our heartiest congratulations for a job exceedingly well done.

ARMISTICE/VETERANS DAY CEREMONY

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, on November 11 each year the town of Surfside, in my congressional district, has a stirring, patriotic ceremony. I know of no municipality or community which more constantly honors our Nation's dead and provides appropriate ceremonies to commemorate our patriotic obligations than the town of Surfside. For many years I have been honored to participate in various patriotic events which this progressive and beautiful municipality has provided. Another stirring occasion at Surfside was November 11 of this year when I again was privileged to participate. The outstanding address made on that occasion was made by the very distinguished and eloquent mayor of Surfside, a very dear friend of mine, the Honorable Sam Brenner. On a similar occasion Mayor Brenner made an eloquent address which I inserted in the CONGRESSIONAL RECORD, because of the breadth and scope, as well as the moving beauty, of what he said. On November 11 of this year, Mayor Brenner made another outstanding address in which he not only calls upon us to honor our heroic dead but he movingly inspires us, as a duty to our honored dead, to do all in our power to establish institutions to keep the peace, which would save the lives of those who would die in war. We need more emphasis upon adequate preparedness and peace-serving institutions in our patriotic addresses. It is with a great deal of pleasure that I ask that Mayor Brenner's outstanding address on November 11 of this year be incorporated following these remarks in the body of the RECORD.

ARMISTICE/VETERANS DAY ADDRESS

We, of this small community of Surfside, Florida, are gathered here before the open sky with our hearts bared to the heavens on this Armistice/Veterans Day to pay tribute to our dead who fought in that First World War, which was the war to end all wars.

How useless does that all seem now! Instead of ending wars, wars have accelerated themselves into greater and more destructive conflicts and they rejuvenate themselves constantly.

Why are we here again? Armistice Day has almost lost its meaning, yet, the dream of Woodrow Wilson keeps coming alive and tries to resurrect itself many times. Remembering that the dream died because there were no teeth in the League of Nations, it is frightening to think that after all these years, there are no teeth in our United Nations either.

Besides remembering our dead we are bothered by the greatest disturbing question since time began. From the chaos of the present how can we create world order which could end all wars and for which all of us so intensely yearn?

Again, I must cry out in pain that we can no longer live in a world where nations are wild beasts roaming the jungles of nationalism. We must clear the jungles and tame the wild beasts. I will shout that out to my dying day or until some form of lasting peace shall inherit the earth. Who dares to say we cannot live side by side with our neighboring nations? And who dares to say we need not bring the spectre of world holocaust before our eyes when it grows more imminent day by day?

As we pay tribute to these men of world war one, and to all veterans, let us also pay tribute to the memory of Woodrow Wilson, their leader, for his was the dream of peace for which these men fought and died. The dream of Woodrow Wilson lies embedded in their bones. Where is that peace for which they fought? Our duty and obligation to that dream began the moment these men died. There must be something more to their dying than just the preservation of old ideas, but also for the building of new ones, and for the dreams men dream. Men do not fight only to preserve the ideas of the past, but to improve the present and to idealize the future. There is always an innate hope in the soldier that something new and better will evolve from his supreme sacrifice. From that, the dream of Woodrow Wilson and the League of Nations was born. Today, if we grow bold with the same courage these men displayed, we could be but a short time away from having the dream come true in its real essence and meaning.

Oddly enough, at this moment in history, I believe Israel finds itself in the position of probably holding the magic key to man's destiny in the successful attainment of a just world order.

The United Nations is making demands upon Israel to desist from establishing new settlements in certain areas and return some territories to the Arabs.

If I were Israel I would use their demands to make some demands of my own.

If I were Israel I would insist upon the implementation of a new blueprint for a just world order which would guarantee security and protection for all nations before I'd give up an inch of territory.

Would we in America advise our country to give up any land needed for our protection for which American lives were lost or blood was shed? Would we not solidify our gains? Our enemies are thousands of miles away! How can we have the hypocrisy to expect Israel to give back territories which were the bases for attacks against them or not to solidify their gains when Israel's enemies are ringed all about them and only several miles away?

If I were Israel I would ask of the United Nations, "were you the innocent victims who were rounded up and slaughtered like sheep as the Jews were in World War Two? And you ask us not to fortify our gains for our own protection? Why? Will you protect us? What right do you have to tell Israel to let her guard down? Israel was duped and chloroformed before and will not be anesthesized again." How can the world justify the price Israel has had to pay for its existence? Never in the blackest annals of history was there ever a slaughter of such magnitude! And you tell Israel not to fortify its position? Israel has every righteous indignation to spurn your request! Did any of you not protect your gains through the years? What are all of you who sit in the U.N. General Assembly if not the retention and fortification of all your gains throughout the years? What protection will you give Israel? This? This organization where every member nation sits here armed to the teeth like a pack of gangsters and allows itself to be addressed by one who comes before you with a gun in his holster and denies Israel the right to exist! Such a sacrilege you do not even challenge in these sacred halls of alleged peace! How can we rely on you in such a situation?"

If I were Israel I would say, "Yes, we'll give up our gains, we'll desist from fortifying our borders and creating new settlements for that purpose. We'll give it all up if you will give us the assurance that you will protect us as well as protecting all nations by the formation of a heterogeneous peace keeping force, based upon proportionate percentages of your member nations existing fighting forces, sufficiently adequate to keep the peace. And this force must be governed by an impartial world constitution with justice and protection for all nations, regardless of their race, color, creed or form of government. Then there'll be no need for national armaments. That is the only just solution for lasting peace."

"If we see that you can give adequate protection to all nations, then no nation will need to fortify its boundaries. There will be no more boundaries or Maginot Lines as we have known them in the past. Nation's boundaries will come to cease to exist. As should be, they will become invisible lines of demarcation, based upon the cultures and municipalities of what was heretofore nations."

No wind can rustle the leaves as much as mankind's dire need to establish world order can shake the roots of the trees for such a creation.

Oh Israel, insist upon this and as you were led out of bondage, so lead the world out of the recurring scourge of war. And, as is proclaimed in all your parchments, "Hear Oh Israel, the Lord Our God Is One!" So should it also be said, "Hear oh Israel, the world is one!" Then nations will have truly risen to beat their swords into ploughshares. And these men of World War One to whom we pay tribute today can best be remembered and immortalized by this creation of world order, so that they can rest assured that we lifted the torch they passed on to us, that "freedom's light shall never die" and that at long last, these men who march again in our stricken consciences will have won the war to end all wars.

YOUNG MIAMIAN WRITES STIRRING ESSAY ON WHAT IT MEANS TO BE AN AMERICAN

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, I am pleased to be able to call to your attention, and that of our distinguished colleagues, a remarkably talented young person of my area, Miss Renee Reinhardt.

Miss Reinhardt is 17 years old and has shown herself to be an involved, active person, who, far beyond the requirements of high school, deeply cares about our Nation and the people in it. Aside from an eventual law course and aspirations to Government service, her interests range broadly into teaching, drama, and psychology. Miss Reinhardt currently works as a valued and capable intern in my district office in Miami, where she was referred by the Dade County leadership program, and where she has proven a real addition to our regular staff who like her well.

In school, as well, Miss Reinhardt is intensely busy, and the fact that she is vice president of two of Miami Coral Park High's scholastic and service organizations, while belonging to seven other clubs, including the National Honor Society, shows how qualified she is. Needless to say, her grades are standing at a perfect 4.0 average, and she has received numerous performance awards, such as Girl's Nation, Girl's State, letters in track and cross country, and placing first in her school in the VFW Voice of Democracy competition.

It was for that last named competition that she wrote the following, excellent essay, which, I think, might speak for all of us, whose forebears came not long ago to this country to fulfill their own special hopes for success and whom we honor with our gratitude and patriotism as fervent as is Miss Reinhardt's love for our country. I think we all might be interested in this thoughtful and mature essay, which I am inserting at this point in the Record:

Essay by Renee Reinhardt

Taking a trip to a bicentennial city proved to be an extremely beneficial experience. Boston over the Fourth of July is beautiful and has an atmosphere of a slow-moving, congenial carnival. Almost the entire purpose of the journey was to learn about America's beginning and find my roots somewhere in my grandparent's adopted country. Perhaps this progressive age of technology is not quite so detrimental. When else could you find an entire village of houses and artifacts from around the country, 200 years old, except now in a place called Sturbridge Village? Yes, this journey to another world caught my fascination and convinced me to begin to learn about my country and its very essence.

When I stand up every school day at 8:15 and pledge my allegiance to that piece of cotton fabric hanging in the corner—something always touches me. It has become a reassurance to me, now that I am old enough to understand and mean what I am saying. It is something solid to hang onto, and I breathe a silent Amen after my classmates and I finish mumbling our recitation.

In order to understand how I feel about America, you must first understand just a few things about myself. I consider myself a simple person, and according to my standards I do not expect much, but this is what I do want. The right to be ME! The choice to love whom I want to love, believe what I want to believe, and be what I want to be—me! America gives me this. I base everything on what I consider to be the most natural gift of all: individualism in life. Fortunately, I have had no personal experience with communism, but from my reading I have found that it curtails individualism. That is enough to influence me strongly against it. From the moves of the communist powers in history, I believe that if it were not for America, Communism and its subsidiaries would be much more widely spread. America is the balance, and the bulwark of peace.

To me as a person and a citizen, this land offers certain rights which appeal to me in their uniqueness and their freeness. Recently, I watched a news report on television, demonstrating how the Senate "morals" Committee does almost nothing, and, according to off the record comments, functions primarily as a Senate country club, with the advocation of our great and obviously human leaders—the Senate. Now perhaps this report is not totally true, perhaps it *is* rumor and hearsay and scandal. But what I truly marvel at is the sincerity with which our first amendment to the Constitution is meant. Freedom of speech is a way of life to the American people, and they do not expect to hear about any reporter's unfortunate and timely fatal accident.

Another remarkable right, at the risk of being repetitious, was clearly demonstrated in this last election. The worth and importance of just one vote along with the "just plain folks running the government" theory was nicely illustrated.

Which brings us right up to the fact that anyone in this country can ring doorbells for a candidate of their choice and I have the right to listen, no matter what they say, I have the right to listen, then shut my door if I want. I do not have to listen to anyone I do not want to, and I am not withheld from hearing anyone. It is something I have been used to, not even noticing, but little things like this are so inherent in America's working structure, without them this country would be lost.

Another point on individualism: It is obvious to anyone researching almost anything that books and articles do not all reach the same conclusion. I can walk into a library and read ten different viewpoints on a single historical event, and then decide for myself. Make a choice and I treasure that. Each and every American is given the right to free thought, creativity, and original ideas. And this is the vortex of forward movement.

Of course, America is not perfect, she has many faults, but I truly believe she is the best yet. Furthermore, rights are only one side of the coin. We have an enormous responsibility to this benefactor of ours, and that is to take advantage of America's invitation to make the most out of yourself you possibly can. To do your personal best, to serve your country in whatever way you are able. I feel deeply indebted and grateful to America for making me what I am. We have some fantastic abilities; the ability to admit mistakes being foremost in my mind. We are strong enough to put a government official in jail, but also strong enough to show them mercy. We have the ability to improve our country, and the courage to do it. As you can probably tell, America means a great deal to me.

I once read a saying, "Freedom is not the right to do whatever you want to do, it is the right to do as you should do." I guess that, in a nutshell, is what America means to me. But, she is not just a land and a people, she is not only rights and responsibilities, she is not even just a way of life. America is all this, but most of all, she is a dream come true.

NARCOTICS TRAFFICKER NICKY BARNES IS NO LONGER "MR. UNTOUCHABLE"

(Mr. GILMAN asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. GILMAN. Mr. Speaker, on December 2, 1977, Leroy (Nicky) Barnes, known among narcotics traffickers as "Mr. Untouchable" and "Mr. Big" because of his ability for avoiding conviction in previous cases against him and for his skill in eluding detection by law enforcement agencies, was found guilty, along with 10 codefendants, after a trial in the U.S. District Court for the Southern District of New York of conspiring to sell more than 40 pounds of heroin a month at an estimated wholesale monthly value of $1 million. His conviction carries a penalty of up to 15 years in prison and a $25,000 fine. Five "chief lieutenants" in the Barnes organization—Steven Baker, Steven Monsanto, John Hatcher, and Joseph Hayden—along with six lower echelon" members—Leon Johnson, James McCoy, Waymin Hines, Walter Centeno, Leonard Rollock, and Wallace Fisher—were also convicted on this conspiracy charge. Guy Fisher, a "chief lieutenant" for Barnes and Wallace Fisher's brother, and two underlings, Gary Saunders and Wayne Sasso, were freed either because of a jury deadlock or an acquittal.

Barnes, regarded as one of Harlem's top narcotics dealers, was also convicted of masterminding a "continuing criminal enterprise" which carries a penalty ranging from 10 years to life in prison. Some authorities estimate that his adept narcotics operation yielded $200 million of income annually from heroin and cocaine trafficking.

The Barnes trial before Federal Judge Henry J. Werker lasted 2 months and the sequestered jury, whose names and addresses remained anonymous for security reasons even to the attorneys on both sides of the case, deliberated for nearly 3 days over the 10,000 page trial transcript.

Robert B. Fiske, Jr., U.S. attorney for the southern district of New York, assisted by Thomas H. Sear and Robert N. Mazur, brilliantly established the Government's case against Barnes and his coconspirators.

Although no date for sentencing has yet been announced, reports indicate that bail for both Barnes and the convicted codefendants has been revoked and that they have been remanded to U.S. marshals.

Mr. Speaker, although there have been some interagency rivalries among Federal, State and local law enforcement agencies, the Nicky Barnes case represents, a concerted effort by these authorities to cooperate and coordinate their activities to bring to trial a major narcotics underworld figure. Our Nation owes these dedicated men and women its heartfelt thanks for a job well done. Without the cooperation and coordination by the Federal Drug Enforcement Administration, headed by its competent Director, Peter Bensinger, the New York City Police Department under the leadership of Commissioner Micheal Codd and his special investigations unit, the Federal task force, headed by DEA's effective Regional Director John Fallon, the New York City prosecutor's office led by Sterling Johnson, a dedicated fighter against Narcotic trafficking and the U.S. attorney's office for the southern district of New York, together with the untold numbers of dedicated law enforcement men and women, Nicky Barnes and his gang would still remain at large and continue to be folk heros among certain segments of the New York City community. Through their diligent efforts, Nicky Barnes is no longer "Mr. Untouchable."

However, our Nation must not be lulled into any sense of complacency and must not permit euphoria to set in. It is obvious that much work remains to be done in busting other narcotics trafficking operations both here and abroad, and there are many other nefarious individuals who are willing and able to replace Barnes once he is incarcerated. But there is no doubt that some progress is being made, Mr. Speaker, and hopefully the narcotics peddlers will come to realize that no one is above the law, that no criminal is "untouchable."

Mr. Speaker, in order to bring the magnitude of Nicky Barnes' organization to the attention of my colleagues and in order to bring some of the problems faced by this Nation's law enforcement agencies into perspective with regard to establishing a case against him, I am inserting at this point in the Record an article entitled "Mr. Untouchable" appearing in the New York Times Magazine of June 7, 1977, by Fred Ferretti. Mr. Ferretti discusses the events that led up to Barnes' indictment in March of this year.

The article follows:

"Mister Untouchable"

(By Fred Ferretti)

(The police say that Nicky Barnes may be Harlem's biggest drug dealer. Now, the Government will try to prove it.)

The apartment might be in Elmhurst or Flatbush, in Riverdale or South Jamaica, in Mount Vernon or Sugar Hill. It really doesn't matter where it is, for as many as 20 or 30 flats are kept permanently rented, locked securely, empty, awaiting the time when one of them becomes a one-night processing mill.

Two men, lieutenants they are called, sit in the apartment watching the women work. There are 15 women, between the ages of 16 and 30, and they are lined up along the sides of a huge sheet of plate glass that, propped up on pieces of furniture, has become a table. The women are naked, to insure that they will not be tempted to conceal any of the powder they are working over. The lieutenants, trusted, dressed, do not even look at the women. Their eyes, like the eyes of the women, are on the small pyramids of white powder heaped on the plate glass.

The women have surgical masks over their noses and mouths so they won't inhale the powder. They make equally sized mounds of the powders in front of them, powders of quinine, lactose, dextrose, a milk sugar called bonita, and almost-pure white heroin. By the ounce they mix heroin with four parts—often five parts—of dilutant, using tiny aluminum measuring spoons. They mix it thoroughly, weigh out 55 grains at a time, then spoon it carefully into glassine envelopes. Each of these envelopes will sell on the street for $70.

It is an all-night task, considering that 10 kilos of heroin are diluted in one evening. Once the cutting is done, "salesmen" or "jobbers," who have been waiting by prearrangement, are telephoned. They arrive at the apartment in gypsy cabs, and they are carrying shopping bags. There is money in the bags, lots of money. They trade the money for the glassine envelopes of cut heroin, called "scrambled eggs." They go back to their waiting cabs and deliver the heroin to a local outlet: a candy store, a bar, a luncheonette, perhaps on Avenue C, or Delancey Street, or somewhere in the Village. There, it is dispensed by street people to addicts, often after the heroin has been cut once again with milk sugar.

In the apartment, the women dress, receive anywhere from $500 to $1,000 apiece for their 16 hours of work and go to their homes, or to their straight jobs.

In those 16 hours, 10 kilos of pure heroin, usually bought from a wholesaler by a trusted representative of one of New York City's major drug dealers for $150,000 ($15,000 a kilo), has become worth about $630,000. For the dealer, the night's expenses have run about $170,000, including the cash fees to the women and their apartment guardians. Thus the dealer has cleared about $460,000 in profits—all in cash—in an operation that he financed, sanctioned and arranged, but in which he had no physical part.

There are very few drug dealers in the city, or in the country for that matter, who can operate at a level involving that much cash. Leroy (Nicky) Barnes, 44, is one such dealer, according to the New York City Police Department's intelligence apparatus, its Special Investigations Unit, the Federal Drug Enforcement Administration and the Unified Intelligence Division, which is a sort of Federal-local crime clearinghouse in Manhattan, staffed with ex-Federal and local police officers.

Barnes is, police say, one of the biggest heroin dealers in the country. In his home base, Harlem, the center of the New York City drug traffic, he is regarded as perhaps the biggest. But he is more than that. To the police, to the drug community and to an extent in the uptown drug-related subculture, Nicky Barnes is a current legend. His appearances, either on the streets or at the stops he makes on his rounds, attract attention; his name alone inspires awe because of a spit-in-your-eye, flamboyant life style that is perceived by the street people as Barnes's way of thumbing his nose at officialdom.

Furthermore, he has not been convicted of any of the charges law-enforcement authorities have brought against him since 1973. Juries have acquitted him. Court cases, often poorly researched or prosecuted too soon because of the publicity attached to the arrest, have often been thrown out on appeal. Evidence thought to be airtight has been disallowed because of poor police procedure. This is not uncommon in narcotics cases or with figures dubbed "major violators" by narcotics detectives. Often the anxiety to arrest and jail an alleged major dealer causes prosecutors to rush to court with cases that lack proper development. Disgruntled law-enforcement authorities feel this combination of haste, of too much awareness of public pressure, and of prosecutors' desire to make names for themselves by jailing someone possessing underworld glamour, has contributed to the failure to put Nicky Barnes in jail. Barnes's lawyer, on the other hand, maintains that Barnes is, unjustly, a target of police and prosecutors "out to make a score."

Whatever the reasons, the failure to make an arrest stick has earned Barnes the street name "Mr. Untouchable." He is not a retiring man. Of medium height, he projects a presence larger than his size. He is muscular and recently shaved the beard he sported for years. He prefers luxurious motor cars and elaborate custom clothing. To the street people, he is a presence. To the police, this symbolic quality is as significant as the crimes they allege he has committed.

To them he embodies the new trend in drug trafficking, in which blacks and Hispanics, the new ethnic successors in organized crime, have taken over from their predecessors, the Italian street gangsters. Nicky Barnes is also important to the Federal Government, which is trying to put him in jail, something the city police have been unable to do recently. On March 16, Barnes and 17 others, including five men closely associated with him, were indicted by the Federal Government for alleged participation in a vast heroin-selling conspiracy. Five days later, President Carter took note of the arrests in a letter to Peter Bensinger, administrator of drug enforcement in the Department of Justice.

"I congratulate you on the culmination of the Drug Enforcement Administration's New York investigation, which resulted in Wednesday's important arrests," the President wrote. Then, after noting that those arrested would be tried and either found guilty or innocent, he wrote that he wanted to thank all of law enforcement for its "tireless, often dangerous hours spent in their efforts to end heroin trafficking here and abroad."

It was the first time that an American President had taken note of Nicky Barnes.

He has a record of 13 arrests dating back to 1950, when he was 18. For more than 10 years, the police have labeled him a "major narcotics violator." They have investigated him and bugged the telephones of his several apartments. He has been put under continual surveillance—at one point, 24 hours a day for eight consecutive months. He has been arrested for narcotics violations, for bribery of a police officer and for murder. His current Federal indictment charges him with conspiracy to violate the narcotics laws and with being the leader of a "criminal enterprise" of more than five people who constituted a drug-selling operation.

He may have the most voluminous file in the records cabinets of the Police Department's Intelligence Section, a file filled with allegations, suppositions, the results of countless surveillances, with confidential reports from street informants, with rumor. At one time his file went by the name of "Operation Slick." The Unified Intelligence Division file is equally stocked, only this agency puts out what it calls "blue books" of crime. Barnes is listed in its "Black Major Violators" book. But he is also to be found in the file labeled "Italian Major Violators"—this in recognition, perhaps, of Barnes' reported ties to Italian sources of narcotics, and to his alleged fondness for patterning himself after what possibly is his conception of the way organized crime, Italian-style, works.

Thus, the files report not only an acquaintance with the late mobster Joey Gallo, who Barnes is said to have met during a 1965 stay in Greenhaven Prison, but a tenuous connection with Carmine Galante, the man police have been publicizing as one of the new leaders of Italian organized crime. They allege that Barnes conducts his business after consultation with some sort of "Council of 12" that he formed in Harlem. The council, the police say, is a group of black drug dealers who meet sporadically to set up distribution territories.

These intelligence sources suggest that Nicky Barnes might have met in Greenwich Village with Joanne Chesimard, a key figure in the Black Liberation Army, and that Patty Hearst, when she was a fugitive, might have met him as well. They suggest that he is somewhat of an organizational genius. The police say that because he has put so many administrative layers between himself and the actual drugs, he has created practically an arrest-proof narcotics operation; even if one of his processing mills is successfully raided, it can't be traced back to him and can't put a crimp in his operations. The intelligence says that Barnes has enormous quantities of uncut heroin stashed at various locations in the New York City area (he was picked up once, police reported with $500,000 worth of drugs in his car).

The files also note the fate of one Reggie Isaacs, a man they identified as a Barnes lieutenant. Isaacs liked to play golf. The police believe he held out on Barnes. He was found dead four years ago, with three bullets in him, on the 18th hole of the Mosholu Golf Course in the Bronx. The police believe Barnes, whom they refer to as "Nick," was implicated in the slaying, but they have never been able to prove it—just as they have been unable to prove Barne's complicity in the slaying of another former intimate, Stanley Morgan, who was shot eight times almost next door to a police station. Morgan, it is said, held out on part of a narcotics cache.

The police say Barnes has, at the very least, one Mercedes-Benz, perhaps more, and a Citroen Maserati, and is surrounded by gaggles of Thunderbirds, Lincoln Continentals and Cadillacs. At various times he has had, they report, apartments in upper Manhattan, Riverdale, Hackensack and across the Hudson in the forest of high rises in Fort Lee.

Ironically, these police intelligence operatives, who keep on watching Nicky Barnes but haven't caught Nicky Barnes, betray a certain grudging admiration for Barnes's life style, a style which is, consistently, wickedly flamboyant, and often humorous. They are professionals admiring a professional, without condoning what they believe him to be. This, for example, is Nick Barnes:

It is just before last Christmas on 126th Street and St. Nicholas Avenue, and Barnes, in what the police say is one of his 300 new suits, wearing one of his 100 pairs of shoes, one of his 50 leather coats, one of his 25 hats—all color-coordinated—is handing out turkeys to the needy with a panache that would do credit to a turn-of-the-century Tammany Hall alderman.

And this is Nicky Barnes:

He is on trial last year for possession of hashish, a sawed-off shotgun, a .25-caliber automatic, a .32-caliber Smith & Wesson revolver, a .32-caliber Clerke revolver and a .38-caliber handgun, a collection police said they found in his upper Manhattan apartment in August, 1973, along with $43,934 in small bills. During an adjournment he goes into a washroom in Criminal Court and sees two narcotics detectives he knows.

He dips his hands under the tap, lifts them up and says to the mirror, "I need a handkerchief. Let's see, is this a handkerchief?" He reaches into a side pocket and pulls out a cylindrical roll of bills. "Oh," he says, "That's not a handkerchief, is it?" and he grins at the two narcs reflected in the mirror.

The wad goes back in his pocket. He reaches into the other side pocket. "Is this a handkerchief here?" and pulls out a duplicate roll. "Now, that isn't a handkerchief either, is it?" he says, and grins again at the two detectives. He shakes his hands dry and walks out of the washroom.

And this is Nicky Barnes:

He'll show the flag evenings in Harlem, checking in at the Shalimar, the Gold Lounge, or Small's and he will be bowed to, nodded to, but not touched. "It's like the Godfather movie," says one detective, "Baaad, Baaad Leroy Brown. . . ."—the song that his fans believe was written for him—will get a steady play on the juke, and Nicky Barnes will wade through his admirers, "being treated like the ——— Pope," a detective says.

And this is Nicky Barnes:

A few months ago, a school for court stenographers advertised in The Law Journal that it was staging a mock trial during which testimony would be taken so that its students could be tested. Nicky Barnes answered the ad, suggesting that he play the part of the "bad guy" on trial. The school did not accept his offer, which is a bit surprising: It would appear that Barnes has almost singlehandedly seen to it that unemployment among court stenographers is kept to an absolute minimum, because of his insistence on having copies of every page of testimony—at $4.50 a page—taken at his many trials.

Which is not all he does. He has all of the testimony and evidence in his trials bound into volumes that he keeps in his apartment. Those portions of the trial record that deal with instances of police surveillance are reproduced and distributed, police say, to his lieutenants as primers on basic security. His lawyer, David Breitbart, calls Barnes a "voracious reader, particularly of the law." Mr. Breitbart said that when Barnes was in Greenhaven Prison he subscribed to 37 different law journals, and "when he sits next to me in court, each issue, each constitutional question, whether it be search or seizure, the admissibility of evidence, is discussed by him with knowledge and thoroughness. I consider him a learned client."

Mr. Breitbart, while refusing comment on Barnes's current indictment, dismissed as ridiculous virtually all of the police intelligence information. The accounts of his client's wardrobe are "pure bull," he says. "My God, the guy's got holes in his shoes." As for his fleet of cars, Mr. Breitbart claims that Barnes "only rents them."

He says that Barnes has repeatedy been "framed" by the police, "ever since he was nominated by the Intelligence Section as a major violator."

Why the frame?

"Budget items," said Mr. Breitbart. "The police have to justify their budgets. The Drug Enforcement Administration has to justify itself to the General Accounting Office. And these are the prosecutors. Each individual prosecutor has a shot at the crown. He's the biggest, they say. So they want their shot. You know, I love the system. It works if it's followed. The trouble is they don't follow the rules."

Mr. Breitbart, who was once a prosecutor in the Bronx District Attorney's office, quit, he said, "so I could earn a living." His firm, Goldberger, Feldman and Breitbart, is a criminal law office made up of former prosecutors. He makes a nice living now, he says, and when he is asked how Nicky Barnes—who Mr. Breitbart says is in the real-estate business—can afford an attorney "who wears a gold watch and a lizard belt, I say I'm a humanitarian. I like causes, I like this cause."

Early in 1973, Nicky Barnes again became a hot item for the police, and a joint investigation by the Police Department's Intelligence Section, the Special Investments Unit—with input from the Manhattan District Attorney's office's Special Narcotics Unit—was aimed at him. From January until August of that year the police were with Nicky Barnes 24 hours a day.

And Barnes knew it.

One of Barnes's cars would pull out of the garage of his building, the police said, and Barnes's wife, Thelma, would be driving while Barnes lay flat on the back seat. The car would speed to the West Side Highway and then careen along at 100 miles an hour. Then it would simply return to the garage, and Barnes and his wife would go back to their apartment. No ticket was ever issued. In any other circumstances, a speeder would be arrested. Police feel that Barnes knew they were more interested in tailing him than in arresting him, and so he played with them.

At other times, the car would be driven to Brooklyn. Barnes would get out, get into a building, come out, walk around the car and casually look at the tail, then he'd get back in his car and it would make a bewildering series of U-turns before returning to his apartment, completing the wild goose chase he had just led.

The car would be driven to Harlem, and Barnes would make a point of stopping in at literally 100 different locations simply to annoy his trailers.

The car would be driven to Riverdale, and Barnes would, as he did once, quickly turn into a clump of high weeds at roadside. Then, as the police trailing car passed, he would switch on his lights and move in back of the policemen and blow his horn.

On Aug. 30, 1973, policemen with a warrant arrested Barnes in the basement of the Haven Avenue apartment. When they went up to what they claimed was his apartment, they found a flat whose walls were covered with mirrors, whose floors were covered with gray shag. There was a $4,000 white leather sofa and furnishings of glass, chrome and marble. There was a king-sized bed in the Mediterranean-style bedroom, a shotgun loaded with 10 shells next to it, and the collection of handguns mentioned earlier. Said one detective, "Where Nicky is, is guns."

Barnes, by all accounts, wasn't bothered a bit by his arrest and, as it eventually turned out, he was right in not being concerned. The case dragged on through hearings on the admissibility of evidence and on the validity of the warrant served. It was not until January of this year that the charges were dismissed, because it was ruled that, though the police arrested Barnes in the basement of that house, there was no evidence that could be admitted that connected him with the apartment.

At one point in the many court arguments, the prosecutor was addressing the court and mentioned that $50,000 in cash had been found in the apartment. This figure was excessive: Actually, $43,934 had been found. Mr. Breitbart rose from his seat and suggested to the court that what the prosecutor was saving meant that perhaps the arresting police had pocketed about $6,000. At that point Nicky Barnes jumped up and told the judge that that wasn't the case at all—because "these cops are honest, they don't steal." Then he sat down, grinning.

Between then and now Barnes beat a few other charges as well. On May 11, 1974, he was arrested and charged with stabbing a Bronx man to death with a penknife. That court proceeding was marked by a series of legal arguments over the posting of Barnes's bail. A sum of $100,000 in checks from a Harlem church was rejected by a judge who suggested that the source of the money was questionable. Subsequently, bail was posted by Barnes, who said he put up his equity in a $4.6-million Detroit housing project—a Federally backed enterprise—as collateral.

While he was out on bail, while arguments were still going on about the 1973 arrest, he was arrested yet again on Dec. 17, 1974, charged with offering a bribe to a policeman—who had stopped his Mercedes in the Bronx after a series of suspicious driving maneuvers—with $130,000 in cash that was in the trunk of the car. Bail on this charge, initially set at $2.6 million, was reduced first to $500,000 then to $100,000 on Mr. Breitbart's application. He pointed out that Barnes had never failed to appear for a court appearance.

Then things began to go Nicky Barnes's way. On May 8, 1975, he was acquitted of the bribery charge, although his $130,000 wasn't returned because Internal Revenue had put a lien on it as partial payment of the $325,000 it says Barnes owes in back taxes.

In March of 1976 he was acquitted of the murder charge by a Bronx jury.

Last October 26, he was again arrested in the Bronx for possession of a gun, but the charge was dismissed by the Bronx grand jury. Mr. Breitbart contended that the gun, allegedly found in Barnes's car, had been planted there by police.

Then, this January, the 1973 charges of drug and gun possession were finally thrown out by a Bronx court, and Barnes found himself completely free of any criminal charges, though police were still referring to him as one of the most powerful, perhaps the most powerful, of the "major violators" in the city.

During that four-year period, from 1973 until March of this year, when Nicky Barnes had been charged with homicide, bribery, drug dealing and possesion of dangerous weapons, the only time he had spent in jail was 150 days on various charges while bail was being secured.

Then, on March 16, he was arrested again. He was one of 18 people indicted by a Federal grand jury for a heroin selling and distributing conspiracy. The indictment charged that Barnes, who it called the chief of the operation, and five of his "lieutenants," had conspired to sell 44 pounds of heroin, at a wholesale price of $1 million, from a Harlem garage each month since November of 1976. It called Barnes "the head of a loose-knit narcotics organization which distributed bulk quantities of heroin and cocaine," an organization through which "a chain of distribution was established, and the narcotics flowed through several levels of the conspiracy, and ultimately to narcotics on the streets of New York City." Nicky Barnes spent another 44 days in jail after this arrest. Then, on April 29, he was released in $300,000 bail put up by a bondsman after Barnes pledged his $1.25 million interest in that Detroit housing project.

These days he spends his time at Mr. Breitbart's office preparing his defense. Meanwhile, in recent weeks another fellow—who dresses all in white and sports a white cape with a scarlet lining—has been driving his white Cadillac into the 116th Street and Eighth Avenue scene and calling himself "The Godfather." The street word is that this new man on the scene will be someone to reckon with, if the Federal Government succeeds in putting Nicky Barnes in jail. But the street people in Harlem remember each of those times when it looked as if the police were about to get Barnes behind bars, and they are skeptical about the Federal effort: To them, Nicky Barnes remains "Mr. Untouchable."

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows for:

Mr. Walker (at the request of Mr. Rhodes), for the remainder of this week, on account of a death in his family.

Mr. Marriott (at the request of Mr. Rhodes), for today, on account of official business.

Mr. Railsback (at the request of Mr. Rhodes), for the week of December 5, on account of official business.

Mr. Cotter (at the request of Mr. Wright), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. Kindness) to revise and extend their remarks and include extraneous material:)

Mr. Steers, for 5 minutes, today.

Mr. McDade, for 5 minutes, today.

Mr. Pursell, for 5 minutes, today.

Mr. Duncan, for 5 minutes, today.

Mr. Martin, for 5 minutes, today.

(The following Members (at the request of Mr. Flippo) and to revise and extend their remarks and include extraneous matter:)

Mr. Mattox, for 5 minutes, today.

Mr. Ichord, for 10 minutes, today.

Mr. Fraser, for 10 minutes, today.

Mr. Annunzio, for 5 minutes, today.

Mr. Gonzalez, for 5 minutes, today.

Mr. LaFalce, for 5 minutes, today.

Mr. Levitas, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. Gilman, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the Record and is estimated by the Public Printer to cost $885.50.

(The following Members (at the request of Mr. Kindness) and to include extraneous material:)

Mr. Ashbrook in three instances.

Mr. Anderson of Illinois.

Mr. Whalen.

Mr. Derwinski in two instances.

Mr. Rousselot in two instances.

Mr. Gilman.

Mr. Goldwater.

Mr. Regula.

Mr. Frenzel in three instances.

Mr. Lagomarsino.

Mr. Forsythe.

Mr. Stockman.

Mr. Kasten.

Mr. Crane.

Mr. Young of Florida in two instances.

(The following Members (at the request of Mr. Flippo) and to include extraneous matter:)

Mr. Montgomery in two instances.

Mr. Anderson of California in three instances.

Mr. Gonzalez.

Mr. Addabbo.

Mr. Mitchell of Maryland.

Mr. Mottl.

Mr. Murphy of Illinois.

Mrs. Burke of California in two instances.

Mr. Bonker in two instances.

Mr. Leggett.

Mr. McDonald.

Mr. Levitas in three instances.

Mr. Oberstar.

Mrs. Collins of Illinois in two instances.

Mr. Bevill.

Mr. Baucus in two instances.

Mr. Foley.

Mr. Edwards of California in two instances.

Mr. Ullman.

Mr. Udall.

Mr. Stark.

Mr. Harkin.

Mr. Lederer.

Mr. Fascell.

Mr. Gore.

Mr. Conyers.

ADJOURNMENT

Mr. FLIPPO. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 40 minutes p.m.), the House adjourned until tomorrow, Thursday, December 8, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2801. A letter from the Acting Director, Office of Management and Budget, Executive Office of the President, transmitting a report that the appropriation for Salaries and Expenses, Agricultural Stabilization and Conservation Service has been reapportioned on a basis which indicates the necessity for a supplemental estimate of appropriation, pursuant to section 3679(e)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

2802. A letter from the Secretary of Transportation, transmitting a report on the Department's disposal of foreign excess property during fiscal year 1977, pursuant to section 404(d) of the Federal Property and Administrative Services Act of 1949; to the Committee on Government Operations.

2803. A letter from the Chief, Forest Service, U.S. Department of Agriculture, transmitting the classification, development plan, and boundaries for the Flathead Wild and Scenic River, Mont., pursuant to section 3(b) of the Wild and Scenic Rivers Act (82 Stat. 908); to the Committee on Interior and Insular Affairs.

2804. A letter from the Comptroller General of the United States, transmitting the initial report of the Professional Audit Review Team on the activities of the Office of Energy Information and Analysis, pursuant to section 55(a) of the Federal Energy Administration Act, as amended (90 Stat. 1137); jointly, to the Committees on Government Operations, Interstate and Foreign Commerce, and Interior and Insular Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DODD: Committee on Rules. House Resolution 928. Resolution providing for the consideration of Senate amendments to the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes (Rept. No. 95–833). Referred to the House Calendar.

Mr. DODD: Committee on Rules. House Resolution 929. Resolution providing for considering the Senate amendments to the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes (Rept. No. 95–834). Referred to the House Calendar.

Mr. LONG of Louisiana: Committee on Rules. House Resolution 930. Resolution providing for the agreeing to the Senate amendments to the bill (H.R. 9378) to amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for 2 years, the date on which the corporation first begins paying benefits under terminated multiemployer plans (Rept. No. 95–835). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California (for himself and Mr. Snyder):

H.R. 10249. A bill to amend the Federal Aviation Act of 1958, relating to aircraft piracy, to provide a method for combating terrorism, and related purposes; jointly, to the Committees on International Relations, the Judiciary, and Public Works and Transportation.

By Mr. BAUCUS:

H.R. 10250. A bill to amend medicare and medicaid provisions as they relate to rural health care facilities; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

H.R. 10251. A bill to amend the Public Health Service Act to permit disapproval by Congress of national guidelines for health planning issued by the Secretary of Health, Education, and Welfare; jointly, to the Committees on Interstate and Foreign Commerce, and Rules.

By Mr. BEDELL (for himself and Mr. Steiger):

H.R. 10252. A bill to amend title 38, United States Code, to provide that agricultural employment required for eligibility for educational assistance under the GI bill for a person enrolled in a farm cooperative program need not be full-time employment or the principal expected source of income of such person and may include employment in establishments engaged in the processing, distribution, or sale of agricultural products; to the Committee on Veterans' Affairs.

By Mr. CARNEY:

H.R. 10253. A bill to amend title 38 of the United States Code in order to revise the provisions therein relating to the construction, alteration, and acquisition of land for cemeteries; to the Committee on Veterans' Affairs.

By Mrs. FENWICK:

H.R. 10254. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide benefits to survivors of certain medical and rescue personnel who die in the performance of duty; to the Committee on the Judiciary.

By Mr. FORSYTHE (for himself, Mr. Leggett, Mr. Murphy of New York, Mr. Dingell, Mr. Bowen, Mr. Young of Alaska, Mr. Oberstar, Mr. Anderson of California, Mr. Bauman, Mr. de la Garza, Mr. Breaux, Mr. Emery, Mr. Studds, Mr. Bonker, Mr. Dornan, Mr. AuCoin, Mr. Trible, Mr. Hughes, and Mr. Akaka):

H.R. 10255. A bill to assist the States in developing comprehensive fish and wildlife resource management plans and in implementing such plans with respect to nongame fish and wildlife; to the Committee on Merchant Marine and Fisheries.

By Mr. KEMP (for himself, Mr. Butler, Mrs. Heckler, and Mr. Young of Florida):

H.R. 10256. A bill to provide for permanent tax rate reductions for individuals and businesses; to the Committee on Ways and Means.

By Mr. LEVITAS:

H.R. 10257. A bill to amend the Administrative Procedure Act to require the performance and publication of economic impact analyses in the Federal Register for all proposed and final rules which are subject to the provisions of that act; to the Committee on the Judiciary.

By Mr. LLOYD of California (for himself, Mr. Baucus, Mr. Bevill, Mr. Burke of Florida, Mr. D'Amours, Mr. Duncan of Tennessee, Mr. Flood, Mr. Fuqua, Mr. Guyer, Mr. Hughes, Mr. Hyde, Mr. Lehman, Mr. Lent, Mr. McCormack, Mr. Ottinger, Mr. Price, Mr. Roe, Mr. Scheuer, Mr. Simon, Mr. Vento, Mr. Weiss, and Mr. Whitehurst):

H.R. 10258. A bill to strengthen Federal programs and policies for combating international and domestic terrorism; jointly, to the Committees on International Relations, the Judiciary, and Public Works and Transportation.

By Mrs. LLOYD of Tennessee:

H.R. 10259. A bill to establish a Department of Education and for other purposes; to the Committee on Government Operations.

H.R. 10260. A bill to amend title 39, United States Code, to require that the notice included in a mailed solicitation stating that such solicitation is not a bill or an account due shall be displayed at or near the beginning of such solicitation; to the Committee on Post Office and Civil Service.

By Mr. MILLER of California (for himself, Mr. Edgar, Mr. Moss, Mr. Richmond, Mr. Ryan, Mr. Stark, and Mr. Vento):

H.R. 10261. A bill to establish a loan program to provide financial assistance to drought-impacted water districts, to provide Federal assistance to water districts for acquisition and installation of residential and agricultural water conservation devices and equipment, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. OBERSTAR (for himself, Mr. Quie, Mr. Hagedorn, Mr. Frenzel, Mr. Vento, Mr. Fraser, Mr. Nolan, and Mr. Stangeland):

H.R. 10262. A bill to authorize access spurs for the Great River Road; to the Committee on Public Works and Transportation.

By Mr. RISENHOOVER:

H.R. 10263. A bill to amend the Federal Property and Administrative Services Act of 1949, as amended, to provide for the disposal of surplus real property to States and their political subdivisions for economic development, and for other purposes; to the Committee on Government Operations.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mrs. SPELLMAN:

H.R. 10279. A bill to permit the burial of Chief Tayac in Piscataway Park, Oxon Hill, Md., to the Committee on Interior and Insular Affairs.

By Mr. YATES (by request):

H.R. 10280. A bill for the relief of Dong Hwan Kim; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

WATER USE AND ALLOCATION

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. ULLMAN. Mr. Speaker, one of the most critical issues confronting agriculture in the West is water use and allocation. If doubt about this fact ever existed, it was dispelled last August, when the Interior Department and Bureau of Reclamation proposed regulations regarding the distribution of this regionally scarce resource from Federal impoundment projects.

The Department's proposal responded broadly to a relatively narrow court ruling on water distribution. By so doing, it cast doubt on scores of agreements between the Federal Government and water users, reached over three-quarters of a century.

Predictably, the proposal was met by waves of protest that welled up in every Western State where Federal projects help control the flow of rivers and streams. Just as predictably, the Department has initiated an intensive review of its proposed regulations.

Meanwhile, however, contracts and agreements reached in good faith remain in doubt; planning for the coming crop year is rendered impossible.

Mr. Speaker, farmers in the West cannot afford this uncertainty. As a result, I have introduced legislation that will give Congress the opportunity to demonstrate that the Federal Government is as good as its word.

The bill is a simple one. It addresses a very limited aspect of the controversy currently swirling around reclamation law. It would do nothing more than validate the contracts and written representations upon which water users have long-relied.
